Col. Taylor stated before our committee—I believe I quote him correctly—that the very fact that the Government was engaged in dredging on any particular project had the effect of holding down private contractors to lower contract rates, and that their bids were lower by reason of the fact that a Government dredge was established there. I think that is substantially true. Yet the private contractors upon that waterway upon which we expended $400,000 last year, named a price 80 per cent greater than the cost to the Government for doing the work with its own dredges. I do not know that I care to offer anything further, except that suggestion. It is well to place some legal restriction on contracts with dredgers, according to the facts developed by the gentleman from Iowa.

Mr. MANN. Mr. Chairman, what was the amendment?

The CHAIRMAN. A pro forma amendment.

Mr. MANN. I am opposed to striking out the last word. If that goes out, it all ought to go out. I would like to inquire what is the necessity of the appropriation at all at Miami? My recollection is that we imposed conditions of some sort down there. Is not this where the Flagler road runs?

Mr. FREAR. Yes.

Mr. SPARKMAN. Yes; it runs right through Miami.

Mr. MANN. Have those conditions been complied with?

Mr. SPARKMAN. Yes; those conditions have been complied with.

Mr. FREAR. By the city.

Mr. MANN. Have they been complied with by the railroad?

Mr. SPARKMAN. The conditions imposed upon the railroad were transferred to the city. The city has assumed the obligation, and complied with the requirements of the act.

Mr. MANN. What were those conditions?

Mr. SPARKMAN. I can not repeat them all, but if I had time to refer back I could do so. There was a lot of work to be done in the harbor and a lot of work to be done in the way of furnishing terminals, and so on.

Mr. MANN. I have not refreshed my recollection, as possibly I ought to have done. My recollection is that the Florida East Coast Railroad was to do some dredging down there, and the city was to furnish some docks. Has either one really been done?

Mr. SPARKMAN. As I said a minute ago, all requirements have been met.

Mr. MANN. The requirements of the committee may have been complied with, but have the requirements of the law been complied with?

Mr. SPARKMAN. The requirements of the law have been complied with. As I said, the conditions were finally assumed by the city. The railroad refused to carry out the conditions imposed by the original act. I think they carried out a part of those conditions, but finally failed to carry out the remainder. There was later some modification of those conditions by Congress. Subsequently the city assumed the obligations as modified, and has carried them out in good faith.

Mr. MANN. I read from the report, to which my attention has been called. I see it is stated—

It is anticipated that the city will be able to give the required assurance to the Secretary of War within a short time.

Whether that is a compliance——

Mr. SPARKMAN. That report was made last June.

Mr. MANN. Oh, no; this is the report of the Committee on Rivers and Harbors on this bill.

Mr. SPARKMAN. I will say to my friend that that was taken from the report submitted by the Chief of Engineers last June.

Mr. MANN. Do I understand from the gentleman that we can not place any reliance upon the report submitted by the gentleman from Florida upon this bill? This report was submitted on February 24, 1916.

Mr. SPARKMAN. I will try to make myself clear. What the gentleman is reading from now is, I fancy, an excerpt from the report of the Chief of Engineers submitted last June. Now, that was only published for the convenience of the House or anyone else who might want to investigate those projects. But I want to say that since that time the people there have complied with the conditions, have satisfied the Secretary of War that the conditions were complied with. Here is a statement that we have from Col. Taylor, January 24 last:

The city officials have entered into a contract for the completion of their work, and it is understood that the contract calls for its completion in the latter part of 1916. In order that the United States' work may progress at such a rate as to be completed at approximately the same time that the city's work is completed an additional appropriation of $140,000 should now be made.

Mr. MANN. I see the gentleman who represents the Miami district [Mr. SEARS] is on the floor. While I have great deference for the gentleman from Florida [Mr. SPARKMAN], I have no doubt the gentleman from the district [Mr. SEARS] may have the information up to date, and I would like to ask him whether, in his opinion, these conditions have all been complied with?

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. MANN. I ask that I may have five minutes more.

The CHAIRMAN. The gentleman from Illinois asks that his time may be extended five minutes. Is there objection?

There was no objection.

Mr. SEARS. Mr. Chairman, I am satisfied I can convince my colleague, the able minority leader [Mr. MANN] that this is a worthy project. Ever since 1902 the good people of Miami have been working to get access to deep water. The Florida East Coast Railroad Co. first entered into a contract to get this deep water and were to receive assistance from the Government. There was a suit against this company by the Government, which, as I understand, was won in the lower court by the Government. An appeal was taken, and this time the decision was adverse to the Government. This left the matter practically where it was. In 1912 there was an appropriation of $100,000 for the purpose of deepening the harbor at Miami—that is, for the beginning of the work. It was estimated that $300,000 would be required to complete the work. The engineering department reported that only $140,000, instead of $300,000, would be necessary to complete the work; and on that report, not desiring to go beyond it, I only asked for $140,000.

It has been said repeatedly in this House that the cities should render some assistance. I am truly glad that for the first project in the bill for my district I can state the people of Miami have shown their interest and desire to get deeper water and have bonded themselves in the sum of $585,000 with this end in view—$185,000 for the purpose of securing terminals and building the municipal dock; $360,000 for the purpose of digging a channel across the bay to where the Government takes up the work. This distance is approximately 3 miles. Forty thousand dollars for constructing a municipal railroad on said dock. This shows the people of Miami are interested in the work, and it certainly shows their good faith when they are willing to spend $585,000 of their money—and it is actually being spent, for the work is now under construction. Dredges are at work digging out the basin and the channel across the bay, and by the first of next year they trust the work will be completed. There are, I understand, 32 boats that now pass Miami because they can not go in there.

My district is 535 miles long, from Jacksonville to Key West, and there is no place between Jacksonville and Key West at the present time that boats with a draft of more than 10 feet can get in. Miami is approximately 360 miles from Jacksonville and 165 miles from Key West. If Members could only realize this, they would see how important it is to have this appropriation.

Now, I called up the Census Bureau the other day and asked them to give me the census of Miami. In 1890 they reported there was no record, but in 1900 Miami had 1,681 inhabitants. In 1910 it had 5,471, and I state to my colleagues on the floor of the House that to-day, less than six years from the census of 1910, the population of Miami is approximately 20,000. The city is growing by leaps and bounds.

Mr. MANN. Is that 20,000 population in winter or summer?

Mr. SEARS. All the year round. During the winter we have a great many tourists, but they are not included in the 20,000.

Now, Mr. Chairman, this project means a great deal to the people of Miami. I would like to have the proviso so worded the Government would have to do the additional work of $100,000 by contract. But I am satisfied the War Department so thoroughly appreciates and recognizes the importance of the proposition to this beautiful growing city that everything possible will be done to complete the Government's part of the project by the time the city completes her part.

If this appropriation is made, Miami will have a channel 18 to 20 feet in depth and of sufficient width to take care of her rapidly increasing commerce, and I therefore sincerely trust all opposition will be withdrawn.

Mr. MANN. Mr. Chairman, the gentleman's statement is so lucid and convincing that I have nothing further to say.

The CHAIRMAN. The pro forma amendment is withdrawn.

Mr. GOOD. Mr. Chairman, I offer the following amendment.

The Clerk read as follows:

Page 12, line 17, after the word "obtained," strike out the period and insert a colon, and insert:

"*Provided*, That no part thereof shall be used to pay for any work done by private contract if the contract price is more than 25 per cent in excess of the estimated cost of doing the work by Government plant."

Mr. GOOD. Mr. Chairman, I hope the gentleman from Florida will accept the amendment. It is just like those that have been adopted, and I would like to have an agreement with the gentleman from Florida that it should apply to all the items in the bill.

Mr. SPARKMAN. I think it would be a good idea, in view of the action of the House to-day on two or three amendments, if we had one amendment before us, and that we let it go over until we have completed the bill and then take it up, discuss, and dispose of it.

Mr. GOOD. There are some items here to which it should apply, but I thought I would offer the amendment to the larger items, and then I would prepare an amendment, making the provision apply to all the items in the bill. If that can be agreed to, I will not take up any time on this amendment.

Mr. SPARKMAN. Suppose we let this amendment be pending until we have gone over the bill.

Mr. SEARS. Mr. Chairman, I hope that the gentleman will not insist on this amendment. They have cut the appropriation from $300,000 to $140,000, and it is shown by the report of the Government engineers that they have had some very reasonable bids, cheaper than the Government could construct it.

Mr. GOOD. Then it will do no harm. If the bids are not more than 25 per cent in excess of what it would cost the Government, it will have no effect at all.

Mr. MOORE of Pennsylvania. I would like to say to the gentleman that I would like to have an opportunity to look into this question. It seems to me a very important one, and if we can have a little time we may get more information.

Mr. COOPER of Wisconsin. Will the gentleman yield?

Mr. GOOD. I yield.

Mr. COOPER of Wisconsin. The gentleman said a few days ago, and in part read what amounted to an ironclad agreement from the dredgers and dredging associations, to use a common expression, to "hold up" the Government on the bids they might make for Government work. If that is true, and I suppose it is, it would look no more than proper that the Government should take the precaution to defend itself against a possible holdup by enacting into law some such provision as is proposed by the gentleman from Iowa. It is largely a question of fact whether the agreement was made between the dredgers and the association. What the gentleman from Iowa read was what purported to be a printed report of a meeting of these men in which they exulted over the fact that they had entered into an agreement for the explicit and only purpose of holding up the United States Government in any contract they might be called upon to bid on.

Mr. GOOD. I know nothing about that except what is contained in the report.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that this amendment go over and be considered as pending until we finish the reading of the bill, and then we can go back and dispose of it and any other similar amendments that the gentleman from Iowa may see proper to offer along the same line.

Mr. MADDEN. Mr. Chairman, reserving the right to object, there are a good many items in this bill to which such an amendment as the one presented by the gentleman from Iowa [Mr. GOOD] could not properly apply, and because of that fact it seems that it would be useless to make a single provision covering all the bill, because if such a provision is made in many cases, it might prevent the work for which this bill appropriates proceeding, but where on the face of the appropriation itself in any single item it appears to be advantageous to put such a provision as the amendment of the gentleman from Iowa into the bill, it seems to me that it ought to be put in where it is evident to the House it can be utilized to the advantage of the Government. If a general provision should be enacted, and that general provision might, and it undoubtedly would, embarrass many of these improvements——

Mr. SPARKMAN. Mr. Chairman, will the gentleman permit me to interrupt him right there?

Mr. MADDEN. Yes.

Mr. SPARKMAN. That is exactly what I called the attention of the House to more than once, and that is exactly what the gentleman, I think, voted to put in the bill. I agree with the gentleman fully that with the light now before us we can not tell whether a proposition like that should apply universally or not.

Mr. MADDEN. It can not.

Mr. SPARKMAN. But that is the kind of proposition before us. What I want to do is to have it go over until the end of the bill is reached, so that we may have time to investigate the matter and find out what the engineers may say about it, and if it is practicable I certainly would have no objection to it. I do not want to see the Government held up any more than the gentleman does. I do not know whether there is a dredging trust or not. There may or may not be one; but whether there is or not, I do not want the Government to pay one cent more than a fair price for the work.

Mr. MADDEN. I wish to say to the gentleman from Florida that I think it is not practicable to apply the amendment to such cases as the North Carolina case.

Mr. SPARKMAN. Let it be pending, then.

Mr. MADDEN. And to the Georgia case.

Mr. LONGWORTH. Mr. Chairman, will the gentleman from Illinois yield?

Mr. MADDEN. And perhaps in this case—yes; I yield to the gentleman from Ohio.

Mr. LONGWORTH. Mr. Chairman, I wanted to ask the gentleman from Iowa [Mr. GOOD] if it was his intention to have this apply in any other case than dredging—that is, this general proposition?

Mr. GOOD. Yes.

Mr. LONGWORTH. Does he want it to apply, for instance, to the building of dams, locks, and so forth, or is it to be confined to dredging?

Mr. GOOD. It is limited by its terms to those items where the Government has a plant to do its work, because the comparison is by Government plants, and therefore it might not apply to those items where the Government has no plant and where it could not make an estimate. However, it should apply to all work provided for.

Mr. LONGWORTH. But the gentleman generally has referred to the case of dredging, and to a possible combination among dredgers. I wanted to know whether he intended to cover anything except dredging where the Government had a plant?

Mr. GOOD. What I was going to ask the gentleman from Florida is whether or not he would object to my amendment being offered at this time as a new paragraph and modified so that it will read—

That no part of the funds herein appropriated shall be used to pay for any work done by private contract if the contract price is more than 25 per cent in excess of the estimated cost of doing the work by Government plant.

It would then apply to the entire bill, and then we could let that amendment be pending until the completion of the bill.

Mr. SPARKMAN. I think the gentleman should have permission to offer his amendment—of course, he has that—but I think that all amendments like that should go over until we have finished reading the bill for amendment. I, for one, want to get some more information than I have at present before finally passing upon it.

Mr. GOOD. I do not care to take any unnecessary time. I only believe that the principle is right and should be written into the law. Therefore, Mr. Chairman, I ask unanimous consent to modify my amendment and offer it as a new paragraph, so that it will read:

That no part of the funds herein appropriated shall be used to pay for any work done by private contract if the contract price is more than 25 per cent in excess of the estimated cost of doing the work by Government plant.

Mr. SPARKMAN. Let that be pending until we reach the end of the bill.

The CHAIRMAN. Without objection, the gentleman from Iowa will be permitted to modify his previous amendment, and will offer, in the nature of a new paragraph, the amendment which the Clerk will now report.

Mr. MOORE of Pennsylvania. Mr. Chairman, reserving the right to object, I would like to know whether the motion of the gentleman from Iowa [Mr. GOOD] pertains only to the amendment attaching to the present paragraph?

The CHAIRMAN. The Chair just directed the Clerk to report the amendment.

Mr. MOORE of Pennsylvania. I was asking as to the understanding between the gentlemen.

Mr. GOOD. It will apply to everything.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

After line 17 insert as a new paragraph the following:

"That no part of the funds herein appropriated shall be used to pay for any work done by private contract if the contract price is more than 25 per cent in excess of the estimated cost of doing the work by Government plants."

Mr. MOORE of Pennsylvania. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MOORE of Pennsylvania. Are we now to consider the request for unanimous consent?

The CHAIRMAN. The Chair thinks it should be submitted to the House. The gentleman from Florida asks unanimous consent that the amendment offered by the gentleman from Iowa, which has just been reported, be considered as pending, and that no action be taken upon it until the conclusion of the reading of the bill. Is there objection?

Mr. MOORE of Pennsylvania. Mr. Chairman, reserving the right to object; this is a very serious matter, and the amendment is so general in its terms that I do not feel that we ought to be involved to the extent of passing it by unanimous consent.

Mr. SPARKMAN. We are not passing it by unanimous consent. We are passing it over until the end of the bill, and then we will take it up and consider it.

Mr. MOORE of Pennsylvania. I would like to know if the gentleman from Iowa intends to offer any more amendments following the action on this request for unanimous consent?

Mr. GOOD. No. The intention was to offer it as a new paragraph at this time. I understand that it will be likely transferred to some other place in the bill where it will be appropriate.

Mr. MOORE of Pennsylvania. My objection to this request is this, the gentleman from Iowa has offered two amendments, which have passed, one pertaining to one item in the bill and another pertaining to another item in the bill, whereas he has not offered an amendment with respect to hundreds of other items in the bill.

Mr. GOOD. I will say to the gentleman I did not care to take the time of the House to offer an amendment to every

little item. I am satisfied that that would prejudice the proposition.

The CHAIRMAN. Is there objection?

Mr. MOORE of Pennsylvania. I object.

Mr. SMALL. Mr. Chairman, I ask that the gentleman from Pennsylvania withhold his objection for a moment.

Mr. MOORE of Pennsylvania. There is a disposition to rush this thing through, and the easiest way is to object.

Mr. SMALL. If I may have the attention of the gentleman from Pennsylvania, I would suggest that the gentleman from Iowa [Mr. GOOD] wishes to revise his amendment so that it would be applicable to the whole bill.

Mr. GOOD. I have already been granted that permission.

Mr. SMALL. And then have that pending, to be considered at the end of the bill. Now, does the gentleman from Pennsylvania [Mr. MOORE] object to that, a revision of the amendment so that it will be applicable to every appropriation in the bill, and to be passed over and considered as pending and taken up at the end of the bill?

Mr. MOORE of Pennsylvania. If the gentleman will yield, I should like to know when we come to consider this proposed general amendment offered by the gentleman from Iowa at the conclusion of the reading of the bill, in what position we will be with respect to two items in the bill to which this amendment has already been attached, irrespective of the fact that dozens of other items have already been passed to which it has not been attached?

Mr. SMALL. That will take care of itself at the time. All items have already been amended. That may be reconsidered or it may be put to the House when the committee reports to the House.

Mr. MOORE of Pennsylvania. The gentleman recalls this fact: That the committee originally refused to consider this amendment and voted it down as a general proposition. Then the committee reversed itself and passed this amendment attached to the inland waterway item as between Norfolk and Beaufort, and then on a subsequent vote as to the Savannah Harbor it again attached this amendment. The gentleman from Iowa did not offer his amendment with respect to any other paragraph except these two.

Mr. GOOD. There were no large items intervening.

Mr. MOORE of Pennsylvania. I am asking if he is willing to have withdrawn by unanimous consent the two amendments that have already been passed with respect to the items separated from all others in the bill, that we may bring the whole matter up for discussion?

Mr. GOOD. Is the gentleman from Pennsylvania willing that we should return and vote on the proposition on the Philadelphia item?

Mr. MOORE of Pennsylvania. It ought to be general.

Mr. GOOD. Of course; and that is the reason I have offered this amendment.

Mr. MADDEN. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. MADDEN. The gentleman from Pennsylvania a moment ago objected to the unanimous consent to have this amendment pending. Did not that make disposition of it?

The CHAIRMAN (Mr. SHERLEY). The gentleman from Iowa, at the suggestion of the gentleman from North Carolina [Mr. SMALL], renewed the suggestion. The Chair was simply endeavoring to give the committee an opportunity to come to an agreement, if possible, touching the matter. Is there objection to the request of the gentleman from Iowa [Mr. GOOD]?

Mr. MOORE of Pennsylvania. Reserving the right to object——

Mr. MADDEN. Regular order, Mr. Chairman.

The CHAIRMAN. The regular order is the objection to the request of the gentleman from Iowa [Mr. GOOD].

Mr. SMALL. Will the gentleman from Pennsylvania [Mr. MOORE] reserve his objection for a moment?

The CHAIRMAN. The regular order is the request of the gentleman from Iowa [Mr. GOOD] for unanimous consent.

Mr. MOORE of Pennsylvania. I object, Mr. Chairman.

Mr. McLAUGHLIN. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD on matters about which I spoke.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. GOOD. A parliamentary inquiry, Mr. Chairman?

The CHAIRMAN. The gentleman will state it.

Mr. GOOD. The question now recurs on the amendment?

The CHAIRMAN. On the amendment offered by the gentleman from Iowa.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that the amendment be considered as pending, to be returned to when we reach the end of the bill.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that the amendment be considered as pending, to be returned to when the end of the bill is reached. Is there objection?

Mr. MOORE of Pennsylvania. Reserving the right to object, I would like to know whether the gentleman from Iowa is willing to have the general question submitted irrespective of the two amendments that have already been adopted to special paragraphs in the bill?

Mr. GOOD. I will say to the gentleman that I think, especially as to one of the amendments, that it is very important. Personally, I would not consent, and I do not see how the committee could again take up that question anyway.

Mr. MOORE of Pennsylvania. Then the gentleman proposes to make fish of two items in the bill and fowl of all the others?

Mr. GOOD. No; I intend to make fowl of all of them.

Mr. FOSTER. We are going to put them all on.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

Mr. MANN. I object.

The CHAIRMAN. The gentleman from Illinois objects.

Mr. MANN. Then I ask unanimous consent that the consideration of the amendment now pending may be postponed until the gentleman from Iowa [Mr. GOOD] can have an opportunity to offer another amendment.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the amendment of the gentleman from Iowa [Mr. GOOD] may be temporarily postponed until he shall have opportunity to perfect it. Is there objection?

Mr. MANN. Or to offer a further amendment.

There was no objection.

Mr. GOOD. Mr. Chairman, I move now an amendment as a new paragraph, which I send to the Clerk's desk.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Iowa [Mr. GOOD].

The Clerk read as follows:

After line 17, insert as a new paragraph, the following:
"No part of the funds herein appropriated shall be used to pay for any work done by private contract if the contract price is more than 25 per cent in excess of the estimated cost of doing the work by Government plant."

Mr. SMALL. Mr. Chairman, I ask unanimous consent that the amendment may be considered as pending, to be recurred to at the end of the appropriations.

The CHAIRMAN. Is there objection to the request of the gentleman from North Carolina?

Mr. MOORE of Pennsylvania. Reserving the right to object, Mr. Chairman, does this bring the general question up at the close of the reading of the bill?

Mr. SMALL. It will.

Mr. MADDEN. Mr. Chairman, I do not believe that the gentleman from North Carolina [Mr. SMALL] is correct about that. We have already adopted two amendments covering this same proposition, and I do not understand that they are to be set aside by the request of the gentleman from North Carolina.

Mr. SMALL. I am willing to take chances on that.

Mr. MOORE of Pennsylvania. Is that the attitude of the Committee on Rivers and Harbors, so far as the gentleman can speak for it?

Mr. SMALL. Yes; that means with the approval of the chairman.

The CHAIRMAN. Is there objection?

Mr. BARKLEY. Reserving the right to object, Mr. Chairman, I would like to ask the gentleman from Iowa [Mr. GOOD], if the amendment just offered passes, is it the gentleman's intention to offer the two amendments he has prepared?

Mr. GOOD. I will say to the gentleman from Kentucky that if this amendment I have offered is adopted, of course I would have no objection then to those amendments going out.

Mr. SMALL. And we will ask unanimous consent to take them out.

Mr. GOOD. The general proposition applies to them, and there would be no use in putting them in the bill twice.

Mr. CULLOP. We could take a separate vote on those amendments and strike them out.

The CHAIRMAN. Is there objection?

Mr. MANN. That both amendments go over?

Mr. SMALL. Yes.

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Harbor at Pensacola, Fla.: For maintenance, $20,000.

Mr. WILSON of Florida. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Florida moves to strike out the last word.

Mr. WILSON of Florida. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by printing extracts from the report of the Board of Inspection for Shore Stations of the Navy Department on the Pensacola Navy Yard, dated August, 1913, in which they deal with the condition of Pensacola Harbor.

The CHAIRMAN. The gentleman from Florida asks unanimous consent to extend his remarks in the RECORD in the maner indicated. Is there objection?

There was no objection.

Following is the report referred to:

ADVANTAGES OF PENSACOLA AS A NAVY-YARD LOCATION.

Extracts from the report of the Board of Inspection for Shore Stations of the Navy Department on the Pensacola Navy Yard, dated August, 1913:

CLIMATIC AND SANITARY CONDITIONS.

"The climate of Pensacola and surrounding country is equable; extreme temperature of either heat or cold is infrequent. The land about Pensacola is of an undulating character, and is relatively high, rising in some places to about 100 feet above sea level. * * *

"The sanitary condition of the naval station is excellent. The absorbent nature of the soil, a sandy loam, in this vicinity renders the sanitation more efficient than would obtain in other localities having a different formation, other conditions remaining the same.

"The absence of extensive areas of swamp lands so prevalent along the Gulf coast relieves this locality of the presence of infection-carrying mosquitoes. Malarial and kindred fevers are almost unknown in and about Pensacola. * * *

"The water supply of Pensacola is taken from a gravel water-bearing strata 130 feet below the surface by means of 13 driven wells. This water is shown by chemical, microscopical, and bacteriological analyses to be of exceptional purity. The daily average pumpage for the year 1912 was 1,400,000 gallons. To increase this amount is only a question of more wells. * * *

COAL SUPPLY AND DISTRIBUTION.

"Under existing conditions, all the coal supplied to the port is brought over the tracks of the Louisville & Nashville Railroad. * * *

"The project of building a canal from Pensacola to Mobile is said to be now under consideration by the district engineer of the Army Board for Rivers and Harbors, and, with the completion of such a canal, the coaling facilities of Pensacola would be greatly improved.

"In the course of a few years it can reasonably be expected that Pensacola will have such extended terminal and modern coaling facilities that the shipment of coal from this port will probably be one of its greatest exports. Further attention is called to the fact that the various railroads now in process of construction from Pensacola look to the coal trade as their principal source of income, and therefore contemplate extensive coal-pier facilities, with modern handling appliances. Before any dry dock could be completed, it is reasonably certain that the port is likely to possess such extensive transportation and coal-handling facilities as would make it a large coal supply and distributing center. * * *

RAILROAD FACILITIES.

"The Louisville & Nashville Railroad makes New Orleans, Mobile, and Pensacola its three principal deep-water terminal shipping points. * * *

"The Gulf, Florida & Alabama Railway has in process of construction a road from Pensacola to Jasper, Ala. * * *

"There is also in process of construction the Pensacola, Mobile & New Orleans Railroad, a line about 60 miles long, connecting Pensacola with Mobile. * * *

BAY, ENTRANCE CHANNEL, AND ANCHORAGE CONDITIONS.

"Bay: Pensacola Bay is one of the most important harbors on the Gulf coast. The bay is about 19½ miles long in a general northeast by east and southwest by west direction, and has an average width of about 2½ miles. Its tributary bays considerably increase the area available for vessels of medium draft. * * *

"Channel: From the entrance to anchorage off the city of Pensacola, a distance of nearly 7 miles, not less than 32 feet of water can be safely carried. The entrance channel is well marked by accurate ranges and buoys, void of embarrassing turns, and is easily navigable under almost any condition of weather. * * *

"Anchorage facilities: There is a feasible anchorage for not less than 27 battleships in not less than 30 feet of water, in double column, interval and distance 500 yards, with excellent holding ground, and this without blocking the fairway leading to Pensacola. There is also available, without interference with shipping, a large area for the anchorage of torpedo-boat destroyers and the 'train' of a large fleet. * * *

"In general: Pensacola Bay offers excellent and unusual advantages for a variety of drills. It is particularly adapted for boat drills, torpedo and submarine exercises. * * *

POINT FOR EMBARKING TROOPS.

"The extent of harbor anchorage, depth of water at piers, salubrity of climate, extent of the water-front reserve possessed by the War and Navy Departments, accessibility of the port to the coal fields of Alabama, and the character of the pier facilities already in existence or under development, make Pensacola the most advantageous port in Florida as a point for embarking troops." * * *

ADVANTAGES AS A NAVAL STATION.

(a) The great extent of the bay, its easy access from the Gulf, and the security afforded by the fortifications at the entrance.

(b) Its central position on the Gulf coast and location relative to interior portions of the country.

(c) The small rise and fall of tide and the stable condition of the ground, rendering dry-dock construction feasible.

(d) The general character and extent of its water front, rendering pier development a fairly simple and satisfactory matter.

(e) The location of the yard, 7 miles from the city of Pensacola, on a Government reservation, insuring freedom from objectionable dives and resorts such as are found frequently in proximity to other navy yards.

(f) Ample space in the towns of Warrington and Woolsey, as well as in Pensacola (with which there is efficient trolley communication), for the accommodation of workmen and their families.

(g) Equable climate, permitting out-door work all the year round.

The board is unreservedly of the opinion that Pensacola is the best and only site practicable on the Gulf of Mexico for a navy yard of the first class.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask that I may be accorded the same privilege.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Oklawaha River, Fla.: Continuing improvement and for maintenance, $10,000: *Provided*, That there shall be conveyed to the United States, free of cost, title to the land occupied by what is known as the "Kyle & Young Canal" and the "Morrison Landing extension" of the same, on the Oklawaha River, in the State of Florida, together with title to a strip of land on the east side of said canal of such width as in the judgment of the Secretary of War may be required for the future widening of said canal and extension by the United States; and the Secretary of War is hereby authorized to accept said land and navigation improvements as the property of the United States upon the delivery to him by the owners of a clear and indefeasible title; and the said canal and extension shall thereupon become a free public waterway of the United States in place of the existing natural bed of the river: *Provided further*, That the Secretary of War is hereby authorized to permit J. D. Young, or his assigns, to construct an extension of the foregoing improvements from Morrison Landing to Starks Ferry or Lake Griffin in accordance with plans recommended by the Chief of Engineers: *And provided further*, That said J. D. Young, or assigns, convey to the United States, free of cost, title to the land to be occupied by said proposed extension, together with any lands immediately adjoining the same on the west side, which may be needed for further improvement by the United States.

Mr. MANN. Mr. Chairman, I reserve a point of order on the paragraph.

The CHAIRMAN. The gentleman from Illinois reserves a point of order on the paragraph.

Mr. MANN. I would like to ask the gentleman how much shorter will this make the transit by vacating part of the Oklawaha River and constructing a canal across part of the way?

Mr. SPARKMAN. I will say to the gentleman that I could not answer that offhand, but it will very materially shorten the distance to be traveled by the boats going up and down the canal, because the canal is practically straight and the Oklawaha River, as its Indian name implies, is a very crooked stream. I think the distance is about 3 to 1.

Mr. MANN. How long is the canal? I should think the gentleman would have some information concerning as curious an item as this one.

Mr. SPARKMAN. My recollection is—I can only state from memory——

Mr. MANN. The gentleman will have to have something more than recollection if he does not want a point of order made on this item.

Mr. SPARKMAN. I am doing the best I can.

Mr. MANN. The gentleman has facilities for information right at his hand.

Mr. SPARKMAN. I am under the impression that the extension already constructed and the second extension will amount to about 2 miles in all.

Mr. MANN. How much?

Mr. SPARKMAN. I think it will figure up about 2 miles in all—that is, the two canals. One canal has been constructed by a private individual, who proposes to construct an extension.

Mr. MANN. I understand. About 2 miles in all?

Mr. SPARKMAN. I think it is about 2 miles. That is my recollection.

Mr. MANN. The gentleman said he had no idea. I did not know but it was 50 miles.

Mr. SPARKMAN. It is about 2 miles, as I recall.

Mr. MANN. How long is the river that we give up to these other people?

Mr. SPARKMAN. I should think it would be at least twice that distance, maybe more. One of the purposes that we have in view in doing this——

Mr. MANN. I supposed that the purpose was to shorten the distance, and possibly to make it less expensive, although I do not know about that.

Mr. SPARKMAN. It will be much shorter, and, of course, less expensive to maintain. I will say further that this canal is a part of a land-reclamation plan inaugurated by J. D. Young, who has a large body of muck land which he is trying to reclaim, and in order to do this constructed this canal, and

as far at it is now built, whatever the length which he proposes to extend it. Now, of course, the Government does not want to stand in the way of the reclamation of this land. We want to help him if we can without injuring the Government, which it does not do; on the contrary, it benefits the Government very materially by shortening the stream which will have to be maintained hereafter.

Mr. MANN. How much work will have to be done on this canal by the Government after it takes it over?

Mr. SPARKMAN. Nothing more than the present channel would require, in fact, not as much, except the annual maintenance, whatever it may be; and it is said that will be very small. It is not much there now, and it can not be any greater.

Mr. MANN. I suppose there is some business on the Oklawaha River now?

Mr. SPARKMAN. Oh, yes.

Mr. MANN. When I was younger I can remember, I think, was considerable—was done by boats carrying passengers up and down the river, because it was said to be the most beautiful scenery in the United States.

Mr. SPARKMAN. That was correct in those days, and the scenery is equally beautiful now.

Mr. MANN. But now you are going to abandon part of it.

Mr. SPARKMAN. It is only a part of it, and it is not the scenic part that is being abandoned.

Mr. MANN. Well, I will withdraw the point of order.

The Clerk read as follows:

Anclote River, Fla.: For maintenance, $3,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. We have passed a number of items in the bill, some of which are deserving of criticism, from my viewpoint; but I just wish to suggest about this item that, taking out the lumber, which, of course, will go with a very small channel, the improvement is 3½ miles long, and there is only a balance of 2,470 tons upon this project, and only one launch.

Mr. SPARKMAN. Is this Anclote River?

Mr. FREAR. Yes; and according to the engineer's report that the only real business on the Oklawaha River—and that there is only one launch running upon this project.

Mr. SPARKMAN. Will the gentleman yield?

Mr. FREAR. Yes.

Mr. SPARKMAN. I have not had time to look up the matter, but I think there is more than one launch running in those waters. But that is of little consequence, as there is a great deal of other kinds of shipping. I venture the assertion that every week in the year there are as many as 100 vessels going through that channel. It is the great sponge center of that portion of Florida. At Tarpon Springs, located on that channel, are brought nearly all the sponges that are gathered in American waters. They are taken in there and distributed thence to other parts of the country. Not only that, but it is a great fishing center, and it is mainly for those purposes that this appropriation is made. I want to say further that there is hardly a small project in this bill that has more merit than this particular project, and I doubt if there are any with more merit.

Mr. FREAR. The tonnage of only 2,400 tons impressed me.

Mr. SPARKMAN. Naturally so, but when you consider that it is made up largely of sponges, you will realize that while it is very valuable it is more bulky than weighty.

Mr. FREAR. I concluded it would keep one launch pretty busy. Mr. Chairman, I withdraw the pro forma amendment.

The Clerk read as follows:

Withlacoochee River, Fla.: For maintenance, $5,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. There are three launches on this stream and 4 miles to the project. We have spent $339,000 on it, and the commerce is largely for a phosphate establishment, as I understand.

Mr. SPARKMAN. That is correct.

Mr. FREAR. Outside of the phosphate there is practically nothing else.

Mr. SPARKMAN. Very little.

Mr. FREAR. I want to ask the gentleman if the channel was built up for their factory or is there anything else up there.

Mr. SPARKMAN. The channel was constructed at first by this phosphate company. The company, having in contemplation the improvement of the harbor down there, constructed a railroad, something like 20 miles in length, to the mouth of the river for the purpose of shipping their output of phosphate to that harbor there. Then the company went on to construct a channel to deep water in the Gulf at a very heavy cost to itself, I think more than $100,000, perhaps as much as $200,000. After that was done and while Senator Burton was chairman of the Committee on Rivers and Harbors, the Government stepped in and took up the work and carried it on. It is a great phosphate shipping port. There is a great deal of foreign commerce that goes out there. A great deal of this phosphate is taken to foreign countries. If there is any falling off of the commerce it is due to the war, which has temporarily stopped those shipments.

Mr. FREAR. The commerce fell off 50 per cent last year, due to the war, they say.

Mr. SPARKMAN. There is no question but that it was due to the war, for the phosphate goes mostly to foreign countries.

Mr. FREAR. Is that the only concern, the only one that is being served?

Mr. SPARKMAN. Not entirely, but that one concern furnishes the bulk of the commerce there.

The Clerk read as follows:

Apalachicola River, Fla.: Continuing improvement and for maintenance, including the cut-off, Lee Slough, lower Chipola River, and upper Chipola River from Marianna to its mouth, $6,000.

Mr. MANN. Mr. Chairman, I move to strike out the last word. The Clerk got by the item that I would like to ask the gentleman from Florida about. What success are they having in reference to water hyacinth, and what process do they use to overcome it?

Mr. SPARKMAN. In most instances they use a mechanical contrivance. Often the method used is to concentrate the hyacinth in the center of the stream and let the current take them down to places where they can be disposed of, or still on down to brackish water, which kills them. They adopt almost any method to get rid of them, except spraying, which they did at first, but that method has been abandoned on account of its danger to live stock, which now they are not allowed to do.

Mr. MANN. They have not got far enough along to introduce hippopotami, with a view of clearing it out, have they?

Mr. SPARKMAN. No. That, I believe, was suggested at one time.

Mr. MANN. I think I made the suggestion myself several years ago. I do not know but that it would be as effective as any process they have tried, and perhaps cheaper in the end.

The Clerk read as follows:

Alabama River, Ala.: Continuing improvement and for maintenance, including the Alabama and Coosa Rivers between Montgomery and Wetumpka, $100,000.

Mr. FREAR. Mr. Chairman, I move to strike out the item. I have passed over some questionable items without making the motion. I do so now in order to call attention to a condition which seems unusual for a large appropriation. In the past the appropriations for the Alabama have reached $1,289,000. and this bill calls for $100,000 more.

Excluding the logs and timber there are about 41,000 tons of commerce. On page 744 of the Engineer's Report, he says:

The effect of the river is to maintain effective water competition with the railways as far as Selma, and to some extent to Montgomery. The full effect of water transportation is not felt at Montgomery because of the failure of the boats to make good use of the means provided for navigation and of the merchants of Montgomery to patronize the boats. Water rates control most of the shipments to and from the country contiguous to the river below Montgomery. One steamer is above Selma.

It does not say how often the boat is run. From the showing made by the engineer's report that $100,000 appropriated in this bill is a very large item, following as it does the large sum of money that has been appropriated heretofore. I believe we are making extravagant appropriations in view of the return we are getting on many of these streams. We passed one a moment ago, but I did not care to raise the point, where only one boat is on the stream, and that only running occasionally. I do not know of any other way of calling the attention of Congress to the condition of affairs we have on these rivers and creeks except by moving to strike out the appropriation, no matter what the action of the committee may be. As I said before, I can quote the best authorities on the subject, not only in this country, but those who have had experience in Europe, that the inland-waterway traffic there, with the exception of one or two streams and canals, is not a good investment compared with the small returns in commerce. Until we get some means here of controlling the railroad transportation so that we can withhold rates and prevent them from running the traffic off the rivers, as they do in so many cases, it is useless for the Government to keep throwing in large amounts of money as in this case, $100,000, in addition to over a million dollars that has already gone into this river.

Mr. BARKLEY. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Yes.

Mr. BARKLEY. Is it the gentleman's theory that the Government ought to force the railroads to raise their rates in order to allow the boats to run upon the rivers?

Mr. FREAR. The theory of the European Governments by means of which they maintain waterway traffic is to have the railroad rate so large that it forces traffic onto the rivers. That is the policy pursued there.

Mr. BARKLEY. Is that the policy that the gentleman advocates here?

Mr. FREAR. That is the policy that is pursued there. The policy that I would advocate here is not to make appropriations for streams unless they are carrying actual commerce, because you have your commissions, interstate and State, by means of which you can have the rates regulated. If at a river point, and you lower the rates below what they are 50 miles inland, some one inland has to make good the deficiency. With the State commissions and the Interstate Commerce Commission we do not need to make these large appropriations, because you have a forum to which you can go.

Mr. BARKLEY. How can it be correctly estimated how much commerce a great river might carry in an unimproved condition as compared with what it would carry if the river was improved from the mouth to the head?

Mr. FREAR. If the gentleman's argument amounts to anything, it means simply this, that on all these rivers the traffic is steadily decreasing, from the Mississippi River down. I do not think there is a single exception that can be made. The traffic has decreased because of the railway competition throughout the country, and practically the same condition exists in Europe, except on the Rhine.

Mr. BARKLEY. Is it not true that the traffic on a great many rivers has decreased because of the fact that they could not be navigated more than six months in a year, and that men refuse to put money into an enterprise that they can not work all of the year around?

Mr. FREAR. Then decrease the appropriations to a reasonable amount.

Mr. CULLOP. Mr. Chairman, does not experience show in these improvements that as the improvements have increased the commerce has decreased?

Mr. FREAR. That has been the experience in practically every case, probably not due to that cause, but simply because of the competition of the railroads or because it is found more expedient to use other means of transportation.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. SWITZER rose.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. SWITZER. Mr. Chairman, I desire to call the attention of the committee to the fact that the gentleman from Wisconsin [Mr. FREAR] in one place in his lengthy minority report advocates regulating monopoly and in another place advocates the old competitive theory. I suppose he will do the same thing on the floor of the House. In other words, he wants the committee to understand that every ton of traffic that the river takes from the rail will in proportion to the traffic increase the rates to be paid by the patrons on some other part of the railway system because of the decreased traffic. He does not take into consideration that the opening up of some of these rivers and the developing of the river trade allows the manufacturer to concentrate in many places where he can get a cheap rate, sand, ore, coke and coal, lumber and timber, and thus enable him to manufacture articles at a price attractive to the general public, increasing the consumption of these articles and thereby increasing the general tonnage traffic of the railways and the rivers throughout the country.

But when the gentleman comes to that part of his report entitled "Where the money goes," and referring to the Mississippi River, he says that if we had taken the $150,000,000 that has been expended on the Mississippi River and it had been invested in railways there would have been a decrease in railway rates in that section of the country. If it is right and proper to invest money in additional railways to decrease the railway rates, why not invest money in river development in order to decrease railway as well as water rates?

But if the gentleman will follow the expenditures upon the Mississippi River, he will not have to draw upon his imagination or indulge in the realm of speculation to find the development of the railways. In 1880 there were only about 500 miles of railway in the Delta of the Mississippi, and to-day there are 3,700 miles. Most of it is in the Delta of the Mississippi, because the levees along the river, protecting these lands, make the demand for these railways, and, in fact, the railways could not have been built in the Delta if the lands had not been protected by the system of levees that is being now constructed by the Mississippi River Commission. Here you have, without drawing on your imagination, actual development of railways. But I protest against gentlemen, when it becomes convenient, in discussing one part of the bill advocating regulated monopoly and in another part advocating the competitive theory.

Mr. FREAR. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. Debate has been exhausted on this paragraph. The Clerk will read.

The Clerk read as follows:

Tombigbee River, Ala. and Miss.: For maintenance of improvement from the mouth to Demopolis, $25,000, and from Demopolis, Ala., to Walkers Bridge, Miss., $10,000; in all, $35,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. Just briefly, in reply to what has been said, it seems to me that it requires no answer for anyone who is familiar with the facts and who is acquainted with waterway-transportation questions. I have followed in my suggestions in regard to the building of railway lines the very propositions that leading waterway authorities and economists have made, men who have made a thorough study of the question. That same method of comparison is used with the European waterways as well as those in this country. The question occurs if the $150,000,000 that has been put into the Mississippi River could not have been better invested by the Government. We could have built railroads with that money, many thousands of miles—built them and owned them—we would have had lower rates, whereas no material return comes from the waterways as they have been constructed.

Now, I say that that is the method of determination established by waterway writers so far as I have examined. If the Government has charge—and I am not advocating Government ownership—but if the Government had used that money for building railways we would profit from the investment. That is done in Germany and in other countries. If the money had been wisely invested we would have something to show for it.

That is the reason for the comparison; not because of any personal interest in the subject. I have given a rule of computation used by those who attempt to ascertain the result of such investments by this Government and by other Governments on waterways. And this perhaps has held true, according to the best waterway experts of waterways in Europe, outside of the Rhine River. The same rule can be applied, and they say probably it would be cheaper in Europe to use the money in reducing railway rates rather than to go on and make many of the expensive improvements which have been made on European waterways, canals, and rivers.

Mr. MADDEN. Mr. Chairman, I move to strike out the paragraph beginning in line 24 on page 15 and ending in line 2, page 16.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Strike out the paragraph beginning on line 24, page 15, and ending on line 2, page 16.

Mr. MADDEN. Mr. Chairman, this seems to be an insignificant river, upon which there has been expended $367,858.22 without any cooperation.

Mr. SMALL. Mr. Chairman, a parliamentary inquiry. That has been passed.

Mr. MADDEN. No. The gentleman moved to strike out the last word, and that left that thing open. Upon this river $367,858.22 has been expended out of the Public Treasury, with no local cooperation, very little, if any, traffic on the stream, and then $35,000, to be expended if this appropriation is to be adopted.

Mr. LONGWORTH. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. LONGWORTH. This river is a very beautiful river, is it not?

Mr. MADDEN. Well, I have heard the gentleman from Mississippi [Mr. CANDLER] frequently talk about its beauty, and how the birds sing in its trees along the shore, and how the sun shines, and how they can look through the darkness of the trees to the blue sky above, and can see the shimmering water below, and also tell about everything else that might be thought beautiful except the traffic upon the stream.

Mr. SLOAN. Will the gentleman yield?

Mr. MADDEN. I will, sir.

Mr. SLOAN. This is not the river that was in doubt some years ago, and called for exploration by a noted explorer, is it?

Mr. MADDEN. No.

Mr. SLOAN. The doubt has been removed?

Mr. MADDEN. No; it will not be until we have heard from the gentleman from Mississippi [Mr. CANDLER].

Mr. SLOAN. Is the doubt remover present?

Mr. MADDEN. He is.

Mr. CANDLER of Mississipi. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. CANDLER of Mississippi. You do not want to strike the Tombigbee out of the bill. [Laughter.]

Mr. MADDEN. I thought perhaps it would be very beneficial to the bill if the Tombigbee were left out and this $35,000 that is to be appropriated should be saved to the public.

Mr. CANDLER of Mississippi. I want to serve notice on the gentleman and on the House that if you strike out the Tombigbee you can not pass the bill, because you could not pass the bill without the Tombigbee being in it. [Laughter and applause.]

Mr. MADDEN. Then, if the statement of the gentleman from Mississippi is a fact, I hope the item will go out of the bill, because it will be thirty-nine or forty million dollars to be saved to meet this great question of preparedness that we will have to meet in a short time, and it will be one burden taken off the shoulders of the Democratic leader of the House when he comes to prepare his revenue bill upon which we will all be called upon to vote. [Laughter.] I sincerely hope, Mr. Chairman, that this item will be stricken from the bill and that this $35,000 at least will be saved as the beginning of the end of a fund to be used later on for preparedness. [Laughter.]

Mr. MANN. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] moves to strike out the last two words.

Mr. SPARKMAN. Mr. Chairman, how much time does the gentleman desire to use?

Mr. MANN. Only a minute or two.

Mr. Chairman, my colleague, Mr. MADDEN, has moved to strike this item out of the bill, and the gentleman from Mississippi [Mr. CANDLER] has stated that if the item relating to the Tombigbee went out of the bill, the bill could not pass, which seems to present a curious case of difference of opinion between the House and the distinguished body at the other end of the Capitol known as the Senate.

Now, I have listened to the gentleman from Mississippi a number of times in the House while he talked very eloquently and convincingly about the Tombigbee River, but I hold in my hand a bill passed by the Senate the other day, where this river is slurringly referred to as the Tom Beckby River—the name of an individual, Tom Beckby. I want to know whether the distinguished gentleman from Mississippi [Mr. CANDLER] calls this the "Tombigbee" River, one word, or the "Tom Beckby" River, two names?

Mr. GREEN of Iowa. A hyphenated name. [Laughter.]

Mr. MANN. I would like to know whether the gentleman is going to permit the Senate to call this the "Tom Beckby" River? We know the gentleman from Mississippi by the name of "TOMBIGBEE CANDLER," and we know the name of the river by the name of "Candler Tombigbee." Is that all gone to the winds now? [Laughter.]

Mr. CANDLER of Mississippi. Even the Senate of the United States would not undertake to change the name of the Tombigbee, because if they did that they would change the history of the United States of America [laughter], and it would be impossible to do anything of that kind, because the history made by the Tombigbee River is identical with the records made by this great Republic. It is the river that adds glory to this Republic. If you were to take it out, there would be no glory left. [Laughter.]

Mr. MANN. The gentleman says the Senate would not do such a thing. The fact is it has done such a thing. Here is a "bill for a bridge across the Tom Beckby, commonly called the Tombigbee."

Mr. CANDLER of Mississippi. The Senate of itself can not do anything, and I am glad it can not. It requires the concurrence of this House to do anything, and the change of the Tombigbee would be as impossible in this House as it would be to stop the sun as it shines in the firmament above. [Laughter.]

Mr. SLOAN. Mr. Chairman, will the gentleman yield to me?

Mr. MANN. I will yield first to the gentleman from Nebraska, although I hope later to yield to the gentleman from Mississippi [Mr. CANDLER].

Mr. SLOAN. Why should we invest any money on this river? It is Mr. Beckby's river.

Mr. MANN. No; it is the Tombigbee.

Mr. SLOAN. What right have we to interfere with private waterways and interfere thereby with preparedness?

Mr. MANN. The gentleman from Nebraska is mistaken. While the name of this river is "Tombigbee," or "Tom Beckby," it does not belong to that gentleman at all. It belongs to the gentleman from Mississippi, Mr. CANDLER. [Laughter.]

Mr. CANDLER of Mississippi. I am very proud of my possession, because I consider it the greatest possession in the world.

The CHAIRMAN. The question is on the amendment of the gentleman from Illinois to strike out the paragraph.

Mr. MANN. I withdraw the amendment.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman from Mississippi [Mr. CANDLER] yield for a question?

Mr. SPARKMAN. I should like to inquire how much time the gentleman wants?

Mr. MOORE of Pennsylvania. I merely want to ask the gentleman a question.

Mr. SPARKMAN. Will two minutes be sufficient?

Mr. MOORE of Pennsylvania. Yes.

Mr. SPARKMAN. I ask unanimous consent that debate on this paragraph and amendments thereto close in two minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate on this paragraph and amendments thereto close in two minutes. Is there objection?

There was no objection.

Mr. MANN. We ought to hear the annual speech on the Tombigbee River. [Applause.]

Mr. MOORE of Pennsylvania. Mr. Chairman, how much time have I?

The CHAIRMAN. Two minutes.

Mr. MOORE of Pennsylvania. I may yield a portion of that time to the gentleman from Mississippi [Mr. CANDLER]; but first I want to ask him this question: Whereas the question has been raised by the gentleman from Illinois [Mr. MANN] as to the two methods of spelling the name of this river, is it not a fact, highly creditable to the gentleman from Mississippi and also to the river of which he is the author, that where the name of a river is spelled in two separate and distinct ways it is entitled to two separate and distinct appropriations? [Laughter.]

Mr. CANDLER of Mississippi. The Tombigbee River is entitled to a double appropriation regardless of its spelling. The spelling of the name has nothing to do with it. It has glory enough to entitle it to a double appropriation, whether spelled in one way or the other; but I resent any suggestion loooking toward the changing of the name, because, as I have stated, I do not wish to change the history of the Republic. [Laughter.]

Mr. MOORE of Pennsylvania. Mr. Chairman, how much time have I remaining?

The CHAIRMAN. The gentleman has half a minute.

Mr. MOORE of Pennsylvania. I yield that half minute to the gentleman from Mississippi to explain further about this glorious river of the South.

Mr. CANDLER of Mississippi. Everybody knows about it, and hence it is not necessary to explain it. [Applause.]

The Clerk read as follows:

Pearl River, Miss.: Continuing improvement and for maintenance below Rockport, $35,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. This is the stream of my friend from Mississippi [Mr. HARRISON], and I have here the statement that he made in regard to it. It is a very fair statement. I merely wish to suggest to the House a question of policy, which does not apply alone to this but to some of the other items that we have had before us. This statement of the gentleman from Mississippi [Mr. HARRISON] is so clear-cut that it is a good example of the policy we pursue.

All of the traffic upon that stream is timber, logs, and lumber from one or two mills. There is no merchandise. The Government is engaged constantly in taking out the snags put there by the mills. The question is whether or not the Government wants to be engaged in that purpose. The question is one of policy, I admit; but it seems to me that it is a policy the Government ought not to pursue.

Mr. HARRISON. The gentleman is very fair in his statement. I am glad he has my remarks before him; but the gentleman is mistaken as to the lumber that comes down from the mills being the only commerce. The commerce is made up in part of logs coming from the lands of the settlers.

Mr. FREAR. I assume that; but the Government is engaged constantly in snagging the stream, and there is no merchandise upon it.

I have offered a pro forma amendment in order to call attention to it. The Government is engaged in taking out snags and the mills keep putting them in.

The CHAIRMAN. The pro forma amendment will be withdrawn. The Clerk will read.

The Clerk read as follows:

Yazoo River and tributaries, Mississippi: For maintenance and improvement, including Yazoo, Tallahatchie, Coldwater, and Big Sunflower Rivers, Tchula Lake, Steele and Washington Bayous, Lake Washington, and Bear Creek, $45,000: *Provided*, That the sums herein and hereafter appropriated for maintenance of improvement of mouth of Yazoo River, together with any unexpended balance of appropriations heretofore made therefor, shall be expended under the direction of the Secretary of War.

Mr. MANN. I move to strike out the last word. What is the purpose of the proviso in this paragraph?

Mr. HUMPHREYS of Mississippi. I can answer the gentleman.

Mr. MANN. All right.

Mr. HUMPHREYS of Mississippi. Sixteen or eighteen years ago Congress adopted a project whereby the Yazoo River was turned through a canal into Lake Centennial in front of the city of Vicksburg. I will say that part of the project, the harbor at Vicksburg and the mouth of the Yazoo River, carried an appropriation of a certain sum. At the time that the original project for the diversion was adopted the harbor at Vicksburg was then under the Mississippi River Commission. That was transferred to the Chief of Engineers. A few years ago Congress undertook to transfer the harbor at Vicksburg back to the jurisdiction of the Mississippi River Commission, and in doing it—it was a Senate amendment and the House agreed to it—we transferred the entire item as it had appeared in the bill, the harbor at Vicksburg and the mouth of the Yazoo. The Mississippi River Commission is not at all equipped to get up through the lake to the mouth of the Yazoo Canal.

Mr. MANN. The purpose of it is to have it under the Chief of Engineers instead of under the Mississippi River Commission.

Mr. HUMPHREYS of Mississippi. Yes; this is to transfer it back to the Chief of Engineers, where it ought to be.

The Clerk read as follows:

Southwest Pass, Mississippi River: Continuing improvement and for maintenance, $600,000.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. I wish some one who has the information would advise the committee as to the present depth of Southwest Pass.

Mr. SPARKMAN. My recollection is, about 32 feet; they are working to a depth of 35 feet.

Mr. MOORE of Pennsylvania. Is there any appropriation here for the Southeast Pass?

Mr. SPARKMAN. Not in this bill.

Mr. DUPRÉ. The South Pass? That is carried in the sundry civil bill.

Mr. MOORE of Pennsylvania. I have had occasion to look up the Coast and Geodetic Survey records and have found, just to illustrate how rivers will silt up and how necessary it is to make appropriations for their maintenance, that the Southeast Pass, which originally had 12 fathoms of water, which would be 72 feet, has filled up to a very few feet.

Mr. DUPRÉ. I do not know what the gentleman means by the Southeast Pass. There is no such condition in the South Pass, for that is the main channel for the entrance to the river.

Mr. MOORE of Pennsylvania. What pass is used by vessels in the foreign trade?

Mr. DUPRÉ. The South Pass and the Southwest Pass have been used, and will be more largely used after the improvement is completed. They are the two passes used for vessels in the foreign trade.

Mr. MOORE of Pennsylvania. One is closed up, is it not?

Mr. DUPRÉ. The South Pass is the one developed by the Eads jetties, and there is 32 feet of water there.

Mr. MOORE of Pennsylvania. I am not opposing this appropriation for the Southwest Pass. I think it ought to be made. I am referring to that region where there has been a considerable filling up of the channel.

Mr. DUPRÉ. In the Southwest Pass conditions have not been quite as favorable, and a board has gone down to investigate there.

Mr. MOORE of Pennsylvania. The present appropriation for the Southwest Pass is to continue the work for 35 feet, which has at present a depth of 28 feet?

Mr. DUPRÉ. Twenty-eight feet.

Mr. MOORE of Pennsylvania. That is the channel used by ships in the foreign trade, entering New Orleans.

Mr. DUPRÉ. Yes; because conditions in the Southwest Pass have not been as good and satisfactory on account of the silting.

Mr. MOORE of Pennsylvania. Is the channel being used to any great extent at present?

Mr. DUPRÉ. Yes.

Mr. MOORE of Pennsylvania. I wanted to bring out, if the gentleman please, that where there is a natural filling up of the channel appropriations for maintenance are in order.

Mr. HUMPHREYS of Mississippi. The silt at the mouth of the river is what closed the river before the Government took it up. The Mississippi River as it emptied into the Gulf originally filled up at the mouth, as all silt-bearing streams do when they empty into the ocean. So it was not possible for a ship drawing more than 12 or 14 feet of water to enter the river, although just above there the river is 100 or 150 feet deep. Along the city of New Orleans the river is 150 to 200 feet deep, but when it reached the Gulf the deposits took place and the river was closed. Many years ago, under what is known as the Eads jetty project, Congress appropriated money and undertook to build jetties and confine the water between the inner walls so that it would force it through and scour it out; and that took place and deepened the water considerably. That is true of the South Pass. There are three passes—the South Pass, the Southwest Pass, and Pass a Loutre.

Several years ago Congress adopted a project for a 35-foot channel and provided that it should be made through the Southwest Pass. That is the project that has been prosecuted for a number of years. As I understand, the depth of water is 28 feet, and there is no question, I assume, that when the project is completed it will develop a channel of 35 feet. So far no very great demand has developed for a 35-foot channel.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. HUMPHREYS of Mississippi. Yes.

Mr. MOORE of Pennsylvania. I have brought this question up to try to show how interdependent we are in matters of this kind. We do business at the port of Philadelphia with the port of New Orleans, and if our vessels run on the shoals there or if yours run on the shoals up around Philadelphia, it is a serious matter. I happen to have before me now, borrowing it from the gentleman from Wisconsin [Mr. FREAR], a chart of the North Carolina coast. It is one of those coasts that by reason of its sandy formation is constantly filling up with shoals. That is so all along the Atlantic coast, and I wanted to have it understood that the same sort of conditions prevail down at the Passes of the Mississippi, where the business is not Mississippi's business alone, but Philadelphia's business, or New York's business, or Chicago's business. It is natural that those shoals should form, and it is necessary that Congress should make appropriations to keep them clear.

Mr. STAFFORD. Has the Government, as on the Great Lakes, any dredges of its own for excavating the bars that form at the mouths of the rivers along the Gulf and in the delta of the Mississippi?

Mr. HUMPHREYS of Mississippi. Yes; all of those dredges are owned by the Government. There was a provision put in the law a few years ago, as I recall, that above a certain point here on the Atlantic coast north the Government should not construct any dredges, but that did not apply to the southern waters.

Mr. STAFFORD. All along the Gulf coast?

Mr. HUMPHREYS of Mississippi. And at the mouth of the rivers.

Mr. DUPRÉ. The report shows that there are two dredges owned by the Government that are constantly in operation at the mouth of the river.

Mr. HUMPHREY of Washington rose.

Mr. SPARKMAN. Mr. Chairman, how much time does the gentleman desire?

Mr. HUMPHREY of Washington. Five minutes.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on the paragraph and all amendments thereto close in five minutes. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington. Mr. Chairman, I feel that I ought not to let this day close without expressing my very great pleasure at the return of my distinguished friend from Pennsylvania [Mr. MOORE] once more to the Republican fold. Yesterday when he for the time being followed the President I was bowed with grief, and it disturbed me not a little, but since he has come back to-day I want to greet him. It is not very often that the distinguished gentleman from Pennsylvania is wrong. He is usually right, and as I have been reading these items of appropriations to-day I have thought of the fight that was made by the distinguished gentleman from Pennsylvania and myself during the last Congress, and if the fight we

made had been won there would have been a different situation in this country to-day. I want to read a dispatch that I have received from Seattle that throws light upon what I have in mind. It is directed to the distinguished Secretary of Commerce. It is as follows:

SEATTLE, *March 27, 1916.*

Hon. WILLIAM C. REDFIELD,
Secretary of Commerce, Washington, D. C.:

Due entirely to section 13 of seamen's bill, 8 sailing vessels loaded with lumber for foreign trade have been delayed total of 53 days owing to inability to secure certified seamen Some have been permitted to clear without full compliance with law. Two vessels are now waiting for crews not obtainable owing to seamen's bill. This is detrimental to our commerce and principal industry. There has been no delay clearing Japanese vessels or vessels from British Columbia, our competitors. We earnestly request suspension of the section until the Government can offer relief by better legislation.

MERCHANTS' EXCHANGE OF SEATTLE.

If we write a few more laws on the statute books like the seamen's law, it will not be necessary for us to improve our harbors, because no vessels will be able to sail out of them, anyway. I am proud to say that my friend, the gentleman from Pennsylvania [Mr. MOORE], joined me in fighting this law, the most vicious and destructive ever written on our statute books.

The Clerk read as follows:

Inland waterway on the coast of Louisiana: For maintenance from Franklin to Mermentau, $10,000, and from Mermentau River to Sabine River, La. and Tex., $10,000; in all, $20,000.

Mr. DUPRÉ. Mr. Chairman, I offer the following amendment, which I send to the desk and ask to have read; and I desire to state that it meets the approval of the chairman of the committee.

The Clerk read as follows:

Page 17, line 22, after the figures "$13,000," insert:
"*Provided*, That, of the amount herein appropriated, the sum of $1,500, or so much thereof as may be necessary, may be expended in removing the wrecked lock and dam near the mouth of the Mermentau River."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The Clerk read as follows:

Removing the water hyacinth, Alabama, Mississippi, Louisiana, and Texas: For the removal of the water hyacinth from the navigable waters in the States named, in so far as it is or may become an obstruction to navigation, $20,000.

Mr. MILLER of Pennsylvania. Mr. Chairman, I move to strike out the word "hyacinth" in line 24. A few days ago I had the pleasure, and it was a real pleasure, of voting with the chairman of the Committee on Ways and Means in favor of retaining the duty on sugar so as to save $41,000,000 to the Government. In a few weeks hence we will be called upon to vote for a bill to levy additional taxes to pay the expenses of the Government for the coming year, and we shall vote for that; we will have to; and here to-day, if the statements made by the gentleman from Wisconsin [Mr. FREAR] are true, we are absolutely throwing away $20,000,000 on improvement of rivers worthless to commerce, where there is no commerce, where there is not much water, and in this case where they have to take the weeds out in order that boats may navigate the streams.

We ought to remember, gentlemen on that side of the House, and there are not very many of them here, I think only about 25, and about an equal number of this side—50 gentlemen altogether, here to pass a bill appropriating $39,000,000—we ought to remember that a good gentleman that used to be over in the Senate from Ohio, Mr. Burton, and who stopped the waste of public funds, is not there now. In the last Congress he saved this country $42,000,000 by his opposition. There will be no person over in the Senate this year to do that, and when this bill goes from this House with its $39,000,000 or $40,000,000, it will come back with eight or ten million dollars more, and we will pass it, because there will be enough money going into the districts, not to benefit the rivers but benefit the people that want it, and a whole lot of other Members who want to favor them will vote for it also.

I think gentlemen on the other side of the aisle, in view of the fact that we need money to run this Government for the next year, in view of the fact that they put the duty on sugar for the express purpose of getting money, in view of the fact that we will be voting in a little while for more taxes on the people, would be wise if they would think the matter over and reduce the appropriation carried by this bill to what it ought to be, at least to $20,000,000.

Mr. HARRISON. Will the gentleman yield?

Mr. MILLER of Pennsylvania. Yes.

Mr. HARRISON. Does the gentleman propose by his amendment to strike out the word "hyacinth"?

Mr. MILLER of Pennsylvania. Yes.

Mr. HARRISON. If it should be stricken out, we would appropriate $20,000 to remove the water.

Mr. MILLER of Pennsylvania. If we remove the water the hyacinths will not grow. [Laughter.]

Mr. MANN. It would not take that much to remove the water from most of the river.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Bayou Queue de Tortue, La.: For maintenance, $3,000.

Mr. MANN. Mr. Chairman, I move to strike out the last word. I think we had an understanding last night that if we met at 11 o'clock we would quit at this time to-night. It will be 5.30 before the House adjourns.

Mr. SPARKMAN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. SHERLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill, H. R. 12193, the river and harbor appropriation bill, and had come to no resolution thereon.

FORTIFICATIONS.

Mr. SHERLEY, from the Committee on Appropriations, reported the bill (H. R. 14303) making appropriations for fortifications and other work for defense, for the armament thereof, for the procurement of heavy ordnance for trial and service, and for other purposes, which was read a first and second time and referred to the Committee of the Whole House on the state of the Union and ordered printed. (H. Rept. 498.)

Mr. MANN. Mr. Speaker, I reserve all points of order on the bill.

MINORITY VIEWS ON PHILIPPINE BILL.

Mr. GARRETT. Mr. Speaker, on behalf of the gentleman from Virginia [Mr. JONES], chairman of the Committee on Insular Affairs, I have presented a report on the bill S. 381, and I ask unanimous consent——

Mr. MANN. What is the bill?

Mr. GARRETT. It is not necessary to report it in this way. I am asking unanimous consent that the minority may have five days in which to file minority views.

The SPEAKER. The gentleman from Tennessee [Mr. GARRETT] asks unanimous consent that the minority of the Committee on Insular Affairs have five days in which to file their views on the bill S. 381. Is there objection?

There was no objection.

EXTENSION OF REMARKS.

Mr. MCKELLAR. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing therein some observations which I made on the McLemore resolution, and have not been put in the RECORD.

The SPEAKER. The gentleman from Tennessee asks unanimous consent to extend his remarks in the RECORD on the McLemore resolution. Is there objection? [After a pause.] The Chair hears none.

HOUR OF MEETING TO-MORROW.

Mr. KITCHIN. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. to-morrow.

The SPEAKER. The gentleman from North Carolina asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock to-morrow. Is there objection?

Mr. MANN. Reserving the right to object, is to-morrow pension day?

Mr. STAFFORD. Yes.

Mr. MANN. Do you expect to go ahead right away with this bill, or has the Pension Committee something to call up? Or do they waive their rights?

Mr. KITCHIN. They do not object to it.

Mr. MANN. I am well aware that under the action of the Democratic caucus they can not object to it.

Mr. KITCHIN. They could, but I understand there is nothing from that committee.

Mr. MANN. We just wanted to know for information.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

ENROLLED BILLS AND JOINT RESOLUTION SIGNED.

The SPEAKER announced his signature to enrolled bills and joint resolution of the following titles:

S. J. Res. 80. Joint resolution authorizing the Secretary of War to receive for instruction at the United States Military

Academy at West Point René W. Pintó y Wentworth, a citizen of Cuba;

S. 585. An act conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in claims of the Sisseton and Wahpeton Bands of Sioux Indians against the United States;

S. 922. An act for the relief of Mary E. Nicolson; and

S. 707. An act for the relief of Beverly E. Whitehead.

EXTENSION OF REMARKS.

Mr. PLATT. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting a little address by the Hon. William H. Calder, a former Member of this House and a candidate for United States Senator in the State of New York, on the subject of preparedness.

The SPEAKER. Is there objection? [After a pause.] The Chair hears none.

ADJOURNMENT.

Mr. KITCHIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 30 minutes p. m.) the House, under its previous order, adjourned until to-morrow, Friday, April 7, 1916, at 11 o'clock a. m.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. PADGETT, from the Committee on Naval Affairs, to which was referred the bill (S. 1417) to erect or purchase, or both, a factory for the manufacture of armor, reported the same without amendment, accompanied by a report (No. 497), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. JONES, from the Committee on Insular Affairs, to which was referred the bill (S. 381) to declare the purpose of the people of the United States as to the future political status of the people of the Philippine Islands, and to provide a more autonomous government for those islands, reported the same without amendment, accompanied by a report (No. 499), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and a memorial were introduced and severally referred as follows:

By Mr. BAILEY: A bill (H. R. 14296) to authorize and empower the Secretary of the Interior immediately to develop oil-producing lands belonging to the public domain, to authorize an appropriation therefor, and for other purposes; to the Committee on the Public Lands.

By Mr. HINDS: A bill (H. R. 14297) to provide for the purchase of a site and the erection of a public building thereon at Sanford, in the State of Maine; to the Committee on Public Buildings and Grounds.

By Mr. HAY: A bill (H. R. 14298) to standardize the barrel of lime; to the Committee on Coinage, Weights, and Measures.

By Mr. GRAHAM: A bill (H. R. 14299) to amend section 33 of an act to codify, revise, and amend the laws relating to the judiciary, approved March 3, 1911; to the Committee on the Judiciary.

By Mr. BARCHFELD: A bill (H. R. 14300) to provide for the purchase of a site and the erection of a public building thereon at Duquesne, Pa.; to the Committee on Public Buildings and Grounds.

By Mr. ANTHONY: A bill (H. R. 14301) to increase the pay of United States penitentiary guards; to the Committee on Appropriations.

By Mr. TAVENNER: A bill (H. R. 14302) to provide for the retirement of employees in the classified civil service of the United States of America, the establishment of a civil-service superannuation and disability pension system, and for other purposes; to the Committee on Reform in the Civil Service.

By Mr. SHERLEY: A bill (H. R. 14303) making appropriations for fortifications and other works of defense, for the armament thereof, for the procurement of heavy ordnance for trial and service, and for other purposes; to the Committee of the Whole House on the state of the Union.

By Mr. MADDEN: Resolution (H. Res. 194) authorizing the Committee on the Judiciary to investigate the lobbying activities of the Du Pont Powder Co. and others; to the Committee on Rules.

By Mr. BARNHART: Concurrent resolution (H. Con. Res. 26) authorizing the printing of the journal of the national encampment of the Grand Army of the Republic; to the Committee on Printing.

By Mr. LOBECK: Concurrent resolution (H. Con. Res. 27) authorizing the printing of a revised edition of the bankruptcy laws, as prepared by the Committee on Revision of the Laws of the House of Representatives; to the Committee on Printing.

By Mr. DALE of New York: Memorial of the Legislature of the State of New York, favoring adequate preparedness for the Army and Navy of the United States; to the Committee on Military Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. ANTHONY: A bill (H. R. 14304) granting a pension to Sidonia Lanitz; to the Committee on Invalid Pensions.

By Mr. ASHBROOK: A bill (H. R. 14305) granting an increase of pension to Henry A. Butts; to the Committee on Invalid Pensions.

By Mr. BARCHFELD: A bill (H. R. 14306) granting an increase of pension to James R. Davidson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14307) granting an increase of pension to Michael Sowers; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14308) granting a pension to Lyda Brown; to the Committee on Invalid Pensions.

By Mr. BORLAND: A bill (H. R. 14309) granting an increase of pension to Tillie E. Reeves; to the Committee on Invalid Pensions.

By Mr. CASEY: A bill (H. R. 14310) granting a pension to Thompson S. Lozan; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14311) granting a pension to Patrick McDonald; to the Committee on Pensions.

Also, a bill (H. R. 14312) granting an increase of pension to Charles Dippre; to the Committee on Pensions.

By Mr. COOPER of West Virginia: A bill (H. R. 14313) granting a pension to Sue E. Madden; to the Committee on Pensions.

By Mr. DARROW: A bill (H. R. 14314) granting a pension to Sarah C. Daisey; to the Committee on Invalid Pensions.

By Mr. FARR: A bill (H. R. 14315) granting a pension to Mary A. Butcher; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14316) for the relief of the widow of Patrick F. McDermott; to the Committee on Military Affairs.

By Mr. FREAR: A bill (H. R. 14317) to reinstate Joseph Thaddeus Zak as a cadet at the United States Military Academy; to the Committee on Military Affairs.

By Mr. GARD: A bill (H. R. 14318) granting a pension to Frank L. Schaarman, alias Frank L. Sherman; to the Committee on Pensions.

Also, a bill (H. R. 14319) granting an increase of pension to Levi Essick; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14320) granting an increase of pension to Edward E. Curran; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14321) granting an increase of pension to Andrew J. Smith; to the Committee on Invalid Pensions.

By Mr. HAMILTON of Michigan: A bill (H. R. 14322) granting a pension to Emily Zapf; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14323) granting an increase of pension to Daniel J. Masters; to the Committee on Invalid Pensions.

By Mr. MURRAY: A bill (H. R. 14324) removing the restrictions of Nancy Smith; to the Committee on Indian Affairs.

Also, a bill (H. R. 14325) to enroll Robert Underwood; to the Committee on Indian Affairs.

By Mr. REILLY: A bill (H. R. 14326) granting an increase of pension to Thomas Lynch; to the Committee on Invalid Pensions.

By Mr. RICKETTS: A bill (H. R. 14327) granting a pension to Louisa C. Younker; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14328) granting a pension to Benjamin Jadwin; to the Committee on Invalid Pensions.

By Mr. RODENBERG: A bill (H. R. 14329) granting an increase of pension to Clark K. Denny; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14330) for the relief of James W. Kingon; to the Committee on Claims.

By Mr. RUSSELL of Missouri: A bill (H. R. 14331) granting an increase of pension to Harriett A. Langston; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14332) for the relief of the estate of Robert P. Paramore; to the Committee on Claims.

By Mr. SCHALL: A bill (H. R. 14333) granting a pension to Hulda E. Bryant, former widow of John W. Walker; to the Committee on Invalid Pensions.

By Mr. SCULLY: A bill (H. R. 14334) granting an increase of pension to Laura Liming; to the Committee on Invalid Pensions.

By Mr. STAFFORD: A bill (H. R. 14335) granting a pension to Elizabeth Muller; to the Committee on Invalid Pensions.

By Mr. WATKINS: A bill (H. R. 14336) for the relief of the heirs of Mrs. Susan A. Nicholas; to the Committee on War Claims.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Memorial of Manila Merchants' Association; to the Committee on the Territories.

Also (by request), memorial of Murray Post, No. 179, Grand Army of the Republic, indorsing Senate bill 392 and House bill 386; to the Committee on Military Affairs.

By Mr. ANTHONY: Memorial of Republican State convention at Topeka, Kans., favoring national woman suffrage; to the Committee on the Judiciary.

Also, petition of Bert H. Simpson and other citizens of Doniphan County, Kans., against passage of bills to amend postal laws; to the Committee on the Post Office and Post Roads.

By Mr. BEALES: Petition of residents of Gettysburg and Cumberland Township, Adams County, Pa., urging the passage of House bill 13342, to improve and maintain certain public roads and parts thereof included within the limits of the national park at Gettysburg, as defined by the act of Congress entitled "An act to establish a national military park at Gettysburg, Pa.," approved February 11, 1895, and making an appropriation therefor; to the Committee on Military Affairs.

Also, papers to accompany House bill 13353, for relief of Martin Frey; to the Committee on Invalid Pensions.

By Mr. CASEY: Petition of Woman's Christian Temperance Union and 200 people of Freeland, Pa., favoring national prohibition; to the Committee on the Judiciary.

By Mr. CLINE: Petition of citizens of the twelfth Indiana district, against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of citizens and organizations of the twelfth Indiana district, favoring national prohibition; to the Committee on the Judiciary.

Also, petition of sundry citizens of Fort Wayne, Ind., favoring House bill 6915, relative to employees of the postal service; to the Committee on the Post Office and Post Roads.

By Mr. COLEMAN: Petition of 23 citizens of Pittsburgh, Pa., favoring national prohibition; to the Committee on the Judiciary.

By Mr. CRAMTON: Memorial of Local Union No. 97 of National Brotherhood of Operative Potters, of Mount Clemens, Mich., in support of the Linthicum resolution for Federal inspection of dairies and dairy products; to the Committee on Rules.

Also, petitions of Alvin Baerwolf and 12 other citizens of the seventh congressional district of Michigan, for an embargo on shipment of munitions of war; to the Committee on Foreign Affairs.

Also, petitions of Speaker Baptist Church, of Melvin, Sanilac County; session of First Presbyterian Church of Lapeer; the Methodist Episcopal Church of North Branch; C. E. Crissman and 19 other citizens of Macomb County; and 11 citizens of Melvin, all in the State of Michigan, asking speedy passage of Webb-Smith national prohibition resolution; to the Committee on the Judiciary.

Also, petitions of F. J. Jenkins and 19 other farmers of Tuscola County and Mrs. Arthur E. Moore and 28 other members of Fremont Grange, No. 654, of Sanilac County, Mich., protesting against Madden amendment limiting size of parcel-post packages; to the Committee on the Post Office and Post Roads.

By Mr. CROSSER: Petitions of sundry citizens of Cleveland, Ohio, opposing House bills 491 and 6468; to the Committee on the Post Office and Post Roads.

By Mr. CONRY (by request): Petition of certain citizens of St. Helena, Cal., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. DALE of New York: Petition of United States penitentiary guards at Leavenworth, Kans., for increase of pay; to the Committee on the Judiciary.

By Mr. DARROW: Petitions of sundry citizens of Philadelphia, Pa., in behalf of woman suffrage; to the Committee on the Judiciary.

Also, petitions of sundry citizens of Philadelphia, Pa., in opposition to House bills 6468 and 491, to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. ELSTON: Memorial of Hill and Valley Club of Hayward, Cal., favoring Senate joint resolution 132, relative to citizenship of North American Indian; to the Committee on Indian Affairs.

By Mr. FLYNN: Petitions of Henry Torrance and J. M. Etzel Co., of New York City, favoring preparedness; to the Committee on Military Affairs.

By Mr. FOSS: Petition of the Men's Club of the Fourth Presbyterian Church, of Chicago, favoring national prohibition; to the Committee on the Judiciary.

By Mr. FULLER: Petition of United States penitentiary guards at Leavenworth, Kans., for increase of pay; to the Committee on Appropriations.

By Mr. GALLIVAN: Memorial of officers of the Massachusetts squadron of cavalry, favoring organization of a permanent New England regiment of cavalry; to the Committee on Military Affairs.

By Mr. GORDON: Petition of Mrs. Marion E. Kemmer and 77 other members of the Federation of Women's Clubs, of Cleveland, Ohio, praying for favorable action by the House of Representatives on House bill 6915; to the Committee on the Post Office and Post Roads.

Also, petition of Charles L. McElroy and 198 other citizens of Cleveland, Ohio, praying for the enactment of House bill 6915; to the Committee on the Post Office and Post Roads.

By Mr. HAMLIN: Papers to accompany House bill 14099, for relief of James Mitchell; to the Committee on Invalid Pensions.

By Mr. HELGESEN: Petitions of citizens of Dunn Center, Killdeer, Werner, Taylor, Renville, Halliday, Emerson, Mandan, Bismarck, Manning, Kulm, Marie, Forbes, Wirch, McClusky, Niagara, Pilot, McCanna, Shawnee, Leonard, Doyon, Crary, Zenith, and Belfield, all in the State of North Dakota, protesting against the enactment of House bill 652; to the Committee on the District of Columbia.

By Mr. HOPWOOD: Petition of Church of the Brethren, of Paint Township; Burden Bearers S. S. C., of Windber; 40 people of Stoyestown, 250 people of Stoyestown, and 150 people of Stoyestown, all in the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

By Mr. HUMPHREY of Washington: Petition of sundry citizens of the State of Washington, against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petitions of sundry citizens of the State of Washington against passage of bills for Sunday closing of barber shops in the District of Columbia; to the Committee on the District of Columbia.

By Mr. KELLEY: Petitions of F. H. Hitchcock and 11 other residents of Fenton; E. C. Van De Walker and 6 other residents of Mount Morris; and John A. Bradley and 7 other residents of Holly, all in the State of Michigan, favoring a tax on mail-order houses; to the Committee on Ways and Means.

By Mr. LOUD: Petition of Frank Dvzewiecki and 50 other members of Vine Grange, No. 744, of Tawas City, Mich., against the Madden rider in Post Office appropriation bill; to the Committee on the Post Office and Post Roads.

By Mr. MAGEE: Petitions of sundry citizens and societies in the State of New York favoring national prohibition; to the Committee on the Judiciary.

Also (by request), petition of citizens of Syracuse, N. Y., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. MAPES: Memorial of Methodist Episcopal Sunday School of Lamont, Mich., favoring national prohibition; to the Committee on the Judiciary.

By Mr. RAKER: Petition of Seattle (Wash.) Chamber of Commerce urging appropriation for providing a halibut boat for north Pacific waters; to the Committee on the Merchant Marine and Fisheries.

Also, petition of guards of United States penitentiary, Leavenworth, Kans., for increase of pay; to the Committee on Reform in the Civil Service.

Also, petition of 62 citizens of the city of Red Bluff, and A. M. Todd and others, of Placerville, all in the State of California, against passage of bills to amend the postal law; to the Committee on the Post Office and Post Roads.

Also, petition of A. M. Todd and others, of Placerville, Cal., against the Sunday observance bill in the District of Columbia; to the Committee on the District of Columbia.

By Mr. ROWE: Petition of W. S. Brown, of Brooklyn, indorsing House bill 11876; to the Committee on Labor.

Also, petition of George Y. Davison, of Brooklyn, N. Y., favoring censorship of picture films; to the Committee on Education.

Also, memorial of American Temperance Board of Indianapolis, Ind., indorsing the Sheppard-Barkley bill; to the Committee on the District of Columbia.

Also, petition of Merritt & Chapman Derrick & Wrecking Co., of New York, opposing House bill 8036; to the Committee on the Merchant Marine and Fisheries.

Also, petition of Van Blerck Motor Co., of Monroe, Mich., opposing House bill 9411; to the Committee on the Merchant Marine and Fisheries.

Also memorial of Knights of Columbus Institute of Brooklyn, N. Y., in re preparedness; to the Committee on Military Affairs.

By Mr. SCHALL: Petition of Rev. J. H. Johnson, pastor of the Swedish Evangelical Lutheran Church, of Dalbo, Minn., favoring peace; to the Committee on Foreign Affairs.

Also, petitions of sundry citizens and organization of the State of Minnesota, favoring national prohibition; to the Committee on the Judiciary.

Also, petition of C. E. Johnson and members of the Almelund Farmers' Club of Minnesota, favoring investigation of monopoly in twine industry; to the Committee on Rules.

By Mr. SCOTT of Michigan: Memorial of Epworth League of the Methodist Episcopal Church of Sault Ste. Marie, Mich., favoring national prohibition; to the Committee on the Judiciary.

By Mr. SCULLY: Memorial of New Jersey Senate, indorsing House bill 11250 and Senate bill 703; to the Committee on Education.

Also, memorial of New Jersey Senate, favoring erection of an archives building in Washington; to the Committee on Public Buildings and Grounds.

Also, memorial of New Jersey Senate, favoring preparedness; to the Committee on Military Affairs.

Also, memorial of Chamber of Commerce of the United States of America, in re industrial efficiency; to the Committee on Labor.

Also, memorial of Farmers' Educational and Cooperative Union of America and of the National Grange, in re legislation; to the Committee on Agriculture.

By Mr. STEENERSON: Petition of 34 citizens of Esplee, favoring passage of Senate bill 2986, relative to Federal farm-loan system; to the Committee on Banking and Currency.

By Mr. TEMPLE: Petition of Rev. J. C. M. Johnston, New Wilmington, Pa., opposing the Shields water-power bill; to the Committee on the Public Lands.

Also, petition of T. H. Sawhill and Post No. 555, Grand Army of the Republic, of Claysville, Pa., favoring House bill 11707, a bill granting an increase of pension to soldiers' widows; to the Committee on Pensions.

Also, petition of the Washington Branch (Pa.) Socialist Party, favoring House joint resolution 137, prohibiting sectarian appropriations and opposing House bills 401 and 6468; to the Committee on the Post Office and Post Roads.

Also, resolution signed by Rev. H. Edward Cottrell, in behalf of the Hoover Heights Gospel Tabernacle, of New Castle, Pa., favoring national prohibition; to the Committee on the Judiciary.

Also, resolution signed by John Richardson and adopted by the Maitland Memorial Church, of New Castle, Pa., favoring national prohibition; to the Committee on the Judiciary.

Also, resolution signed by Mr. Thomas E. Dagg and 16 other citizens of Washington County, Pa., favoring national prohibition; to the Committee on the Judiciary.

Also, petition signed by Mr. J. H. McClure in behalf of the Wilmington Grange, No. 1477, New Wilmington, Pa., in support of the Government ownership of telephone and telegraph systems; to the Committee on the Post Offices and Post Roads.

Also, petition signed by Mr. J. H. McClure, in behalf of the Wilmington Grange, No. 1477, New Wilmington, Pa., protesting against preparedness and favoring the manufacture of munitions of war by the Federal Government; to the Committee on Military Affairs.

Also, petition of the Woman's Christian Temperance Union, of Harrisville, Pa., favoring national prohibition; to the Committee on the Judiciary.

Also, memorial on preparedness presented by Mr. Scott Munnell, of New Castle, Pa., in behalf of Willard Grange, No. 1440, New Castle, Pa.; to the Committee on Military Affairs.

By Mr. WALSH: Petition of Major How Post, No. 47, Grand Army of the Republic, by G. W. Heath, post commander, and F. S. Bradley, adjutant, requesting passage of so-called Ashbrook widows' pension bill; to the Committee on Invalid Pensions.

SENATE.

FRIDAY, *April 7, 1916.*

(Legislative day of Thursday, March 30, 1916.)

The Senate reassembled at 12 o'clock meridian, on the expiration of the recess.

NAMING A PRESIDING OFFICER.

The Secretary (James M. Baker) read the following communication:

UNITED STATES SENATE,
Washington, D. C.

To the Senate:

The Vice President being absent from the Senate, and the undersigned being also necessarily absent therefrom, he, as President pro tempore of the Senate, hereby names the Senator from New York, Mr. JAMES A. O'GORMAN, to perform the duties of the Chair on the 7th day of April, 1916, this substitution not to extend beyond an adjournment.

JAMES P. CLARKE,
President pro tempore of the Senate.

Mr. O'GORMAN thereupon took the chair as Presiding Officer.

COAST DEFENSES IN CALIFORNIA.

The PRESIDING OFFICER (Mr. O'GORMAN) laid before the Senate the following communication from the Secretary of War, which was read, and, with the accompanying papers, referred to the Committee on Military Affairs and ordered to be printed:

WAR DEPARTMENT,
Washington, April 5, 1916.

To the PRESIDENT OF THE UNITED STATES SENATE.

SIR: I have the honor to transmit herewith a statement showing the coast defenses in the State of California, how they are manned, and the number and kind of guns in each fort, and to request that this statement be substituted for a statement on the same subjects transmitted under date of March 31, 1916, in response to Senate resolution of March 27, 1916, which original statement was published in the CONGRESSIONAL RECORD of April 4, 1916.

Subsequently to the transmission of the original statement to the Senate under date of March 31, it was found that the statement was arranged in such form as to be misleading, and as likely to convey an erroneous impression as to the seacoast armament in the State of California that can be manned by the available personnel, including both the personnel of the Regular Coast Artillery and that of the California Militia Coast Artillery. The statement now inclosed, which is for substitution for the original statement, shows the actual condition of affairs in this respect.

Respectfully,

NEWTON D. BAKER,
Secretary of War.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. SMITH of Georgia. Mr. President, I desire to offer an amendment at the close of section 29, to be known as section 29a.

The PRESIDING OFFICER. The amendment will be read.

The SECRETARY. It is proposed to insert the following as a new section:

SEC. 29a. In addition to military training soldiers while in the active service shall hereafter be given the opportunity to study and receive instruction upon educational lines preparatory for their return to civil life, and, when practicable, an average of 94 hours monthly shall be devoted to such work. Civilian teachers may be employed to aid the Army officers in giving such instruction, and part of this preparation for civil life shall consist of vocational education either in agriculture or the mechanic arts. The Secretary of War, with the approval of the President, shall prescribe rules and regulations for conducting the instruction herein provided for.

Mr. SMITH of Georgia. Mr. President——

Mr. REED. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The roll will be called.

The Secretary called the roll and the following Senators answered to their names:

Ashurst	Dillingham	Martine, N. J.	Smith, Ga.
Bankhead	du Pont	Myers	Smoot
Beckham	Gallinger	Norris	Sterling
Brady	Harding	O'Gorman	Sutherland
Brandegee	Hardwick	Oliver	Swanson
Broussard	Hitchcock	Overman	Taggart
Burleigh	Husting	Owen	Thomas
Catron	Johnson, Me.	Page	Thompson
Chamberlain	Johnson, S. Dak.	Pittman	Tillman
Chilton	Jones	Ransdell	Townsend
Clapp	Kenyon	Reed	Underwood
Clark, Wyo.	Kern	Robinson	Vardaman
Colt	Lane	Shafroth	Walsh
Culberson	Lodge	Sheppard	Warren
Cummins	McCumber	Sherman	Weeks
Curtis	Martin, Va.	Simmons	

Mr. CHILTON. I wish to announce the absence of my colleague [Mr. GOFF] on account of illness.

Mr. KERN. I desire to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER] on official business. He is paired with the Senator from Idaho [Mr. BRADY].

I also desire to announce the unavoidable absence on account of illness of the Senator from Arizona [Mr. SMITH].

These announcements may stand for the day.

The PRESIDING OFFICER. Sixty-three Senators have answered to their names. A quorum is present.

Mr. GALLINGER. In connection with the bill under consideration I submit three telegrams from citizens of New Hampshire which I ask to have printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The telegrams referred to are as follows:

NASHUA, N. H., *April 6, 1916.*

Senator GALLINGER,
Washington, D. C.:

As an ex-militiaman and member Plattsburg Training Regiment, who has the adequate defense of the country at heart, I urge you use your influence to obtain an Army bill that puts all forms of our national defense under direct Federal control. Section 56 of the present Senate bill should be preserved. The killing of this section is dangerous to the Plattsburg movement, which to-day is essential for the training of reserve officers. I also urge a consistent naval program, as advised by the General Board of the Navy.

ELIOT A. CARTER.

NASHUA, N. H., *April 6, 1916.*

Senator J. H. GALLINGER,
Washington, D. C.:

Section 56 of Senate Army bill is essential for sound military system in this country. Its defeat would be disastrous.

L. SOULE.

KEENE, N. H., *April 6, 1916.*

Senator JACOB H. GALLINGER,
The Capitol, Washington, D. C.:

Do all you can to put through Federal reserve plan, section 56 of Senate bill. A national system of Plattsburg camps is of vital importance to all loyal American citizens. It will enable business and professional men to get military training which will be invaluable.

JOHN ELLIOT,
Member First Training Regiment.

Mr. UNDERWOOD. Mr. President, several days ago I had read from the Secretary's desk a letter I had received from Mr. du Pont and my answer to that letter, in which I stated to Mr. du Pont that if Mr. Cooper and Mr. Landis would write me letters stating their attitude with reference to the amendment I offered proposing an investigation to determine whether the Government should establish a water-power plant and a nitric-acid plant I would be glad to have the letters read in my time, so as to present their statement to the Senate. I present a letter from Mr. Cooper and ask to have it read so that the Senate may be informed as to what Mr. Cooper has to say.

The PRESIDING OFFICER. The Secretary will read as requested.

The Secretary read as follows:

NEW YORK, *April 5, 1916.*

Hon. OSCAR W. UNDERWOOD,
United States Senate, Washington, D. C.

MY DEAR SIR: On page 5347 of the CONGRESSIONAL RECORD you charge that I have been "endeavoring to defeat the legislation that was before the House looking to the Government of the United States establishing a water power and a nitrogen plant for the Government's own use.

In your discussion of this nitrogen question you have made it appear that I was an active representative of the Du Pont Co. seeking to defeat section 82 of the House military bill. Ordinarily when accusations are made, at least some little justification is found. In this case, however, not a vestige of fact justifies what you have said.

My reply to your charges is that you have been most grievously imposed upon. I have never, except as noted below, either directly or indirectly, by spoken word or written letter, discussed section 82 of the Hay bill, or the subject therein referred to, with even one Member of the House of Representatives, either while the section was in the committee or while it was before the House.

It is equally true that the Du Pont Powder Co. has never at any time even suggested to me that I should do the things you charge me with. This is as sweeping a denial as can be made.

I live in the State of Connecticut and when the Hay bill was in committee I called on Congressman TILSON (of the Hay committee), of Connecticut, in his office and asked him for a copy of the Hay bill, and told him I was interested in the section regarding the fixation of nitrogen and hoped it would be so drawn that everyone would have a fair chance to compete for the Government's nitrogen needs. My interview with Mr. TILSON was about 10 minutes long and is the total extent of my acquaintance with him, and I have never seen him since. Congressman TILSON'S office afterwards mailed me a copy of the Hay bill without any comments whatsoever.

Your offer to read this letter into the Senate record is in harmony with your well-deserved reputation for fairness of mind, and I hold myself always at your service and shall be very glad to come to Washington at any time and appear before you or any of your fellow Senators, and there face the people who have imposed upon you.

Yours, very truly,

HUGH L. COOPER.

Mr. UNDERWOOD. Mr. President, at the time I made my address to the Senate on the subject of the Government building its own nitric-acid plant I knew that Mr. Cooper was one of the consulting engineers of this company. I was informed that Mr. Cooper had brought the bill to Washington for the Du Pont Co., which was read from the desk, proposing that the Government give them an opportunity to establish a water power with which to make nitric acid.

In addition to that, I had been informed that Mr. Cooper had stated in the New Willard Hotel to a gentleman of high character and eminent ability, whose statements could not be controverted, that Mr. Cooper was fighting or proposed to fight a Government nitric-acid plant.

Since the receipt of Mr. Cooper's letter, as the communication did not come to me direct from the gentleman to whom Mr. Cooper made the statement, I called on the gentleman myself to get his statement at first hand, and the gentleman stated to me that he did have a conversation with Mr. Cooper on this subject, but said that I was mistaken in quoting Mr. Cooper as saying that he was fighting a Government nitric-acid plant or a Government water power for that purpose; but he stated to me this morning that Mr. Cooper did state that he was opposed to a Government plant. So what I said is confirmed, so far as my information was concerned, except that I was mistaken in quoting the gentleman as saying that Mr. Cooper would fight the bill. The information I get from this gentleman now is that Mr. Cooper said he was opposed to it.

Mr. President, I have a letter also from Mr. Landis with reference to this same matter, which I ask to have read at the Secretary's desk, so that the Senate may be informed as to what Mr. Landis has to say in reference to the charge I made.

The PRESIDING OFFICER. The Secretary will read as requested.

The Secretary read as follows:

E. I. DU PONT DE NEMOURS & CO.,
Wilmington, Del., April 5, 1916.

Hon. OSCAR W. UNDERWOOD,
United States Senate, Washington, D. C.

MY DEAR SIR: On page 5347 of the CONGRESSIONAL RECORD you April 3, 1916, on the nitric-acid proposition you read and had printed in the RECORD a communication by you to Mr. P. S. du Pont, president of the Du Pont Co., in answer to a communication from him, in which you say:

"I have also been informed that Mr. Charles B. Landis, an employee of your company, has been in Washington, and exerted his influence against the proposals in the House bill looking to the Government securing a supply of nitrogen."

Supplementing this, you state that if Mr. Landis will write you that he was not in Washington opposing the House bill you would be glad to publish his letter in the RECORD.

I have had nothing to do with any provision in the House bill bearing on nitrates or anything else. Indeed, I do not recall that I have ever spoken to any Senator or Representative about nitrates or the fixation of atmospheric nitrogen.

Very truly, yours,

C. B. LANDIS.

Mr. UNDERWOOD. Mr. President, what I was contending for in my speech was the establishment of a Government plant to make nitrogen with which to make the powder supply that is required by our Army and Navy; that was the substance of my contention. I made these statements with reference to Mr. Cooper and Mr. Landis, and it is proper that I should now state on what basis I made this representation, as far as Mr. Landis is concerned. I had it from what I considered reliable sources. I confirmed the information that I had yesterday before having Mr. Landis's letter read. These are the facts:

In a letter I wrote to Mr. du Pont, the president of the Du Pont Powder Co., I stated that—

I have also been informed that Mr. Charles B. Landis, an employee of your company, has been in Washington exerting his influence against the proposals in the House bill looking to the Government securing a supply of nitrogen.

After receiving Mr. Landis's letter that has just been read, it is proper that I state on what information I made this statement.

Mr. R. F. Bower, of Albemarle County, Va., is one of the official representatives of the Farmers' Union in the United States. Mr. R. B. Carter, formerly of Albemarle County, Va., is now one of the engineers employed by the Du Pont Powder Co. Mr. Bower and Mr. Carter are friends. Mr. Bower is greatly interested in the development by the Government of a nitric-acid plant, in hopes that if the Government develops such a plant it may aid in securing cheaper fertilizer for the farmers of the United States. He discussed this question with his friend, Mr. Carter. Shortly afterwards Mr. Carter went to dinner with Mr. Charles B. Landis, and Mr. Carter stated to Mr. Bower that at the dinner he called to Mr. Landis's attention the argument that Mr. Bower was making in favor of a nitric-acid plant built by the Government, and told Mr. Bower that, in reply to his statement, Mr. Landis said to him that—

You should not advocate such a proposal. Our company is opposing a Government nitric-acid plant.

Mr. Bower repeated this statement to me before I wrote the letter to Mr. du Pont. After receiving the letter from Mr. Landis which I have just had read, I sent for Mr. Bower and told him that I must give his name as authority for my state-

ment. He stated he wanted to let Mr. Carter know that I intended to use the statement. Mr. Carter came to see me personally, explained his relations with his company, and said it would embarrass him greatly if I repeated the statement. I assured him that I regretted to embarrass him in any way, but it was on the basis of what he said that I had made the statement in reference to Mr. Landis, and that I felt that it was my duty to repeat the source of my information. Although Mr. Carter was anxious that I should not bring him into the matter, he confirmed to me what Mr. Bower had stated in reference to his conversation with Mr. Landis.

Mr. President, Mr. Carter is an employee of the Du Pont Powder Co. He was an unwilling witness; he did not desire me to make this statement, but I have made the statement on the basis of what he said as to his conversation with Mr. Landis—that the Du Pont Co. was opposing a Government nitric-acid plant. That is the gravamen of the whole charge that I have made against the Du Pont Co. In my remarks the other day I did not reflect upon the company, its officers, or its agents.

A short while ago we had a proposition before the Senate to build an armor-plate factory. The Bethlehem Steel Co. openly opposed the proposition. It wrote circular letters to me, and I have no doubt every Senator here received them. There was no reflection on the Bethlehem Steel Co. because it saw fit, for its own interest, to oppose a Government armor-plate plant. Nevertheless, the Senate, in its wisdom, determined to establish a Government plant. The only charge that I made was that the agents of this company were opposing the Government plant. They had a right to do so if they wanted to; but we have the right, if we think it to the better interests of the people of the United States, to establish a Government plant, and it is for us to determine what is the wise course to pursue.

There is just one more thing that I wish to say about this matter, and then I am through. I think I have done full justice to these gentlemen by giving them an opportunity, through me, to make their statement and to have it read at the Secretary's desk. I have given the Senate the source of my information.

Day before yesterday I came into the Senate and found the senior Senator from Illinois [Mr. SHERMAN] on the floor asking unanimous consent for the consideration of a resolution of investigation. I stood in the rear of the Hall and inquired what was going on, but took no part in the matter whatever. I notice that the Washington Post and a number of other newspapers carried to the country the statement that I had objected to the consideration of the resolution of investigation proposed by the senior Senator from Illinois. The RECORD discloses the fact that I did not object. I had no idea of objecting; it did not enter my head for one moment to object. I have no objection now, not only to the consideration of the resolution but to its passage, if the Senator from Illinois is prepared to say that he is willing to vouch for the statements contained in his resolution.

So far as this matter is concerned, what I have done has been absolutely in the open. I made my statement in the open; I have not made any anonymous statements against anybody. I called the men's names; I had their letters read from the Secretary's desk, and have given the Senate the basis on which I made the statements, so far as they were concerned.

Mr. President, I do not propose to now argue this case or to go into it. I think the question of the Government of the United States establishing for itself a nitric-acid plant, so that it may have a supply of powder in case we should engage in a foreign war, is one of the most important questions that confronts the country.

Not for one minute in these proceedings have I advocated the interest of any corporation or of any private individual. All that I have asked the Senate to do is to have the question investigated with a view of looking to the establishment of a Government water-power development and of a Government nitrogen plant. From these resolutions, and from these false statements as to my attitude that are being circulated, it is apparent to me that some one or some source is trying to becloud this situation and build up a false issue in order to carry the Senate and the country away from the real issue that confronts us, and that is the question as to whether the Government itself shall pursue an investigation at this time looking to the establishment of a Government plant.

Mr. SAULSBURY. Mr. President, I think that while the subject matter of the remarks of the junior Senator from Alabama [Mr. UNDERWOOD] is fresh in our minds I may be permitted to say only a few words, as incidentally I have been connected with this matter by reason of the introduction of a bill.

The Senator from Alabama has most frankly and fully stated his connection with the subject of the fixation of atmospheric nitrogen and his connection with the proposed amendment to this bill. I do not care anything at all about the activities of Mr. Cooper and Mr. Landis. Mr. Landis I have not seen for months, although I know him as an ex-Member of Congress, residing in Wilmington, and know him very pleasantly. Mr. Cooper, the day before I introduced the bill which was sent to me by the president of the Du Pont Co., came to my office; and not knowing him, and, as a younger Member of this body and new in legislative experience, naturally being somewhat careful of horrible lobbies that are operating, I inquired who he was. He told me, and stated also that he knew the junior Senator from Montana [Mr. WALSH] very well, who would tell me what his reputation was. I inquired of the Senator from Montana, and he said that Mr. Cooper was a very eminent hydroelectric engineer who, I believe, had built the dam across the Mississippi and had been engaged in the State of the Senator from Montana for a number of months on such propositions.

So that when Mr. Cooper came back in the afternoon to see me I was satisfied to have quite an extended talk with him and introduced him to the chairman of the Military Committee, with whom he desired to speak, believing that he was entitled to a proper hearing from any Member or any committee of this body. Later on he asked me to introduce the bill which he gave me, and which I afterwards introduced; but, not knowing by what authority he was acting in that particular respect, and as his previous conversation with the Senator from Oregon [Mr. CHAMBERLAIN] and myself, I think, did not indicate that he was authorized to present any bill with the approval of the company which he represented, I insisted that I should first have the request of the president of the Du Pont Co., whom I know very well, and if he requested me to introduce that bill I should be glad to do it and see that it got a fair hearing. I have a telegram from the president of the company, received either that evening or the next morning, which I shall ask to have the Secretary read.

The PRESIDING OFFICER. Without objection, the Secretary will read as requested.

The Secretary read as follows:

WILMINGTON, DEL., *March 29, 1916.*

Senator WILLARD SAULSBURY:

Endeavored to call you by phone this evening, but your phone reported out of order. Would greatly appreciate your introducing bill as requested by our Mr. Cooper.

PIERRE S. DU PONT.

Mr. SAULSBURY. Mr. President, I introduced that bill and had this talk with the chairman of the Military Committee, who, if I may be permitted to quote the conversation, stated that before matters could be inquired of by his committee from the War Department there would have to be some matter before his committee, and, I have no doubt, that was the occasion for the introduction of the bill.

Since then I have seen Mr. Cooper but once. He came to my office the day following with Mr. Hamilton M. Barksdale, a vice president of the Du Pont Co., a gentleman of the highest reputation, a man who has been my warm personal friend for years, with whom in the same house I lived for a number of years when we were bachelors, a classmate of the Senator from Alabama at the University of Virginia; and, at his request, I asked the Senator from Alabama if he would see Mr. Barksdale and have him fully explain to him the position of the Du Pont Co., which Mr. Barksdale certainly represents in this matter by reason of his position. The Senator from Alabama is, I believe, going to see him.

Mr. UNDERWOOD. Mr. President, I will say to the Senator from Delaware that I will be very glad to see Mr. Barksdale and hear his statement about the matter. Mr. Barksdale has not yet called on me, but when he does I shall be glad to see him and hear all he has to say.

Mr. SAULSBURY. I had a letter from him acknowledging my telegram, saying that he intended calling on the Senator.

Now, Mr. President, I think I have stated all the communication I have had with the members of the Du Pont Co. When Mr. Barksdale called he asked me if I would be willing, or if I were in a position where I could see that their suggestions as to what they were willing to do had fair consideration. I told him I would do my best for that company, as for any other company in my State, and no more than I would for any other company, to see that any proposal they had to make to the Government was properly considered. He expressly stated to me—and I have absolutely no doubt that he stated it correctly, because I know that he would not state anything incorrectly—that the position of his company was this: They have decided to build for their own use a plant somewhere for the recovery of nitric acid from the atmosphere. He described the character of their process to me, and he said to me, as is shown by the correspondence

which has been inserted in the RECORD, that they had been considering the erection and installation of a plant of that character in this hemisphere, or in North America, I think, about the time the war broke out, and had determined to establish one. The breaking out of the war and its continuance had caused them to believe that their plans respecting the location of that plant should be modified, and that the plant should be established within the United States, where it might aways be available for the production of nitric acid, which is absolutely essential to the manufacture of explosives, because in case of international complications the plant otherwise might not be available.

Their proposition, as I understand the matter, and what they say they are willing to do—and what I have no doubt they will do if they are able to obtain a satisfactory water power for use in the production of nitric acid—is, without any expense whatever to the Government, to erect a plant which shall be erected under plans as desired by the War Department; that the War Department may take their product at a fair price, to be fixed by the Secretary of War—any portion or all of that product—and may take possession of the plant for the use of the Government at any time when necessary, and at the end of the lease, which is proposed to be for 50 years, or the license, or the permit, or whatever you desire to call it, the Government may take over the whole plant permanently.

It seems to me, more from what the Senator from Alabama has said than from anything I knew, that it is a most important matter that our country should be in a position within its borders to produce its own munitions of war. It seems to me, in addition, Mr. President, that the usual objection can not be made to the Government entering into the production of nitric acid from the air, the fixation of atmospheric nitrogen, which may be urged to almost any other manufacturing proposition, because there are no manufacturers in this country at present engaged in the business who would be in the slightest degree interfered with or competed with by the Government. Therefore I can not see the slightest objection to the Government entering into this business at this time. Neither can I see any objection, apart from the idea of the Government entering into manufacturing propositions—and there is less objection in this case than in any other I know of that has ever been presented—neither can I see any objection whatever to the utilization of the water power on the Tennessee River, if that is, as I understand it is, the location that is rather referred to by the proposition of the Senator from Alabama, although it covers generally——

Mr. UNDERWOOD. Mr. President, will the Senator allow me to interrupt him?

The PRESIDING OFFICER. Does the Senator from Delaware yield to the Senator from Alabama?

Mr. SAULSBURY. Certainly.

Mr. UNDERWOOD. I do not want that statement to go into the RECORD without contradiction.

Mr. SAULSBURY. I am perfectly willing to withdraw it if I misunderstood the Senator.

Mr. UNDERWOOD. I want to say this: The Government engineers have made a report in reference to the Muscle Shoals proposition on the Tennessee River, and have recommended its feasibility and practicability for utilization by the Government or private persons for the establishment of a great water power; but I have not for one moment contended for the Tennessee River proposition or any other. I notice that everybody connects me with it, and they try to make it appear—I am not referring to the Senator from Delaware—that I am advocating something here because it happens to be in my State.

I wish to say to the Senator that more than two years ago, in the House of Representatives, I called the attention of the House to our unpreparedness, that we had no nitrogen supply, and urged, in a speech that I delivered in the House, that the Government should do something. I am advocating this proposition because I think it is suicidal if the Government of the United States sleeps on its rights and does not do something.

Now, I have not advocated and am not advocating, so far as I am concerned, any point where the water power should be developed or any process by which nitrogen shall be made. I am advocating that we have an investigation, and that a board of engineers of the United States Army select the best place and the best process and put it to work. If they select Muscle Shoals and think that is the best place, I would be very glad to know it; but if they select Priest Rapids on the Columbia River, or some other place, I will be equally glad to know that the Government is preparing for its defense, and will most cheerfully support any practicable and feasible recommendations that they may make to accomplish this purpose.

The only thing that I wanted to say to the Senator in reference to this is that I think the people who are fighting a Government plant, who are trying to prevent the Government from doing this because I am advocating it or who are trying to connect me with some particular project, are trying to becloud the situation, and that is the only reason I deny it. Muscle Shoals is a good place to establish it, but the Government Board of Engineers should determine what is the best place, and not myself or the Senate of the United States or the Congress of the United States.

I thank the Senator for his courtesy.

Mr. SAULSBURY. I, of course, accept the statement of the Senator from Alabama implicitly, so far as his connection with the matter is concerned. My reference to it was doubtless caused by the general talk I have heard in connection with it. I can only say that in a measure the position in which the Senator seems to be placed now and then reminds me of the position in which I find myself. Simply because I am willing to say that gentlemen who are engaged in legitimate business, who are constituents of mine, desire me to present a bill for consideration to the Senate, I seem to be considered, in a measure, as having bills drawn by them for me and to be in a measure representing them, which I entirely and completely and utterly disavow.

I may say, Mr. President, rather humorously, that I would hardly be recognized in my own State as representing some of the people, certainly, who are or were connected with this company, whose interests I desire to have only just and proper treatment, and that is all.

I was simply saying that all three propositions—the one coming from the Agricultural Committee, which has been read into the RECORD; the one coming from the Senator from Alabama [Mr. UNDERWOOD]; and the one coming from the Du Pont Co. itself—it seems to me are not necessarily inharmonious. I suggest, however, that here you have a proposition from a company ready and willing to proceed with the manufacture of a necessary ingredient in all munitions of war now used in the world; that is, in all explosives. They ask the Government to do nothing except to give them an opportunity to manufacture an article of which they are the greatest users in the world, as shown by their correspondence.

A manufacturer, of course, when he is ready and willing to go ahead with a proposition, is very desirous of having the matter settled; and I would suggest to the gentlemen who have the idea that the Government should proceed that they determine to reserve for the Government, if they think proper—and I will vote with them for that purpose—the very best water power there is in the United States for the purpose of entering into the manufacture if the Government should so decide. But I think it would be only fair to this company, I think it would be only just to the people of this country, who are entitled to have manufactured within their borders all the necessaries of war, that the Government might say to these people: "We should be glad to have you proceed with this manufacture at other points than those which we reserve for our own possible use," or tell them that they prefer that there should be a Government monopoly of the production of nitric acid from the atmosphere.

These people are perfectly ready and willing to go ahead, and, as I understand the matter, are postponing it from the very proper desire, for which I think every Member of this body would honor them, to manufacture within this country the necessaries which enter into the manufacture of munitions of war, thereby giving this country control of its own supply of powder in case we should have a war with some foreign country.

Mr. SMITH of Georgia. Mr. President, I ask that the Secretary may read again the amendment that I offered to section 29.

The PRESIDING OFFICER. The Secretary will read the amendment to the amendment.

The SECRETARY. The Senator from Georgia offers the following amendment:

Add at the end of section 29, which would come in the bill on page 142, after line 2, the following:

SEC. 29a. In addition to military training, soldiers while in the active service shall hereafter be given the opportunity to study and receive instruction upon educational lines, preparatory for their return to civil life, and, when practicable, an average of 94 hours monthly shall be devoted to such work. Civilian teachers may be employed to aid the Army officers in giving such instruction. A part of this preparation for civil life shall consist of vocational education, either in agriculture or the mechanic arts. The Secretary of War, with the approval of the President, shall prescribe rules and regulations for conducting the instruction herein provided for.

Mr. SMITH of Georgia. Mr. President, I claim no originality in offering an amendment to the military bill which will make the preparation of the private soldier for civil life a part of his work while he is with the colors. As far back as 1866 Gen. Lew Wallace wrote to the chairman of the Military Committee

of the House urging that the private soldier's life should be for him, while with the colors, as nearly as practicable what West Point was for the officers. In this letter he stated that a considerable part of the time of the private soldier was without occupation, that this idleness was really a burden upon him; it was calculated not to improve but to injure him, and it deterred parents from giving their consent that their boys might enlist in the Army. In that letter he went on to show how easy it would be for the officers to devote, at least when in garrison and when not on the march, three to four hours a day to teaching the private soldier, to developing him mentally, to developing his character, and to instructing him in some special vocation.

The suggestions were not accepted at the time. The views of most of the older soldiers were antagonistic. But a process of evolution has been going on in the thought upon this subject, and now I believe it is true that a majority of the officers favor devoting a considerable part of the time of the private soldier to his preparation for a return to civil life.

This subject has attracted the thought of the country. On the Pacific coast a number of publications have been made upon it. Chambers of commerce, through their committees given to investigating the question, have passed resolutions commending it. Writers in the eastern press have considered and approved it. Gen. Wood has recently published a strong letter in one of the New York City papers expressing the opinion that ample time could be taken from the life of a private soldier under a short enlistment, under an enlistment for two years, which would not hinder his preparation as a soldier, and also send him back to private life much improved and developed in his general knowledge, and in some special vocation which he might select.

Speaking of vocational instruction in this connection, let me say that the thought of the world in the last 20 years has made great progress and has substantially changed. Continuation schools, as they are called, are now the rule in Germany for all those who begin work as breadwinners before they are 21. The merchants and the manufacturers of our country are moving strongly in that direction; and they favor for boys and girls under 21 years, and even 25, who enter their employment, the organization of part-time schools to develop them broadly, even though they have at an early age begun the struggle of life as breadwinners.

A few years ago, when a prize was offered for an article upon the subject of preparation for defense, it was won—and his article received first position—by Col. William A. Glassford. The feature of his article was the presentation of the thought that part of the time of the private soldier must be used to prepare him to return to civil life; that the character of men needed in the Army were men who would enlist for a short period and return to civil life; that our real preparedness must consist of two forces—one the men in the Regular Army, and the other those in the Regular Army reserve, who, as privates in the Regular Army, had been taught the work of a soldier, and who, remaining after retiring from the colors upon the national reserve, could be called in 30 days to active service.

I am prepared to vote for the immediate increase of the Army by 100,000 men. I believe in preparation for national defense, and I believe it is not preparation five years hence that we should especially consider, but preparation for next year. I am not so much interested about five years from now, but I am interested in this fall and next year. God grant we will not be called on to use them. If we are prepared, we will not be called on to use them; but if we are not prepared nobody knows how much we may need them.

It is a mistake to think that we can remain upon land feeling perfectly secure on account of our Navy. I believe, man for man, that there is no more splendid set of officers who go on board vessels than the boys and the mature men of the American Navy. But we have two coasts, not always accessible even through the Panama Canal. It would take a navy double the size of ours to protect both of our coasts. And yet, if in 30 days we could put 500,000 men upon our shore, ready to defend the shore, no country could land troops in the United States. They could not hope, no matter how large their navy, to bring over more than 250,000 or 300,000 troops at a time; and if we had a land force ready to meet what they could first bring and prevent their landing, or drive them off, there would be no landing of enemy troops.

Now, Mr. President, I like this section 29 of the bill. I like the provision about the seven years' enlistment. I like the provision that at the end of two years the private who desires has the privilege of going back to the reserve. I would be glad to go further and make it really his duty to go, unless he fell into a class that contemplated permanently being in the Army. I like the provision that if at the end of 12 months his officers in command find him proficient as a soldier they can permit him to retire at once to civil life.

I heartily approve the provision for enlistments through the aid of postmasters.

A few years ago the theory was that we could gather men into the Army who were to stay there. I believe the entire best thought of the Army and those who have studied the subject is now against that view. Secretary of War Dickinson reached the conclusion that short-time enlistments were the wise plan. Secretary Stimson in his last report took the position that it was the short-time enlistment and the reserve that were necessary to build the Army. Secretary Garrison finally reached that conclusion.

If we are to have an Army, if we are to prepare to meet an immediate demand, we ought to contemplate 500,000 men who can be called to the colors, who have been trained, and who can be called in 30 days. Instead of increasing the Army at 16,000 a year, I should like to have the entire increase enlisted at once. I would like to see a hundred thousand men brought to the colors by the 1st of December on short-time enlistments.

Then, I hope, under this bill, that we will send from the colors each year 75,000 men, sending them back to civil life members of the national reserve still for four years, or, I believe, under the terms of the bill, five years. If we would carry to the reserve each year 75,000 to 100,000 trained men who would remain with the reserves we would soon have with our reserves at least 300,000 men.

Mr. HUGHES. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from New Jersey?

Mr. SMITH of Georgia. I yield.

Mr. HUGHES. I will say that I agree almost entirely with the Senator from Georgia; but I ask him if he does not think, in view of the fact that we have this difficulty in elisting the Army up to the legal authorized strength, it will be necessary in some way to make enlistment much more attractive than it is at present?

Mr. SMITH of Georgia. That is the very thing I am advocating.

Mr. HUGHES. I understand that, and I think the Senator's proposition goes a great way in the direction of making the service more attractive; but does he not think that some substantial increase must be made in the pay of the enlisted men?

Mr. SMITH of Georgia. I can not say that I do. I do not look to the pay to get them. I want something worth more than the pay to get them.

Mr. HUGHES. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield further to the Senator from New Jersey?

Mr. SMITH of Georgia. For a question.

Mr. HUGHES. I want to assure the Senator that I have been an enlisted man myself, and that the amount of money which an enlisted man receives each month is extremely important to him, whether it is important to the Senator or whatever his views on the subject may be, and in an age like this, when an unskilled laborer can get $3 a day, you are not going to get a young American boy to put off his civil rights, privileges, and prerogatives for the right, if you may call it that, of serving the United States Government for $15 a month, which would not give him enough money to go to moving-picture shows.

Mr. SMITH of Georgia. Mr. President, if the right spirit is put into the execution of the amendment which I have introduced, it will not be the $15 that takes the young man into the Army, it will be something worth a great deal more than the $15 a month.

Mr. CHAMBERLAIN. Mr. President——

Mr. SMITH of Georgia. I yield to the Senator from Oregon.

Mr. CHAMBERLAIN. I was not going to interrupt the Senator further than to express the hope that the Presiding Officer will enforce the rule that has been enforced here as to interruptions.

The PRESIDING OFFICER. The present occupant of the chair will regard it as his duty to enforce the rule that a Senator can yield only for a question. If he yields for discussion or argument, he loses his right to the floor.

Mr. REED. Mr. President——

Mr. SMITH of Georgia. Then, I desire to say I decline to yield except for a question.

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Missouri.

Mr. SMITH of Georgia. I would prefer to go on just now without interruptions at all.

Mr. REED. Mr. President, a parliamentary inquiry. Is the decision the Senate made yesterday on that question in force

and effect? The Senate yesterday decided that there was no such rule.

Mr. SMITH of Georgia and others. Oh, no.

The PRESIDING OFFICER. The Chair thinks the Senator from Missouri misapprehends the result of the vote yesterday. However, the Chair is not at liberty, of course, to enter into a discussion of it. The present occupant of the Chair will feel it to be his duty to enforce the rule just referred to.

Mr. SMITH of Georgia. The present occupant of the floor will not yield to any question or any interruption except that which the rule permits, and if so interrupted by a Senator it will be because the Chair does not require the Senator who interrupts to obey the rule.

Now, Mr. President, I had just called attention to the fact that Gen. Wallace presented this subject. I have called attention to the fact that there has been an evolution of thought all over the United States upon it, and that in the Army there has been a change of thought. I had called attention to Gen. Wood's indorsement of short enlistments, of Secretary Stimson's indorsement, and to the features of the bill.

This subject has been before the General Staff and the War College a number of times. They have been divided on it. Some of the older men have insisted that a soldier should do nothing but think of war; that he should receive no training except for fighting; that anything else was objectionable; but there has been a steady opposition to that line of thought in the Army, and I think the brightest and the ablest, especially of our younger officers, have realized how much better soldier, especially with the modern devices of war, is the man who has some education, who understands something about mechanics, who has a broader knowledge and more culture.

Mr. President, in 1913 the subject was referred to the General Staff, and upon it the General Staff reported through Col. Biddle, approved by Gen. Ligett. I ask nothing better than that report to sustain the necessity for this provision. The report was made, but nothing substantial followed it. In the report it is pointed out that there is time that hangs idly upon the private's mind and body which can be used so that the private can be greatly benefited, and that it is practicable to devote this time to preparing the private for his return to civil life. This is the report of Col. Biddle. Then he stated that the brighter the man the more education he has, the quicker he learns to be a soldier, and that general instruction under a two years' enlistment instead of retarding fitness as a soldier will help.

Then he comes to two other reasons of great importance. The soldier is to go back speedily if the enlistment is short into private life. Shall his Army service be a help or shall his time with the colors be wasted so far as our civic life is concerned. If wasted, then he goes back, not up, to his associates, those whom he knew while he was in private life. If, however, he has been trained, if his education has been broadened, if he has received vocational training, he goes back practically with two years' training at a school superior to that which probably he would have been able to attend had he not enlisted. The conclusion drawn in this report is that a system of instruction can be given to the private soldier while with the colors which will put an end to an economic waste otherwise incident to men being in the Regular Army, which will relieve the public mind of prejudice on account of militarism, and will send back to private life men better prepared, the association with whom will cause other boys of 17 and 18, the best age to enter the Army, to gladly enlist if they have no facilities for educational advantages beyond the grammar school.

The report of Col. Biddle, who at the time was Chief of the War College Division of the General Staff, is printed in full in the RECORD of Monday, April 3, beginning on page 6100. I quote a few extracts from it:

The Nation: The security of a nation rests on its military strength, and where, as in our case, this strength, represented by its Regular Army, is so small as not to secure its safety, the Army should be used in time of peace in the creation of a war reserve. We recognize that we need a reserve large enough to raise our Army immediately to war strength and to fill the vacancies caused by the first six months of active operations.

* * * * * * *

A third suggestion is that of offering vocational training as an inducement for enlistment. The hope in offering this is that a new class of young men may be reached. There can be no doubt that the thoughtful young man will hesitate and think a long time before exchanging three or four years of the formative period of his life for a certain training that, at its end, will find him where he started plus certain qualifications that are not generally recognized in the commercial world as increasing his earning capacity. On the other hand, if this same service will discharge him with some training of a clerk or an artisan, the case will be very different, and he will doubtless be willing to be a member of the reserve for a period in exchange for the training.

* * * * * * *

There is nothing that the public can then see for the rest of the soldier's enlistment but idleness and its attendant evils, and self-respecting parents oppose the entrance of their sons in such a life. The prejudice of the better class of people must be overcome, and when they are convinced that the Army is spending what they now believe to be idle time in industrial training we may expect such magazine articles as "The Army—an idle man's job," to disappear.

Unless some better plan than vocational training can be offered to stimulate enlistment—and none has yet been found—such training will soon have an important hearing on the welfare of the Nation.

The Army: When those who have been engaged in the training of enlisted men for some years are brought in contact with the results accomplished at educational institutions where officers of the Army are on duty they can hardly, at first, believe it has been possible to accomplish in weeks what the enlisted man requires months to master. It is soon apparent that the superior intelligence of the student, combined with his purpose to do, places him in a class apart. It is believed that the inducement of vocational training will bring to the Army a class of intelligence that will not only permit of soldiers being made in less time, but will make a better, more contented, and more valuable Army. This, then, would indicate that a shorter term of enlistment is necessary before this class may pass to the reserve.

* * * * * * *

Certainly the introduction of this training will place a different aspect on Army service from the viewpoint of those who will accept the training. They will have an occupation for their leisure time, they will be made more content, and will be given a purpose in life.

Conclusion: If it be the purpose of the Army to spread military training through the Nation, to create an adequate reserve, to break down the popular prejudice against the Army, to fill our ranks with men who later will be a valuable class of citizens, vocational training is an advisable measure to adopt toward this end.

* * * * * * *

It must be conceded that we can give some time in summer and more in winter without encroaching on the time usually given to military training, and if vocational training does take some of the military time, we can in the six months of outdoor work do more intensive training.

* * * * * * *

Conclusion: The practicability of introducing this training is apparent, but such practicability should not be destroyed by the application of an impracticable system. The whole question will be solved successfully or otherwise by the methods employed.

Mr. President, the Senator from New Jersey [Mr. HUGHES] wanted to know how we would get enlistments. We are crowded with applications for West Point and Annapolis. If you will make the two years with the colors for a majority of the boys who enlist a training school in military affairs and for private life, running the two hand in hand, as soon as it is really done and known I have no question about the fact that you will have more applications for enlistment than you have places.

Gen. Wallace, in his article, discussed West Point. He pointed out how the work to be done by a private soldier should be prepared along the lines of West Point, modified to the status of the private soldiers.

There is no necessity for moving these new volunteers all over the country. Suppose 10,000 boys volunteer in New York State or in Pennsylvania, how much better to organize a post in the State and let their training, to a large extent, be there. If we add a hundred thousand men to the Army and have no immediate necessity for their use in active service, their work, their location should be as near to the State of their enlistment as practicable. They will make better soldiers classed together in companies composed of men from their own States.

The German Army to-day moves out from States and sections, neighbors standing beside neighbors in the ranks as they charge. There is no hindrance to the training of the men by locating together largely boys of the same State in the same camp. You can take entirely away from the life of the private soldier those things which deter the boy and the father when enlistment is considered. You can substitute a life of improvement with normal companions, free from loneliness and filled with improvement.

Mr. President, it is hard to estimate the contribution to law and order in our entire land which would result if we should send out from the Army 75,000 boys each year after two years of discipline with the colors, who have associated with officers, who know what it is to obey directions, who have been taught to recognize constituted authority, who have improved mentally, morally, and physically, who have been trained in vocational lines, while they recognize authority and obey directions, because those in authority give direction. We would have 75,000 boys of that kind scattered all over the United States each year, trained in mechanic arts, trained for scientific farming; and that by the way can be done inside of a room as well as on a farm. The greatest of all the German schools to-day for agriculture are their winter indoor schools, and the reports we get of their work is that they make the very best farmers. It will be a great contribution to our Nation to send back 75,000 boys—I wish it were 100,000—each year who have been for two years in the Regular Army receiving the character of instruction, the character of training, and the character of development which could be carried out under the amendment which I present.

Of course, Mr. President, it will depend somewhat upon the officers of the Army as to what they do with it, but if they will

take hold with the right spirit, with a great spirit of national service, with the spirit of recognition of their obligations to the civil life of the community, as well as the military life, not alone the boys who are privates will grow, but the officers themselves will grow. They will broaden, they will be bigger men, because they labor to perform all their responsibilities as citizens, because they have thought of the welfare of all their fellow citizens, because they have studied the civil problems as well as the military problems of their country.

Mr. President, I will not detain the Senate. I propose, however, as the result of suggestions from several Senators, to change the figures "94" and substitute "75," so that it will read:

And when practicable an average of 75 hours monthly shall be devoted to such work.

The PRESIDING OFFICER (Mr. HUGHES in the chair). Without objection, the amendment of the Senator from Georgia is modified in that respect.

Mr. BRANDEGEE and Mr. LODGE addressed the Chair.

The PRESIDING OFFICER. The Senator from Connecticut.

Mr. BRANDEGEE. If the Senator from Massachusetts wants to proceed at this moment, I will not interrupt him.

Mr. LODGE. I only wanted to ask for an amendment which affects one case.

Mr. BRANDEGEE. I will yield.

Mr. CHAMBERLAIN. Will the Senator allow me to interrupt him for a moment?

Mr. LODGE. Certainly.

Mr. CHAMBERLAIN. I will say that as far as I am concerned I am willing to accept the modified amendment of the Senator from Georgia. I have conferred with a number of members of the committee who are willing to accept that amendment, but I believe the Senator from Massachusetts opposes it. So far as I am concerned I am perfectly willing to accept the amendment.

Mr. LODGE. I did not rise for the purpose of opposing or discussing the amendment, but I have another amendment which I wished to present if I could get the floor.

The PRESIDING OFFICER. The Senator from Massachusetts is recognized.

Mr. LODGE. Mr. President, I suppose the pending amendment is that offered by the Senator from Georgia [Mr. SMITH]?

The PRESIDING OFFICER. That is the pending amendment.

Mr. LODGE. And I suppose that amendment must be disposed of before I can offer my amendment?

The PRESIDING OFFICER. The Senator may debate the amendment proposed by the Senator from Georgia, if he so desires.

Mr. LODGE. I did not rise to debate that.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Georgia to the amendment reported by the committee.

Mr. BRANDEGEE. Mr. President, on yesterday I offered a resolution asking the Secretary of War to send here an opinion which I understood had been given by the Judge Advocate General, but the Senator from Maryland [Mr. LEE] felt constrained to object because, he said, the opinion had already been printed in the testimony. I told him the opinion to which he referred was not the one which I desired, but that there was another opinion or other opinions. So I will now ask unanimous consent that we may have those other opinions printed.

The PRESIDING OFFICER. Does the Senator from Connecticut ask unanimous consent for the present consideration of the resolution to which he now refers?

Mr. BRANDEGEE. Yes; I ask for its present consideration.

The PRESIDING OFFICER. The resolution will be read.

The Secretary read the resolution, S. Res. 158, which had been submitted by Mr. BRANDEGEE on yesterday, as follows:

Resolved, That the Secretary of War is hereby directed to furnish to the Senate any written opinions which the Judge Advocate General of the Army may have given concerning the project contained in the so-called Hay and Chamberlain bills to federalize the National Guard.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

Mr. SMITH of Georgia. If the resolution can be acted upon without discussion, I have no objection.

Mr. BRANDEGEE. I shall not ask that it be acted upon if it produces any discussion.

The PRESIDING OFFICER. Is there objection to the present consideration of the resolution?

There being no objection, the resolution was considered and agreed to.

The PRESIDING OFFICER. The question is on the amendment offered by the Senator from Georgia [Mr. SMITH] to the amendment reported by the committee.

Mr. WEEKS. Mr. President, I understand that the chairman of the Military Committee and several other members of that committee, who have been consulted, are sufficiently in sympathy with the amendment offered by the Senator from Georgia, so that they do not wish to offer objection to it; but I am not in sympathy with it, and I think I ought to briefly put into the RECORD my views.

There is no question in my mind as to what effect the amendment will have on the service. The Senator from Georgia seems to have the impression that it will hold out inducements to young men to go into the military service. My own judgment and the information I have from those connected with both the military and naval services lead me to the conclusion that it would prevent enlistments rather than increase them.

I am very much in sympathy with what the Senator from Georgia has said about section 37 of the bill. The method prepared by the committee for enlistments, for the retention of men in the service, and for their discharge under certain conditions is a distinct advance, in my judgment, over anything that we have had in our military service. A young man, by giving attention to his duties, can become sufficiently proficient so that he may be discharged at the end of a year, but he must devote himself to his military duties in order to bring about that result. The amendment offered by the Senator from Georgia is, to that extent, directly contrary to the spirit of this bill. The Senator proposes that two and one-half hours a day, excluding Sundays—substantially three hours a day—shall be devoted to some kind of vocational or other education. It is not a gracious position in which to be put to oppose any form of education or any development which may bring about a higher degree of education, but in this case, in my judgment, we are trying to prepare an efficient Army, and anything that will militate against that should be kept out of this bill.

We must not lose sight of the fact that there are ample opportunities for young men who desire education of any kind in the military or naval service to obtain it now. During the hours when they are on duty or off duty they can study anything they desire, and there is always an officer ready and willing to give them such assistance as they may need.

I want to call the attention of the Senate to some of the benefits of the vocational training which may be obtained in both the military and the naval service.

Mr. SMITH of Georgia. Mr. President, will the Senator from Massachusetts allow me to call his attention to this language in my amendment: "Shall be given the opportunity to study and receive instruction"?

The PRESIDING OFFICER. The Chair must hold that the Senator from Massachusetts was interrupted against his will. He did not give permission. Therefore the Chair will not attempt to apply the rule.

Mr. WEEKS. Mr. President, in my own time I want to ask the Senator from Georgia to explain what he means by "opportunity"? I will express my question a little more explicitly. Does he mean that a man when he is off duty may take the time which he might devote to other things to study, and that there will be no compulsion or that there will be no definite time which he shall devote to study? I would like to have the Senator answer that question in my time.

Mr. SMITH of Georgia. I mean by that language this: The War Department would organize a system which would give these young men the opportunity, if they desire to use it, to prepare themselves for civil life. I think also beyond question the privilege would be with the War Department to prescribe rules requiring attendance; but this amendment does not go that far. This amendment requires that the War Department shall organize a system which will give the opportunity to those who desire to embrace it.

Mr. WEEKS. Mr. President, I am proceeding on the theory that a similar practice is to be established in the Army to that which now obtains in the Navy, so I am going to read three or four opinions which I have here on the Navy policy.

It is not easy under present conditions to get from naval officers for publication their opinions about matters which are contrary to the policy of the administration, and therefore I do not wish to give the names of my informants; but I wish to say that I do not know a single naval officer—and I have talked with a great many of them, because I wanted to get the information at first hand—who is in favor of the naval educational policy which has been established by the present administration. There may be such, but if there are, I have not found them.

Now, let me read three or four opinions about the course and the results of the course, so far as the Navy is concerned, expressing opinions as to the views of the officers and of the men:

I can give you in confidence any information as to the results of the schools which have been held aboard ship during this administration. From my talks with Navy men and from the general idea which prevails in the service, the concensus of opinion—which is practically unanimous—is opposed to schools on board ship. Both officers and men are of the opinion that the schools materially interfere with and reduce the efficiency of the vessels, as the time spent at school in academic studies could and should be devoted to the routine work of the ship, which is now seriously interfered with and, in some respects, neglected.

I quote further:

If a man is desirous of improving himself in academic matters, he can do so of his own volition during the recreation hours which are prescribed, but that same man, if compelled to go to school, does so unwillingly, and therefore derives but little benefit from such compulsory education.

I read still another:

As you well know, a modern man-of-war offers many fields of study in a vocational way for the ambitious young man. He has a very large scope in engineering and electricity, which will be of vast benefit to him if he should leave the service, and certainly of much greater benefit than would rhetoric and the other subjects taught at the schools. It is therefore apparent that a man who desires to improve his mind has a large field before him on board ship.

Mr. VARDAMAN. Mr. President, will the Senator permit a question?

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Mississippi?

Mr. WEEKS. Yes.

Mr. VARDAMAN. If a man would have the time from his duties on the ship to devote to a course of study which he himself might take up, why could not that time be improved by the assistance of the officers in giving instruction?

Mr. WEEKS. I have no objection to that kind of preparation; but I do not wish to sit in my place and see established as a part of the routine in the military service something which I believe will be harmful to the service, and, as I said——

Mr. VARDAMAN. Is it not the purpose——

Mr. WEEKS. If the Senator will pardon me a moment—as I said a few moments ago, I am proceeding on the theory that time is to be set apart when men shall perform this kind of service or duty, and it would amount to two hours and a half a day every day in the year.

Mr. VARDAMAN. Is it not the purpose of this proposed legislation to leave to the discretion of the officers the fixing of the time to be devoted to study, and will it not be time that is not needed for the service which men join the Navy or the Army for the purpose of performing?

Mr. WEEKS. I do not so understand, Mr. President, and that has not been the result on board ship. It has been obligatory, and regulations that have been made by the departments carry it out.

Mr. VARDAMAN. Does the Senator think that the disinclination of officers to bother with the men has had anything to do with their opinion about the matter?

Mr. WEEKS. We are in the habit of taking the opinions of our officers on matters that relate to the service. It may be possible that some officer may dislike to act as teacher under such circumstances; but we must take their judgment as to what the results of that service are, and I think the Senator will find that it is unanimously against the kind of instruction which has been established on board ship. Furthermore, the men do not like it, either.

Now, let me point out some of the things that a man may learn on board ship as a preparation for the life he may follow after he leaves the service. He may become an electrician, a water tender, which is connected with the engineering service—all of these things are in line of duty—he may become a commissary steward, which will be important in some walks of life, a cook, a baker, a boiler maker, a machinist, a coppersmith, a ship fitter, an electrician of several classes, a blacksmith, a plumber and fitter, a sailmaker's mate, a carpenter, or a painter. All those trades are open to a man on board ship, and he can devote his surplus energy to acquiring a trade which will be of material benefit to him when he leaves the service.

If any Senator thinks that that same statement will not apply to the Army, all he has to do is to examine the bill which is now before the Senate, and he will find that there are a large number of trades which are open to men in the service and which they may learn, if they so desire, which will be of use to them in their after life.

Let me go on with two or three more of these opinions about the effect that it has had in the naval service:

To make a man-of-war at the present time efficient, the enlisted men's time is fully occupied with the various duties tending to this end; and it is therefore but natural that when you divert them from these duties to educational matters that portion of their time so used is devoted to things which are prejudicial to efficiency.

That the order is not a smooth one—

That is, the order that is enforced in the Navy—

and does not meet with approval is clearly shown by the number of times it has been modified since its original promulgation in order to meet with the many objections which officers have urged against it and to make it work with as little detriment to the service as possible.

I have no hesitancy in telling you that I think, if a vote of the officers of the service were taken, you would find that they would be almost unanimous for the abolition of these schools.

That is the information I have had from my conversations and correspondence with officers in the service, and from inquiries which I have made I think the same result will happen if we establish such an activity in the military service. I believe that we should take young men into the military service, thoroughly train them, and then as soon as they are trained turn them back to civil life, to take up the industrial employments for which they are fitted. That is the correct principle; but when you take any of the time which a young man is to spend with the colors and devote it to the study of something which he can study better elsewhere, I think you are making a mistake from the standpoint of the man and a mistake from the standpoint of the military service. It is for that reason, Mr. President, that I have made a protest against the passage of this amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Georgia, as modified to the amendment of the committee.

The amendment as modified to the amendment was agreed to.

PERSONAL EXPLANATION—IMMIGRATION BILL.

Mr. LODGE obtained the floor.

Mr. SMITH of South Carolina. Mr. President, before the Senator from Massachusetts begins, I desire briefly to call the attention of the Senate to a matter in the nature of a question of personal privilege.

I wish to call attention to the misleading character of an article published in one of the Washington papers, which I have seen quoted elsewhere.

Mr. LODGE. A question of personal privilege, if the Senator will pardon me, sometimes takes hours here.

Mr. SMITH of South Carolina. This will only take a moment. I read in the Washington Star of yesterday evening—and in another paper I saw an article of similar import—a statement which reads:

Immigration bill delayed. Senate committee holds back measure on theory it is not needed.

Mr. President, I am chairman of the Immigration Committee. I have communicated with only a few of the members as to the time of meeting; but it is the purpose of the committee, so far as the chairman may speak for it, to proceed as vigorously as possible with this measure, take what action the committee sees fit to take as to reporting it out, and putting it through the Senate at the earliest possible time. I merely wish to correct the erroneous impression which has gone abroad because of the statement to which I have referred. From what source it emanated I do not know, but it is totally incorrect.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

Mr. LODGE. Mr. President, if I may have the attention of the chairman of the committee, in section 28, relating to the retirement of officers of the Philippine Scouts, at the bottom of page 139, line 21, occur these words:

And any former officer of Philippine Scouts who has been retired as an enlisted man by special act of Congress.

I believe there is only one case of that kind, and with that case I happen to be familiar. It is the case of Capt. Drake, who was retired on full pay, and it appealed very strongly to Congress. He had incurred a severe injury in line of duty and had been the victim of malpractice in hospital, and was ruined physically for life. If the provision is passed as it stands in the bill his pay will be reduced. Congress passed an act in his behalf in order that he might have full pay, because he is at present a perfectly helpless man. I have here the report on his case and a copy of the law which was passed two years ago for his benefit. I am sure the committee did not mean to reduce his pay. It would be really a very cruel thing to do.

The words "who has been retired as an enlisted man by special act of Congress" can be taken out—I think this is the only case—or it can be met by inserting after the words "authorized by this section, and no more," the words "unless otherwise provided by special act."

Mr. CHAMBERLAIN. Let me ask the Senator if the difficulty would not be corrected—and I think that was the intention of the committee—by striking out the word "and," in line 21, and inserting the word "except." That, I think, would correct the difficulty that the Senator has in mind.

Mr. LODGE. Yes; that would correct it, of course.

Mr. CHAMBERLAIN. I think that that would perfect it.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The SECRETARY. On page 29, line 21, it is proposed to strike out the word "and" and insert in lieu thereof the word "except," so as to read: "except any former officer of Philippine Scouts"——

Mr. LODGE. That leaves the officer under the provisions of the special act.

Mr. CHAMBERLAIN. I have no objection to that.

The PRESIDING OFFICER. The question is on agreeing to the amendment proposed by the Senator from Oregon to the amendment of the committee.

The amendment to the amendment was agreed to.

Mr. LODGE. On the same page, Mr. President, on line 8, I want to ask the Senator from Oregon if the word "twenty-five" could not be stricken out and the word "twenty" substituted, and I will explain why I suggest that reduction:

If we retire from the Philippine Islands, which now seems probable under the legislation adopted by Congress, it seems hardly possible for those men to get the full 25 years. The Philippine Scouts have done excellent work; they are good men; but the scouts have not been in existence even 20 years yet, and if we should retire from the islands of course their chance of getting 25 years would be at an end, and it would nullify the provision.

I wish to ask the chairman if he sees any objection to reducing the limitation to 20 years?

Mr. CHAMBERLAIN. The only objection the committee had in mind was that it retired a man after having given to the Government not nearly as much service as they give in continental United States or in other branches of the service, and the committee thought 25 years was a reasonable time.

Mr. LODGE. I only suggested that. Of course, they get double time for service there.

Mr. CHAMBERLAIN. They get double time.

Mr. LODGE. That is true; so that that would put some of them, I suppose, outside of the 25 years. It is only to enable more to come within it that I suggest the change.

Mr. CHAMBERLAIN. The committee had that matter under consideration, and we all thought that 25 years would be a just term.

Mr. LODGE. Well, Mr. President, I do not desire to press it unduly, but I wish the chairman would take under consideration the reduction of the term to 20 years. It is not a very serious matter, as it seems to me.

If I may call the chairman's attention to page 165, section 64, line 9, I would like to strike out the words "of appropriate grade"; and I will explain to the chairman the particular case that is brought to my attention. There may be many other similar cases.

We have in Massachusetts 4 troops of cavalry, there are 3 in Rhode Island, 2 in Connecticut, and 1 in New Hampshire, making in all 10 troops; and they have been described by the War Department, and so treated by the War Department, as the New England regiment of cavalry. This provision as it stands permits them, as they desire, to be consolidated as one regiment without reference to State lines. That can be done under this clause, and instead of being separate troops they can be consolidated in one regiment; but if you leave in the words "of appropriate grade," that expression seems to limit the commanding officer of the regiment to a colonel, and it may be that it would be impossible to get a colonel of the Regular Army for that duty. They would like it left open, so that the President, if necessary, could appoint, for instance, a captain-inspector who is now in charge of their drill and evolutions. In other words, they want to smooth the way to being treated as a regiment; and there are no doubt other similar cases.

Mr. CHAMBERLAIN. Mr. President, I have no objection to that. As a matter of fact, I think it is discretionary with the President, anyway, and with the Secretary of War, written as it is. I do not think they would be obliged to assign officers of the particular ranks, but I have no objection to striking it out. I think it could be done if the language were left in, however.

Mr. LODGE. I think it might be as the chairman says, but I think it is perfectly safe to leave it out. It is all in the discretion of the President. They are afraid, however, that it might be interpreted to limit them.

Mr. CHAMBERLAIN. The change would remove any question about it.

Mr. LODGE. Yes; it would remove any question about it. I move to strike out the words.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The SECRETARY. On page 165, line 9, it is proposed to strike out the words "of appropriate grade," so as to make the section read:

SEC. 64. Assignment of National Guard to brigades and divisions: For the purpose of maintaining appropriate organization and to assist in instruction and training, the President may assign the National Guard of the several States and Territories and the District of Columbia to divisions, brigades, and other tactical units, and may detail officers either from the National Guard or the Regular Army to command such units: *Provided*, That where complete units are organized within a State, Territory, or the District of Columbia the commanding officers thereof shall not be displaced.

The amendment to the amendment was agreed to.

Mr. SMOOT. Mr. President, I offer the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The SECRETARY. On page 153, line 8, after the word "institutions" and after the comma, it is proposed to insert "except that units of the senior division may be organized at those essentially military schools which do not confer an academic degree, but which, as a result of the annual inspection of such institutions by the War Department, are specially designated by the Secretary of War as qualified for units of the senior division."

Mr. SMOOT. Mr. President, under section 42, providing for the reserve officers' training corps, the President is "authorized to establish and maintain in civil educational institutions a reserve officers' training corps, which shall consist of a senior division organized at universities and colleges requiring four years of collegiate study for a degree, including those State institutions that are required to provide instruction in military tactics under the provisions of the act of Congress of July 2, 1862, donating lands for the establishment of colleges where the object shall be practical instruction in agriculture and the mechanic arts, including military tactics, and a junior division organized at all other public or private educational institutions."

My amendment, Mr. President, is to provide for another class of civil educational institutions. For instance, if schools like Culver Military Academy are able to give the military work prescribed by the War Department for senior units of the reserve officers' training corps, they certainly should be permitted to maintain such units. Culver Military Academy, for instance, provides all the diversified military training of West Point—Infantry, Cavalry, Artillery, practical military engineering—and is superbly equipped. In fact, Mr. President, there is no college in this country in which the military training equals that of Culver, either in scope or in thoroughness, a statement which will be verified by the officers of the Army who have inspected Culver. It seems absurd, therefore, because Culver or similar institutions do not require four years of collegiate study for a degree to deny them the privilege of forming senior units when a college giving a much less thorough military course is permitted to form such units.

I hope the Senator in charge of the bill will accept this amendment, for it will only take in a class of schools like Culver, and it is guarded in every way, and the President is the only one authorized to establish and maintain a reserve officers' training corps in these schools. I therefore ask the chairman of the committee if he will not accept the amendment.

Mr. CHAMBERLAIN. Mr. President, there was no intention upon the part of the committee to exclude Culver, because all of the members of the committee are familiar with the institution and know its worth as a military institution. The committee thought, and I think, too, that the bill as it is framed is broad enough to cover it; but in order that any doubt on the subject may be removed, I am perfectly willing to have it inserted.

Mr. SMOOT. Mr. President, I suppose the committee had an idea that section 51 would cover Culver Military Academy, but I doubt it very much. I certainly appreciate what the Senator has said, and I hope the Senate will accept the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Utah.

The amendment to the amendment was agreed to.

Mr. SMITH of South Carolina. Mr. President, I think the whole country, as well as the Senate, are thoroughly aroused as to the necessity for the work that we are now doing; but there are some features that it seems have been either overlooked or purposely neglected.

It is perhaps possible that the present appalling conflict in Europe may not be an unmixed evil. It has clearly demonstrated

that in the expression of the crude animal passions of men the discoveries of science are all powerful and predominant. The war in Europe is not as other wars have been, dependent upon the personal military skill of the commanders or the personal bravery of the army. It is dependent upon the discoveries of science and the practical and skillful use of these as destructive agents. The machine guns, the great siege guns, and the cannon, and their proper placing, together with the aeroplane, are the elements upon which the combatants rely; and it is simply a question of who has the most men to be destroyed by these modern implements of warfare to determine who is the victor, and not upon the skill of military tactics or the personal bravery of those who put those tactics into effect.

The present war, in its effect upon us, has been startling. In the first place, a very small per cent, if any, of the peoples of Europe or this country believed that a conflict between any of the first-class powers of the earth was possible, to say nothing of its being imminent. That the whole of Europe would be plunged into such a conflict none believed. That one nation sandwiched between the other powerful nations of Europe could successfully withstand the onslaught of these nations from all sides was inconceivable.

The war revealed to all the possibilities of modern science. It also revealed that we as a nation are totally unprepared to meet what we may be called upon to meet. It has revealed the fact that our Navy, the number and tonnage of our naval vessels, is totally inadequate to protect us against the powerful navies of Europe, when we consider the vastness of our shore line and the vulnerability of our fort defenses. It has also brought home to us our helplessness in respect to our Army and those prepared in military training to protect us. We have sought to remedy, and we are now seeking to remedy, these palpable deficiencies. We are providing for the construction of battleships to meet our needs. We have passed a bill in the Senate for the construction of a Government armor-plate factory in order to meet the necessities upon us. We are now in consideration of the bill before us attempting to devise ways and means by which our Army may be equipped to meet any possible emergency that may arise.

Our armor-plate factory was made necessary because the penetrating power of the modern projectiles, hurled by modern explosives, made the war vessel a helpless structure; and hence a new, powerful resistant, known as armor plate, was essential to resist these forces. Our Army is equipped with modern rifles, rapid firing, high power, in order to keep pace with the equipment of the armies of the other nations. Our forts have been dismantled of the old mortar and cannon and in their places have been mounted the enormous caliber and long range guns and mortars to meet the equipment developed by modern science. The submarine, with its deadly torpedo, has got to be considered by modern invention. All these we are engaged in preparing ourselves with, because we have come to realize our helplessness in case trouble should arise similar to that which has engulfed Europe in this unthinkable and appalling conflict.

It is startling to think that in the discussion of the measures presented by the Naval and Military Committees, representing the two arms of our defense, that not a bill, save the one presented by the Committee on Agriculture and Forestry, has taken cognizance of the fact that back of all this the invention upon which all modern armaments, all modern war vessels, all modern cannon depend is the modern explosive. Without this ingredient the vast sums expended in the construction of warships and in the great armaments that they carry are absolutely useless. No matter how well trained that army may be, no matter how adequate in number of officers and men, it matters not how modern the rifles, without this one essential they are inefficient, more inefficient than your old Revolutionary flint and steel. Our forts may be constructed after the most modern resisting designs and equipped with the last word in cannon and mortars, but without this material they would be as helpless and as inefficient as the old forts of logs and clay. Our submarines, mines, and aeroplanes would be as helpless as floating débris on the sea without this same ingredient, and yet we have made absolutely no provision, as far as the Nation is concerned, for our independence and for supplying ourselves out of our own resources with this all-important and necessary material.

It is a well-known fact that the basis of all modern explosives is nitric acid, and the source of America's supply is from a little strip of country along the western coast of Chile. We have prepared ourselves with an armor-plate factory for the making of armor plate used in the construction of our naval vessels; we have erected our own plant for the manufacture of our own powder, because we did not propose to be dependent upon the caprice and avarice of corporations furnishing us with the finished product. Our powder plant at Indianhead is absolutely dependent upon Chile for the ingredients out of which to make the powder upon which every form and device of our defense is dependent. And yet it is demonstrated beyond a doubt that we need not longer be dependent upon any nation for this all-important article for our national defense.

The whole world stands amazed at the power of Germany and Austria to resist the combined attack of practically the balance of Europe, and every modern expert testified, as every student knows, that Germany is perhaps better equipped for producing in large volume this ingredient than any other nation of the earth. She perhaps was the first that became thoroughly acquainted with the tremendous power possible in modern explosives, and she certainly is the leader of the nations of the earth in the manufacture of the ordnance which has the greatest possible capacity for range and destructiveness.

The artificial processes for obtaining nitrogen, from which these high explosives are made, are no longer in the experimental stage, as the sustained and enormous use of them in the European war attests. Dr. Norton in his testimony before the Committee on Agriculture and Forestry, as well as in articles contributed to the scientific journals of this country, says, in case we were at war—

> we would be in exactly the same position in which Germany would be in to-day if four years ago she had not developed methods of winning the nitrogen from the air which enabled her to supply the needs of her army when fighting for life and death and also to partly meet the legitimate demands of agriculture. If five years ago Germany had entered upon the present war she would probably have been forced ere this to sue for peace.

Dr. Baekeland, a member of the Naval Consulting Board, said on the same subject:

> As a member of the naval board—of the Naval Consulting Board—I have had plenty of opportunity of late of examining the subject of the supply of nitrates for this country. The consulting board is enabled to consider this from the standpoint of national preparedness. This country is in the peculiar condition that for the purposes of war we can furnish practically everything that is needed except one thing—nitrates. Now, it so happens that without nitrates, or nitric acid—for practically this means the same thing—there is no possibility of carrying on any war.

Hence the statement that I have made as to the uselessness of our vast expenditures in building navies, aeroplanes, submarines, and mines and forts equipped with modern cannon; organizing armies and equipping them with modern high-power rifles—it is absolutely useless if we should be cut off from our supply of nitrates.

Mr. KENYON. Mr. President, may I interrupt the Senator from South Carolina?

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Iowa?

Mr. SMITH of South Carolina. I yield.

Mr. KENYON. I should like to know if the Senator has ascertained the process that Germany has been using to develop nitric acid?

Mr. SMITH of South Carolina. I am coming to that later on in my speech. I will refer to an article received by this morning's mail from Dr. Baekeland. It seems that the Secretary of the Navy, Mr. Daniels, had indited a letter of inquiry, and Dr. Baekeland, who is a member of the Naval Advisory Board, in his reply to the Secretary of the Navy, sent him a communication, a copy of which he transmitted to me.

Mr. KENYON. May I ask the Senator if he knows whether the War Department or the Navy Department have made any thorough investigation as to the various processes for the fixation of nitrogen?

Mr. SMITH of South Carolina. I have no other information than that given me by experts of the Navy Department, namely, Dr. Baekeland, Dr. Norton, who is connected with the Department of Foreign and Domestic Commerce, and Mr. Meritt, whose testimony appears in the hearings before the committee.

Mr. KENYON. I suppose the Senator is intending to discuss the different processes.

Mr. SMITH of South Carolina. I am.

This is sufficient, perhaps, to bring us to some realization of how in our zeal for preparedness we have overlooked the prime essential. Since the discovery of smokeless gunpowder about 1880, when it was put into practical use, to the present time we have gotten from Chile with comparative ease an adequate supply of this material, but scientists tell us that the demand for Chilean saltpeter for military purposes, for agricultural purposes, for the arts and sciences, is so great and the amount in Chile being necessarily limited, that its total exhaustion is only a matter of a few years. But even before this exhaustion, what would happen to this country if we were at war and an enemy were to succeed in blockading the Chilean nitrate mines? In this respect Dr. Norton says:

> We are at present entirely dependent upon a single foreign source, Chile, for our supply of the raw material used in making nitric acid.

An interruption in the receipt of adequate supplies from this quarter cripples our agricultural and manufacturing industries, paralyzes our means of defense against attack.

The transportation of this raw material, Chile saltpeter, can be effected only by maritime shipments, beginning on the Pacific coast of Chile, terminating usually in our Atlantic ports. A naval command of the Pacific on the part of an enemy would render them impossible. A naval command of the Atlantic would render them difficult, forcing the long railway haul across the Continent from some port on our Pacific littoral.

To emphasize this still further, the great necessity of our providing ourselves at once with the means of producing an abundant supply of this material, Dr. Baekeland says:

If we had to prepare ourselves to-day it would probably take from 8 to 12 months before we begin to feel that we were entirely independent for our supply of nitric acid. The Germans have been at it for 18 months. At the beginning of the war the plants for the producing of this nitric acid were totally insufficient. Of course, Germany had a large supply of Chile saltpeter. From the conversations I have had with the heads of our Navy Department, I understand that this country has taken the precaution of having a comfortable supply of Chile saltpeter at hand, but this supply, of course, can not last indefinitely and depends entirely on the extent and the duration of any war in which we might be involved.

The present European war is so different from any wars which have occurred heretofore, not only in magnitude of operations and the size of the armies, but the tremendously increased consumption of explosives. In two instances, the battles of Neuve Chapelle and Loos, in three days more explosives were used than in the whole campaign of 1870. That gives you an idea of how in modern war any stores of Chile saltpeter would soon be exhausted.

That gives us an idea that in modern war any source of Chilean saltpeter would soon be exhausted.

These illustrations are sufficient to impress upon this Senate the absolute necessity for immediately taking steps to render ourselves independent of Chile, to provide ourselves with the means of obtaining an inexhaustible supply of this all-important material.

Now, as to the means of obtaining it. Power either in the initial form of water or steam is necessary to take the stores of nitrogen from the air and fix it in the form of nitric acid. These processes are no longer experimental, but are commercial and military, facts startingly substantiated by the European war. It is idle, silly, for us to stop in preparing ourselves adequately for defense to inquire into them, as far as the Senate is concerned, as to which is the most available of these processes. Those processes that are now used are relative in their productive power as to cost and quantity. The testimony of the experts before the commitee was to the effect that where there was an abundance of cheap water power the arc process was the best; where less water power was available the cyanamide was perhaps better.

The bill which I am offering as an amendment to this bill leaves the question of the processes entirely to the discretion of the War Department, where it should properly be left, as is also the location of the water sites. If in their wisdom a location is found where the water power is sufficient and cheap to render the arc process the most available, they will doubtless use that; if another be found where the cyanamide or any other process is more available, they will use that. The question is not to determine whether or not it is a practical fact. That question has been determined both in this country and in Europe. In testimony of this Mr. Frank B. Washburn, president of the American Cyanamid Co., who is an inventor of processes connected with the manufacture of this article, said before the committee:

So the point I wish to make is this: That the nitrogen industry is no longer in the experimental stage. It has taken the great scientists of the world, men understanding such things, 16 years to bring it to where it is a great, successful, reliable, extraordinarily cheap method of producing the most valuable single substance known to mankind.

In this connection Dr. Baekeland stated:

The whole situation is a shame to the human race. We know how to get nitrogen from the air; we know how to increase the yields of our acres. We do not do it, although those chemical processes are no longer secrets, and we know all about them. The key to the whole situation is better utilization of our natural resources of cheap power. If you make your nitrogen compounds or your nitric acid at too high prices, you may be able to use it in war time—in war time nothing is too expensive when it comes to murdering each other.

* * * * * * *

This nitric acid is made by a chemical process, which, I am glad to say, the chemists of the United States can duplicate at any time. There is no particular secret about it, and if the chemists of the United States were confronted with this problem I have no hesitation in saying that, if properly supported and given the necessary time, they would make as good a showing for themselves as did the German chemists.

* * * * * * *

The question of the fixation of nitrogen from the air from the chemical standpoint is clear and easy, and is a problem no more difficult than any other chemical problem.

Now, as these scientists and experts declare, the processes of manufacturing it are established and well known, a powerful and important fact, one that we can not ignore. Now, the question arises, What are the facilities, what resources have we for the manufacture of this article? It has been suggested that it takes great units of water power to successfully manufacture this article, and it has been testified that there are water powers in America sufficient for the operation of modern plants. Dr. Norton says:

You can start in with any amount. You can start with 5,000, 10,000, 15,000, 20,000, or 30,000 horsepower. Less than 10,000 horsepower is economically not very advantageous. The industry requires to be mounted upon a large scale in order to produce the highest economic results.

* * * * * * *

I should, from my observation in Europe, especially in Scandinavia, say that we ought not to start any individual plant with less than 30,000 horsepower. I should put that as about the minimum figure.

In a letter to me, under date of April 4, he says that there is no question of the presence in various sections of the country of an ample supply of water power for the purposes in question, should methods 1 and 2 be adopted. Evidence brought out in the hearings before the Committee on Agriculture and Forestry shows the large amount of water power in the northwest and the southeast of our country not yet harnessed in the interest of the Nation's industrial evolution. The vast reserve power of Niagara can be drawn upon without seriously affecting its value as a scenic asset.

A careful enumeration of available water power would reveal many not yet well known but easily susceptible of development. Thus, within 50 miles of Pittsburgh there is a water power capable of producing 148,000 horsepower, as yet entirely undeveloped. A similar power in Tennessee, not very far from the famous Muscle Shoals, seems also to have escaped attention.

The estimates submitted show that ample power is available, ranging annually in cost from $3 per horsepower, should Niagara Falls be utilized on the intermittent plan, all the way up to $10 for less advantageously located sites.

Mr. BRADY. I should like to inquire from whom the Senator is quoting?

Mr. SMITH of South Carolina. I am quoting from Dr. Norton, of the Department of Foreign and Domestic Commerce.

Mr. BRADY. He appeared before the Committee on Agriculture and Forestry?

Mr. SMITH of South Carolina. Yes.

Dr. Baekeland, also speaking of our water power and its availability, says:

You need a good and substantial installation to make it worth while; you must be able to run economically in order to make some profit at the end of the year; and I should say that for the manufacture of nitric acid or cyanamide it would be rather awkward to try to make a profitable installation on a small scale. It would not take less than, say, twenty-five or fifty thousand horsepower, and it would be much better if there could be available 150,000 horsepower or more.

Therefore it is useless to inquire as to whether or not we have the horsepower. According to the testimony before our committee there is an abundance of water power in the various mountain ranges of the country and around the Great Lakes. The committee, therefore, having determined this, left the matter of the sites to be determined upon by those charged with the execution and administration of this important work.

From the military standpoint it is the first absolutely essential necessity that we have to meet. We have demonstrated that as to the processes they are available; as to the water power, that is adequate and available. Therefore the only question before the Senate is: Do you intend to prepare yourselves with the proper equipment for the production of this all-important article?

From the best sources it was ascertained as nearly as the committee could what would be the minimum amount necessary to put into practical operation a sufficient installation to supply this country with its nitrogen. The experts were of opinion that $15,000,000 was the minimum that could be economically used in the production of an adequate supply for the use of the Government. I inquired of Dr. Norton as to this, and in a letter to me he states what I might read in this connection, but as it is quite lengthy I can have it read for the benefit of the Senate at the close of my speech. Dr. Baekeland is also of the opinion that if we are going to employ the two well defined and developed systems, namely, the arc system and the cyanamide system, the appropriation in this amendment should be doubled, and he thinks it would be economy on the part of the Government to install both systems, for reasons that I shall give further on in my remarks.

Mr. KENYON. Mr. President——

The PRESIDING OFFICER (Mr. O'GORMAN). Does the Senator from South Carolina yield to the Senator from Iowa?

Mr. SMITH of South Carolina. I do.

Mr. KENYON. I should like to ask the Senator if that statement contemplates one plan or several plans for the making of nitric acid.

Mr. SMITH of South Carolina. The amendment which I have offered, which is the bill passed upon by the Committee on Agriculture and Forestry, contemplates that the Government, through its proper department, the War Department, shall ascertain the best site, according to the testimony given, as the Senator will remember, before our committee, for strategic as well as economic reasons. The experts thought there should be at least three, one in the southeastern part of the country, one in the northeastern, and one in the West, removed far enough from the coast, of course, not to render them liable to destruction by an invading foe.

Mr. KENYON. Is there any difference between the cost of the arc process and the cyanamide process?

Mr. SMITH of South Carolina. I called attention a moment ago to the fact that they are relatively equivalent, as Dr. Baekeland, who is a chemist on the Naval Advisory Board, points out; that where you want immediate results in the form of the nitric acid the arc process, in time of war, when cost is not to be considered primarily, is the most available, and even where for the arts and sciences you want pure nitric acid you have to take the product of the cyanamide process and carry it through some subsequent processes in order to get the nitric acid. So, for the purpose of military uses, the testimony seems to be that there is no very great difference between the cost of the two processes.

Mr. KENYON. The amount appropriated in the Senator's amendment has nothing to do with the particular process that is to be employed?

Mr. SMITH of South Carolina. Nothing whatever, because at the time of the drafting of the bill we had not gone into it sufficiently to determine other than the average cost of the production of the amount necessary for the Government.

Mr. VARDAMAN. Mr. President, I do not want to interrupt the line of argument the Senator from South Carolina is making; I am very much interested in it, but I should like to ask the Senator if there is any difference between the cost of the process to be used in the manufacture of fertilizers and that used in the manufacture of powder?

Mr. SMITH of South Carolina. In reply to the Senator, I will say——

Mr. VARDAMAN. I ask that question for the reason that I know it is the Senator's view, when the plant is not working to provide the Government with powder to kill people, that it will be used to make fertilizers to produce food and clothing for the people.

Mr. SMITH of South Carolina. I should like to state, in answer to that, that I am now attempting to impress upon the Senate the absolute necessity, from a military standpoint, for this article. Some writer in a scientific journal—perhaps it was Dr. Baekeland himself—in speaking of the necessity for this article on board our warships, in our Army equipment, in submarines, and in aeroplanes, said that without nitric acid you are as helpless as you are in an automobile without gasoline. We are spending a hundred million dollars to develop our Navy, millions of dollars to develop your submarines and aeroplanes, and you are absolutely dependent upon the little strip of Chilean coast as to whether they will be of any service or a dead expense. That is what I am attempting to show. The whole testimony is to the effect that we have absolutely ignored the fundamental, the prime necessity. Every witness before our committee testified that had Germany not perfected processes by which she could furnish herself with atmospheric nitrogen she would have been on her knees suing for peace long before this, because England with her great navy, mistress of the seas, could at least get her supplies for the creation of modern explosives from the Chilean coast. Here we are seriously spending millions in providing for armor-plate factories for our great warships and our modern armament and we have ignored entirely the fact that since 1880 the whole scheme of warfare has been projected upon this wonderful scientific discovery.

Mr. CLARKE of Arkansas. Where does the Government at the present time get its supply of explosives for practice purposes?

Mr. SMITH of South Carolina. From Chile. The testimony before the committee was that we, anticipating that there might be possible danger, laid in an extra store of Chilean nitrate. Germany had done the same thing, and, as the testimony shows, in three days' fighting under the modern equipment more explosives were used than were used in the entire campaign of 1870. Yet not a line, not a scrap, not a word save this bill has been introduced looking to equipping ourselves first and foremost with the fuel that will make the engines run, rather than build the engine and depend on Chile for the fuel.

Mr. MARTINE of New Jersey. Will the Senator yield for a moment? Is it not a fact established upon good authority that the Chilean nitrate beds are fast approaching a condition of utter depletion and exhaustion?

Mr. SMITH of South Carolina. The testimony before the committee was, as I have just stated, as to aniline dyes that we hear so much of here in the Senate. We want to develop our dyeing industry; and all the coal-tar dyes, the lack of which is to-day absolutely stagnating our manufacturing progress, are based upon nitric acid. This very process that I am pleading this Government shall engage in for its defense is the source out of which comes this essential ingredient in our manufacturing processes. Now, coming to the question of the amount of appropriation necessary, Dr. Norton says:

> The amount specified in the bill under consideration, viz. $15,000,000, is not sufficient to entirely liberate us from dependence upon Chile saltpeter. It should, however, enable us to provide fairly well for meeting the Nation's needs in regard to munitions of war and to cover normally a large share of the current consumption of combined nitrogen.

We have provided in the committee amendment for a bond issue. It was the unanimous opinion of the committee that this being a matter which is permanent in its nature, that a bond issue was the proper thing to do. Especially was this true in view of the fact that under the statutes now existing, providing for the issue of Panama Canal bonds, no new legislation was necessary. In fact the arguments used for the construction of the Panama Canal and the issuance of the bonds for its construction are the very arguments that may be used with more force and reason for the present purpose.

In reading the argument made for the digging of the Panama Canal connecting the two oceans we find that it was for the purpose of developing the commerce of America and adding to its defense, and yet back of all that is the question involved in this amendment, our power to provide ourselves with an adequate supply of that which makes your vessels available and your fields attractive.

When the vital importance of this legislation, its absolute necessity as a means of defense alone, is considered, the great project of the Panama Canal or the Alaskan railway that we so willingly voted $40,000,000 for sinks into insignificance. We built the Panama Canal, approximating in cost now something like $600,000,000, for the purpose of facilitating the movement of our commerce and promoting its development and strengthening our naval defense. This project, costing an infinitesimal part of what the canal project cost, is of far greater importance to the American people.

I have said this much to emphasize the necessity for immediate action from the standpoint of military necessity. It so happens that nitrogen is an indispensable chemical in practically every department of our economic life. It is the essential element in all plant food. As a fertilizer ingredient it is indispensable. Dr. Baekeland made the startling statement before the committee that statisticians had declared that the available water power, not the potential, but the available water power of Niagara, converted into atmospheric nitrogen and applied to the wheat fields of America would increase the yield of wheat 3,000,000 bushels every 24 hours. This was arrived at by the accurate experiment of taking a certain amount of atmospheric nitrogen and applying it to an acre and comparing the increased yield of that acre with one not so treated.

Mr. VARDAMAN. Will the Senator kindly give me the estimate made as to the increased product to the fields? That is what I want.

Mr. SMITH of South Carolina. There is not a Member of the Senate who would not agree that as important as if not more important than any other question is the development of our agricultural resources. This development necessarily rests upon the fertility of the soil. Upon that, and that alone, depends the possibility of adequate supplies for the necessities of the human race. It is a well-known fact that the great wheat fields of the West, the Delta of the Mississippi, the silt deposits that through ages have made the soil contiguous to our great water courses, all are rich in nitrogen, secreted through countless ages by millions of certain microbes in the presence of decomposing matter. But surely and steadily this stored-up soil wealth is being exhausted. The yield of our own wheat fields is now but slightly exceeding the demands of our own people. The cost of living depends practically, as every other commercial problem depends on the law of supply and demand, and rests ultimately upon the productivity or the fertility of the soil. In the southeastern part of our country, or the cotton belt, one-half of the entire agricultural area is dependent upon artificial fertilization, and the principal ingredient, the most costly, and the most essential is nitrogen. The amount of

nitrogen imported last year for agricultural purposes approximated $23,000,000. The yield of corn per acre on the Atlantic seaboard, in the cotton belt, in the last 10 or 15 years, has been doubled principally by the increased use of nitrate of soda. Agricultural chemists are practically agreed that all foodstuffs are naturally rich is nitrogen and therefore require artificial applications to supply this ingredient to the growing plant in order that the fruit or the harvest may be satisfactory.

We to-day boast of the fact that we, by virtue of climate and geographical position and the proximity of the Gulf Stream, have a monopoly of the three world necessities of the human family. The world consumes now 16,000,000 bales of cotton, as compared with about 8,000,000 bales 25 years ago. This added excess is largely due, if not wholly due, to the discovery and use of nitrate of soda from Chile. I can state from my own experience as a farmer that in the State of South Carolina, according to a table which I am going to submit without reading, the yield of corn per acre in North Carolina, Georgia, and Florida in 15 years has doubled, and every corn producer in those States will testify that the happy solution of the question of grain production in the southeastern part of this country is entirely dependent upon the application of concentrated nitrates.

I want to state for the information of the Senate what will be borne out by any scientist, that you can go into any wheat field upon which no application of this ingredient has been made, and you may write your name by sprinkling this nitrate of soda, and until the crop is matured and the color becomes the same by virtue of the crop ripening you can read your name in the excess growth produced by that application.

I am calling your attention to this because even now we are proposing to investigate the high cost of living, and, as in the case of investigating the high cost of a battleship, you are not justified in putting a dollar into it if you do not put an explosive in the battleship, the Agricultural Department is not justified in spending these millions and millions of dollars in so-called farm instruction when the perfected seed that they have developed on their plats and the processes by which they develop them have got to be employed in an impoverished soil.

I state here and now that I do not know but that in my State, under present conditions, it is absolutely wrong to go down there to teach our farmers the modern processes of agriculture unless you can give them an adequate means of enriching their soil to meet that which you teach them. The law of increasing and diminishing returns is involved in the cost of artificial fertilizer; and no matter what the ultimate production of an acre of land may be, if the cost of extra fertilizer takes away the profit, there is no incentive to produce to its fullest capacity. The economic problem that confronts you and me is as of vital importance—aye, it is of more vital importance—than the question of whether or not we shall equip ourselves to defend our country from an invading foe. The one is an accident that we all pray may be averted; it is one that we hope may be temporary, while the vast army of agriculturists is that army that 365 days in the year are on the farm and are preparing themselves at all times, when not engaged in actual labor, to fight the battle that makes it possible for you and me to sit in the Senate Chamber of the United States. I say that it is of more importance to us to take care of the man who protects our lives in time of peace, who supports us, than it is to take care of the man who defends and protects us in time of war.

It is useless to state to this Senate what must be apparent to all—that the question of agriculture is to-day, as it has always been, the paramount issue with every country. Some one has said, and said truly, that civilization begins and ends with agriculture.

Now that there is given the opportunity to this Congress to provide this ingredient for purposes of defense, it surely will not hesitate to go as far as the Constitution will allow to provide the toiling agricultural masses with the essential ingredient needed so sorely to help them in their task of feeding and clothing the human race.

The cost of fertilizers is one of the greatest burdens placed upon agriculture. It is the duty of the Government, if it may not directly furnish at the lowest possible cost an adequate supply of that upon which we are all dependent, it should feel it to be its duty to use every legitimate means within its power to further this all-important end of maintaining the fertility of our soil and its productiveness to the highest possible degree.

I want to state to the Senate now that the question of the yield per acre has never been solved because the cost of the fertilizer which would produce the highest possible yield goes beyond the region of profit to the man so using it. In my State a 17-year-old boy made 234 bushels of corn on 1 acre. Of course, that would be impossible as a profitable process; but it certainly illustrates what may be done, given the means. If I were not assured that in the Department of Agriculture the record is there, I would not venture on this assertion. Another South Carolinian, previous to the exploit of Jerry Moore, made 254 bushels of corn on 1 acre.

Mr. MARTINE of New Jersey. Mr. President, I should like to ask the Senator a question.

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from New Jersey?

Mr. SMITH of South Carolina. I yield.

Mr. MARTINE of New Jersey. I desire to ask the Senator from South Carolina whether the acre referred to was a measured acre of 43,560 square feet or whether it was a section of an acre on which these experiments were exploited? I glory in anything that will increase the farmer's supply, for God knows the struggle is pretty hard and bitter for the average farmer; but to a practical farmer, who has spent the years of his life in farming, that is a pretty big story.

Mr. SMITH of South Carolina. I should like to hear what the Senator has to say; but on account of the ruling of the Chair I prefer to finish my speech rather than lose the floor.

Mr. MARTINE of New Jersey. I do not wish to interfere with the Senator, but I say God speed him, if in South Carolina they can produce 254 bushels of corn to the acre. [Laughter.]

Mr. SMITH of South Carolina. Well, Mr. President, in reply to that, I wish to say that I think God is doing His part, and I am trying to get the Senate to speed on just now.

Mr. MARTINE of New Jersey. That is all right.

Mr. SMITH of South Carolina. I think God has provided us with all the material that is necessary, and it only remains with us whether or not we shall utilize that material to realize approximately the yield which I have indicated.

A provision in this bill gives the Secretary of Agriculture the right to dispose of any surplus nitrogen that may be had above the needs of the Government for military purposes.

I do not believe that the agricultural interests of this country bear the same relation to the Government practically that others bear, for the reason that here the raw material is made upon which all life, both human and animal, is dependent, and the prosperity and development of every department of our life depends ultimately upon the productiveness of our fields, and from the very nature of the case they can not bear the same relation to the Government that the excrescences that have appeared above the economic body by virtue of invention, and which personal interests have foisted upon us. And when it is taken into consideration that the vast majority of those engaged in agriculture; in fact, practically all are comparatively poor, limited in means to supply themselves with the ingredients that would enrich the soil; poor because of the very vocation in which they labor; poor because the returns from the farm scarcely average more than a sufficiency to support life, and in view of the fact that so vast an army of these small farmers produce the food and clothing of this country, the very conditions of the work demand special attention. We have recognized this in the establishment of the Department of Agriculture. We have devoted millions of dollars to experimental farming, to discover the best methods of farming; we have devoted millions in experimenting in the development of seed to give him the best yield from a given plant; we are devoting millions in supporting agricultural institutions, in part at least, throughout the country; and yet it all is comparatively a failure if the fertility of the soil does not cause the plant to respond to the labor and seed.

The cost of fertilizers, by the law of diminishing returns, makes it unprofitable. Therefore, Mr. President, I believe it to be the duty of the Senate, for reasons which I have set forth, to adopt this amendment or a similar one, and to at once begin the manufacture of that article which, while essential to the military defense of this country, is equally essential to the progress and development of our resources.

Mr. VARDAMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Mississippi?

Mr. SMITH of South Carolina. I do.

Mr. VARDAMAN. Did I understand the Senator to say that he would insert in his remarks an estimate as to the probable cost of this plant?

Mr. SMITH of South Carolina. Yes.

Mr. VARDAMAN. But the Senator has not given that to the Senate?

Mr. SMITH of South Carolina. Yes; I have set it forth here. It is $15,000,000.

Mr. VARDAMAN. I merely wished to know if the Senator had done so.

Mr. SMITH of South Carolina. It is set forth in my amendment.

Mr. VARDAMAN. I shall be glad to read it in the Senator's speech.

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Iowa?

Mr. SMITH of South Carolina. I do.

Mr. CUMMINS. Is the supply of nitrogen in the air inexhaustible?

Mr. SMITH of South Carolina. A member of the committee asked that question, and we were told that the blanket of atmosphere is about 50 miles deep, and that 1 acre square, by actual calculation, would produce enough nitrogen, if it could all be extracted, to last the human family for a generation.

Mr. CUMMINS. So that if war becomes, as it is apt to become, the normal condition of the world, and we withdraw from the air the nitrogen necessary to manufacture all the explosives, and also the world at large shall withdraw from the air the nitrogen necessary to fertilize the soil, there is no danger that the atmosphere will become so changed that it will not sustain human life?

Mr. SMITH of South Carolina. The amount extracted would be like a drop out of the ocean.

Mr. CUMMINS. I am very glad to hear the Senator from South Carolina say that. I had really begun to have some alarm about the outcome.

Mr. SMITH of South Carolina. There is not a particle of danger of exhausting the supply of nitrogen. The fact is, Mr. President, I should like to say to the Senator from Iowa, that this element also comes under the great law of the transformation of energy, and as rapidly as it is exhausted in the production of a crop or as rapidly as a cannon explodes the initial elements go back to replenish the supply very much like the exhalations of the ocean furnish the clouds which furnish the rain which supplies the ocean.

Mr. CUMMINS. Now, Mr. President, I really want to ask a question. The Senator from South Carolina said a few moments ago that this bill was the first suggestion along the line of his argument. I think the Senator from Alabama [Mr. UNDERWOOD] has introduced a bill looking to the manufacture of nitric acid by the Government. I should like to know, for my own information, the essential difference between the bill reported by the Committee on Agriculture and the one introduced by the Senator from Alabama.

Mr. SMITH of South Carolina. Mr. President, the essential difference is this: The amendment offered to this bill by the Senator from Alabama seeks to have a commission appointed to investigate the questions involved in a proposition of this kind, and at some future time, after they have ascertained the best process or processes by which to manufacture this commodity and determined the site or sites where plants should be located, to report to the Senate for such action as they may see fit to take. The Agricultural Committee have investigated. We availed ourselves of the very best authorities that this country could produce; we had before us Mr. Washburn, who practically controls the patents in the cyanimide process; we had before us Dr. Norton, who has spent several years under the auspices of the Government in studying the arc process. After exhaustive hearings, which are available to the Senator, the Agricultural Committee of the Senate was of the opinion that, in view of the pressing necessity, we should avail ourselves now of what is entirely practicable and proceed at once, without any further delay, toward the manufacture of this commodity.

There is not a Senator here who does not know that, if we postpone this undertaking and refer it to a commission, and the subject follows the usual routine of commissions, we will be exactly in the same fix that we were in at the time of the Spanish-American War. The idea of our going up against even weak, effete Spain, and being compelled to use black powder was humiliating. Even as late as that war we were not equipped with modern explosives, and, if it had not been for the very nature and character of the poor, disintegrating Government that we went up against at that time, the tale might have ended differently.

I believe the testimony before our committee will show the entire practicability of this undertaking; and the same thing is shown, I think, by the letter which I received this morning from Dr. Baekeland, the chemist of the Naval Advisory Board, who goes into it exhaustively. Let me read the last sentence of his letter. I am not going to take the time of the Senate to have it read, but I am going to ask to have it printed in connection with my remarks. In speaking of the appropriation, and right along the line of the inquiry of the Senator from Iowa, he says:

> In this way the appropriation provided for in the present bill—
>
> Speaking of the bill which I am about to offer as an amendment—
>
> would insure the main factor of the problem—cheap power—and leave it to the merits of changing opportunities in what way this power shall be utilized to the best interests of the community.
>
> The present bill may be made an important instrument for national defense and for industrial and agricultural peace preparedness of the United States.

I should like to state to the Senator also that Dr. Baekeland is of the opinion, and so states, as the Senator may read in the morning in the RECORD, that it will take at least 12 months before we can begin to supply ourselves with this ingredient. He says that we are thoroughly equipped and have as good chemists as the world has; that what Germany is doing and what Norway and Sweden and France and England are doing, we can more abundantly do with our matchless resources; that the processes are known and familiar to American scientists; and that there is absolutely no necessity for a day's delay.

I now ask that the communication from Dr. Baekeland, to which I have referred, may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, permission is granted.

The communication referred to is as follows:

NITRIC ACID IN WAR.

It is generally accepted that in case of war the United States can be put in a condition to produce, within its boundaries from its own resources, all the needed materials or ammunition, except for the fact that until now it is entirely dependent on its importations of Chile saltpeter for the manufacture of nitric acid. Nitric acid is the essential chemical for the manufacture of our explosives. Any enemy who, through interference with navigation or by seizing the nitrate fields in Chile, would cut off our supply of Chile saltpeter would have this country at his mercy if we could not devise other means for producing nitric acid. These means exist, and Germany has been compelled to utilize them, because since the beginning of the war it has been practically shut off from the outside supply of Chile saltpeter. It is true that at the beginning of the war Germany was supplied with a large stock of ready-made explosives and a reserve of Chile saltpeter, but very probably Germany did not expect the war to last beyond a few months nor to use the incredible amount of ammunition and explosives which have been expended during this war. At any rate, it is a well-known fact that Germany is obtaining now all the nitric acid for its war operations by the utilization of chemical processes for the fixation of nitrogen, which have been developed not only in Germany but in several other countries. These processes are well known and could be duplicated in this country but for the fact that the mass production of any chemical requires a well-trained staff and a well-equipped plant.

TIME REQUIRED FOR GETTING READY.

The construction of a plant of adequate size, even under the most propitious conditions and using all diligence and skill of American engineers and chemists, will require a considerable time to erect, and certainly not less than a year. But even after a plant is erected the staff of engineers and chemists will not gain the necessary experience except after the usual delays and disappointments which are the unavoidable accompaniments of any new chemical manufacturing processes. In other words, even the best of chemists and of engineers have to go through a period of apprenticeship whenever they undertake a new manufacturing process. In frequent cases it has taken years before a competent staff was able to operate a new process efficiently. On account of this a beginning must be made in advance. After some units are in successful operation it becomes a relatively easy task to duplicate these units and to communicate the experience of the initial members of the staff to additional men who are put in charge of the increasing units.

In relation to this, it may be interesting to point out that as soon as war was declared the German Government, under threat of strong penalties, forbade German engineers and chemists to participate in foreign enterprises which might tend to help foreign enterprises to compete with its domestic industries.

IN WAR NITRIC ACID IS MADE REGARDLESS OF COST.

This problem of equipping the country so as to put it in a condition where it can manufacture its own requirements of nitric acid is difficult enough and requires the best of chemical engineering talent and the highest executive abilities. Nevertheless, it is a relatively easy problem, as compared to that which tries to furnish to this country an abundant supply of cheap nitrogen fertilizer obtained from the cheapest methods of production, namely, the fixation of the nitrogen of the air. Indeed, for war purposes nitric acid can be made regardless of cost. It becomes simply a paramount matter of getting nitric acid at all. Germany now is making nitric acid regardless of cost, but such a process does not suit peace conditions. If the problem of the manufacture of nitric acid for national defense is important enough by itself, it should not be overlooked that its utilization for war purposes is only a probable possibility, while the processes of cheap nitrogen fertilizer are absolutely sure of utilization in times of peace as well as in times of war. Moreover, it is perfectly possible in our plans for national defense to direct the same efforts so that they surely may contribute as a national asset in times of peace.

NITROGEN FERTILIZER A QUESTION OF PRICE.

On account of this the problem of the economical fixation of nitrogen of the air gains a considerably increased importance beyond its uses in military preparedness. The productivity of our farms and yields per acre are directly increased by the use of proper fertilizer, of which nitrogen fertilizer is one of the most important constituents. The comparatively high yields per acre in Belgium and Germany, as compared to the yields per acre in the United States, are almost proportionate to the increased use of nitrogen fertilizer in Belgium and in Germany. But this fact is of no importance whatsoever if nitrogen fertilizer can not be produced cheaply, as the increased cost for fertilizer may then be higher

than the increased value of the crops. So when we consider this question in its broadest aspects, we may say that for war purposes it is not so much a question of getting nitric acid cheaply and economically as to insure abundant, independent supplies of nitric acid, obtained not necessarily by the cheapest but by the most expedient process. For agricultural purposes the nitrogen fixation problem has little or no importance, unless the processes furnish the nitrogen at the very lowest possible cost.

On account of the diversity of the two points of view, I shall take the liberty of summing up my personal conclusions as to what this country ought to do in time of war in order to insure an uninterrupted supply of nitric acid.

OUR PROGRAM IF WAR BROKE OUT TO-MORROW.

If we were involved in a serious war to-morrow, this country would not possess a single equipment of any importance at this time for making nitric acid from the air. So the first source of supply would be from stock on hand of Chile saltpeter, which would only last us for a while. I have been assured by the military authorities that this country is now provided with a somewhat increased supply of Chile saltpeter, which may help us out for a short time after the beginning of the war. After war was declared one of the first measures the United States Government ought to take would be to commandeer all the supplies of ammonia available in this country from any source whatsoever.

NITRIC ACID FROM AMMONIA.

It is a known fact that in a suitable apparatus, ammonia can be oxidized by means of air, and can be finally transformed into nitric acid. This, in fact, is the process adopted almost exclusively by Germany in order to get its supply of nitric acid for war purposes. Ammonia, in this country, is mainly obtained as a by-product from coke-ovens, together with tar. Its annual supply in the United States would be equivalent to a production of about 120,000 tons of nitric acid. But Germany is consuming, for the manufacture of its explosives, at the rate of 250,000 to 300,000 tons of nitric acid per year. Furthermore, about 40 per cent of the ammonia produced in this country is used in refrigerating machines, and in times of war refrigeration of food supplies becomes even more important than in times of peace. So if anything, the amount of ammonia available for oxidation into nitric acid would, on this account, be considerably reduced, aside of the fact that ammonia is indispensable for other industrial purposes which would become paralyzed on account of any shortage. Furthermore, the equipment and operation of nitric-acid plants from the oxidation of ammonia, although relatively simple, require special experience and skill, which very few people in this country possess at present, because our engineers and chemists have never been called upon to carry out this process on a large factory scale.

I am assured, however, that the technical staff of the American Cyanamid Co., which operates in Niagara Falls and Canada, and which is composed of American engineers and American chemists, is now equipping a first small unit for this purpose, and it claims that the yields have been as high as those currently reported in Germany, namely, as high as 90 per cent to 95 per cent of the possible theoretical yield.

In a sudden war, one of the first steps would be to call immediately into action anybody who has acquired sufficient experience in this operation so that we may be able to transform our available supply of ammonia into nitric acid as fast as possible. It should be stated right here that for the operation of transforming ammonia into nitric acid practically no water power is required, as this operation is mainly dependent upon heat if once you possess the necessary amount of ammonia.

AMMONIA FROM COKE OVENS.

While this part of the problem is being attended to and while we are transforming the available supplies of ammonia into nitric acid, we should look forward to increase our supplies of ammonia beyond what can be produced from by-product coke ovens, because the erection of additional by-product coke ovens would, by itself, consume time and a considerable investment of capital, aside from the fact that the production of coke is mainly dependent on the demands of the iron and steel industry. On this account it would be much cheaper and simpler to install processes which provide us with ammonia without producing at the same time, a disproportionate amount of another product like coke.

AMMONIA FROM CYANAMIDE.

The cheapest known and most available process for producing ammonia in the most rapid way and with the simplest equipment is to make it by means of cyanamide. This is the way the Germans are at present producing almost all the ammonia they require for nitric acid manufacturing. There are several other processes, but the urgency of the situation made them decide to rely mainly on this source of supply. At the beginning of the war Germany had only three plants in which cyanamide was manufactured, with a total annual production of 50,000 tons. At present these plants have been rapidly increased in size and in number, until they now total an annual production of about 500,000 tons of cyanamide.

It fortunately happens that the cyanamide industry is a well-known industry here in the United States, and has been under operation for a number of years on the Canadian side of Niagara Falls, under the management and operation of Americans, so that it would be possible to invoke their immediate help for the equipment of cyanamide plants in the United States in one or more sites in the interior where they would be sufficiently far remote from interference from the enemy in case of invasion.

For the manufacture of cyanamide, abundant supplies of electric current are essential, and this electric current can be produced either by water power or by steam, gas, or oil engines. Of all sources of power there is none which can be obtained as cheaply as water power, although in some cases the selling price of water power has become so high as to be higher than that of power obtained from fuel by steam or gas engines. But in a war emergency the question of price plays no rôle, and Germany is now making most of its cyanamide by means of power raised from fuel, for the simple reason that water powers in Germany or Austria are very limited in size and in number. So the next step would be to commandeer any suitable existing power plants, where cyanamide could be manufactured promptly and erect additional power plants.

HOW CYANAMIDE IS PRODUCED FROM CARBIDE.

As to the manufacture of cyanamide, the first step of the process consists in making calcium carbide, an essentially American industry, invented by Americans, developed by Americans, and in which the United States, since the inception of the process, has remained the leader. The manufacture of carbide of calcium consists chiefly in submitting a mixture of coke and lime to very high temperatures produced by the electric current. Whenever this electric current is cheaply obtainable it becomes possible to make this carbide of calcium cheaply.

The next operation consists in changing this carbide of calcium into cyanamide. This is done by uniting nitrogen, under suitable conditions, with the calcium carbide. This gives cyanamide. The nitrogen for this purpose is extracted from the air. Air contains about one-fifth of nitrogen and four-fifths of oxygen. By liquefying the air, or by other suitable processes, it becomes possible to separate the nitrogen from the oxygen, and this separated nitrogen is then available for transforming carbide of calcium into cyanamide. Cyanamide under the action of steam at increased temperatures, gives ammonia, and thus supplies the necessary material which can ultimately be converted into nitric acid.

There are several other processes for making ammonia, but none was found as easily and abundantly adaptable for the purposes of the nitric-acid supply of Germany.

OTHER NITRIC-ACID PROCESSES AND THEIR RELATIVE MERITS.

There are also some methods for making nitric acid directly from the air, without going through the intermediate formation of ammonia. One of the best examples is the process now used in Norway, in which an electric arc is passed directly through circulating air, whereby the nitrogen unites to the oxygen and by the subsequent addition of water, furnishes nitric acid. This process is also frequently called the "arc process." It has been developed by chemists and engineers of several nationalities. The first efforts in that line were carried out in Niagara Falls by two American electrochemists, Bradley and Lovejoy. The process was abandoned here on account of the exorbitant cost of water power, which made it unprofitable; it was taken up again, and further improved and developed in Norway, where, on account of abundant and cheap water power, electrical current is available at about one-fourth of the price at Niagara Falls. A large plant utilizing this process has been in operation in Norway for several years, and the allies, besides what is being produced by other means, are using most of the nitrates produced by the Norway concern. Germany has been cut off from this supply since the beginning of the war for several reasons, one of them being that the controlling financial interests of this enterprise are in the hands of French bankers.

Until the outbreak of the war it was generally considered that the Norway process was the cheapest and quickest way of making nitric acid. Since then increasing data are at hand which indicate that the oxidation of cheap ammonia furnishes more expedient and less expensive means for the manufacture of nitric acid, especially in all cases where power is relatively more expensive and limited in quantity.

It is generally accepted that with the arc process it takes from 2½ to 3 horsepower in order to produce 1 ton of nitric acid per year, while by means of the cyanamide process it only takes 0.55 horsepower to produce the same amount of nitric acid. So that with the same amount of horsepower five to six times more nitric acid can be produced with the cyanamide process than with the arc process.

These facts were not so well known at the beginning of the war, before it was clearly understood that the rate of production of ammonia with the cyanamide process and the rate of oxidation of the ammonia in the subsequent production of nitric acid, gave as high yields as those which are now reported and guaranteed by the chemical engineers who make a specialty of this class of operations. There are other processes for making ammonia which could be converted into nitric acid, for instance, the so-called Haber process, of which much capital has been made in the chemical literature, because it was thought that it would make Germany independent from the necessity of cheap power in the permanent production of nitric acid. On this account every encouragement has been given by the German Government in the development of this process to the private enterprises which took it up.

Notwithstanding this, only a relatively small amount of ammonia has been produced by means of the Haber process, and the German experts had to place their main reliance on the cyanamide process, which is furnishing incomparably the largest amount of nitric acid.

THE NITROGEN PROBLEM IN TIMES OF PEACE.

Expediency and speed of equipment and operation are the most essential factors when it comes to provide any nation with nitric acid in time of war. Germany spent about $100,000,000 during the last 18 months in erecting, with feverish haste, additional equipment for insuring its needed supplies of nitric acid. The problem becomes quite different in times of peace, if real economy of production has to be taken into consideration. This is the guiding point of view whenever we speak about nitrogen for fertilizer purposes. It is no longer the question, "Can we get the nitric acid which we need for making explosives?" but "How can we make nitrogen fertilizer at such a low price that our farmers can afford to use it on their fields so that, with the same amount of labor, they may be able to increase the yields of their acres?"

CHEAP NITROGEN FERTILIZER.

It is generally accepted as a result of direct experiments that it does not matter much whether the nitrogen is applied to the fields under the form of ammonia, of cyanamide, or of nitrates, although there seems to be some slight advantage in favor of the latter. This advantage disappears entirely in view of the fact that nitrogen, under the form of nitrates, is decidedly more expensive to produce or to purchase than what nitrogen can be manufactured for under the form of cyanamide.

The amount of nitrogen is what counts in a nitrogen fertilizer; it does not matter much whether this nitrogen exists as nitrate, ammonia, or cyanamide.

If it is cheaper to manufacture nitric acid by the way of cyanamide than by the direct arc process, it stands to reason that the nitrogen contained in cyanamide will even be less expensive than the nitrogen contained in nitric acid or nitrates manufactured by the arc process. In the last analysis we come to the conclusion that the cyanamide process, for the present, is the cheapest way of obtaining nitrogen for agricultural fertilizing purposes in illimited quantities. This conclusion seems to be supported by the fact that of all the nitrogen processes known, none has taken such an enormous extension as the cyanamide process. This does not mean to say that if coke manufacturers are willing to sell their ammonia at sacrifice prices, they could not sell lower than present cyanamide prices, but the quantity of ammonia from by-product coke ovens is limited by the market for coke, and the latter is mainly dependent upon the iron or steel industry. Furthermore, in times of peace there is a relatively close margin of profit in the coke industry, and in order to make up this profit every item of the selling price of the by-products has to be taken into consideration. So what is

usually called a by-product is a misnomer in so far as it is only one of the many products which are produced in the same operation, the selling of which contributes to make the enterprise remunerative or not.

This statement is best substantiated by the fact that not so long ago, within the last few years, the Deutsche Bank, one of the most powerful and best organized banking institutions of the world, notwithstanding the experience and advice of its best German engineers and chemists, incurred a loss of about $6,000,000 after installing by-product coke oven processes in this country after systems which had run successfully in Germany. So that after all the statement that the ammonia can be supplied in unlimited quantities from by-product coke ovens or gas tar, is only a relative statement of the truth.

If nitrogen can be provided at a lower cost by means of cheap cyanamide, this would enable an enormously extended use of nitrogen fertilizer. But in order to produce this cyanamide cheaply, the predominant factor is that of cheap water power.

COST OF WATER POWER.

The cost of water power, or the production of cheap electric current produced thereby, is a subject which in itself has so many different and complicated factors that it can only be discussed thoroughly by specialists. It is a branch of engineering decidedly different from the chemical problems connected with the economic fixation of nitrogen from the air. Without going into many details, it can be stated that the cost per horsepower is first of all determined by local conditions and then by the law of supply and demand. Some water powers situated in remote corners of the United States, far removed from centers of consumption, are not even worth while developing for the present, whenever the advantage of the cheaper cost of water power would hopelessly disappear before the increased freights. On this account owners of water powers situated inland toward the Pacific coast, in Oregon and Washington, are offering in vain every inducement to attract enterprises, while in Niagara Falls, N. Y., manufacturers are willing to pay decidedly more for power there than the same power can be produced in less accessible localities of the United States by means of steam where cheap coal is available. Niagara Falls is preferred because it lies in the center of the best market and on the main freight roads. Then again we note that the water power developed by Niagara Falls is sold at a lower price on the Canadian side of the Falls than on the New York side. This is due to a certain extent to the fact that Canada offers a smaller market and is industrially less developed than the United States.

The initial cost of construction of a power plant also varies from one locality to another. In Norway it happened that the natural conditions were such that the power site was unusually well adapted for inexpensive construction, and furthermore there was an open deep-sea harbor almost immediately below the falls. The cost of the dam and the water rights has another considerable bearing on the ultimate cost of installation.

Among the many other factors which come into play I should mention that our methods of financing power developments are proverbially wasteful. In Europe money is available at considerably lower rates of interest for honestly conducted enterprises whenever relatively small but regular dividends seem insured. In this country new industrial projects, especially at their beginning, can not be floated except at a high premium for bankers and promoters, so that a new water-power development, from its inception, is already loaded with an exorbitant, permanent charge aside of the cost of operation, amortization, maintenance, and repair. It has been stated justly that even in the most conservative cases the initial water-power development is already saddled with $9 per horsepower of bonded charges, aside of any cost of operation. In some cases it is higher.

It is claimed that in some special localities of the the United States—for instance, on the Deschuttes River, in Oregon—a power plant could be installed at a price of $62 per electric horsepower delivered at the switchboard. Although I do not indorse the accuracy of those figures, it is generally accepted in the United States that a water power which can be developed at $100 per electric horsepower, including cost of construction, water rights, and so forth, is considered inexpensive, while in most cases the cost will run up to $130, $140, and $150 per horsepower. This, of course, means an increased fixed charge for bonded debt, aside of the cost of operation, amortization, and repairs, and it all depends, furthermore, on the greed of the promoters or the wastefulness of the banking methods how much the final bonded debt shall be.

The United States Government, with its limitless credit, can afford to borrow money at rates of interest incomparably cheaper than private parties, especially if bonds have to be issued on new industrial enterprises. Here is where the United States Government, without injury to itself and for the benefit of the citizens of the Nation at large, might fund some large power plants. This could be accomplished so much the better because the Government, exercising its prerogatives of eminent domain and its power to regulate the navigability of streams, possesses, in this instance, an enormous advantage over private enterprises.

To generate power for purposes of public utility or to rent this power at a proper rental and under equitable terms to private enterprises would be one of the simplest ways of disposing efficiently of some of the natural resources of this country. In this particular instance it would interlock very suitably with the program for national preparedness for war and for peace by insuring the sufficient production of nitric acid in time of war and abundant cheap fertilizer in times of peace.

It should be noted that certain electrochemical industries can not be run economically in small units; this is the case of the manufacture of nitrogen fertilizer. As a matter of urgency for the production of nitric acid in war times this is not so important except for the fact that it immediately requires the necessary scattering over too many points of a limited technically trained staff.

SULPHURIC ACID JUST AS NECESSARY AS NITRIC ACID.

There is another consideration of great importance, namely, that in the manufacture of explosives nitric acid is practically always used in conjunction with sulphuric acid. So we need a corresponding production of sulphuric acid. This matter is relatively easy in view of the fact that the United States is the largest sulphuric-acid producing country of the world. But it is very necessary that the sulphuric acid should be produced right on the spot where the nitric acid is manufactured for the reason that transportation of sulphuric acid, by itself, or nitric acid, by itself, to the points where both products have to be used for making explosives, constitutes an enormous complication, in as far as these products have to be transported in glass containers. It so happens, on the other hand, that if you mix sulphuric acid and nitric acid the problem of transportation becomes incomparably simpler by the fact that these mixed acids can be transported in iron containers to the plants where the explosives are made.

Even in times of peace this sulphuric-acid problem has its importance, because sulphuric acid is used to make superphosphates—another fertilizer which should be used in conjunction with nitrogen fertilizer—so that it may contribute to give to the soil all of the fertilizing elements which are wanted.

These are only a few of the ramifying practical considerations which have a direct bearing on the present problem.

COST OF POWER.

When it comes to analyze the cost of electric horsepower it may be stated that while in Norway such power has been available at $4 to $7 per horsepower year, in Niagara Falls, N. Y., it is sold currently between $18 and $20 per horsepower year, and in Niagara Falls, Ontario, it has been sold as low as $10.50 per horsepower year, although it is probable that to-day it is no longer obtainable at these lower rates since the demand has enormously increased. Furthermore, the supply of power in Niagara Falls is practically below the demand. In other large power plants of the United States the cost of power is considerably higher than that of Niagara Falls.

REQUIRED APPROPRIATIONS.

It has been claimed that under unusually favorable conditions, and by borrowing money at 3 per cent, electric horsepower could be produced in the United States at a cost as low as $5 per year, but I have not been in a condition to verify these statements. Other specialists in power production claim that electric current can be generated from steam at $18 per horsepower year if good bituminous coal is available at $1.25 per long ton. In view of the above data, even if a hydroelectric plant could be installed at the relatively low rate of $100 per electric horsepower, delivered at the switch, an appropriation of $15,000,000 would only furnish 150,000 horsepower, without providing any funds whatsoever for the chemical equipment in which the nitric acid or the fertilizer has to be made. This in itself would require an appropriation at least as high. With an equipment of 150,000 horsepower, using the arc, or Norway, process, it would only be possible to produce about 50,000 tons of nitric acid per year, which would be a relatively small amount if we take into consideration that Germany is consuming now more than five times as much.

The same amount of 150,000 horsepower, with the cyanamide process, might produce over 250,000 tons of nitric acid per year which would seem sufficient for war purposes, unless the war is waged on a still larger scale than what is going on now in Europe.

In this relation it should be mentioned that up till now the fleets of the warring nations have used practically no explosives as compared to what may happen the day when they begin to participate actively in the war.

SHOULD THIS BE A GOVERNMENT ENTERPRISE?

But such an immense production of nitric acid as may be required for war is entirely disproportionate to the relatively small amount which is sufficient for times of peace. On this account it appears more logical to install an equipment which in times of peace will furnish fertilizers so cheaply that the whole production can be disposed of, and to provide at the same time an additional equipment at a relatively small outlay, so that the manufacturing process can be rapidly converted into the manufacture of nitric acid as soon as war conditions demand it. Cheap fertilizers not only requires efficient methods of production but also economic methods of distribution. The latter not only involves the question of freight rates but also, to a large extent, the great increase of cost through middlemen. Anybody who only takes these factors into consideration would think that the simplest solution consists in a huge Government enterprise, utilizing natural resources at lowest cost and selling the products at a modest profit to the farmers of the country, while maintaining the plant in such a condition as to have it always ready for national defense purposes in times of war.

Some instances might be pointed out where the Government has done excellent work in similar directions in entering into engineering enterprises, as in the case of the Panama Canal, which can be cited as a monument of national efficiency.

In another case the manufacture of smokeless powder in a Government factory is claimed to have produced cheaper and better powder. Unfortunately, none of these cases is comparable to the present problem. Indeed, it should be apparent from what has been cited that none of the processes for the fixation of nitrogen of the air or the manufacture of nitric acid have received their full development nor have by any means attained the degree of perfection which they are likely to reach in time. Scarcely a year and a half ago our conception as to what were the most efficient processes for manufacturing nitric acid were rather misleading. Even to-day quite some discussion is going on on this subject, mainly by the fact that those who are expert in one process are hardly as competent to know what their competitors have been able to accomplish with other processes. Were it not for the self-evident fact that Germany has mainly staked her safety on the production of nitric acid from the cyanamide process, many electrochemists and engineers would still be induced to believe that the process used in Norway was more adapted for the purpose. But there are still other processes pending which I have not even mentioned, because, for the moment, they are too imperfect to be worthy of consideration in this present condensed statement.

Nor is this condition of affairs any different from the history of practically every chemical process. Chemical processes are essentially imperfect when they are at the beginning of their history of utilization. It requires time, money, and experience on a large scale before improvements suggest themselves, and by the time a chemical process has reached perfection it finds itself frequently displaced by a newer and better process which settles the problem along newer and more efficient lines. These improvements on chemical processes go on so fast that it is hardly possible for anybody outside of each specialized art to follow the most recent steps. Just on this account all the flexibility and the rapid action of private enterprises, stimulated by the hope of increased dividends, have accomplished wonders in the chemical industry. And right there is where a Government enterprise is at an enormous disadvantage. Appropriations for experiments or for new equipment or for extensions and improvements can not be attended to with efficiency or expediency whenever they have to travel through all the red tape of the machinery of government and legislation, where matters of a purely technical character have to be debated in endless fashion, while most of the time they are so misunderstood as to paralyze rapid constructive effort.

However, if these arguments apply in full force to the chemical part of the present proposition, they can not be invoked except to a minor extent when it comes to the funding, equipment, administration, and operation of a Government hydroelectric power plant. The art of engineering and equipping and operating these power plants is now

well established; the efficiency which can be obtained by the present engineering methods is such that there is relatively small room for further improvements.

An investment in a power plant of this kind may properly be considered as safe and permanent an investment as the Panama Canal. There is quite some similarity in this proposition and the Panama Canal, which the Government operates as a help to private shipping enterprises, aside from holding it in reserve for operations of war.

With a Government-owned hydroelectric plant there would be every possibility to make arrangements with private parties and to select the most generous bidder for making arrangements under what conditions nitric acid and nitrogen fertilizer shall be manufactured and sold.

In this way the appropriation provided for in the present bill would insure the main factor of the problem—cheap power—and leave it to the merits of changing opportunities in what way this power shall be utilized to the best interests of the community.

The present bill may be made an important instrument for national defense and for the industrial and agricultural peace preparedness of the United States.

If the Government intends to run both the hydroelectric plant and the chemical plant, then the appropriation of $15,000,000 is insufficient and should at least be $35,000,000.

Mr. SMITH of South Carolina. At the proper time, Mr. President, I am going to offer this proposal as an amendment to this bill, believing, as I do, that the facts as set forth in the speech which I have made before the Senate and the authorities quoted justify action by the Senate; and that if we can make provision for this article, we will then have met the two prime necessities of preparedness—we will have provided adequately for sustaining life and for preserving it.

The PRESIDING OFFICER. The Chair will state that the amendment of the Senator is now in order, if he desires to offer it.

Mr. SMITH of South Carolina. I thought, perhaps, that there was an amendment pending. Inasmuch as there is not, I offer the amendment I send to the desk.

The PRESIDING OFFICER. The amendment to the amendment of the committee will be stated.

Mr. SMOOT. Mr. President, this is a very important amendment, and there are but few Senators present. I think it would hasten matters if a call for a quorum were made at this time, so that Senators may be advised as to the nature of the amendment they are to vote upon. I suggest the absence of a quorum.

The PRESIDING OFFICER. The absence of a quorum being suggested, the Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Brady	Husting	Overman	Sutherland
Brandegee	Johnson, Me.	Page	Swanson
Burleigh	Jones	Pittman	Taggart
Catron	Kern	Poindexter	Thomas
Chamberlain	Lane	Reed	Tillman
Clarke, Ark.	Lee, Md.	Robinson	Underwood
Cummins	Lewis	Saulsbury	Vardaman
Curtis	Lodge	Shafroth	Walsh
Dillingham	Martine, N. J.	Sheppard	Warren
Gallinger	Myers	Simmons	Weeks
Gore	Nelson	Smith, S. C.	Williams
Hardwick	Norris	Smoot	
Hitchcock	O'Gorman	Sterling	

Mr. HUSTING. Mr. President, I desire to announce that the Senator from South Dakota [Mr. JOHNSON] is absent on account of official business. I ask that this announcement may stand for the day.

The PRESIDING OFFICER. Fifty Senators have answered to their names. A quorum is present. The Secretary will read the amendment of the Senator from South Carolina to the amendment of the committee.

The SECRETARY. It is proposed to add at the end of the committee amendment a new section as follows:

SEC. 120. That the President at any time, in his discretion, may, by Executive order, designate for the exclusive use of the United States any site upon a navigable river, the improvement of which for purposes of navigation will make available at such site surplus water power over and above the needs for navigation. After being so designated, and until the designation is modified or revoked, every such site shall be developed and improved only in the manner and for the purposes authorized by this act.

That the President may also at any time, in his discretion, withdraw from settlement, location, sale, or entry and reserve for the exclusive use of the United States any public lands of the United States, including the Territory of Alaska, whether within national forests or other reservations or withdrawals, which are valuable as water-power sites for the purposes of this act: *Provided*, That not more than five sites shall be withdrawn in pursuance of the authority given by this act.

That the Secretary of War is authorized and directed to investigate and to recommend for designation or withdrawal such dam sites and water-power sites as in his opinion will be necessary for carrying out the purposes of this act, and is further authorized to construct, maintain, and operate at or on any site so designated or withdrawn dams, locks, other improvements to navigation, power houses, and other plants and equipment necessary or convenient for the generation of electrical or other power and for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers: *Provided*, That all plans and specifications for dams in navigable rivers shall be submitted to and approved by the Secretary of War.

That the Secretary of War is authorized to lease, purchase, or acquire, by condemnation, gift, or devise, such lands and rights of way as may be necessary for the construction and operation of such plants and to take from any lands of the United States, or to purchase or acquire by condemnation, materials and minerals necessary for the construction or operation of such plants and for the manufacture of such products.

That the products of such plants shall be used by the Secretary of War or the Secretary of the Navy for military or naval purposes, and any surplus not so required may be sold and disposed of by the Secretary of Agriculture under such regulations as he may prescribe.

That the sum of $15,000,000 is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, available until expended, to enable the Secretary of War to carry out the purposes of this act.

That the plant or plants provided for under this act shall be constructed and operated solely by the Government and not in conjunction with any other industry or enterprise carried on by private capital.

That in order to raise the money appropriated by this act and necessary to carry its provisions into effect, the Secretary of the Treasury, upon the request of the Secretary of War and the approval of the President, may issue and sell or use for such purchase or construction hereinabove authorized any of the bonds of the United States now available in the Treasury of the United States under the act of August 5, 1909, the act of February 4, 1910, and the act of March 2, 1911, relating to the issue of bonds for the construction of the Panama Canal, to a total amount not to exceed $15,000,000: *Provided*, That any Panama Canal bonds issued and sold or used under the provisions of this section may be made payable at such time after issue as the Secretary of the Treasury, in his discretion, may deem advisable and fix, instead of 50 years after date of issue, as in said act of August 5, 1909, not exceeding 50 years.

Mr. THOMAS. Mr. President, I recognize the importance of this proposed amendment and also the presence of the exigency which was so well outlined by its sponsor, the Senator from South Carolina [Mr. SMITH]. It carries, however, an appropriation of $15,000,000, which is in itself a very large sum of money. I have no doubt that the establishment of works sufficiently extensive and of sufficient capacity to furnish the country with its needs for military purposes would cost not less than the amount thus provided for. On the other hand, if this amendment carries it is probable that as the work proceeds, when sites have been selected and the structures are begun, the amount provided for in this bill will be very much less than the total amount necessary for the purpose. If therefore we act upon this matter hastily and without due examination we may find ourselves embarrassed by our lack of proper calculation of the cost of the venture; and I want, therefore, to inquire of the Senator from South Carolina what estimates have been made and upon what basis the proposed amount of $15,000,000 rests?

I have some information—not very extensive, but of a reliable character—that the amount ultimately necessary for this purpose will very largely exceed the sum of $15,000,000. I am friendly to the proposition. I think something should be done either by way of construction or by way of investigation; and, so far as I am concerned, my vote upon this particular amendment will be very largely influenced by the character of the information with regard to the sufficiency of the proposed appropriation of $15,000,000.

Of course $15,000,000 is, relatively speaking, a small sum for a purpose of such tremendous importance, not only from the standpoint of our necessary defenses, but also from the equally serious viewpoint of the needs of our great agricultural interests. At the same time I am sure that we would subject ourselves to just but serious criticism if in adopting this amendment and appropriating $15,000,000 for it we should find ourselves hereafter face to face with the necessity of making another large appropriation, possibly as much as if not more than the amount carried by this amendment, in order to complete the structure and equip it with the needed apparatus.

Mr. SMITH of South Carolina. Mr. President, I should like to state, in reply to the very pertinent inquiry of the Senator from Colorado, that this appropriation of $15,000,000 was based upon the average cost of horsepower and the productibility or the producing power expressed in units of this product by horsepower. It was estimated that in times of war we might need as much as 180,000 tons of this ingredient; during times of peace not so much. I am frank to say to the Senator that if we desire to produce the ultimate amount that we might need in times of war—that is, establish a plant sufficient to meet the requirements that might be imposed upon us during times of war—the cost would be in excess of the $15,000,000 provided for; but for normal times, using the producing power of 150,000 horsepower, the experts were of opinion that this appropriation was sufficient.

Of course the bill is open to amendments along that line; and I think that if we wish to produce as much as 150,000 or 180,000 tons, so as to make ourselves absolutely independent of any foreign source, perhaps there should be an increase in the appropriation.

Mr. THOMAS. Mr. President——

Mr. VARDAMAN. Mr. President, I should like to ask the Senator from South Carolina a question, with his permission and that of the Senator from Colorado, namely, whether the

$15,000,000 which this bill carries includes the cost of building the dam on the river that is to furnish the water power?

Mr. SMITH of South Carolina. The estimate was that this sum would equip a plant sufficient to supply the needs of the Government.

Mr. VARDAMAN. I want to say just in this connection, Mr. President, that I am personally willing to begin with the $15,000,000, because I think it is a very necessary provision to be made, more for industrial development than for preparation for war; and if we start with $15,000,000, and place it in the hands of prudent officials to invest, I do not see any harm that could come, even if we had to supplement the amount.

Mr. THOMAS. I agree with the statement of the Senator from Mississippi; but while I think it is a fair assumption, from what has been said so far, that $15,000,000 will be accepted in public estimation as sufficient for the purpose, if we pass the amendment, I do not think we can afford to make it upon that or any other assumption which might, and probably would, be followed by the necessity of further and large appropriations not now contemplated.

I repeat that the subject is one of such importance that some step should be taken, looking either to the investigation or the execution of the project, or possibly both, by way of amendment to this bill or by other legislation before this session of Congress shall have adjourned. But although my knowledge upon the general subject is somewhat superficial, I am well satisfied that the construction of a power plant or plants with a generating capacity of 100,000 horsepower will in all probability cost much more than double $15,000,000, and we may be sure that a capacity less than this will be insufficient for the national needs.

Mr. HARDWICK. Mr. President, of course I hate to oppose a proposition submitted by my good friend from South Carolina and intended to benefit so large a portion of my own constituents as well as his; and yet this amendment contains in it elements of public ownership, of governmental participation in private business, that render it absolutely impossible for me to lend it my support, unless it is materially modified from its present shape.

I desire to invite the attention of the Senate to some of the provisions of this amendment, in order that we may see exactly what we are asked to do and exactly what we are asked to favor.

The amendment provides—

> That the Secretary of War is authorized and directed to investigate and to recommend for designation or withdrawal such dam sites and water-power sites as in his opinion will be necessary for carrying out the purposes of this act, and is further authorized to construct, maintain, and operate at or on any site so designated or withdrawn dams, locks, other improvements to navigation, power houses, and other plants and equipment necessary or convenient for the generation of electrical or other power and for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers.

So that we are not confined by this amendment to the legitimate and proper governmental function of merely providing the nitrates that we need for powder in the manner suggested in the speech of the Senator from South Carolina; but it is made one of the direct and specified purposes of the amendment that we shall also provide, by Government manufacture, and in another provision by Government sale, fertilizer for the use of the farmers of the country.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Utah?

Mr. HARDWICK. I do.

Mr. SMOOT. I should like to ask the Senator if it is not true that the principal and main object of the bill is for the purpose indicated just now by the Senator?

Mr. HARDWICK. I am afraid so. I can not tell. If the Senator were to ask me, I should say, without undertaking to judge any Senator's motive, that I suspect that the principal purpose of my friend from South Carolina was to put the Government in the business of manufacturing and selling fertilizers.

Mr. SMOOT. That it was not for the purpose of manufacturing this product for fertilizer?

Mr. HARDWICK. No; I think it is the other way. I think this is a proposition to manufacture and sell fertilizers.

Mr. SMOOT. Yes; so do I.

Mr. HARDWICK. That is the truth about it, if the Senator wants me to express my opinion. But, anyhow, no matter what Senator can accept the proposition that we can manufacture nitrates for powder for the Government, and, if there is a by-product that is absolutely unavoidable in the manufacture of the necessary governmental powder, that it may be disposed of, there are few Senators on either side of the Chamber who, after maturely reflecting about the matter, will stand on the proposition that we are going to erect a plant for the double purpose, so expressed in the law, of furnishing nitrates both for powder purposes and for fertilizer purposes. I do not believe that if the Senate understood it there would be six Senators in this body who would vote for such a proposition—not six.

As far as I am concerned myself, I am willing to support a proposition, just as I did in the case of the armor-plate plant, for the Government to supply the nitrate that is needed for powder. I regard that as just as correctly and properly a governmental function as to own the Capitol, or the courthouses of the country, or the post-office buildings, or the departmental buildings. For the Government to supply its own necessities, whether in the shape of armor plate or powder or shot or shell or what not, that it needs for its own uses in any one of the public services, is one proposition; but to undertake to go into the business of manufacturing fertilizer or hats or shoes or clothing or anything else for sale to its citizens is quite another and different proposition, and rests on quite another and different principle.

Mr. SUTHERLAND. Mr. President, may I ask the Senator from Georgia whether or not this is the bill that was considered and reported from the Agricultural Committee?

Mr. HARDWICK. I do not know. I have been so informed, in a general way.

Mr. SMITH of South Carolina. Mr. President, if the Senator from Georgia will allow me——

Mr. HARDWICK. I yield; yes.

Mr. SMITH of South Carolina. This is the identical bill.

Mr. SUTHERLAND. Has it ever been considered by the Committee on Military Affairs?

Mr. SMITH of South Carolina. The Committee on Military Affairs had before them this proposition and the proposition of the Senator from Alabama [Mr. UNDERWOOD]; and, as I understand, they took no action but just referred them both back to the Senate.

Mr. HARDWICK. Yes. So that we are confronted with this situation——

Mr. SUTHERLAND. I should like——

Mr. HARDWICK. Just a moment, if the Senator pleases. We are confronted therefore with this situation: Although language is used which seems to rest this proposition on the governmental necessity for powder, yet it appears that it is being urged here in this body before the committee that deals with the agricultural interests of the country. So that the real purpose, if we may judge by that circumstance, or the principal purpose, is not to supply the Government with powder, but to supply the farmers with fertilizers.

Mr. SUTHERLAND. I was going to ask the Senator from Georgia whether he did not think that if this was primarily for a military purpose it would have been referred to the Committee on Military Affairs?

Mr. HARDWICK. The Senator's observation is eminently correct, and I thank him for it. Of course it ought to have been. If this proposition is advocated here as a military matter, why did it not come from the Military Affairs Committee? Why did they not report it? Why did not they investigate it? Why did not they inform the Senate and the country how much of a plant was necessary to supply the need of the Government for powder or for public purposes of any sort, and why does it come from the Committee on Agriculture, which, of course, considers the subject from an entirely different standpoint, and which has adopted an entirely different method of dealing with it?

Of course if the Senate wants to adopt it, it is in the power of the Senate to embark on any course it wants to about these questions of public policy; but the Senate ought not to adopt it without fully understanding what it means, the principle that it has indorsed, and exactly how far it has gone when it does it. I call the attention of the Senate again to the fact that the express language of the bill is that we shall acquire these electrical or other powers—

> for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers.

Mr. President, it is not an easy thing for a Senator who comes from a great agricultural State like mine, the vast majority of whose people depend for their livelihood upon the cultivation of the soil, to stand here under circumstances like these and stand true to the governmental principles in which he believes. It may be that there would be some benefit to the farmers of my State from this sort of a proposition; but I am not willing, Senators, to see this Government embarked in all sorts of private business, in the business of manufacturing fertilizer, even for farmers of Georgia, without at least recording my protest against it and without letting the Senate understand exactly what the proposition of the Senator from South Carolina means, and without being certain that neither the Senate nor the coun-

try shall fail to understand exactly what it means and where it leads.

There are certain other sections on page 3 that indicate that purpose, too:

That the products of such plants shall be used by the Secretary of War or the Secretary of the Navy for military or naval purposes, and any surplus not so required may be sold and disposed of by the Secretary of Agriculture under such regulations as he may prescribe.

In other words, we are going to put the Secretary of Agriculture now into the business of running a fertilizer plant and selling its products.

Again:

That the plant or plants provided for under this act shall be constructed and operated solely by the Government and not in conjunction with any other industry or enterprise carried on by private capital.

In other words, we are going to run this business enterprise ourselves, without any partners of any sort, and we are going to run it exactly to suit the Government of the United States in whatever way this highly beneficent and highly socialistic scheme can be best carried out according to the view of the Secretary of Agriculture.

I know not what course other Senators may adopt about this thing. If the Senate wants to put it on, all right, but never, so long as I represent Georgia in the Senate, will my vote be cast for any such proposition as this.

Mr. SMITH of South Carolina. Mr. President, I do not know that I am very greatly surprised to find that the Senator from Georgia or other Senators take the view that the Senator from Georgia has just expressed, but the object I had in view was the object set forth in the speech I made to-day, namely, that we were absolutely dependent, from the standpoint of preparedness, for this ingredient, nitrogen——

Mr. HARDWICK. Mr. President, will the Senator yield just a moment for a question?

Mr. SMITH of South Carolina. When I get through; yes.

Mr. HARDWICK. Oh! I will not disturb the Senator at all, then.

Mr. SMITH of South Carolina. No; I do not mean that. I just wanted to get through on this point.

There has been considerable discussion on the floor of the Senate in reference to the Government going into the manufacture of armor plate. There was rumor of scandal. There was such force given to that rumor that the bill passed taking out of the hands of private individuals the manufacture of armor plate and turning it over to a Government factory. There is not a Senator on the floor who does not recognize the fact that our armor plate and our naval vessels are worse than junk without a modern explosive; and it so happens that there is not a factory producing this article on the continent of America in commercial quantities. It so happens that we are dependent upon Chile for this article, and need it now.

In view of the fact that we do need it, and need it now, and in view of the further fact that the ingredient without which we could not prosecute a war happens to be the very identical ingredient that the agricultural interests of this country stand so sorely in need of——

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Utah?

Mr. SMITH of South Carolina. Just one minute—it seemed to me, as a member of the Agricultural Committee, believing, as I do believe now, that there is not a Member of the Senate who is influenced by the name of the committee in his patriotism and in his desire to help on the work in which Congress is engaged, namely, the work of preparedness, that therefore a bill looking toward producing a chemical that is notoriously needed and for which we are shamefully dependent upon a foreign country, and which is also needed for the enrichment of our soil, upon which we are all dependent, would not properly come under the jurisdiction of a committee that would not wish to commit the Government primarily to this enterprise for the purpose of manufacturing fertilizer.

I want to state right here and now that the main object I had was this: In view of the fact that experts are declaring that this ingredient, nitrogen, can be produced from the air for one-half the cost to the farmer of this country that he has to pay to the Government of Chile—two-thirds of the income of that country results from the royalties exacted upon Chilean saltpeter, approximately $25,000,000 worth of it, in the concentrated form, being used in this country to help eke out the rapidly depleting soil—so far as I am concerned, if the constitutional prohibition is such as to make it unwise to use that exact phraseology, then I would not be averse to the Government, if it saw fit, after having established its plant, placing such restrictions around it that the plant might be used for the benefit of those who support this country, and thus relieve their burdens to a degree. I am making no apologies whatever for standing here and advocating this amendment.

Mr. HARDWICK. Mr. President, is the Senator now ready to yield?

Mr. SMITH of South Carolina. I yield; yes.

Mr. HARDWICK. Would the Senator mind striking out the words "and useful in the manufacture of fertilizers," in line 17, page 2, of his amendment? If he will just word it so as to give the Government the powder that it needs, there will be no trouble about it.

Mr. SMITH of South Carolina. Well, Mr. President, when I say "useful," there are a lot of power sites that it is clearly within the right of the Government to set aside.

Mr. HARDWICK. I know; but the trouble is, if the Senator will let me pursue this subject just a little with him, that he has directed the Secretary to construct and operate these power plants at places suitable "for the production of nitrates or other products needed for munitions of war and useful in the manufacture of fertilizers."

Mr. SMITH of South Carolina. Yes.

Mr. HARDWICK. In other words, the whole system rests on both propositions, as the Senator has drawn his amendment. One of them is clearly within the purview of proper, legitimate Government work; the other is merely manufacturing fertilizers. Now, is the Senator willing to strike out the one and stand on the other?

Mr. SMITH of South Carolina. In reply to the Senator from Georgia, I want to make myself perfectly clear. It so happens that in order to equip ourselves for the manufacture of sufficient nitrogen for use in times of war we will have to provide a capacity greater than would be necessary in times of peace. Now, have we gotten so sensitive about the Constitution of the United States——

Mr. HARDWICK. Nobody has invoked the Constitution of the United States. It is just a question of socialism, pure and simple; that is all.

Mr. SMITH of South Carolina. Very well. Are we so sensitive about the injection of a socialistic principle that although everyone knows that the farmer of this country is notoriously outside of the pale of any help, we are going to pass a law in order not to help him? We are going to make this article; but in order that the farmer shall not get it, are we going to throw such restrictions around a Government plant, in a democratic Government of the people and for the people and by the people, as to keep poor old Rube from having any part or parcel in the benefits that might accrue from it?

Mr. SUTHERLAND. Mr. President——

The PRESIDING OFFICER. Does the Senator from South Carolina yield to the Senator from Utah for a question?

Mr. SMITH of South Carolina. I do.

Mr. SUTHERLAND. I should like to ask the Senator from South Carolina two or three questions about the bill.

Mr. SMITH of South Carolina. I shall be glad to answer them, if I can.

Mr. SUTHERLAND. In the first place, I understood the Senator to say a moment ago that there was no factory on the American Continent that was furnishing this article of nitrate.

Mr. SMITH of South Carolina. I meant in continental United States.

Mr. SUTHERLAND. Is it not true that it is being very successfully produced by a private company in Canada?

Mr. SMITH of South Carolina. Yes; my terminology was unfortunate. What I meant to say was within the limits of the United States.

Mr. SUTHERLAND. Is there any reason why it can not be as successfully produced by private capital in the United States as it is produced in Canada?

Mr. SMITH of South Carolina. The answer to that is that it is not. The answer to the Senator's question is that those who are producing it on the Canadian side are American capitalists.

Mr. SUTHERLAND. I will ask the Senator whether or not the people who went to Canada with their capital, and invested it in this enterprise, were not first anxious to establish their plant on this side in the United States?

Mr. SMITH of South Carolina. I understand that they could get certain concessions, perhaps, and certain rights over there, which I have understood they could not get here. But this remains true, that the manufacture in Canada is successfully carried on, so far as we have been informed, because of the difference in the cheapness of water power in Canada and in this country.

Mr. SUTHERLAND. Mr. President, is it not true that they were driven over there because we proposed to impose upon

them such onerous conditions and terms that they found themselves unable to spend their money here, but took it to Canada, where they could get better terms?

Mr. SMITH of South Carolina. In answer to that I will state that the fact was developed before the committee that a certain individual organization was preparing to engage in this manufacture on a huge scale in the southeastern part of this country, now that it has practically preempted all the water power in most of the Southern States. In reply to the question of the Senator from Utah, I will say that so far as the Government is concerned I am not advised as to what impositions or restrictions they laid upon this very patriotic body of men, nor am I advised as to what was the available water power not owned by the Government. I understand that we tried to pass a certain law making certain very advantageous conditions, and that Mr. Taft vetoed the bill. Therefore they went to another country.

Now, no matter what else may be said, we know at this juncture that this thing is a prime necessity, and every scientific expert who came before our committee said that it was of such vast importance and was so costly that they doubted whether private individuals would engage in it for the purpose of furnishing the Government.

Mr. SUTHERLAND. Let me ask the Senator another question, with his permission. Is there a plant of this character in South Carolina?

Mr. SMITH of South Carolina. I understand that there is a very small one, perhaps experimental. I can not answer the Senator as to the capacity of the plant. It is a little place that has taken its name from the works—Nitrolee, I believe—up near the North Carolina line.

Mr. SUTHERLAND. The Senator does not know whether it is in operation?

Mr. SMITH of South Carolina. I think it is in operation along experimental lines. I do not think it is being operated in a commercial form.

Mr. SUTHERLAND. I wish to ask the Senator another question. I will ask him first, whether or not the primary purpose of this amendment is to produce nitrates for agricultural purposes in time of peace?

Mr. SMITH of South Carolina. I did not catch the last part of the Senator's question.

Mr. SUTHERLAND. I asked whether or not the primary purpose of the amendment is to produce nitrates for agricultural uses in time of peace?

Mr. SMITH of South Carolina. I will state to the Senator very frankly what my object was. In view of the testimony that it could be produced at about one-half the cost, it is for the purpose of getting a supply of nitrogen for agricultural purposes, understand, during times of peace, of course; and I hope sufficient to carry on agriculture during times of war. I wish to state it frankly to the Senator, so that he will understand it, and that there need be no invidious questions, and I shall make no such answer. In view of the fact that we are paying right now $85 to $90 a ton for this all-important ingredient imported from Chile, upon which we are dependent for the food crops now necessary in our section of the country, and rapidly becoming so in every section of the country, and in view of the fact that the present war, by the demand it has made on the Chilean nitrate beds, put the agricultural interests of this country absolutely where they are hopeless as to anything like crops, I am perfectly willing to have the amendment so amended as to have the Government engage in the production of this all-essential ingredient.

Mr. SUTHERLAND. For agricultural purposes?

Mr. SMITH of South Carolina. And for munitions. Why does the Senator say for agricultural purposes?

Mr. SUTHERLAND. Primarily for agricultural purposes?

Mr. SMITH of South Carolina. I stay right on the proposition for agricultural purposes, because I would infinitely rather promote agriculture than promote war.

Mr. SUTHERLAND. So would I. But does the Senator think that is a constitutional purpose—to produce nitrates for agricultural purposes?

Mr. SMITH of South Carolina. I think the Government bought some buildings down here, or rather bought some lots for the erection of certain buildings, and it did not put buildings on them. Are you going to refuse the Government the right to sell the lots?

Mr. SUTHERLAND. The Senator answers a different question. No doubt the Senator's illustration is to be answered in the negative; but does the Senator think that there is any warrant in the Constitution for the United States Government to engage in the production of nitrates for agricultural purposes?

Mr. SMITH of South Carolina. Yes, it is; if in serving a governmental function it produces a surplus, and the disposition of that surplus is for the benefit of those upon whom you are dependent.

Mr. SUTHERLAND. Then, does the Senator think there is a warrant in the Constitution for engaging in the business which produces a given article, half of which is intended for governmental uses and half of which is intended for agricultural uses?

Mr. SMITH of South Carolina. I have not used any arithmetic to see just how much. In the case of the man who makes the bread that you eat and the clothes that you wear I can not figure it down and be very sensitive of the Constitution when there is some benefit that may accrue to him. I am glad I have not such a trait. I feel under obligation to him to such an extent that I do not think I could look him in the face——

Mr. SUTHERLAND. I am not more sensitive about the Constitution than the Senator from South Carolina ought to be, but I was undertaking to get his view.

Mr. SMITH of South Carolina. The Senator from Arkansas [Mr. CLARKE] hands me this—a copy of the Constitution—and I think I will read the preamble to the Constitution:

> We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America.

Mr. SUTHERLAND. If the Senator from South Carolina thinks that is a substantive grant of power, then the Senator and I have no common foundation upon which we can conduct an argument.

Mr. SMITH of South Carolina. I do not think the Senator from Utah and the Senator from South Carolina, when it comes to a question of differing about anything for the farmers of this country, can stand on the same platform, anyhow.

Mr. SUTHERLAND. No; I think not. I wanted to ask——

The PRESIDING OFFICER. Does the Senator from South Carolina yield further to the Senator from Utah?

Mr. SMITH of South Carolina. No; I do not believe I will, because I do not like to be cross-examined by a lawyer in a fight that I am making for those who are not lawyers and who have suffered from time immemorial from lawyers.

The PRESIDING OFFICER. The Senator from South Carolina declines to yield to the Senator from Utah.

Mr. SUTHERLAND. I should like to ask the Senator a practical question.

The PRESIDING OFFICER. The Senator from South Carolina refuses to yield.

Mr. LODGE. Mr. President, I had intended to say something on this question of nitrogen when the amendment proposed by the Senator from Alabama [Mr. UNDERWOOD] came before the Senate, but it has been precipitated by this somewhat different amendment of the Senator from South Carolina [Mr. SMITH], and therefore I think I might as well discuss the whole question now as later. Therefore in what I say it will be remembered I am covering both amendments, what may be called the Muscle Shoals scheme and the different processes, and whether it is wise for the Government to enter upon the production of nitrogen and nitric acid, which the experience of Germany apparently shows can be produced by chemical processes much cheaper and in larger quantities.

I have not much faith, Mr. President, in arguments which proceed on the fact that some corporation has opposed a proposition or supported it; but so much has been said as an argument in favor of the Government entering upon the production of nitrogen because a great corporation, the Du Pont Co., have offered, if they could get a water power, to make it from the air, that I think we may as well look into some of the other propositions.

I suppose a corporation is wicked in Pennsylvania or Delaware and that a corporation is good in Alabama; but, setting aside this distinction, I think it is just as well that we should know just who is behind some of these propositions.

I hold in my hand a pamphlet sent me by the kindness of the junior Senator from Alabama [Mr. UNDERWOOD] called "The facts in the nitrogen case now before Congress," by Frank H. Washburn, a patriot no doubt, buf as we have been examining so much into the Du Pont Co. it occurred to me it would be just as well to know what Mr. Washburn's business interests are. I am not reflecting on his patriotism by so doing, for I do not regard with horror a successful business man.

It appears from Moody's Manual that Mr. Washburn is president of the American Cyanamid Co., which company has for some years been engaged in manufacturing fertilizer from the air by the process which Mr. Washburn presented to the com-

mittee; that he is also a director of the Alabama Traction, Light & Power Co., chairman of the board of directors of the Alabama Power Co., vice president of the Muscle Shoals Hydroelectric Power Co., vice president of Anniston Electric & Gas Co., and a director of the Alabama Interstate Power Co., the Birmingham, Montgomery & Gulf Power Co., and Little River Power Co., which companies practically control all the water powers in the State of Alabama, as appears from the speech of Congressman FREAR, of January 10, 1916 (CONGRESSIONAL RECORD, Jan. 13, 1916, p. 1137), and from the letter of the Secretary of Agriculture, on the subject of Electric Power Development in the United States. (S. Doc. No. 316, p. 55, 64th Cong., 1st sess.)

Mr. Washburn is associated in the cyanamide manufacture with James B. Duke, who has made millions in the tobacco manufacture; and through Mr. Duke the cyanamide company also controls the Ammo-Phos Co., of New York, Amalgamated Phosphate Co., and Virginia Chemical Co., which companies practically control the fertilizer and cottonseed-oil business of the territory east of the Mississippi River, and large water-power interests in North and South Carolina.

Mr. J. W. Worthington is also a director of the American Cyanamid Co., vice president and director of Alabama Power Co., president of Muscle Shoals Hydroelectric Power Co. and a director of Alabama Interstate Power Co. and Little River Power Co., and of the Sheffield Co., which owns the lighting systems in the towns on the Tennessee River which will be largely benefited by this development.

The development of the water power of the Tennessee River by the Muscle Shoals Hydroelectric Power Co. has been proposed several times. The first proposal appears from Rivers and Harbors Committee Document No. 14, Sixtieth Congress, second session, being a report of the Engineers for Rivers and Harbors of January 11, 1909, on the survey of the Muscle Shoals in the Tennessee River. The plan thus proposed was made through Mr. Frank S. Washburn, as president of that company. The subject was also examined by a board of engineers with reference to a proposal of the Muscle Shoals Hydroelectric Power Co., and as appears from the report printed as House Document No. 781, Sixtieth Congress, first session, the proposal from the company was submitted through Mr. Frank S. Washburn as the president. The next reference to the subject is in House Document No. 360, Sixty-second Congress, second session, being a letter from the Acting Secretary of War, transmitting a report on the survey of this river, in which report reference was made to the water power to be developed, but no specific plan was outlined.

The next document dealing with this subject is House Document No. 20, Sixty-third Congress, second session, being a letter from the Chief of Engineers transmitting a report of the Board of Engineers for Rivers and Harbors on the Tennessee River. This report has particular reference to a proposal made by the Muscle Shoals Hydroelectric Power Co. for developing the water power of the Tennessee River under a plan of cooperation with the United States; and in the course of this report, page 5, reference is made to the fact that the Muscle Shoals Hydroelectric Power Co. has interests in other power developments on the Tallapoosa, the Coosa, and Little Rivers, and that connecting these developments with the proposed Muscle Shoals development will make up deficiency in power at the latter place which will result in creating 680,000 horsepower, and that the results from such a combination of plants are hardly exceeded at any place in the country; that the project contemplates the conservation of this natural resource and its development on the largest possible scale, resulting in cheap power for all the needs of that and many communities and for industrial and other purposes, and also the lease of the water-power privileges for a period of 100 years to the Muscle Shoals Co., and it is also pointed out that without this combination a limited amount of power, probably 100,000, will be available at Muscle Shoals.

The proposal of the Muscle Shoals Co. begins on page 74, and is submitted through J. W. Worthington, president, and shows the relation of the Muscle Shoals project with other proposed Alabama projects owned by the power companies before mentioned, in which both Mr. Washburn and Mr. Worthington are directors.

This general information shows that the power companies have for years had under consideration the development of the Muscle Shoals power, and that it has been urged repeatedly by the Muscle Shoals Co., through its presidents, Frank S. Washburn and J. W. Worthington, and that the project is now owned by interests which combined have practically the entire water-power situation in Alabama under one control.

Taking up the subject in more detail, it appears that Mr. Washburn is president of the American Cyanamid Co., as I have said, a corporation organized in Maine in 1907 to manufacture cyanamide, a nitrogenous fertilizer material, the nitrogen in which is derived from the atmosphere—its manufacture, sale, and use being controlled by patents; that it has an authorized capital stock of $8,000,000, of which $5,758,600 is outstanding; that its directors include Messrs. Washburn, James Mitchell, of New York; J. W. Worthington, of Sheffield, Ala.; and Lawrence Macfarlane, of Montreal, Canada; and Dr. Nicodem Caro, of Berlin, Germany.

Mr. Washburn is also a director of the Alabama Traction, Light & Power Co. (Ltd.), a corporation under the laws of Canada to acquire and operate hydroelectric-power plants in Alabama, which company owns or controls the stock of Alabama Power Co., Alabama Interstate Power Co., Birmingham, Montgomery & Gulf Power Co., Muscle Shoals Hydroelectric Power Co., and Little River Power Co., and owns, through its subsidiaries, water powers on the Tallapoosa, Coosa, and Tennessee Rivers in Alabama; that it has an authorized capital stock of $30,000,000 with $18,000,000 outstanding, and that its officers include James Mitchell, president, Lawrence Macfarlane, vice president, both of whom, together with Frank S. Washburn, are directors of that company.

The Alabama Power Co., an Alabama company engaged in the manufacture of electric power, owns various lighting properties in Alabama, having an authorized capital stock of $50,000,000, with outstanding bonds of some $12,000,000, all of the stock being owned by the Alabama Traction, Light & Power Co. (Ltd.), and its officers include Frank S. Washburn, chairman of the board; James Mitchell, president; J. W. Worthington, vice president, all of which officers are also directors.

The Alabama Interstate Power Co. is a Maine corporation with an authorized capital stock of $3,000,000, with James Mitchell, president; Frank S. Washburn, vice president; and that its directors include James Mitchell, Lawrence Macfarlane, J. W. Worthington, and Frank S. Washburn.

The Birmingham, Montgomery & Gulf Power Co. is also an Alabama corporation with an authorized capital stock of $100,000, its officers being James Mitchell, president, and F. S. Washburn, vice president, both of whom are also directors.

The Muscle Shoals Hydroelectric Power Co. is an Alabama corporation, organized in 1906 to build hydroelectric plants on the Tennessee River near Florence, Ala.; that the company plans to transmit power to various cities, including Nashville and Birmingham; that it has a capital stock of $1,000,000, its officers being J. W. Worthington, president, and F. S. Washburn, vice president, and that its directors include James Mitchell, J. W. Worthington, and F. S. Washburn, and passed under the control of the Alabama Traction, Light & Power Co. after its organization in 1912.

The Little River Power Co. is also an Alabama corporation with a capital stock of $100,000, its directors including F. S. Washburn, J. W. Worthington, and James Mitchell.

The Anniston (Ala.) Electric & Gas Co. is a New Jersey corporation, of which Frank S. Washburn is a director and vice president.

The United Gas & Electric Corporation is a Connecticut company with a capital stock of $57,500,000, and that it owns, through the American Cities Co., the lighting and street railway companies at various places, including Birmingham, Ala.; Houston, Tex.; Knoxville, Tenn.; Little Rock, Ark.; Memphis, Tenn.; and New Orleans, La.; and that its directors include F. S. Washburn.

The American Cities Co., which is controlled by the United Gas & Electric Corporation, is a corporation of New Jersey with a capital stock of $60,000,000, and that its directors include James Mitchell.

It appears from the New York Times of October 23, 1915, that the Ammo-Phos Corporation was organized under the laws of New York with a capital stock of $6,000,000 to manufacture cyanamide and to acquire shares of the Amalgamated Phosphate Co., incorporated under the laws of West Virginia, its incorporators being A. H. Sands, jr., private secretary of James B. Duke; Walter C. Parker, secretary and treasurer of Southern Power Co., of which James B. Duke is president; and William L. Baldwin, all of No. 200 Fifth Avenue, New York.

It appears from Moody's Manual, 1915, page 2027, that the Amalgamated Phosphate Co. is a corporation under the laws of West Virginia, with capital of some $8,000,000; that it owns various phosphate beds—those are necessary for the fertilizers—and that the Virginia-Carolina Chemical Co. is largely interested in the company. The directors include several directors of the

Virginia-Carolina Chemical Co., including S. T. Morgan, president of the latter company.

The Virginia-Carolina Chemical Co. is a corporation under the laws of New Jersey, with a capital stock of $68,000,000, with a bonded indebtedness of $18,000,000, its president being S. T. Morgan, who is also a director of that company. This company appears to own Charleston Mining & Manufacturing Co. This company owns over 68,000 acres of phosphate lands in South Carolina, Tennessee, and Florida. Of course, the phosphates are to be treated with the nitrates. It also owns all the stock of the Consumers' Chemical Co., a corporation manufacturing fertilizer here in New York; it controls Southern Cotton Oil Co., which company refines and manufactures cottonseed oil and other by-products, with mills and factories at various cities of the South, and it controls various sulphur, chemical, and fertilizer companies in this country and in Germany, and has a practical monopoly throughout the South of the fertilizer and cottonseed-oil business.

The Southern Power Co. is a corporation under the laws of New Jersey, with a capital stock of $11,000,000 and a bonded indebtedness of $7,000,000, owning various electric properties in North Carolina and South Carolina, its president being J. B. Duke.

Now, I have given at somewhat tedious length these corporations, because they all seem to be connected with Mr. Washburn, whose pamphlet has been sent to us to give us the facts in the nitrogen case.

The foregoing statements which I have just made suggest some inquiries which, I think, were not brought out in the hearings before the House Committee on Military Affairs, and I do not know whether they have been brought out in the hearings here, for I have not had a chance to examine them.

For example, there is the economical side of the question of the manufacture of nitrogen by the cyanamide process, its value as compared with other processes, and the relation of the company proposing to engage in this business with different power companies and others who may be expected to profit therefrom. The interest and rights of the power companies in Alabama which are now engaged in the manufacture of electric power, or which own properties which may be used for that purpose, is also important to consider, for whatever may be done by the Government will doubtless include the taking over at some value the properties and rights of some of the existing properties in that State.

Mr. UNDERWOOD. Will the Senator from Massachusetts yield to me?

Mr. LODGE. I yield.

Mr. UNDERWOOD. The Senator has just made a statement in reference to the control of power in Alabama by one company. I am sure the statement the Senator has made has been furnished him by those who thought they were informed on the subject.

Mr. LODGE. No; they are furnished from Moody's Manual, showing the connection among the companies——

Mr. UNDERWOOD. Will the Senator allow me to state the extent in which the company that he refers to——

Mr. LODGE. I do not want to lose the floor, Mr. President.

The PRESIDING OFFICER. Under the rule the Senator from Alabama may ask a question, and not more.

Mr. UNDERWOOD. I merely wish to state, Mr. President, the effect of the Senator's statement in reference to these companies I am sure will not be carried out by the fact as to the real ownership.

Mr. LODGE. Mr. President, I do not want to be unreasonable, but I do not wish to lose the floor.

Mr. UNDERWOOD. I would be glad to make a statement to correct it.

Mr. LODGE. That seems to be a statement—more than a question.

The PRESIDING OFFICER. It is.

Mr. LODGE. All I am giving——

Mr. KENYON. I wish to ask the Senator a question. Has he read the report of the Secretary of Agriculture as to the electric power developed in the United States, and discovered by reading that report that one company, the Alabama Traction, Light & Power Co., has 87.9 per cent of the developed water power of Alabama and 57.1 per cent of the total power of the State?

Mr. LODGE. Yes; I quoted from that report. I gave nothing of my own knowledge. I know nothing of my own knowledge. I am only taking these official reports.

Mr. UNDERWOOD. There is but one water power developed in all that power. That is one power in the navigable stream.

Mr. LODGE. Mr. President, again I do not want to lose the floor.

The PRESIDING OFFICER. The Senator from Massachusetts refuses to yield except for the purpose of a question.

Mr. SMITH of Georgia. Mr. President, does the Senator know what connection this power company has with Muscle Shoals? Is it not true that Muscle Shoals is not developed and is not now a water power, and they own no control in it?

Mr. LODGE. If the Senator will take the trouble to read what I have given here he will find that I have shown that all these companies are interlaced and that the same people are in all the directorates.

Mr. SMITH of Georgia. That is not what I asked about this company. What I asked is whether Muscle Shoals is developed or not.

Mr. LODGE. I understand it is not.

Mr. SMITH of Georgia. If it is not developed they do not control Muscle Shoals at all.

Mr. LODGE. They want the Government to develop it. That is just it.

Mr. KENYON. I should like to ask the Senator a question.

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Iowa?

Mr. LODGE. Certainly.

Mr. KENYON. Does the Senator know that the Government has expended something like $4,000,000 in the development of Muscle Shoals, and does he further know that Mr. Washburn testified before the Committee on Agriculture and Forestry that the development in the navigation amounted to nothing?

Mr. LODGE. I did not know of Mr. Washburn's testimony, because I have not seen his testimony before the Agricultural Committee. I have only got these facts in the nitrogen case, which the junior Senator from Alabama very kindly sent to me. The companies which I have described certainly have what are commonly known as interlocking directorates, and they control a great deal of power on the rivers which I have mentioned, and I think they have property which would probably be necessary to the Government in any development for Government use that takes place there. The original scheme, as I understand it, proposed a species of partnership between the cyanamide company and the Government. That, I believe, has been abandoned for the present at least.

I confess that in looking over the list of directors I have wondered that a board of directors, which included a citizen of Germany, should have been so deeply interested in preparing us for national defense. Mr. Washburn points out—no doubt with justice—that the importance of the nitrogen industry is great, both for the reason that upon its development depends our national defense in case of war, but in a large measure the economical welfare of the people in times of peace, with reference, of course, to the question of fertilizers.

Now, the claim is that the cyanamide method of manufacturing nitrates would be very much cheaper than the Chilean saltpeter, which is at present the only source of supply; but if it is, it seems to me that we tumble from the Chilean monopoly into another one, because I understand they are patented processes. If I am mistaken, I can be corrected.

I now come to the question of the cost of cyanamide. I am not enough a man of science to know just how nitric acid is produced by the cyanamide process, but very likely there are methods by which it can be done.

Gen. Crozier, in his testimony before the Committee on Military Affairs, in January last, states that there are two ways of getting nitric acid from atmospheric sources; one is by use of ammonia gotten from the coke ovens of which there is a constantly increasing supply in this country, and at the present time, when the steel industry is extended to its utmost, there is a tendency to an enormous increase in the number of by-product coke ovens which produce sulphate of ammonia.

Gen. Crozier goes on to say, however, that he regards the fixation of atmospheric nitrogen as the better source from which to obtain nitric acid. So one must assume that he also knows of some method of carrying out the conversion of atmospheric nitrogen into nitric acid, though it seems somewhat strange if such a process is feasible that the great explosives companies have so far made no application of this method, so far as the public knows.

I will not go into the question of Chilean nitrates, because they are well known and the costs are easily got; but this is to be considered: The cost of nitric acid in time of peace will presumably be regulated by the cost of the Chilean natural saltpeter. For the short time that any nation may be at war the question of the cost of nitric acid will never be a material factor in the national debt resulting from such a war, and it is always within the power of the Federal Government to requisition the supply of electricity for the manufacture of nitric acid or any other artificially prepared nitrogen. There have been a number

of descriptions furnished in the technical press concerning these, and further information is available in the United States Patent Department. Reference to these sources of information indicate that by far the greater part of the electricity required in the cyanamide process is required, not for fixing nitrogen but for the making of carbide of calcium, which is used for the production of acetylene gas and for other purposes in the other arts and industries. It is well known that carbide of calcium is produced in a number of places in the United States and that there is nothing secret or intricate in its manufacture. We are told that the electric furnaces used in the production of carbide are of a simple nature and can be readily and quickly erected near any suitable source of power. Probably four or five months would be sufficient to erect the necessary furnaces to supply carbide of calcium sufficient for the entire requirements of the United States Government in the way of nitric acid, even in times of war, and a large number of sources already exist where the power could be obtained without any necessity for the Federal Government to construct its own power plant. The great hydraulic plant at Keokuk, Iowa, the steam plants at St. Louis, Chicago, and many plants throughout the State of Ohio and in North and South Carolina and elsewhere, any one of them would be sufficient to supply the entire electrical energy required. Apparently the subsequent preparation of cyanamide consists merely in extracting the nitrogen from the air by the liquid air or other process which require a trifling amount of power, and the preparation of the carbide of calcium to absorb this nitrogen could be done in any cement mill in the United States, as it appears to require merely a grinding of the carbide to a powder.

I have here some notes about the chemical processes, which I shall not weary the Senate with reading, but I want to ask that there may be printed with my remarks a list of the companies to which I have referred, taken from Moody's Manual.

The PRESIDING OFFICER. Without objection, it is so ordered.

The list referred to is as follows:

[Moody's Manual of Railroads and Corporation Securities, 1915, pp. 2044–2045.]

American Cyanamid Co.: Incorporated July 22, 1907, in Maine. Manufactures cyanamide, a nitrogenous fertilizer material, the nitrogen of which is derived from the atmosphere; its manufacture, sale, and use are controlled by patents. Plant located at Niagara Falls, Ontario; capacity has been recently increased from 12,000 to 60,000 tons per annum. Offices at Nashville, Buffalo, Atlanta, and San Francisco. Sales for year ended June 30, 1914, were 37,586 tons, compared with 22,943 tons preceding year. As of June 30, 1914, there were on hand unfilled contracts amounting to 14,755 tons.

Capital stock: Authorized, $4,000,000 common and $4,000,000 6 per cent cumulative preferred; outstanding, $2,500,000 common and $3,258,600 preferred; par, $100. No bonded debt. Preferred stock has preference as to assets and is subject to call at any time at $120 and accrued dividends. Transfer agent: First Trust & Savings Bank, Chicago. Registrar: Fort Dearborn Trust & Savings Bank, Chicago. In addition to the $3,258,600 preferred stock outstanding, company had $36,700 subscribed stock in its treasury as of June 30, 1914. Dividends on preferred stock have been regularly paid semiannually, J. & J., at Nashville, Tenn. No dividends on common. Listed on Louisville and Toronto Stock Exchanges.

Income account, year ended June 30, 1914: Net profits, $324,589; preferred dividends, $189,695; surplus for year, $134,894.

Officers: F. S. Washburn, president; A. H. Robinson, vice president and treasurer; C. M. Grant, secretary, Nashville, Tenn.; K. F. Cooper, general manager, Buffalo, N. Y.

Directors: F. S. Washburn, A. H. Robinson, W. R. Cole, W. H. Lindsey, C. M. Grant, Nashville, Tenn.; James Mitchell, New York; J. W. Worthington, Sheffield, Ala.; Lawrence Macfarlane, Montreal; Dr. Nicodem Caro, Berlin, Germany.

[Moody's Manual of Railroads and Corporation Securities, 1915, p. 4.]

Alabama Traction, Light & Power Co., Ltd.: Incorporated January 5, 1912, under laws of the Dominion of Canada, to acquire and operate hydroelectric power plants and to supply electric energy for light, power, and heat to Birmingham, Montgomery, Mobile, and other important cities and towns in Alabama, and to build, acquire, and operate lighting and tramway systems as occasion may offer.

Company owns or controls the stock of the following companies: Alabama Power Co.; Alabama Interstate Power Co.; Birmingham, Montgomery & Gulf Power Co.; Muscle Shoals Hydro-Electric Power Co., and Little River Power Co.

The company, through its subsidiaries, owns water powers on the Tallapoosa, Coosa, and Tennessee Rivers, and several smaller streams.

Capital stock: Authorized, $25,000,000 common and $5,000,000 preferred; outstanding $17,000,000 common and $1,000,000 preferred; par of both issues, $100. Preferred stock is entitled to 6 per cent cumulative dividends from July 1, 1915, and is preferred, both as to assets and dividends. Transfer agent, Montreal (Quebec) Trust Co.; registrar, Montreal Safe Deposit Co.

Officers: James Mitchell, president, 120 Broadway, N. Y.; Lawrence Macfarlane, vice president; James G. Cartwright, secretary; W. J. Henderson, assistant secretary, Montreal, Quebec.

Directors: James Mitchell, New York; Frank S. Washburn, Nashville, Tenn.; Lawrence Macfarlane, W. J. Henderson, Montreal, Quebec; E. Mackay Edgar, London, England.

General office, 20 Guardian Building, Montreal, Quebec. New York office, 120 Broadway.

[Moody's Manual of Railroads and Corporation Securities, 1915, pp. 5 and 6.]

Alabama Power Co.: Incorporated December 4, 1906, in Alabama, to manufacture electric power. Owns by merger or purchase (in March, 1915) property of Alabama Electric Co.; Wetumpka Power Co.; Alabama Power & Electric Co.; Alabama Power Development Co.; Anniston Electric & Gas Co., Huntsville Railway, Light & Power Co.; the Decatur Light, Power & Fuel Co.; Etowah Light & Power Co., and Pell City Light & Power Co. (See Manual for 1914, p. 2872.)

Capital stock: Authorized, $40,000,000 common and $10,000,000 preferred; outstanding, $18,751,000 (all common); par, $100. All owned by Alabama Traction, Light & Power Co. (Ltd.), except directors' qualifying shares.

Officers: Frank S. Washburn, chairman of the board, Nashville, Tenn.; James Mitchell, president, New York; J. W. Worthington, vice president, Sheffield, Ala.; Thomas W. Martin, vice president; F. H. Chamberlain, general manager; Wiley Alford, secretary and treasurer, Birmingham, Ala.

Directors: James Mitchell, H. S. Swan, Frank S. Washburn, J. W. Worthington, W. P. Lay, Thomas W. Martin.

[Moody's Manual of Railroads and Corporation Securities, 1915, p. 6.]

Muscle Shoals Hydroelectric Power Co.: Incorporated October 10, 1906, in Alabama, to build a hydroelectric power plant of 100,000 horsepower capacity on the Tennessee River near Florence, Ala. The company plans to transmit power to cities within 100-mile radius, including Nashville, Huntsville, Decatur, and Birmingham.

Capital stock: Authorized, $1,000,000; outstanding, $252,000; par, $100. All or a majority owned by Alabama Traction, Light & Power Co. (Ltd.) No bonded debt.

Officers: J. W. Worthington, president, Sheffield, Ala.; Frank S. Washburn, vice president, Nashville, Tenn.; Wiley Alford, secretary and treasurer, Birmingham, Ala. Directors: James Mitchell, New York; J. W. Worthington, Sheffield, Ala.; Frank S. Washburn, Nashville, Tenn.; Thomas W. Martin, Birmingham, Ala.; E. Mackay Edgar, London, England.

Annual meeting, first Monday in March.

Office, Sheffield, Ala.

[Moody's Manual of Railroads and Corporation Securities, 1915, p. 4.]

Alabama Interstate Power Co.: Incorporated November 14, 1906, in Maine.

Capital stock: Authorized, $1,000,000 common and $2,000,000 preferred; outstanding, $1,000,000 common; par, $100. All or a majority owned by Alabama Traction, Light & Power Co. (Ltd.). No bonded debt.

Officers: James Mitchell, president, New York; Frank S. Washburn, vice president, Nashville, Tenn.; Wiley Alford, secretary and treasurer, Birmingham, Ala.; James E. Manter, clerk, Portland, Me. Directors: E. M. Edgar, London, England; James Mitchell, New York; Lawrence Macfarlane, Montreal, Canada; J. W. Worthington, Sheffield, Ala.; James S. Pinckard, Montgomery, Ala.; Thomas W. Martin, Birmingham, Ala.; Frank S. Washburn, Nashville, Tenn.

Annual meeting, second Monday in February.

Corporate office, 281 St. John Street, Portland, Me.

[Moody's Manual of Railroads and Corporation Securities, 1915, p. 6.]

Birmingham, Montgomery & Gulf Power Co.: Incorporated December 8, 1900, in Alabama, as Cherokee Development & Manufacturing Co.; name changed to present one by amendment filed April 1, 1908.

Capital stock: Authorized and outstanding, $100,000; par, $100. All or a majority owned by Alabama Traction, Light & Power Co. (Ltd.). No bonded debt.

Officers: James Mitchell, president, New York; Frank S. Washburn, vice president, Nashville, Tenn.; Wiley Alford, secretary and treasurer, Birmingham, Ala. Directors: James Mitchell, New York; Frank S. Washburn, Nashville, Tenn.; Thomas W. Martin, Birmingham, Ala.

Annual meeting, first Monday in March.

Office, Birmingham, Ala.

[Moody's Manual of Railroads and Corporation Securities, 1915, p. 6.]

Little River Power Co.: Incorporated November 5, 1906, in Alabama.

Capital stock: Authorized and outstanding, $100,000; par, $100. All or a majority owned by Alabama Traction, Light & Power Co. (Ltd.). No bonded debt.

Officers: R. A. Mitchell, president, Gadsden, Ala.; Thomas W. Martin, vice president; Wiley Alford, secretary and treasurer, Birmingham, Ala. Directors: R. A. Mitchell, Gadsden, Ala.; Frank S. Washburn, Nashville, Tenn.; J. W. Worthington, Sheffield, Ala.; Thomas W. Martin, Birmingham, Ala.; James Mitchell, New York.

Annual meeting, first Monday in March.

Office, Gadsden, Ala.

[Moody's Manual of Railroads and Corporation Securities, 1915, pp. 4064, 4066, and 4068.]

AMERICAN CITIES CO.

(Controlled by United Gas & Electric Corporation.)

Incorporated June 21, 1911, in New Jersey, as a holding company. As of January 1, 1914, had acquired in the aggregate 85.83 per cent of the preferred and 95.79 per cent of the common stocks of the following companies:

New Orleans Railway & Light Co.; Birmingham Railway, Light & Power Co.; Houston Lighting & Power Co. (1905); Knoxville Railway & Light Co.; Little Rock Railway & Electric Co.; the Memphis Street Railway Co.

Capital stock and dividends: The authorized capital stock is $60,000,000, consisting of $25,000,000 common and $35,000,000 6 per cent cumulative preferred; outstanding January 1, 1915, $16,264,700 common and $20,553,500 preferred; par of both issues, $100.

Bonded debt: Ten million dollars eight-year 5–6 per cent collateral trust gold bonds; dated July 1, 1911; due July 1, 1919.

Officers: John J. Gannon, chairman board of directors; Hugh McCloskey, president and chairman executive committee, New Orleans, La.; George Bullock, vice president, New York; J. S. Pevear, vice president, New York; Lee Benoist, vice president and treasurer, New Orleans; Ira Lockwood, assistant treasurer and assistant secretary, New York; H. J. Jumonville, assistant secretary, assistant treasurer, and auditor, New Orleans, La.

Directors: C. E. Allgeyer, Lee Benoist, E. H. Bright, C. P. Ellis, John J. Gannon (chairman), Charles Godchaux, F. B. Hayne, Charles Janvier, Hugh McCloskey, J. K. Newman, R. M. Walmsley, George G. Westfeldt, F. B. Williams, H. H. Flaspoller, D. D. Curran, S. J. Dill, New Orleans, La.; S. R. Berton, George Bullock, M. J. Dodge, O. L. Gubelman, J. S. Pevear, Emil Loeb, James Mitchell, A. H. Wiggin, New York; L. K. Thompson, Memphis, Tenn.; Robert Jemison, Birmingham, Ala.; C. H. Harvey, Knoxville, Tenn.; Edwin B. Parker, Walter G. Weiss, Houston, Tex.

Annual meeting, first Tuesday in March, at Jersey City.

General office, New Orleans, La.; corporate office, Jersey City, N. J.

[From the New York Times, Oct. 23, 1915.]

Ammo-Phos Corporation, cyanamid, oxygen, nitrogenous compounds, potassium compounds, ammonia, sulphuric acid, phosphorous compounds, fertilizers; generate water, electric, steam, or other power; and to acquire the total issued shares of capital of the Amalgamated Phosphate Co., a West Virginia corporation, $6,000,000; A. H. Sands, jr., Walter C. Parker, William L. Baldwin, 200 Fifth Avenue.

[Moody's Manual of Railroads and Corporation Securities, 1915, p. 2027.]

AMALGAMATED PHOSPHATE CO.

Incorporated July 28, 1911, in West Virginia, to mine phosphate rock. Mines located near Fort Meade and Bartow, Polk County, Fla. Plant located at Brewster, Fla.; capacity, 300,000 to 500,000 tons per annum. Mining operations commenced June 16, 1913. The Virginia-Carolina Chemical Co. is largely interested in this company.

Capital stock: Authorized, $3,200,000; outstanding, $3,100,000; par, $100. No dividends paid to date.

Officers: B. H. Brewster, jr., president, Baltimore; S. D. Crenshaw, vice president; S. T. Morgan, jr., treasurer, Richmond, Va.; F. M. Smith, secretary and assistant treasurer, New York; F. I. Wheeler, consulting engineer, Jacksonville, Fla.; A. Schneider, superintendent, Brewster, Fla.

Directors: S. T. Morgan, J. F. McGrath, S. D. Crenshaw, Selden Walke, S. T. Morgan, jr., S. L. Carter, B. H. Brewster, jr., Baltimore; F. M. Smith, W. H. Gelshenen, New York; F. I. Wheeler, L. A. Wilson, Jacksonville, Fla.; F. R. Savidge, Philadelphia.

Annual meeting, last Thursday in October.

General office, Baltimore, Md.

[Moody's Manual of Railroads and Corporation Securities, 1915, pp. 1605 and 1606.]

SOUTHERN POWER CO.

Incorporated, 1905, in New Jersey; is engaged in the distribution of hydroelectric power from water-power developments in North and South Carolina, serving a territory for some 335 miles through North and South Carolina.

Capital stock: Authorized, $5,000,000 common and $6,000,000 7 per cent cumulative preferred; outstanding, $4,000,000 common and $6,000,000 preferred; par, $100. Transfer agent, Equitable Trust Co., New York; registrar, Farmers' Loan & Trust Co., New York.

Bonded debt: Seven million dollars first gold 5s.

Officers: J. B. Duke, president; B. N. Duke, W. Gill Wylie, vice presidents, New York; W. S. Lee, vice president and chief engineer, Charlotte, N. C.; W. C. Parker, secretary and treasurer, New York; C. I. Burkholder, general manager; E. C. Marshall, assistant secretary; W. H. Martin, jr., assistant treasurer, Charlotte, N. C.

Directors: J. B. Duke, B. N. Duke, W. Gill Wylie, R. H. Wylie, A. H. Burroughs, W. C. Parker, New York; W. S. Lee, E. C. Marshall, C. I. Burkholder, Charlotte, N. C.

General office, 200 Fifth Avenue, New York.

[Moody's Manual of Railroads and Corporation Securities, 1915, pp. 3563, 3564, and 3565.]

VIRGINIA-CAROLINA CHEMICAL CO.

Incorporated September 12, 1895, in New Jersey, to consolidate a number of manufacturers of fertilizers, acids, chemicals, and various kindred products. Company owns many manufacturing plants from New York, Cincinnati, and Baltimore, Md., to the Gulf, in the States of Maryland, Virginia, North and South Carolina, Georgia, Florida, Alabama, Louisiana, and Tennessee, in which States it does a large percentage of the business in its line.

The company also owns and operates large pyrites mines, producing a large portion of the pyrites used by it in manufacturing sulphuric acid, and in addition has various foreign potash, sulphur, and other properties.

Owns entire capital stock of the Charleston Mining & Manufacturing Co., owning in fee over 68,000 acres of phosphate lands in South Carolina, Tennessee, and Florida, and mineral rights on more than 6,000 acres additional, together with eight plants for mining, preparing, and shipping phosphate rock, about 64 miles of railroad, 26 locomotives, 890 cars, 18 steam shovels, 13 steam hoisters, etc.

In June, 1901, control of the Southern Cotton Oil Co. (see statement in Manual for 1912, p. 3736) was acquired, its entire outstanding $10,000,000 stock now being owned. The Southern Co. is engaged in the refining and manufacture of cottonseed oil, "lard," soap, and other by-products. The company owns mills and refineries at Charleston and Columbia, S. C.; Atlanta, Augusta, and Savannah, Ga.; Charlotte, N. C.; Little Rock and Newport, Ark.; Montgomery, Ala.; Memphis, Tenn.; and Gretna, near New Orleans, La.; also owns cottonseed-oil mills at some 50 other points in the cotton States, together with warehouses, seed houses, oil-tank cars, etc., and also owns the stock of the Wesson Co., covering the David Wesson process for deodorizing and clarifying cottonseed oil.

The Virginia-Carolina Chemical Co. also controls, among others, the Sulphur Mining & Railroad Co, Georgia Chemical Works, American Fertilizing Co., Bryant Fertilizer Co., Prinz Adalbert Potash Mines (was merged into the Einigkeit Co. early in 1912), and the Chemical Works, Schonebeck (Ltd.), the two last named being German concerns.

Capital stock: Authorized, $38,000,000 common and $30,000,000 (increased from $20,000,000 May 12, 1914) 8 per cent cumulative preferred; outstanding, $27,984,400 common and $20,000,000 preferred; par, $100. The $10,000,000 unissued preferred stock is reserved to provide for conversion of the 10-year 6 per cent debentures described below. Preferred stock has preference as to assets as well as dividends. Transfer agent: New York Trust Co., New York; registrar: Guaranty Trust Co., New York. Listed on New York and Richmond Stock Exchanges; common also traded in on the Coulisse of the Paris Bourse. Preferred stock has preference for assets.

Dividends on preferred stock were paid regularly, quarterly, January 15, 1896, to November 15, 1914 (the October, 1914, dividend being paid in November), inclusive; the quarterly dividends due in January and April, 1915, were deferred, but were afterwards paid in one-year 6 per cent scrip to stockholders of record May 31, 1915. Scrip matures May 31, 1916, but is redeemable on January 1, 1916, at par and interest on 30 days' notice. On July 15, 1915, regular quarterly cash dividend of 2 per cent was paid. On common 1 per cent quarterly from December 1, 1896, to March, 1902, inclusive; 1¼ per cent quarterly, June, 1902, to June, 1903; 1904 to 1908, inclusive, none; August 20, 1909, 3 per cent; August 15 and November 15, 1910, and February 15 and May 15, 1911, 1¼ per cent each; August 15, 1911, February 15, and August 15, 1912, and February 15, 1913, 1¼ per cent each; none since.

Officers: S. T. Morgan, president; E. B. Addison, first vice president; S. D. Crenshaw, vice president and secretary; S. W. Travers, treasurer; E. T. Orgain, auditor, Richmond, Va. Directors: S. T. Morgan, E. B. Addison, C. G. Wilson, Richmond, Va.; N. S. Meldrum, Henry Walters, Harry Bronner, L. Oudin, A. J. Hemphill, Alvin W. Krech, C. I. Stralen, New York; George W. Watts, Durham, N. C.; K. K. McLaren, Jersey City, N. J.

Annual meeting, first Wednesday in September.

Corporate office, Jersey City, N. J. General office, Richmond, Va.

Mr. LODGE. As I have said, of course, Mr. Washburn may have resigned from some of these boards. I could only take the list. A reference is made to the pages in every case. Moody's Manual is usually considered good authority.

They had a somewhat extended debate in the other House on the question of the production of high explosives, including nitrogen or nitric acid, of course in their manufacture. So far as the various acids go, toluol, picric acid, and others can be produced, in my judgment, and I think it is generally admitted—can be produced, and are produced, as we all know, as the by-products, if they may be so called, or the partial products of the dyestuff industry. Picric acid and toluol, two of them, are products of the dyestuff industry, drawn from the same source as the dyestuffs. Therefore I believe that it is immensely important that we should encourage the development of the dyestuff industry in order to get these high explosives which are now so important in modern warfare. They can be obtained without costing the Government a dollar by the imposition of duties sufficiently high to protect the dyestuff manufacturers in starting their industry. You will get revenue rather than lose it; you will build up a great industry; and you will get some of your high explosives or materials therefor—picric acid and toluol. I do not care to go off on the question of those explosives. It is a simple way, without cost to the Government, of getting what we need in those particular directions. They are enumerated in the amendment that I have offered here to the sugar bill.

I want, however, to call attention to a brief history of what has been done in Germany. It was embodied in a statement by Mr. LONGWORTH, of Ohio, a Member of the House of Representatives, and I certainly can not improve upon it. He had examined the whole question with great care, and his statement interested me, because it seemed to me to show that it would be extremely unwise and improvident for us to commit ourselves to a vast expenditure of Government money for the purpose of developing a process which is by no means shown to be the best, and certainly not yet shown to be the cheapest. This gives the history of what Germany has done, and I think we can all admit that Germany has been reasonably efficient in the production of explosives:

A good many years ago Germany discovered that the chemical industry—and particularly the dyestuff industry—

I am now quoting from Mr. LONGWORTH'S speech in the other House—

lent itself most readily to the manufacture of high explosives. The German Government therefore started out to encourage and foster this industry in every way possible, and it soon became one of the most profitable industries in the land—

That is a matter of common knowledge; everybody knows of the enormous development of the dyestuff industry in Germany under Government encouragement. In fact, we have been largely dependent on Germany in all our textile industries for dyestuffs. Mr. LONGWORTH continues:

But the German Government was not satisfied merely that this industry should yield enormous profits. It deliberately aimed to extend it to such proportions that it might be, in time of need, converted into an explosive industry to take care under any circumstances of any demand that a great war might create. The demand for dyes at home was not sufficient for this purpose, and it was necessary, therefore, to build up an immense foreign trade. For this purpose every possible concession was granted, as, for instance, in freight rates for export; and the Government even went to the extent of remitting taxes in order that the industry might reach the highest possible stage of development. Cooperation was had between the great German universities and the dyestuff industry so that the best education and talent could be made available. Scientific research was encouraged, and the Government went to the extent even of granting special pensions to those who had devoted a certain number of years to research work in chemistry.

The inevitable consequence of this governmental activity was that almost from the beginning and for many years the German dye industry has dominated the world. Was human foresight ever more brilliantly justified than that of the German nation when war broke out? Note what happened: A general order was issued that the production of dyes should cease and that the factories should at once turn all their energies to the manufacture of high explosives. Following the plan preconceived years before, every tank and every kettle was arranged so that explosives could at once be turned out, and it was known almost to a pound what the production of each factory would be. In every one of these factories was an abundance of crude material, such as every large business concern must keep on hand, and almost every ounce of it was capable of being made into some kind of explosive.

At this point—

And this is what I desire particularly to call the attention of the Senate to—

At this point was made manifest another instance of Germany's wonderful efficiency and foresight. She had within her own borders every material necessary for the production of high explosives save one, namely, nitrogen. Now nitrogen compounds are the basis of all modern high explosives, and in time of war they must be had in unlimited quantities. Up to a few years ago Chile saltpeter was used as the basis of all nitrogen compounds, and this can be obtained only from Chile. German statesmen had realized that if any nation with which she might ever be at war should obtain control of the sea Germany would be cut off from the Chilean supply of nitrogen, and hence, under then existing conditions, practically helpless. And so science set out to evolve some other method of producing nitrogen, and a process was evolved of obtaining it out of the air. It was discovered that to make nitrogen out of the air a cheap electrical energy is essential. On looking over the field German scientists had found that the cheapest source of electrical energy came from waterfalls in Norway, and accordingly large industries were established there to make nitrogen products, and these products were sent to Germany. But even then all future difficulties were not provided for. Germany still faced the question of losing the use of this water power in Norway if some other nation obtained control of the sea, and that was just what happened when England bottled up the German Navy. But in the meantime—

And to this I wish to call the attention of the Senate—

another method of obtaining the cheap electrical energy necessary for producing nitrogen out of the air had been evolved. Six large plants were established on the Rhine in districts where coal was coked. Now, in the process of coking coal a certain gas is developed which ordinarily went to waste, but under this new process this gas was used in internal explosion engines, and these engines were attached to enormous generators for the production of the necessary electrical energy. Thus in one operation Germany obtained not only her benzol and toluol but her nitric acid as well, which in combination make the modern high explosives.

Mr. LONGWORTH, continuing, says:

Now, speaking to the question of the gentleman from South Carolina, I desire to say that while water power is a very good way to produce electrical energy necessary for the obtaining of nitrogen from the air, it is not the only way. Germany herself has proved that nitrogen can be extracted from the air equally well by the use of gas produced in the coking of coal, and therefore it is unnecessary that this Government would have to have an enormous water power in order to produce nitrogen. It may be produced that way, but as a matter of fact nitrogen can be extracted from the air in any large chemical establishment where the coking of coal goes on.

Mr. LONGWORTH then was asked whether he had any estimate of the waste in our present method of coking coal, and he replied:

I believe it has been something like 75 per cent. I think the gentleman from Connecticut [Mr. HILL] showed that in the ordinary beehive oven at least 75 per cent went into waste.

Then there was some further colloquy, which I will ask to have printed, because it all throws light on this question. It came out in the course of the debate that in one district of Pennsylvania, represented by Mr. HOPWOOD, there were 38,000 coking ovens of the beehive type, where all of this gas was going to waste, although it could be utilized for the purpose of making nitrogen.

I now ask that the colloquy to which I have referred may be printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

Mr. FESS. Will the gentleman yield there?
Mr. LONGWORTH. Yes; with pleasure.
Mr. FESS. Has the gentleman any estimate of the waste in our present method of coking coal?
Mr. LONGWORTH. I believe it has been something like 75 per cent. I think the gentleman from Connecticut [Mr. HILL] showed that in the ordinary beehive oven at least 75 per cent went into waste.
Mr. FESS. Could that waste be utilized?
Mr. LONGWORTH. That could be utilized in explosion engines, which are attached to generators, in the same way water power produces and stores electrical energy in generators. The whole question is such a new one that it has not yet been determined what is the best and cheapest method, I assume. In this country though we surely have an advantage over Germany, because we have a great deal of water power distributed all over the country and also a large number of coal mines and coke ovens.
Mr. LEVER. I was about to ask the gentleman if he was describing what is known as the "arc process" of extracting nitrogen from the air by this coking of coal?
Mr. LONGWORTH. I can not answer the gentleman's question specifically.
Mr. LEVER. I am inclined to think it is not. I think the process he is describing now is a recent discovery in Germany.
Mr. LONGWORTH. A recent discovery in Germany, since the war began, or at least put in operation since the war began.
Mr. LEVER. It is the newest process of the Government?
Mr. LONGWORTH. It is the newest process of the Government, and the fact is that Germany is to-day producing absolutely unlimited quantities of explosives and producing at the same time unlimited quantities of nitrogen out of the air.
Mr. LEVER. I believe, personally, that it would be unwise for this Government to commit itself to any definite process of extracting nitrogen from the air until we know what the best processes are.
Mr. LONGWORTH. I agree absolutely with the gentleman, and I think the experience of Germany conclusively proves that it would be folly on our part now to go into a great Government enterprise for extracting nitrogen out of the air because there happens to be at any particular place a very large development or possible future development of water power.
Mr. SWITZER. Mr. Chairman——
The CHAIRMAN. Does the gentleman yield?
Mr. LONGWORTH. I will yield.
Mr. SWITZER. Could the gentleman say which is the cheaper method?
Mr. LONGWORTH. I can not say, because this development is of so recent origin that I presume it has never been estimated.
Mr. HULBERT. Has it been brought out in the hearings before the Ways and Means Committee as to how many such plants there are that are capable of developing nitrogen and what the approximate quantity would be?
Mr. LONGWORTH. I think there are unlimited facilities in this country, both by water power and through the process of coking coal.
Mr. HULBERT. I am speaking of those cases where at present the facilities exist.
Mr. LONGWORTH. I think facilities exist practically in every State of the Union where there is any coal or water power.
Mr. MADDEN. I understood the gentleman to say there were only two plants in existence in the United States.
Mr. LONGWORTH. Only two plants of any size that are making dyes. There is a substantial difference.
Mr. HULBERT. There are a large number of plants in existence at this time making coke, where it would be possible with very few additional facilities, to produce nitrogen?
Mr. LONGWORTH. That is my belief, because that is what Germany is doing.
Mr. HOPWOOD. I would like to state that in my district, in southwestern Pennsylvania, there are 38,000 coke ovens of the beehive type, where all of this is going to waste, and where all of it could be utilized for the purpose the gentleman is speaking of.
Mr. LONGWORTH. I believe it could be made an almost universal industry throughout the country.

Mr. LODGE. Now, Mr. President, here we are met with these propositions. I believe the proposition of the Senator from Alabama—and if I am wrong he will correct me—was simply to have an investigation made.

Mr. UNDERWOOD. The only proposal that I made at all, Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Alabama?

Mr. LODGE. I do.

Mr. UNDERWOOD. I understood the Senator from Massachusetts directed a question to me?

Mr. LODGE. I asked the Senator to correct me if I was wrong in the statement that this amendment merely provides for an investigation.

Mr. UNDERWOOD. The only proposal I have made at all in reference to the matter was one that was presented and referred to the Committee on Military Affairs, proposing an investigation by a board of Army Engineers, subject to the approval of the Secretary of War, of the question of power sites and of the best processes by which nitrogen could be made out of the air.

Mr. LODGE. That was just what I wanted to ask. I thought I understood it rightly—that it was not merely an investigation of power sites but an investigation of processes as well.

Mr. UNDERWOOD. Undoubtedly.

Mr. LODGE. That, Mr. President, is the first step and the proper step. Whatever we may believe about the ultimate action to be taken—and I myself have very strong views about that—it certainly is of great importance to this Government to know what the best processes are for getting nitrogen, and we ought to have that officially stated. It appears on the face of it, from the experience of Germany, that now, when they are cut off, first, from the Chilean saltpeter supply, and, second, from the horsepower in Norway, which they had so providently secured, they are still able to supply themselves, from chemical processes and from the coking ovens of the Rhine district, with the enormous, the immeasurable amount of explosives which they are using.

Here we have an unlimited field from this system of using coke ovens. It has been tested and tried and has worked successfully. We have not yet been able to obtain the cost of the German process. Naturally, they are probably unwilling to divulge their processes, and this perhaps is not a good time to go over there to investigate German chemical processes; but we have not as yet any exact figures as to the cost. It is believed to be cheaper than the nitrogen which is produced by horsepower, because they take this waste in coke ovens, run their electrical engines with it, get their temperatures and their pressures, and produce their nitrogen from the air in that way.

I think that, with these new methods before us, to plunge this Government suddenly into an expenditure of $15,000,000 or $20,000,000 or $25,000,000 without knowing which is the cheapest and the best way, is a most terrible waste of the public money. There is no reason in the world why the nitric acid or the nitrogen we need can not be produced from the coke ovens which are so plentiful in this country, using their waste gas to run electrical engines. I have not myself the slightest doubt that in that way, or through water power, you can secure all you want if you will let private enterprise alone and allow it

to engage in the undertaking, and you will get it cheaper than in any other way.

I agree with the junior Senator from Georgia [Mr. HARDWICK], I do not believe in putting the Government into the manufacture of a purely commercial article like fertilizers. I do not believe in making the Government of the United States socialistic. I believe nitric acid can be made by private enterprise and made better and cheaper than it can be made by the Government. There are articles of manufacture upon which the Government has entered. One of the favorite Government enterprises cited is the powder plant. The reduction in the price of powder is being pointed to as an example of Government manufacture. Yes; we are paying a lower price, but we are getting a cheap powder; if I am not greatly misinformed, we are getting a powder that not one of the belligerents in Europe would use to-day. Under private enterprise, where all the best experts are employed at high salaries, they have developed powders there that are five times less destructive than the powder we are making down at Indianhead.

Mr. GORE. Does the Senator mean less destructive?

Mr. LODGE. Less destructive to the guns. I do not mean less destructive to the object struck by the shell, but I mean less destructive to the gun in which it is fired. With those powders they can use a gun, either a field gun or a rifle, five times longer than a gun can be used with the powders we are making. I have been informed of that lately; and I am trying to get the details about it, but I am very sure that we are making an inferior powder. We are getting it cheap, but the result is an inferior product. Establish a Government shop of any kind and it is bound to be rigid. No inventor is going in there. The Government shows no mercy to an inventor. I think that I am right in saying the Lewis gun—I am using that as an illustration—or the principle of that gun has been adopted in the famous French 75, which is recognized to-day as the best field artillery in the world. Even the Germans recognize that. It was offered to our Government and turned down. So was the Maxim gun.

We are told—I do not know how truly—in the newspapers that in the night surprise at Columbus our machine guns jammed and could not be used for three or four minutes. There are hundreds of American machine guns on the front in France and Flanders to-day, and they do not jam.

Mr. REED. Mr. President——

The PRESIDING OFFICER. Does the Senator from Massachusetts yield to the Senator from Missouri for a question?

Mr. LODGE. I yield.

Mr. REED. Will the Senator permit me to say that that matter was up for discussion a few days ago, and the Secretary of War reported that there was no trouble with the gun at all?

Mr. LODGE. I am delighted to hear that.

Mr. REED. But the men, in the excitement of the time, did not load it just right; but they have since been practicing and perfecting themselves.

Mr. LODGE. That is removing the blame from the gun to the men.

Mr. REED. We ought to put the blame where it belongs.

Mr. LODGE. Well, I am not sure it belongs there.

Mr. REED. That is what the Secretary of War said.

Mr. LODGE. I am not at all sure that it belongs there. I believe that we rejected a gun which is now being used all over Europe. Of course the Government will not get the best experts; it will not attract the inventors; it will not pay them. If you are going to get the best results, you must have the energy behind it of private competition.

There are thousands of coke ovens all over this country. The process of making nitrogen by means of the waste gas of coke ovens as a source of power is a success, and by utilizing them you can secure nitrogen, according to all indications, cheaper than even by the utilization of great water powers.

There are great water powers all over this country; but we do not know the best sites and we do not know the best processes, and I think to plunge into the manufacture of fertilizers on a bill intended for the defense of the United States is a waste of the people's money and ought not to be done at this time. To the extent to which the amendment of the Senator from Alabama goes I have, of course, no objection. I think it is eminently proper to make that inquiry in order to enable Congress to act intelligently; but, putting aside for the moment the question of the constitutionality of what is proposed, I think to embark now upon this vast expenditure until we know more upon the subject would be the height of unwisdom.

Mr. UNDERWOOD. Mr. President, I did not intend in this debate to enter at all upon the discussion of Muscle Shoals or the Alabama Power Co. or the local situation, because, so far as my amendment is concerned, it has nothing whatever to do with them, and, so far as the amendment of the Senator from South Carolina [Mr. SMITH] is concerned, it contemplates nothing directly connected with any power company or any officer of any power company or any location or situation connected with hydroelectric power companies. As a matter of fact, the senior Senator from Georgia [Mr. SMITH] calls my attention to this provision in the amendment of the Senator from South Carolina:

> That the plant or plants provided for under this act shall be constructed and operated solely by the Government and not in conjunction with any other industry or enterprise carried on by private capital.

Therefore, so far as the amendment offered by the Senator from South Carolina is concerned, it entirely excludes any cooperation with private capital, and, so far as my amendment is concerned, it merely calls for an investigation.

An effort has been made to show that this amendment should not be passed because possibly the plant might be located at Muscle Shoals, on the Tennessee River, in northern Alabama. I think the greatest compliment that could be paid to the great water power at Muscle Shoals is the fact that the entire opposition to this proposition points to the fact that it must go to Muscle Shoals if it is developed along this line. I do not say it must go to Muscle Shoals. All that I want is a development in the United States. Naturally, if the board of engineers or those investigating the question should determine that that power is the best and greatest in the United States and the proper place for it to go, I should be very much pleased to see it go there, but I am not advocating that the location be at Muscle Shoals if the board of engineers should find a better location on another river. But first I want to call the attention of the Senator from Massachusetts [Mr. LODGE] to the statements he has put in the RECORD in reference to the Alabama Power Co. owning all the power in Alabama.

In the first place, I desire to state to the Senate that the Alabama Power Co. does not want a Government power development to go through. The Mr. Worthington to whom he has referred in the statement as connected with the Alabama Power Co. was at one time one of its directors, and he was at one time its vice president. He now has no official connection with the Alabama Power Co. and has not had since September of last year. Mr. James Mitchell of New York and Birmingham is the president of the Alabama Power Co. I have talked with Mr. Mitchell since this matter has been up, and Mr. Mitchell has stated to me in my office that he thought the development at Muscle Shoals was not advisable at this time.

There are many good reasons why the Alabama Power Co. should not want this development to be made by the Government, because that company will lose its opportunity to develop any power at Muscle Shoals where the Government may develop power. It is true that the statement the senior Senator from Massachusetts [Mr. LODGE] has presented to the Senate, says that the Alabama Power Co. owns this power at Muscle Shoals; but as a matter of fact it does not own or operate a horsepower there and never can until Congress gives its permission for that company to do so. The only thing it owns at Muscle Shoals is that some years ago it bought the banks, and it owns the banks along that river where a dam probably would be built, just like the farmer who owns the lands from whom the company bought them. Neither the Alabama Power Co., the Muscle Shoals Hydro-Electric Power Co., nor any other power company have any rights at Muscle Shoals that will in any sort of way deter or prohibit the United States Government from building a dam for an air nitrate development. If there is any monopoly or control of dam sites on the Muscle Shoals stretch of the Tennessee River, that monopoly and control is in the United States Government.

Nothing that any power company, or any officer of any power company, represents in the prospectus of any power company can possibly establish the ownership of any water power on any navigable stream in the United States against the paramount right of Congress to regulate commerce on the navigable streams of the country, and there is no riparian owner of any proposed dam site whose lands can not be condemned at the pleasure of the United States. There is no water-power development at Muscle Shoals and none has been authorized by Congress, and if a bill is passed under which the United States may develop a water power at Muscle Shoals by the improvement of navigation, whatever rights any power company has at Muscle Shoals will be taken away from that power company and the same consideration and the same price for any lands owned by a power company would be paid as if a farmer owned the land along the banks of the river.

Again, it has been stated here that the Alabama Power Co. and its allied companies control all the water power in

Alabama rivers. The Alabama Power Co. does control the only developed water power in Alabama on navigable streams. There are a few water powers on nonnavigable streams that have been developed, but these are not important sources of power, but the Alabama Power Co. controls the only power that has been developed on navigable streams in Alabama, and for the very good reason there has been only one power developed on a navigable stream, and that development has been made by the Alabama Power Co. under the permit of Congress at Lock 12 on the Coosa River.

The primary power that is developed there amounts to only 10,000 horsepower. I understand that in the flood season that power sometimes runs up to 40,000 horsepower, but this has the value of secondary power only. The strictly primary power at Lock 12 on the Coosa River which the Alabama Power Co. has developed amounts to only 10,000 horsepower.

This immense "trust" that is being paraded here, this immense aggregation of capital that is being paraded here, has done nothing in the world except the development of one water-power plant in the State of Alabama, the primary power of which is only 10,000 horsepower. It is true that the Alabama Power Co. owns some steam auxiliary stations that it operates with coal, but these auxiliary steam stations operated in connection with the Alabama Power Co.'s water-power development at Lock 12 on the Coosa River constitute no monopoly unless the riparian ownership of lands along the rivers in Alabama bought by the Alabama Power Co. constitutes a monopoly, and this no more makes a monopoly than the ownership of lands on the banks of a river by a farmer makes a monopoly.

The ownership of riparian lands by a power company as possible sites for power development on the banks of a navigable stream establishes no rights against the United States entering upon these sites by condemnation or purchase, and the United States can condemn a power company's riparian ownership just in the way the United States can condemn a farmer's riparian ownership.

I admit that in its prospectus the Alabama Power Co. has set out statements of the great amount of horsepower that it owns; but I can state to you, and I know it to be true, and I challenge any man in the Senate to produce proof that what I state is not so, that it has simply one plant and one power developed in Alabama; and all that it has in addition to this development and all this great "monopoly" that is being paraded here, is the fact that it has bought from the farmers along the river the banks that can be taken away from it by the Government, either by condemnation or purchase, the same as from any other riparian landowner, and, therefore, it is not a surprise, it is not wrong from the Alabama Power Co.'s viewpoint and interest that that company is opposed to Government development at Muscle Shoals independent of that company's interests in connection with its hydroelectric power development plans in the State of Alabama.

As to Mr. Washburn's connections with other corporations, I do not know anything about them except what has been stated here. Mr. Washburn is a great hydroelectric engineer, a man of great ability. In his name stand a great many of the patents with reference to the development of air nitrogen. He is a man of learning and ability, and Mr. Washburn is not here, so far as I know, proposing anything for his proposition or for his company. If an investigation is ordered, Mr. Washburn is ready to go before the Government investigators and say what he is willing to do so far as his company is concerned, and the Government can take it or reject it.

But as somebody else has brought Muscle Shoals in here I wish to call the attention of the Senate to some of the facts in reference to the case.

To begin with, the Tennessee River is one of the very large rivers of the United States. There is probably no other river that has so large a flow of water in it, up to the point where it meets the Ohio, except the Mississippi River and probably the Columbia River in Washington. At the point where the Tennessee River and the Ohio River join there is more water coming out of the Tennessee River than there is out of the Ohio River and the Cumberland combined. The Tennessee River is practically navigable, or will be when some small improvements that are now going on are completed, from Knoxville, Tenn., down to where it runs into the Ohio River, except at Muscle Shoals. At Muscle Shoals the river is a mile wide, with very high rock banks, 100 feet high, on each side.

The navigation improvement at Muscle Shoals was begun by an appropriation by Congress in 1828, and because the importance of this improvement and the importance of the Tennessee River was recognized. From time to time various appropriations were made for the improvement of this stretch of the Tennessee River, and finally in 1889 the present Muscle Shoals lateral canal was completed at a cost of $3,191,726.50. The care and operation of this narrow, tortuous, inadequate canal has amounted to $1,368,247.79 since 1889, and each year since that date there has been wasted from $50,000 to $75,000 annually in the up-keep of this canal, for it has been impossible to use the canal as an important freight carrier. In both directions from the ends of this canal there are rapids along which there is no navigation improvement, and the result is that the canal is an isolated improvement of no practical value and contributing in no substantial way to the transportation of commerce over the entire Muscle Shoals stretch of the Tennessee River. Why have not these unnavigable portions of this stretch of the Tennessee River on both sides of the Muscle Shoals Canal been completed? Because after investigations made by the United States engineers under a resolution passed by Congress directing these investigations to be carried out, the engineers reported their conclusions to be that it would require for 9-foot navigation perhaps over $12,000,000, and for 6-foot navigation as much as $8,000,000 to complete the improvement of navigation along the entire stretch of the Muscle Shoals section of the Tennessee River, and the engineers recommended that it is to the interest of the Government to develop water power in connection with the final navigation improvement of the Tennessee River and to build two dams and locks that will create nearly 150 miles of slack-water navigation improvement, and that by the combined plan of navigation improvement and power development which the engineers recommended, the United States Government would accomplish this great improvement of navigation and development of power, and in the end the power developed would practically reimburse the United States for all of the money expended on this improvement.

It has been contended that there is no commerce on the Tennessee River and, therefore, no further appropriations should be made for the Muscle Shoals improvement, and that the commerce passing through the Muscle Shoals canal has averaged only 11,800 tons annually for 22 years, and that statement is perhaps correct. But why? Because the navigation improvement by the canal plan of the Muscle Shoals stretch of the Tennessee River has never been completed and commerce could not get into the canal nor out of this canal except during high-water stages of the river. Muscle Shoals is a cork that bottles up the commerce of the Tennessee River, the commerce desiring to move in both directions along the Tennessee River. The commerce on the river from Florence, Ala., to Paducah, Ky.. has amounted to 617,000 tons annually for 22 years. Admittedly, this is considerable commerce, but since the improvement of the navigation of the Tennessee River from Florence, Ala., to the Ohio River is now about completed, large movements of pig iron by barge are now going down the river to Ohio and Mississippi River points with a freight rate of $1 per ton under present rail rates. Is it any wonder, and is it not reasonable that those who are interested in the reduction of rates on river shipments on the Tennessee River from points north of Muscle Shoals should plead with Congress for the removal of the obstruction to this commerce at Muscle Shoals?

On the Tennessee River between Muscle Shoals and Chattanooga the commerce has averaged 206,000 tons a year for 22 years, and from Chattanooga to the head of navigation above Knoxville it has amounted to 384,000 tons a year and the commerce on the tributaries on the upper Tennessee amounts to 36,400 tons a year, but none of this commerce can go to the Mississippi and Ohio River valleys on account of the obstruction at Muscle Shoals.

The combined plan for the improvement of navigation and development of power as recommended by the United States Engineers to Congress will all be found in Document No. 20, Sixty-third Congress, second session. In this report, in response to a resolution passed by Congress more than eight years ago directing the engineers to investigate and report upon a plan for the joint improvement of navigation and development of water power at Muscle Shoals, will be found full information and complete facts upon the subject, and lately Maj. H. Burgess, of the United States Engineer Corps, and at present District Engineer of the Tennessee River, appeared before the Military Committee of the House and said that there is a 135-foot fall along the Muscle Shoals stretch of the Tennessee River, and that the flow of the river at this point varies from 7,000 to 500,000 second-feet; that the very lowest flow recorded during the lowest stages of the river is not less than 7,000 second-feet; but he stated that 10,000 second-feet can be counted upon as the practical low flow of the Tennessee River at Muscle Shoals. He stated that a continuous primary horsepower based on the lowest flow of the river can be developed to the extent of 120,000 horsepower, and that secondary power in very much larger volume will result from the development of 120,000 primary horsepower.

He says that this power can be developed and completed to furnish electricity over the switchboard, and put in the necessary

dams and improvements, and finish the navigation improvement, at a cost of $14,500,000; and he says the cost of that power on the switchboard, when this is completed, will average from $7 to $9 per horsepower, or about 2 mills per kilowatt hour for 310 days of the year, operating 12 hours a day.

I do not advocate Muscle Shoals in my amendment, and I did not intend to bring it in here; but I think it is proper that a statement should be made here in reference to Muscle Shoals and the Alabama Power Co., and its officers, in order to correct the glaring misinformation and misunderstanding given to the Congress of the United States on the subject.

I listened with much interest to the statement of the senior Senator from Massachusetts [Mr. LODGE] in reference to the development of nitrogen in the United States, and I am glad the Senator gave as his authority somebody else and did not make the statement on his own authority, because I am sure he is mistaken in what he says. In the first place, nitrogen can not be made out of dyestuffs.

Mr. LODGE. I never said it could. I mentioned picric acid and toluol, and I afterwards read also what Mr. LONGWORTH said in his speech, that it was the one product that could not be made from dyestuffs, and I thought everybody knew it. I am very certain that I did not make the statement.

Mr. UNDERWOOD. I do not think toluol may be made of dyestuffs, for, in fact, both dyestuffs and picric acid, which is a powerful explosive, get their raw materials from coal-tar by-products; and, if we could, we would not go through the very expensive process of reconverting dyestuffs back into toluol and picric acid. It would be reusing——

Mr. LODGE. Will the Senator tell me how picric acid is manufactured?

Mr. UNDERWOOD. I can to some extent, as I happen to be interested in a company that is operating by-product coke ovens, though I am only interested in a small way, but I have gone through these plants and I know what they are doing, as I am one of the stockholders of the company, and this company that I am interested in is engaged in making pig iron, and it makes all of its coke by the by-product coking process, and, as far as practicable to do so, the company utilizes the by-products from its coke ovens. Picric acid is made by treating phenol or carbolic acid, a coal-tar by-product, with sulphuric and nitric acids. Benzol is one of the by-products recovered from the coke-oven plant in which I am interested, but the coal-tar by-products from by-product coke manufacture that enter into the very great variety of dyestuff colors are not largely recovered from by-product coke operations in this country, and hence our limited supply of dyestuffs from coal-tar products as compared with Germany's supply and production of coal-tar products and her great dyestuff industry by using these products.

Mr. LODGE. May I ask the Senator a question? Do I understand, then, that picric acid and toluol are not made by the dyestuff makers in Germany at all as part of their product?

Mr. UNDERWOOD. Well, yes; perhaps they can and do use sulphate of ammonia, a by-product, from their coke ovens, as a source of nitrogen, but they perhaps do not employ dyestuffs as a source of nitrogen or try to convert their coal-tar by-products into nitrogen, for coal-tar by-products are the result of coke manufacture just the same as ammonium sulphate, from which nitrogen can be produced, is a by-product of coke manufacture.

Mr. LODGE. Is it not made in the process of making dyestuff?

Mr. UNDERWOOD. Not at all that I know of, or ever heard of. The process of making dyestuffs is based, so far as I am informed, upon the use of coal-tar by-products from the manufacture of coke.

Mr. LODGE. I have no doubt of that. I am sure of that. That is why I am asking the Senator the question. I am not a manufacturer and I do not know.

Mr. UNDERWOOD. The process of making dyestuff has no connection whatever with making explosives or making picric acid. They both may come from the same original source.

Mr. LODGE. That is what I mean.

Mr. UNDERWOOD. I do not know that it can be done. I do not deny that you might turn the dyestuff back into a product from which it could be made. I do not know.

Mr. LODGE. I must have expressed myself very badly. I did not mean that they were made out of dyestuff. I never meant to say that, and never thought it. I thought they were made from the same general source, and that in making dyestuff they made these explosives, and I am very sure the Germans do.

Mr. UNDERWOOD. I will state to the Senator the process. The dyestuff maker gets his raw material from the by-product of the coke oven.

Mr. LODGE. Certainly; that I knew.

Mr. UNDERWOOD. And the man who makes picric acid gets his raw material from the by-product of the coke oven. Now, that is as close as they come together.

Mr. LODGE. Certainly; but in making the dyestuff they use another by-product to make the picric acid and the tuluol.

Mr. UNDERWOOD. They may use coal-tar by-products that result from the manufacture of coke, just as certain coal-tar by-products are used in making picric acid as an explosive. Now, that is all there is to it. There is no other connection between them. They are not related at all, except from the source of by-products from coke manufacture.

The Senator states that you can get all the nitric acid that is necessary to take care of the explosives in this country from the by-products of the coke ovens. Well, I wish we could. I am very much interested——

Mr. LODGE. Mr. President, I do not want to interrupt the Senator, but I do not think he ought to misquote me.

Mr. UNDERWOOD. I did not intend to do so. If I have, I shall be glad to have the Senator correct me.

Mr. LODGE. I did not say it was a by-product of the coke ovens. I simply said they took the waste gas and used it to run the electric engine with which they make the nitrogen.

Mr. UNDERWOOD. I knew the Senator said that; but I also understood him to say that from the by-product of the coke ovens they could get nitric acid. They can get nitric acid in that way.

Mr. LODGE. I dare say.

Mr. UNDERWOOD. I was coming to that, and that was the reason why I assumed that the Senator meant that.

Ammonium sulphate is a product from which you can get nitric acid. Ammonium sulphate is one of the by-products from coke manufacture and is used as a fertilizer ingredient and for many other purposes, and from the ammonia in ammonium sulphate nitric acid can be produced for the manufacture of explosives. Now, I will tell the Senator why you can not rely on ammonium sulphate for a supply of nitric acid for explosives in times of war. I wish you could, for when I am speaking in favor of the Government making air nitrogen to defend this country in time of war I am, in a sense, speaking against my own interests, because I am interested in a company that makes ammonium sulphate as a by-product from coke manufacture, yet I do not think I would be so selfish to wish for the price of ammonium sulphate to go sky high in time of war because the supply of nitric acid from ammonium sulphate would not meet the Government's demands in time of war.

The Government can not supply its war requirements of nitric acid in that way, and it is not a practical proposition to get an adequate supply of nitric acid from the ammonium sulphate source to meet the Government's needs to defend our people in time of war, and we can not do so for several reasons and examples, and the greatest example is that Germany, though it is the nation that has led all other countries in the development of its by-product coking industry and in the wonderful uses of all the by-products from coke manufacture, still she found herself unable to supply her war requirements of nitrogen by the use of any or all of the by-products of coke manufacture, and the proof of this is that before the war Germany was producing nearly 60,000 net tons of air nitrogen and she has increased her air nitrogen production from 60,000 tons to 600,000 net tons and she has found it a necessity to meet her great requirements by fixing the nitrogen of the atmosphere instead of using ammonium sulphate needed for refrigeration, fertilizers, and for other purposes. She has not met her needs of national defense by subtracting from her economic and military preparedness before the war, but she has increased her efficiency for national defense by adding to her national preparedness for defense by the fixation of the nitrogen of the atmosphere both as a fertilizer and for manufacturing explosives. We can not build coke ovens in this country merely for the purpose of making sulphate of ammonia for securing nitric acid to manufacture explosives needed in times of war, and we can not draw upon our present by-product capacity in this country in time of war because we will cripple, if we do, the very industries that we need to run at maximum capacity in times of war, and Germany has demonstrated this.

There is no telling how much money it would cost to build the necessary by-product ovens in this country to supply the Nation with its nitric acid needs in times of war. It has been estimated that the cost of ammonia per pound from ammonium sulphate is about double what the direct cost of producing ammonia would be by air fixation processes using very cheap water powers. Using the cost of our by-product coke ovens in this country as a guide, it is estimated that to secure the ammonia from by-product coke required to manufacture 180,000 tons of nitric acid per an-

num it would be necessary to invest $100,000,000 and it would require the coking of 27,000,000 tons of coal per annum, or about 75,000 tons per working day. Economically this source of nitric acid supply for explosives is impossible, else Germany would not have developed since the war over 300,000 horsepower at a cost of more than $100,000,000 in the fixation of atmospheric nitrogen for military and agricultural purposes. I am sure the Senator will recognize that it would be impossible to rely upon the by-products of coke manufacture for our needed explosives in times of war.

Mr. LODGE. Oh, I recognize that the Senator has completely demolished a proposition that I did not make.

Mr. UNDERWOOD. I thought he was making it.

Mr. LODGE. I spoke of the gas wasted now from the coke ovens.

Mr. UNDERWOOD. I will come to the gas in a minute. So far as ammonium sulphate is concerned, if you took the ammonium sulphate that is being made to-day for the purpose of making nitric acid, you would take it away from your refrigerator plants. You would spoil all the refrigerated food in the country. I know of no time in the world when we would be more in need of protecting our food supply than we would be in time of war. It would be the last time in the world we would want to take the sulphate of ammonia away from the refrigerating plants to use it to make nitric acid. More than that, there would be the great cost of assembling it. You would have to put it in tank cars and ship it to a central station and assemble it for this purpose. So I will say to the Senator that I think that proposition is an absolutely impracticable one.

Mr. LODGE. Utterly; and I did not make it.

Mr. UNDERWOOD. Now the Senator comes to the other proposition. You can make cheap electricity by the escaped gas from the coke ovens. That is true. I know it is true, because the same company that I have been talking about, in which I am interested, is doing it. It is taking its by-product gases carrying them down under a boiler, and making very cheap electricity in that way, but it is only done in a limited way.

Now, the Senator wants us to abandon the question of making nitrogen out of the air and depend upon the by-product gases from the coke ovens of America, which are limited in operation.

But more than that, the distinguished Senator from Massachusetts has made a double argument here. He has pleaded for the dye industry. Where does the dye industry come from except from the by-products in coke manufacture, and the Senator proposes to take the gases needed in the dye industry, for it requires power in this industry, and intends to use these by-product gases under boiler plants for the purpose of making steam to furnish electricity to make air nitrates.

In the first place, there are few places in the United States where there is a very large extent of coke-oven gas; and then the power you would produce would be very much more costly than you can get from the water powers of this country if they are developed by Government money.

Mr. LODGE. On that we have no figures whatever. We only know the Germans have done it with immense success, and they are almost as practical as manufacturers as the Senator from Alabama.

Mr. UNDERWOOD. My information is that they have developed their power for making air nitrogen to a very slight extent by by-product gas, because they use the by-product gases for other things. My information is that the Germans are shoveling under their boilers, to make power with, lignite coal from their almost inexhaustible deposits of this coal, and with this coal I want to say that the information I have is that Germany since the war has increased her horsepower capacity used in the fixation of the nitrogen of the atmosphere by the cyanamid process over 300,000 continuous horsepower.

I have investigated this question to some extent because I have had the temerity to say that the Government of the United States should prepare for an emergency and furnish air nitrogen, and I have done so without advocating any local proposition and without advocating anybody's patent rights, or anybody's water power; and I have had to meet from those who are opposed to a Government plant all the condemnation that could be thrown in my direction.

I know, as far as my own mind is concerned, there is but one practical way in which you can develop the manufacture of nitrogen in the United States at a reasonable cost and on a practical basis, and that is to take a great water power and let the Government with cheap money develop it, and when that development is made, use the power itself or lease the power to somebody else to make nitrogen. I am not concerned about that now; we can consider that question later on.

Mr. HARDWICK. The Senator, however, does not want the Government to go into the manufacture of fertilizers?

Mr. UNDERWOOD. That is aside from what I am discussing. I will say that I do not think the Government has the power to go into the business of manufacturing fertilizers for the purpose of selling fertilizers; but if the Government develops a power for the purpose of making nitric acid for war purposes and in times of peace does not have to use that power, I say the Government would have a right to lease the power for making cheap fertilizers.

Mr. HARDWICK. That is a very different proposition.

Mr. UNDERWOOD. But that is a second step. We are not facing that step now at all. The question we are facing now, and there is not a Senator in this Chamber who does not know it, it that we are in a deplorable condition. If war were declared against us to-day and our supply of Chilean nitrate were cut off, a second-rate power could make us surrender in six months if we had no further supply of nitrogen and they had plenty. Now, that is the proposition that faces the United States, and why with that condition confronting us you are not either willing to take affirmative action, as is asked for by the Senator from South Carolina, or to take the action that I propose, to have a thorough investigation of this whole subject, I can not understand. It seems to me it is a self-evident fact which ought to be recognized by everyone. I think I understand the proposition, but I am not one of those who assume that I know it all. I may be mistaken. Therefore I do not ask the Senate to take my unsupported opinion on the subject. In the amendment, I have pending at the desk, I have provided for the appointment of a board to go out and investigate and report the facts. That is the proposition I have asked the Senate to agree to.

Mr. STONE. When to report?

Mr. UNDERWOOD. At as early a date as practicable. But if my amendment does not suit, let some other gentleman offer a better one.

Mr. JONES. Mr. President——

Mr. UNDERWOOD. I yield to the Senator from Washington.

Mr. JONES. I just want to ask the Senator whether he would be willing to accept an amendment to his amendment, as follows:

After the word "war" in line 4 strike out "fertilizers in times of peace" and insert "and best adapted to conserve and utilize the water resources of the region in the interests of navigation, the needs of the Government, and the public welfare."

In other words, it looks to the development of all the resources tributary to the point selected wherever they may be. It follows the language of the water-power bill which passed the Senate some time ago.

Mr. UNDERWOOD. The Senator is probably right about that; but I would not like to accept it without giving it careful consideration. I am not adverse to it. What I am trying to get is an adequate supply of powder in time of war.

Mr. JONES. I am in hearty sympathy with the Senator on that proposition.

Mr. WALSH. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Alabama yield to the Senator from Montana?

Mr. UNDERWOOD. I yield.

Mr. WALSH. I have before me the amendment offered by the Senator from Alabama. It contemplates that the Board of Engineers shall hold hearings for the purpose of determining upon a suitable process and also authorizes them to select a suitable site on a navigable stream. Why does the Senator desire to restrict the selection of the site to navigable streams?

Mr. UNDERWOOD. I will tell the Senator why I had that in mind. If it aids the amendment to cut out the word "navigable" I would be perfectly willing to do it, but had very good reason for saying "a navigable stream." In the first place, the Government has jurisdiction and the right to use its money on navigable streams. It adds to the constitutionality of the proposition, although I think under the war power we have the consitutional right anyhow.

In the next place, we have had a great many statements about great horsepowers in this country, but in a development of this kind it has got to be primary horsepower. It can not be secondary horsepower. You must have a development of primary horsepower, because if the enemy is coming in at your front door and it is the dry season of the year and your river has run down you can not wait until rains come for it to fill up to get your horsepower. The development must be a primary power.

Now, I may be mistaken, but so far as I know the great water powers that are not on navigable streams may have immense powers at some times of the year but most of them are in dry

regions, and so your water power is secondary horsepower and not the primary horsepower needed all the year.

But I will state to the Senator from Montana I have no desire to make a contest about that. If the Engineer Corps determine that there is a place off of a navigable stream that is the best place to locate a plant of this kind it is agreeable to me.

Mr. WALSH. I simply desired to inquire why if there is such a place it should be excluded.

Mr. UNDERWOOD. There is not a reason why it should be excluded if there is such a place. The only reason why the amendment was written as I have written it is because I did not contemplate that there was such a place.

Mr. WALSH. I merely desire to inform the Senator that we have had considerable experience in the development of water power in the State of Montana, and no one undertakes there, or anywhere else, to develop a water power except upon the possibilities of the low stage of water because, as a matter of course, the supply must be continuous.

Mr. UNDERWOOD. I will say to the Senator that, as I understand, the War Department has estimated that we ought to have for war purposes capacity for 180,000 tons of nitrogen a year; that is, the power to produce that much nitrogen during the year for war purposes, not to be used in time of peace. It is also stated that to produce that much nitrogen by the cyanamide process, which takes less horsepower than the other process, it will require a horsepower production of 100,000 horsepower. Does the Senator know of a place off of a navigable stream in the United States where a hundred thousand primary horsepower can be produced?

Mr. WALSH. I can point you to three in the State of Montana.

Mr. UNDERWOOD. The Senator is giving me information of which I was not advised.

Mr. WALSH. It is substantially the testimony given before the Public Lands Committee that for the economic production of an air nitrogen 100,000-horsepower plant not only are these available, but they are available upon public lands which belong to the United States, so that we can get the power site——

Mr. UNDERWOOD. I will ask the Senator not to deprive me of the floor, though I am glad to hear his statement.

The PRESIDENT pro tempore. The Senator need not concern himself about the character of the interruption. He is the judge of the character and the extent of it.

Mr. UNDERWOOD. I am occupying the time of the Senate at this late hour, but there is one other proposition to which I wish to call the attention of the Senate and then I shall close. It is as to why the investigation should be made.

Mr. GALLINGER. Will the Senator permit a question?

Mr. UNDERWOOD. Certainly.

Mr. GALLINGER. The Senator's amendment, as I read it, says that this board shall "select a suitable site."

Mr. UNDERWOOD. Subject to the approval of Congress.

Mr. GALLINGER. Would the Senator object to changing the phraseology so that it would suggest a suitable site or sites?

Mr. UNDERWOOD. That is all the amendment intends. I am willing to say that they shall recommend a site because the amendment does say recommend. It says that they shall choose a suitable site and recommend it to Congress for affirmative action, which is exactly the same thing. It does not give the power to affirmatively fix the site; it merely gives the right to select a site and recommend it to Congress for approval; that is all.

Mr. GALLINGER. If the Senator will permit me, the thought in my mind was that the board selecting a site carried much more affirmative strength than if it recommended a site; that is all.

Mr. UNDERWOOD. There is no difference between the Senator and myself in reference to that matter. I am not inclined to foreclose this proposition in any way. I want the light. That is all I am asking.

There is one reason why I say it is necessary to have an investigation. I am convinced in my own mind that you can only get nitric acid by getting it out of the air, except from Chile, which we are trying to avoid. The processes for getting it out of the air are patented. I have my own opinion as to just the best one, but I do not know it. I do not know of any way by which we can determine the question as to which is the best process except to have a competent board in the War Department consider and pass on it and report upon it. I think it is of vital importance that that should be done immediately, and give Congress the information.

Therefore I have limited my contention to asking the department to recommend to us a site and recommend to us a process, and I regret exceedingly that I have been compelled to go far afield and make statements in regard to my own State in reference to this matter that I did not intend at this time to bring into the consideration of the case at all.

Mr. CHAMBERLAIN. May I interrupt the Senator from Alabama?

Mr. UNDERWOOD. Certainly.

Mr. CHAMBERLAIN. Speaking of our total lack of nitrates, could we not be placed in the dangerous position it is said Germany and Great Britain were in, in reference to Chilean nitrates? The only naval battle that occurred between the two powers was along the coast of Chile, and it is generally believed that it was the purpose of those two fleets to obtain Chilean nitrates.

Mr. UNDERWOOD. I think that is undoubtedly true. If we do not provide for a nitrogen supply in our own country and continue to depend on Chilean saltpeter, and get into a war with a first-class naval power, we would have to divert a large portion of our fleet along the lines of commerce from here to Chile to protect our transports instead of protecting our ports and our people at home.

Mr. HUSTING. Mr. President, I have listened with a great deal of interest to the arguments upon the amendment now before the Senate. A great deal of it has turned on the point as to which powder company might have the greatest interest in the passage or defeat of the amendment. We have heard it charged here upon the floor that the Du Pont Powder Co. is opposed to the construction of any dam or power by the United States Government or is opposed to any establishment or institution that would take nitrogen from the atmosphere for the purpose of manufacturing explosives.

To-day we listened to a long list of stockholders and men who have available water-power sites which might be taken up by the Government and who have some interest in the adoption of this amendment. I do not know how that may be, except to say that, as far as I am concerned, I am going to support this amendment without regard to the effect it is going to have upon one powder company or another. I do say that the amendment of the Senator from South Carolina will insure us a supply of the substances necessary to manufacture powder.

We know that there is a great powder concern in this country of which the United States is the best customer, and we know that the Government has gone into the business of manufacturing powder. It has been stated here that the powder we manufacture is not as good as the powder manufactured by private manufacturers, but I understand, and I have not heard the statement denied, that the price of powder manufactured by the private concerns has dropped from about a dollar a pound down to about 50 cents a pound, so that even if the powder we make is not as good as the powder made by the private concerns, if that statement is true, we are saving 50 cents on every pound of powder we buy. The charge, however, that the United States is making an inferior quality of powder is denied by those who should know what they are talking about.

Now, it is claimed that one powder manufacturer has a monopoly on powder manufacture; and it is also claimed that there are two concerns that have a monopoly or a patent on the methods of the fixation of nitrates from the atmosphere—one owned by one powder company and the other owned by a prospective powder concern. They practically have a monopoly, then, on modern powder production, because it is acknowledged that nitric acid is a necessary ingredient in the manufacture of explosives. There is, then, only one more thing necessary for us to do in order to give them perfect enjoyment of the land, the water, and the atmosphere, and that is to give them control of our water powers. If we are ready to let them condemn all land necessary for power sites and flowage rights and are ready to give them a monopoly of water-power development, and thus give them a monopoly of the right to create hydroelectric energy by water power, and then protect them by patent to the sole use of the atmosphere to take their nitrates from, why, then we turn over to them the land, the water, and the air for their sole use and benefit.

When the water-power bill, which was known as the Shields water-power bill, was under consideration, in order to have some control of this matter that is of such vital importance to the United States, I offered an amendment to that bill, as follows:

That whenever in the opinion of the President of the United States, evidenced by a written order addressed to the holder of any franchise, permit, or lease hereunder, the safety of the country demands, the United States hereby reserves the right to enter upon and take possession of any power plant developed under a permit, lease, or franchise held under the provisions of this act, for the purpose of the manufacture of nitrates, explosives, or for any other purpose concerning the safety of the country, and retain possession, management, and control thereof for such length of time as may appear to the President to be necessary to accomplish the said purposes, and then to restore possession and control to the party or parties entitled thereto: *Provided*, That the United States shall pay to the party or parties entitled thereto such fair and just compensation for the use of said property,

calculated upon the basis of a normal, fair, and moderate profit in time of peace, as may be agreed upon between the licensee and the commission: *Provided further*, That such fair and just compensation shall not be in excess of a sum which will hold the party entitled to such compensation harmless of any loss or damage or damages by reason of such taking over, holding, using, and the restoring of the said properties in substantially the same condition as at the time of the taking thereof to the party or parties entitled thereto.

Mr. President, that amendment was defeated. I tried to tell some of the Senators—I did not tell it in detail in the way that it has been told here, for I did not have at my command the statistics which have been so ably presented by other Senators—but I did say that this was a matter of vital importance to the Government and to the people of the United States, and that if we wanted to secure to ourselves a powder supply we should write into every lease, into every permit issued by the United States, a clause, which should provide in effect that we could take over at any time in time of war plants for the manufacture of nitrogen and of nitrates, and use them during the continuation of the war, and at the end of the war to turn them back and pay just compensation, but to cut out any war profits.

Mr. OWEN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Wisconsin yield to the Senator from Oklahoma?

Mr. HUSTING. Certainly.

Mr. OWEN. I desire to call the attention of the Senator from Wisconsin to the fact, if he has not already observed it, that in France the first thing they did was to take over the munition plants and put them under the control of the Government.

Mr. HUSTING. I did not know that, and I thank the Senator from Oklahoma for the information. Here, however, was a plain proposition; here was a plan by which we should write into every lease or permit a clause providing that every water-power plant developed under a license of the United States should be subject to call, to commandeering in time of war, so that we could be able to make our powder at a reasonable price. It was not merely the question of the price, but it was a question also of controlling the licensees in the manner that would insure their assistance and aid and that of the water power proposed in time of war. That amendment was voted down, and it was voted down with the aid of some of the Senators who are now here very solicitous about insuring our powder supply. I am glad that they have awakened to the necessity of a powder supply, and that they have awakened to the necessity of safeguarding our water powers in such a way that they will be used for the best interests of the United States in case of necessity.

We are furthermore told that these processes of fixation of nitrates are under a monopoly. If my amendment had been adopted, it would not now make any difference what monopoly they had, because, as a condition, before the issuance of a permit to them for the purpose of manufacturing nitrates, they would have agreed that they would put their processes at our disposal, so that we could continue to manufacture our explosives under their system at a reasonable price.

Another thing—and I think this is the proper time to call attention to it, because that water-power bill may be back here—in that water-power bill, if the so-called Shields bill finally passes, it being Senate bill No. 3331, there will not be any safeguard around the manufacture of nitrates or of powder because in the bill as it passed the Senate the Muscle Shoals Co., the Du Pont Powder Co., or any other powder company could have seized every water-power site in the United States and easily have monopolized the manufacture of nitrates. There is not a single clause in the bill to control the price of powder or the manufacture of powder.

The manufacture of nitrates and of powder under our laws is not a matter of public utility, it is recognized as a private enterprise; and I repeat, the Muscle Shoals Co. or the Du Pont Powder Co., under the terms of that bill, could take over every water-power site in the United States, and then secure a monopoly not only of the land but of the energy of the water, and not only the energy of the water but of the very air itself from which nitrate is to be taken.

I think that Senators, to be consistent, should agree to the proposition that it is necessary for the Government to control the manufacture of powder; and, in order to control the manufacture of powder, they have got to control the water powers and they have to write into their licenses and into their permits clauses that will protect us from a monopolization of the land, the water, and the air by the manufacture of powder or explosives.

I believe that this is a good amendment for the reason that under it we are not to go into partnership with anybody in the manufacture of powder, or in times of peace to go into partnership with anybody in the manufacture of fertilizers. Some of the Senators who advocated the passage of the Shields bill wrote into that bill an amendment by which Government-owned dams, Government-constructed dams, connected with public-utility transmission lines, can not recapture its own dam, its own property—at least that is the way I construe that amendment—without taking with such dams the whole transmission line. According to some of the Senators the manufacture of fertilizers is socialistic; and they would turn a Government-owned dam over to a private company for the manufacture of fertilizers or other purposes in time of peace. I am opposed to this idea because the provisions of the Shields bill, if it passes, would in effect place our property in private hands for private use. It would mean that we would invest our money to provide a private business for the profit of private individuals.

To illustrate, if we construct a dam for the purpose of manufacturing nitrates in times of war and if, as has already been suggested, in times of peace it would be socialistic to manufacture fertilizers, then, after we spend over $15,000,000 in the construction of a dam we turn it over into the private hands of some fertilizer manufacturer, perhaps the Du Pont Co., perhaps the Muscle Shoals Co., perhaps some other company; thus we put it within the provisions of the Shields water-power bill, which passed the Senate, and then the provisions relating to Government-owned dams apply, and under the clause which was incorporated in the Shields bill, if the manufacturer of nitrates who we put in possession of our dam goes into any other business we can never get our dam back to manufacture powder in time of war until we buy out his whole concern, the whole transmission line or trolley line, if he has one; that would be the effect of the bill which passed the Senate, if it becomes a law.

So I am opposed to this partnership business, and I am for the amendment with the understanding that it is to be run as a Government institution and be conducted as a public enterprise. I trust that if we are going to build a dam for the purpose of manufacturing powder and nitrates, we will hang on to that dam and use it in time of peace in the best manner and for the best purpose to which we can put it.

It has been said here by Senators that for the Government to manufacture fertilizer in time of peace is socialistic. I do not know whether that is any more socialistic than the manufacture of powder. The one is to protect and defend our existence, while fertilizer is to promote our means of subsistence by encouraging the raising of crops to sustain life. If we want to go a step further than that, we can urge that we manufacture fertilizer to put upon our land to raise crops to feed our troops in time of war. I think we have taken all the socialism out of it, if that be our object, unless our contention is socialistic. But what is the difference, whether you call a thing socialistic or not? That does not change it in any way. It is easy to call names or apply epithets or to characterize a Government as socialistic or something else; but that adds nothing to the elucidation of the question under discussion. I think the time has gone by when anyone is driven from a sound position in legislation which promises good results to the people merely because somebody shouts "socialism." It is rather strange to find that whenever legislation is proposed which promises to make for the public advantage—that is, equalize taxes, for instance—or which promises to lighten the burden of the already overburdened people, legislation that seeks to benefit the masses of the people, the opponents of the bill invariably denounce the proposed bill as "socialistic," as though that alone answered all arguments in its favor and destroyed whatever great progress was intended.

So of everything calculated to give the Government the use of its own resources to perform some public work or service at a price to ourselves far below that of those to whom they would have us turn over our resources and our sovereignty and be subjected to their own price, "Socialism!" is the cry.

Is everything to be called "socialistic" that is calculated to reduce the price 50 per cent below the price that we will have to pay if we do not do it ourselves?

It has been stated here that, after the erection of a Government powder plant, powder which used to cost us $1 a pound, by virtue of putting up our own powder plant, was reduced in price to 50 cents a pound. Does it make the manufacture of powder a socialistic enterprise merely because the price has been reduced 50 cents a pound? Since the armor-plate bill was passed I understand the armor-plate manufacturers have made a proposition, in writing, I think, whereby they agree to reduce the price of armor plate something over $50 or $75 a ton. I have heard Senators say that it would be socialistic to go into the manufacture of armor plate; and yet, if the effect of such action on the part of the Government is to reduce the price of armor plate $50 or $75 or $100 a ton, I do not think that the cry of "socialism" is a reflection on the bill. I think that reflects great credit on us, and is a great compliment to socialism,

which I do not know whether it deserves or not. I should like to have you call that a Democratic proposition, so that we might have the credit for it as a party. It is a Democratic measure, and nothing less.

Now, as to the manufacture of fertilizers, is it not entirely proper, if we go into the enterprise of producing some commodity that has got to enter into the manufacture of powder, and we have enough of that commodity stored up to last us in case of war, that we turn the surplus power to the work of fertilizing our lands? Are we not the greatest landed proprietor in the world? Is it not our proper business, or at least one of our functions, to see that our land is put in such shape that it will do the greatest amount of good for the people of the United States? Are we not spending millions in irrigation for the purpose of making our lands fertile; and so, if we can manufacture fertilizer from the air by the aid of running water and then put it upon the land, are we not using public resources in a proper manner, which properly comes within the function of a sovereign?

It just happens in a very peculiar way that the great natural resources, the land, the water, and the air, are three great elements upon which we have to depend for our defense and for our very existence. If we use our public waters on our public lands to take nitrogen and fertilizer from the public air—I hope the air is still public and that nobody has monopolized it as yet—and if we put that fertilizer on the public or other lands, what is there socialistic about that? Are we not maintaining an Agricultural Department and maintaining experimental farms and doing a thousand other things with public funds to widen the fertility and production of our soil? I say that it is perfectly in accord with not only the practice already obtaining, but in accord with sound public policy that we should do that, and the question, it seems to me, ought not to be, What are you going to call it? It seems to me the real question is, Is it a good thing for the people of the United States? I do not think in this time and age the people are afraid any more of what you are going to "call" something. Anybody can apply an epithet or make a characterization of anything. That is mere air; that is mere talk. The true test, in my judgment, of whether or not a piece of legislation is good is whether it is a good thing for the people of the United States.

Now we come to the question of what is proposed under this amendment. What is proposed here? It is proposed, in the first place, that we authorize the President to select sites upon navigable streams—which term "navigable streams," I understand, may be broadened to include other streams, and I hope it will be; and not only that, but a very significant clause provides that we may withdraw from public entry any Government-owned lands fit for this enterprise; and it provides further that we find those sites and put upon those sites plants for the fixation of nitrogen from the atmosphere, and that we manufacture nitric acid, or whatever else may be necessary in the process of manufacturing powder, or fertilizer when it is not needed for powder manufacture.

If I understand the amendment correctly, and if I understand the patriotism and intelligence of the present administration or those at the head of our Government, whether now or at some future time, I take it for granted that they will segregate from the public domain all available power sites, remove them from public entry, and designate them as power sites for this very purpose; and then, when they do that and manufacture enough nitric acid to supply our need for explosives in time of war, that they then will manufacture fertilizer by means of the power which would otherwise run to waste and put it upon the market at cost, if anybody wants to buy it, or give it away, if need be, to the farmers of the country so that they may develop their farms and raise crops to further enrich the people of the country. Here is a rare opportunity to do something for the preparedness for which we stand most in need, and here is a rare opportunity to do something for the farmer and for farming at little or no cost to the Government; here is an opportunity to do something for the development of the West without going too deeply into the Treasury of the country. Here is the opportunity and the time to do all these things with harm to nobody and with good for everybody. Now, I can not see anything wrong about this proposition. I like it particularly well, as I said before, because it is the Government itself that is going to do this, and it is not going to go into partnership with anybody else. That will insure us from the danger of putting our money into a power plant and after having it built throw it into somebody else's lap, for the purpose of enriching, not the people of the United States who built it, but the people who are fortunate enough to get a permit from the Government to use Government property built with Government money.

I think this is a good plan. I think this amendment ought to be adopted, but I do not think it goes far enough, although perhaps what I should like to see done can not be properly put into this amendment. What I think properly should be done is to enact in the water-power bill which is going to pass this Congress a clause by which the Government reserves to itself in every water-power permit the right to enter and take over the plant developed under the laws, so that in times of national stress and danger we are assured of a powder supply sufficient for our purposes, at a price that is just and reasonable.

It is not necessary, as some seem to think, to make defense measures only that have to be paid for at excessive prices. It is claimed now that we get less for our money than any other nation; that while we spend more money for our Navy and our Army each year than any other country, yet we have not much to show for it. Why not avail ourselves of the things we have more plentifully than the other nations and put them to our use for defending ourselves? Why do we not take full advantage of the things that belong to us now, that we are now controlling, instead of coming around afterwards, when the stress and danger is present, and then being put in a position where terms will be dictated to us by those to whom we have turned over our great resources and who now use this instrument to hold us up. It seems to me that a little wisdom and a little foresight will lay the foundation for a greater defense program, a better defense program, a more economical defense program than we can by paying out money after we have parted with everything that is necessary to do these things for ourselves.

And so, in this kind of a bill, this defense measure, it is proper not only that we should have armor plate, not only that we should manufacture powder, but that we should have control of the ingredients that enter into the manufacture of powder.

If we have to pay somebody to whom we have given a monopoly in many ways, first, by giving him a patent, and then by giving him a license to run a water power, and then by turning over to him the water-power sites, and thus, in effect, the sole right to use the air and the water for the purpose of manufacturing nitric acid—I say, if we have given him a monopoly of that, then he does not care how we manufacture powder, because we have to come to him and pay him his price for that which makes powder, and we might just as well scrap our powder mills and get out of the business and get our powder directly from him, who controls the price of the product anyway. We can not expect to make powder at a reasonable figure or to save anything to the people unless we can get the stuff that makes the powder at a price that is reasonable and that we can afford to pay.

So it seems to me that there ought to be no valid objection to this amendment going into the pending bill, and going into it now, because, while they are building the dams and preparing the water powers that are going to take this nitrogen from the atmosphere they can be making investigations as to which of the two processes, or any other process, is the proper one.

I am not afraid of this proposition if our chemists, as was said by the Senator from Alabama, set to work to solve these problems on their own account as to how to fixate nitrates from the atmosphere. They have done it in Norway; they have done it in Germany; they have done it everywhere else. I believe this country is able, when it sets its head to do anything, to do it just about as well as, and I think much better than, any other nation on the face of the globe. All we have to do is to go about it, and if this measure is put onto a defense measure we will bestir ourselves; and I, for one, am confident that we will soon be able to get our war thunderbolts from the sky as well, if not better and easier, than any country in the world.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the Speaker of the House had signed the following enrolled bills and joint resolution, and they were thereupon signed by the Presiding Officer:

S. 585. An act conferring jurisdiction on the Court of Claims to hear, determine, and render judgment in claims of the Sisseton and Wahpeton Bands of Sioux Indians against the United States;

S. 707. An act for the relief of Beverly E. Whitehead;

S. 922. An act for the relief of Mary E. Nicolson;

S. 1048. An act for the relief of Warren E. Day; and

S. J. Res. 80. Joint resolution authorizing the Secretary of War to receive for instruction at the United States Military Academy, at West Point, René W. Pintó y Wentworth, a citizen of Cuba.

PETITIONS AND MEMORIALS.

Mr. GALLINGER presented a petition of the Republican County Central Committee of Pima County, Ariz., praying for

the adoption of an amendment to the Constitution granting the right of suffrage to women, which was ordered to lie on the table.

Mr. POINDEXTER presented petitions of sundry citizens of the State of Washington, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented memorials of North Star Grange, Patrons of Husbandry, of Brewster, and of Lake Grange, No. 362, Patrons of Husbandry, of Seattle, in the State of Washington, remonstrating against the increase in armaments, which were ordered to lie on the table.

He also presented the memorial of A. H. Lott and sundry other citizens of Seattle, Wash., remonstrating against the enactment of legislation to limit the freedom of the press, which was referred to the Committee on Post Offices and Post Roads.

He also presented a memorial of North Star Grange, Patrons of Husbandry, of Brewster, Wash., remonstrating against any change in the parcel-post law, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of Lake Grange, No. 362, Patrons of Husbandry, of Seattle, Wash., praying for Government ownership of telephone and telegraph systems, which was referred to the Committee on Post Offices and Post Roads.

He also presented a petition of North Star Grange, Patrons of Husbandry, of Brewster, Wash., praying for the enactment of legislation to provide for an increase in the merchant marine, which was referred to the Committee on Commerce.

He also presented a petition of the St. Urban Booster Club, of Winlock, Wash., praying for the creation of a system of rural credits, which was ordered to lie on the table.

Mr. BURLEIGH presented petitions of sundry citizens of Maine, praying that military and naval protection be given Penobscot Bay, Me., which were referred to the Committee on Military Affairs.

He also presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a memorial of sundry citizens of Calais, Me., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

Mr. TOWNSEND presented petitions of sundry citizens of Michigan, praying for National prohibition, which were referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of Michigan, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

Mr. WARREN presented petitions of sundry citizens of Wyoming, praying for national prohibition, which were referred to the Committee on the Judiciary.

He also presented a petition of the Literary Club of Sunrise, Wyo., praying for an increase in armaments, which was ordered to lie on the table.

Mr. CURTIS. I present a resolution adopted by the Republican State convention of Kansas, favoring a constitutional amendment providing for woman suffrage. I ask that the resolution may be printed in the RECORD.

There being no objection, the resolution was ordered to lie on the table and to be printed in the RECORD, as follows:

Resolution adopted by the Republican State convention of Kansas, at Topeka, March 21, 1916.

Kansas having conferred the elective franchise upon woman, with results that have proven universally satisfactory to the people of our State, we earnestly recommend that Congress submit to the consideration of the people of all the States a constitutional amendment providing for national woman suffrage.

Mr. LODGE presented memorials of sundry citizens of Boston, Wellesley, and Natick, all in the State of Massachusetts, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry citizens of Massachusetts, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. PHELAN presented a petition of the Society for the Prevention of Tuberculosis, of San Diego, Cal., praying for Federal aid for indigent consumptives, which was referred to the Committee on Public Health and National Quarantine.

He also presented a petition of Richmond Lodge, No. 824, International Association of Machinists, of Richmond, Cal., praying for an investigation into conditions surrounding the marketing of dairy products, which was referred to the Committee on Agriculture and Forestry.

He also presented memorials of sundry citizens of Colfax, Weimar, Sacramento, and Chico, all in the State of California, remonstrating against the passage of the so-called Ferris water-power bill, which were ordered to lie on the table.

Mr. SIMMONS presented petitions of sundry citizens of North Carolina, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. WILLIAMS presented petitions of sundry citizens of Mississippi, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. MYERS. I present a resolution of the women voters of Broadwater County, Mont., favoring the passage at this session of Congress of the Susan B. Anthony constitutional-amendment provision, which I ask may be printed in the RECORD, together with the signatures.

There being no objection, the resolution was ordered to lie on the table and to be printed in the RECORD, as follows:

Resolution passed by women voters of Broadwater County, Mont.

Resolved, That we, the women voters of Broadwater County, assembled in a county conference at Townsend April 1, 1916, demand that the national administration give facilities for the passage of the Susan B. Anthony amendment during the present session of Congress; and further be it

Resolved, That a copy of this resolution be sent to the administration leader in our National Capital and the members of the Montana congressional delegation.

Unanimously adopted.

Mrs. MABEL M. MOORE, *Chairman, Townsend, Mont.*,
Mrs. B. B. BRISCO, *Vice Chairman, Toston, Mont.*,
Mrs. MARY M. SHREINER, *Townsend, Mont.*,
Mrs. W. H. MCKNIGHT, *Secretary, Townsend, Mont.*,
Mrs. EVA GOODMAN, *Treasurer, Townsend, Mont.*,
Officers of the Broadwater County Branch of the Congressional Union.

Mr. ASHURST. I present a resolution of the Republican County central committee of Pima County, Ariz., favoring the adoption of the Susan B. Anthony woman-suffrage amendment, which I ask may be printed in the RECORD.

There being no objection, the resolution was ordered to lie on the table and to be printed in the RECORD, as follows:

Resolved, That we, the Republican County Central Committee of Pima County, Ariz., meeting this 29th day of March, 1916, for the purpose of calling a convention to elect delegates to the State Republican convention to be held in Tucson May 6, 1916, do hereby heartily indorse the Susan B. Anthony amendment, known in this Congress as the Sutherland-Mondell resolution, and earnestly urge our colleagues in Congress to do all in their power to pass forthwith on to the States for ratification this amendment enfranchising all the women of the country, in order that the unjust discrimination now existing may be changed and all women enjoy the same privileges and protection under the National Constitution.

Resolved, That copies of this resolution be sent to Minority Leader JACOB GALLINGER of the Senate; Minority Leader JAMES R. MANN of the House; Senator THOMAS, chairman of the Woman Suffrage Committee of the Senate; E. Y. WEBB, chairman of the Judiciary Committee of the House; and to the Senators and Representative from Arizona, with instructions that the resolution be read into the CONGRESSIONAL RECORD.

I hereby certify that the above is a true copy of the resolution passed unanimously by the Pima County (Ariz.) Republican Central Committee.

L. E. SMITH, *Secretary*.

TUCSON, ARIZ., *March 30, 1916*.

REPORTS OF COMMITTEES.

Mr. MARTIN of Virginia, from the Committee on Appropriations, to which was referred the bill (H. R. 12207) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1917, and for other purposes, reported it with amendments and submitted a report (No. 329) thereon.

Mr. SMITH of Maryland, from the Committee on the District of Columbia, to which was referred the bill (S. 5172) to exempt from taxation certain property of the Daughters of the American Revolution in Washington, D. C., reported it without amendment and submitted a report (No. 330) thereon.

Mr. ASHURST, from the Committee on Public Buildings and Grounds, to which was referred the bill (S. 5086) amending section 4 of the public-building act approved March 4, 1913, providing for the purchase of a site for a building for post office and customhouse at Nogales, Ariz., reported it without amendment and submitted a report (No. 331) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. HARDWICK:

A bill (S. 5407) authorizing and directing the Secretary of the Treasury to extend the time of payment of the amount due the Government by the city of Augusta, Ga.; to the Committee on Public Buildings and Grounds.

By Mr. JONES:

A bill (S. 5408) to establish in the Department of Labor a division to be known as a woman's division; to the Committee on Education and Labor.

By Mr. BORAH:

A bill (S. 5409) granting an increase of pension to Charles Reed (with accompanying papers); and

A bill (S. 5410) granting a pension to John Miller (with accompanying papers); to the Committee on Pensions.

A bill (S. 5411) for the relief of George Ashley (with accompanying papers); to the Committee on Public Lands.

By Mr. LODGE:

A bill (S. 5412) for the relief of William H. Rounceville (with accompanying papers); to the Committee on Military Affairs.

By Mr. SHAFROTH:

A bill (S. 5413) for the relief of Richard A. Schwab; to the Committee on Claims.

By Mr. OWEN:

A bill (S. 5414) granting a pension to Joel Drake (with accompanying paper); to the Committee on Pensions.

AGRICULTURAL EXPERIMENT STATIONS.

Mr. SMOOT. Mr. President, on March 25, 1916, I introduced a bill to provide for an increased annual appropriation for agricultural experiment stations, to be used in researches and experiments in home economics, and regulating the expenditure thereof. There has been reported from the Committee on Agriculture and Forestry Senate bill 703, which is on the calendar, being Order of Business No. 88. I desire that the Committee on Agriculture and Forestry shall consider Senate bill 5273 in connection with the bill that is on the calendar, and I desire to give notice that at the first opportunity to-morrow I shall make a brief statement as to the object of the bill introduced by me.

AMENDMENTS TO POST OFFICE APPROPRIATION BILL.

Mr. JONES submitted an amendment proposing that the bulletins issued by municipal boards of health, boards of public charities and corrections, and the public libraries of the country shall be admitted to the mails as second-class matter, etc., intended to be proposed by him to the Post Office appropriation bill (H. R. 10484), which was referred to the Committee on Post Offices and Post Roads and ordered to be printed.

Mr. MARTINE of New Jersey submitted an amendment providing that the Post Office appropriation act approved August 24, 1912, be amended to include post-office laborers in the list of those to receive compensation for overtime, etc., intended to be proposed by him to the Post Office appropriation bill (H. R. 10484), which was referred to the Committee on Post Offices and Post Roads and ordered to be printed.

He also submitted an amendment providing that section 5 of the Post Office appropriation act approved August 24, 1912, be amended to include employees of first and second class post offices designated as special clerks, intended to be proposed by him to the Post Office appropriation bill (H. R. 10484), which was referred to the Committee on Post Offices and Post Roads and ordered to be printed.

NATIONAL DEFENSE.

Mr. LODGE submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

ADMINISTRATION OF INDIAN AFFAIRS.

Mr. ASHURST. Mr. President, I have received a letter from Hon. Joseph H. Choate, with regard to Indian affairs, which I should like to have printed in the RECORD.

The PRESIDING OFFICER. Without objection, it is so ordered.

The letter is as follows:

8 EAST SIXTY-THIRD STREET,
New York, N. Y., April 3, 1916.

Hon. HENRY F. ASHURST,
Chairman Committee on Indian Affairs,
United States Senate, Washington, D. C.

MY DEAR MR. ASHURST: Just now, when questions of great national moment are demanding universal attention, there is danger that matters seriously affecting our domestic affairs may be neglected or entirely overlooked.

The welfare of our Indians is a solemn national obligation. We have no more sacred trust than the protection of the weak from being overreached by the strong. From the earliest times the intent of our people has been to give the Indian that protection.

In the majority of cases this obligation is imposed on the Federal Government by treaty. In the absence of treaty obligation, however, the duty of the Nation to its wards is just as great. In the case of Heckman *v.* United States (224 U. S., 413–417), in speaking of the Indians of the Five Civilized Tribes, the Supreme Court says:

"From their very weakness and helplessness, so largely due to the course of dealing of the Federal Government with them and the treaties in which it has been accomplished, there arises the duty of protection and with it the power."

Specific reservations have properly been set apart for Indian tribes, but for almost half a century there has been a tendency to recognize and give responsibility to the individual. The Dawes Severalty Act, adopted in 1887, was the culmination of this theory. It provides for an allotment of lands to individual Indians, breaking up of tribal relations, and disintegration of communal ownership. The principal thought in this and subsequent legislation has been to place responsibility upon the individual, and at the same time protect him in his personal and property rights until the untutored child of nature is equipped to assume full responsibilities of citizenship.

The difficulty is that too much has been expected of the Indian. To some people it is hard to understand why you can't take an untutored, ignorant, full-blood Indian and make an educated citizen out of him in a fortnight. They expect the unreasonable and impossible. It is contrary to all human experience. Extremists have insisted that the process is too slow; that these wards should be released from Government supervision and suffer the results of their own improvidence, regardless of their qualifications for self-protection and regardless of the consequences to their property rights.

Great caution is necessary in adopting new methods. The Indian problem has been the subject of too many theories which have proven disastrous in practice. In the early days the theory of extermination existed on the ground that "the only good Indian is a dead Indian." This idea did not appeal to our liberty-loving people, and later the theory of "segregation" was conceived, under which the Indians were virtually herded on reservations and policed that they might not escape and injure some white man. The latest theory—that of individualization—developed under the Dawes Severalty Act, really seems most plausible. It may prove a solution of the Indian problem, if properly administered and not interfered with by new and inconsistent legislation.

Of the Indians heretofore allotted about 10 per cent only—the full-bloods, at least—have been prepared for the additional responsibilities thus cast upon them.

Congress in 1908 clothed the county courts of Oklahoma with jurisdiction over the person and property of minor allottees of the Five Civilized Tribes, and further provided that upon the death of an allottee all restrictions against alienation of his land would thereby be removed. The raid upon the Indian's property as a result of this legislation is notorious, and the effect on the Indian was disastrous and irreparable.

Legislation is now pending in Congress which, if adopted, may overturn the present Indian policy and subject the Indian to the worst possible forms of spoliation, not only from outsiders but from unscrupulous persons within the tribal membership. The bill (H. R. 108) introduced by Congressman HASTINGS in the House of Representatives would confer on the Superintendent of the Five Civilized Tribes the authority now vested in the Commissioner of Indian Affairs and the Secretary of the Interior respecting the lands and individual moneys of the enrolled members of the Five Civilized Tribes in Oklahoma. About one-third of the Indian population in the United States belongs to these tribes, with more than 30,000 restricted Indians; their property including over 3,000,000 acres of valuable individually owned land. Perhaps the greatest oil field in the world has been developed in the country of the Five Tribes, from which enormous wealth has accrued to these people.

Under existing law the superintendent of these tribes is nominated by the President and confirmed by the Senate, the appointment being political. The pending bill (H. R. 108) proposes to turn over to this appointee full power and authority over this vast estate, and naturally every pressure, local and otherwise, would be brought to bear on anyone clothed with this great responsibility.

As evidence of the inability of these Indians properly to safeguard their own interests, the following is taken from the opinion of the Supreme Court in 1910 in the case of Tiger *v.* Western Investment Co. (221 U. S., 286–297):

"That full-blood Indians of the Five Tribes are, as a class, incompetent must be assumed not only from the legislation of Congress with respect to them but from the finding of the Court of Claims, where, in the case of Brown & Gritts *v.* United States (44 C. Cls., 283), it was expressly found that full-blood Cherokees, whose right to alienate their lands was forbidden by the legislation contemporaneous with that involved in the case at bar, were, as a class, unable to speak the English language and incompetent to guard their interest from designing persons who were constantly attempting to induce them to part with their property at grossly inadequate compensation."

With respect to the Hastings bill, Arthur C. Parker, a highly intelligent Indian, engaged in important educational work for the State of New York at Albany, who is also the secretary and treasurer of the Society of American Indians, says:

"ALBANY, *March 22, 1916.*

"I desire to register my protest against the favorable consideration of H. R. 108, introduced by Congressman HASTINGS, of Oklahoma, designing to confer the authority now invested in the Secretary of the Interior and the Commissioner of Indian Affairs upon the office of the Superintendent of the Five Civilized Tribes. The condition of Indian property and the complex situation that has arisen from inheritance cases and the presence of a large number of incompetent Indians makes it of utmost importance that the administration of their affairs be retained in the hands of the Federal Government. There is precedent enough to show the danger of State control in Indian matters, where these matters are not properly adjusted and where the mass of Indians are by reason of ignorance or disability unable to protect themselves. The Oklahoma situation has been bad enough without now further providing the means for a wholesale plundering of the estates of minors and incompetents. This bill would bring injustice and be a reproach upon the Federal Government."

Another bill recently introduced by Senator JOHNSON, of South Dakota, S. 3904, by its terms proposes to confer upon tribes of Indians the right to select their superintendents and other employees. This would divest the Interior Department of the appointing power, and the Indian Service would be deprived of the wholesome restrictions provided by the civil service. Anyone familiar with Indians can readily imagine how the more dependent full bloods would thus become the easy prey of conniving mixed bloods and unscrupulous whites. As so aptly stated by Rev. Sherman Coolidge, president of the Society of American Indians, "By such law the very worst elements will seek to control Indian tribes."

Senator LANE'S bill, S. 4452, proposes legislation to abolish the position of Commissioner of Indian Affairs and his assistants, creating in lieu thereof an independent bureau with three commissioners subject only to the control of Congress. This bill provides that these commissioners shall be selected from candidates to be named by all the Indian tribes of the United States "congregated in general delegate council." It is further provided that these commissioners shall exercise all the authority now vested in the Secretary of the Interior and the Commissioner of Indian Affairs.

This bill would also deprive the Indian Service of that protection now afforded by the classified civil service and would subject the Indians to the same pernicious influences as the Johnson bill, the chief difference being that one is retail and the other wholesale destruction. One may suppose that the elements most hostile to the Indians will advocate this and similar vicious legislation.

While the Secretary of the Interior and the Commissioner of Indian Affairs might gladly welcome this relief from the very onerous duties imposed upon them in connection with the administration of Indian affairs, yet these officials, moved by the high sense of public duty the Federal Government owes to its dependent Indian wards, have felt impelled to suggest the great danger to the Indians involved in the legislation contemplated by either of the three bills referred to and have pointed out that existing law is sufficient to enable the Interior Department to place on their own responsibility individual Indians who are qualified to handle their own property. "Competency commissions" are now in the field visiting various reservations where allotments in severalty have been made with a view of removing restrictions against alienation from the land belonging to those Indians found capable of withstanding the machinations of designing persons seeking to prey on members of an unsuspecting race the moment the protecting hand of the Government is lifted.

That wholesale removal of restrictions invites disaster has been amply evidenced by past experience. Should even 50 per cent of the Indians of a given tribe prove competent, is that any reason why the incompetent should be turned over to the mercy of unscrupulous land sharks?

Developments within the past few years show remarkable improvement in the administration of Indian affairs, and just as the latest theory of "individualization" begins to bear good fruit can we afford to destroy the entire structure by removing from the protecting care of the Government even those whose feet are just beginning to tread along the pathway that leads to success?

As an earnest friend of the Indian race I trust that neither of these bills nor any similar legislation will be enacted.

Sincerely, yours,

JOSEPH H. CHOATE.

PRESIDENTIAL APPROVAL.

A message from the President of the United States, by Mr. Sharkey, one of his secretaries, announced that the President, on April 5, 1916, had approved and signed the following act:

S. 4657. An act to authorize the Cincinnati, New Orleans & Texas Pacific Railway Co. to rebuild and reconstruct, maintain, and operate a bridge across the Tennessee River near Chattanooga, in Hamilton County, in the State of Tennessee.

EXECUTIVE SESSION.

Mr. CHAMBERLAIN. Mr. President, I understand that an executive session is desired, and I therefore move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 5 minutes spent in executive session the doors were reopened.

RECESS.

Mr. CHAMBERLAIN. I move that the Senate take a recess until 11 o'clock to-morrow.

The motion was agreed to; and (at 5 o'clock and 50 minutes p. m., Friday, April 7, 1916) the Senate took a recess until to-morrow, Saturday, April 8, 1916, at 11 o'clock a. m.

NOMINATIONS.

Executive nominations received by the Senate April 7 (legislative day of March 30), 1916.

RECEIVERS OF PUBLIC MONEYS.

John P. Robertson, of Broken Bow, Nebr., to be receiver of public moneys at Broken Bow, Nebr., vice Darius M. Amsberry, term expired.

Arnold F. Beeler, of Hershey, Nebr., to be receiver of public moneys at North Platte, Nebr., vice Ira L. Bare, term expired.

Frank Campbell, of O'Neill, Nebr., to be receiver of public moneys at O'Neill, Nebr., vice Sanford Parker, term expired.

REGISTERS OF THE LAND OFFICE.

Eugene J. Eames, of Maxwell, Nebr., to be register of the land office at North Platte, Nebr., vice John E. Evans, term expired.

Ross G. Moore, of Broken Bow, Nebr., to be register of the land office at Broken Bow, Nebr., vice John Reese, term expired.

PROMOTIONS IN THE ARMY.

CHAPLAINS.

To be chaplains with the rank of captain after seven years' service.

Chaplain William R. Scott, Second Infantry, with rank from February 23, 1916.

Chaplain Franz J. Feinler, unassigned, with rank from February 23, 1916.

FIELD ARTILLERY ARM.

Second Lieut. Jacob L. Devers, Third Field Artillery, to be first lieutenant from April 1, 1916, vice First Lieut. Edwin St. J. Greble, jr., unassigned, resigned March 31, 1916.

CAVALRY ARM.

Second Lieut. Elkin L. Franklin, Thirteenth Cavalry, to be first lieutenant from April 1, 1916, vice First Lieut. Frank P. Lahm, Sixth Cavalry, detailed in the Aviation Section, Signal Corps.

PROMOTIONS IN THE NAVY.

Ensign Howard A. Flanigan to be a lieutenant (junior grade) in the Navy from the 7th day of March, 1915.

Ensign Otto M. Forster to be a lieutenant (junior grade) in the Navy from the 8th day of June, 1915.

Chauncey R. Murray, a citizen of Pennsylvania, to be an assistant paymaster in the Navy from the 6th day of April, 1916.

Boatswain Benjamin F. Singles to be a chief boatswain in the Navy from the 21st day of December, 1915.

Boatswain Frank G. Mehling to be a chief boatswain in the Navy from the 21st day of December, 1915.

Gunner Joseph Chamberlain to be a chief gunner in the Navy from the 21st day of December, 1915.

Machinist Stephen H. Badgett to be a chief machinist in the Navy from the 30th day of December, 1915.

Machinist Jonathan H. Warman to be a chief machinist in the Navy from the 30th day of December, 1915.

POSTMASTERS.

CALIFORNIA.

E. R. Rhymes to be postmaster at Sanitarium, Cal., in place of Leon V. Roberson, declines.

J. C. White to be postmaster at Arbuckle, Cal. Office became presidential January 1, 1916.

GEORGIA.

C. W. McAfee to be postmaster at Blue Ridge, Ga., in place of William M. Wilson. Incumbent's commission expires April 11, 1916.

ILLINOIS.

G. E. Combs to be postmaster at Villa Grove, Ill., in place of Samuel S. Yolton. Incumbent's commission expired March 8, 1916.

James W. Donaldson to be postmaster at Livingston, Ill., in place of Robert A. McFarland, removed.

James L. Mishler to be postmaster at Pearl City, Ill. Office became presidential April 1, 1916.

William G. Wack to be postmaster at Mansfield, Ill., in place of William Clemans, resigned.

INDIANA.

John M. Wickizer to be postmaster at Argos, Ind., in place of Frank M. Pickerl. Incumbent's commission expires May 10, 1916.

KANSAS.

Irma J. Collopy to be postmaster at Turon, Kans., in place of Florence Lowe. Incumbent's commission expires April 24, 1916.

R. W. Moorhead to be postmaster at Sabetha, Kans., in place of David D. Wickins. Incumbent's commission expires May 10, 1916.

LOUISIANA.

Merrill D. Harris to be postmaster at Crichton, La. Office became presidential April 1, 1916.

MASSACHUSETTS.

William P. Lovejoy to be postmaster at Barnstable, Mass. Office became presidential April 1, 1916.

MINNESOTA.

John P. Anderson to be postmaster at Butterfield, Minn. Office became presidential January 1, 1916.

M. H. Baskfield to be postmaster at Zumbrota, Minn., in place of Samuel B. Scott. Incumbent's commission expires April 15, 1916.

J. M. Benson to be postmaster at Lindstrom, Minn., in place of Ludwig J. Andrews. Incumbent's commission expired March 13, 1916.

N. J. Enquist to be postmaster at Isanti, Minn., in place of Wilfred D. Oleson. Incumbent's commission expired March 20, 1916.

H. J. Essler to be postmaster at St. Peter, Minn., in place of Henry C. Miller. Incumbent's commission expired December 21, 1915.

Thomas L. Fay to be postmaster at St. Charles, Minn., in place of John Frisch. Incumbent's commission expired December 20, 1915.

Peter W. Gorrie to be postmaster at Morristown, Minn., in place of William L. Eddy. Incumbent's commission expired January 18, 1916.

Altie Hill to be postmaster at Dawson, Minn., in place of Charles W. Page. Incumbent's commission expired March 13, 1916.

W. E. Lawson to be postmaster at Benson, Minn., in place of Mons Hauge. Incumbent's commission expired March 13, 1916.

Robert M. Mills to be postmaster at Maple Plain, Minn., in place of Robert M. Mills. Incumbent's commission expires April 15, 1916.

O. J. Rea to be postmaster at Tracy, Minn., in place of Arthur H. Rowland. Incumbent's commission expired March 20, 1916.

C. J. Reagan to be postmaster at Appleton, Minn., in place of Bernard W. Johnson. Incumbent's commission expired March 13, 1916.

A. L. Reichert to be postmaster at Red Lake Falls, Minn., in place of Emma F. Marshall. Incumbent's commission expired February 1, 1915.

W. J. Struble to be postmaster at Mora, Minn., in place of C. E. Williams. Incumbent's commission expired January 15, 1916.

MISSISSIPPI.

John A. Smallwood to be postmaster at Ripley, Miss., in place of Charles L. Hovis. Incumbent's commission expires April 17, 1916.

A. B. Smith to be postmaster at Indianola, Miss., in place of George K. Smith, jr., removed.

MISSOURI.

Clyde G. Eubank to be postmaster at Madison, Mo., in place of Samuel B. Craver. Incumbent's commission expired April 5, 1916.

Thomas J. Juden to be postmaster at Cape Girardeau, Mo., in place of Edward W. Flentge. Incumbent's commission expires May 8, 1916.

A. S. J. Martin to be postmaster at East Prairie, Mo., in place of Andrew J. Ryker. Incumbent's commission expired April 5, 1916.

MONTANA.

K. O. Slette to be postmaster at Culbertson, Mont., in place of Albert W. Huxsol. Incumbent's commission expired December 12, 1915.

NEBRASKA.

J. R. Durril to be postmaster at Laurel, Nebr., in place of A. E. Maun, resigned.

NEW JERSEY.

Harrison Hollinger to be postmaster at Port Norris, N. J., in place of Willis D. Robbins. Incumbent's commission expires April 15, 1916.

William L. Scheuerman to be postmaster at Basking Ridge, N. J. Office became presidential April 1, 1916.

NORTH CAROLINA.

J. H. Ball to be postmaster at Elkin, N. C., in place of R. J. Lewellyn, resigned.

NORTH DAKOTA.

John C. Nippolt to be postmaster at Wishek, N. Dak. Office became presidential January 1, 1916.

OHIO.

Franklin Harper to be postmaster at Mount Vernon, Ohio, in place of Sheridan G. Dowds. Incumbent's commission expires April 15, 1916.

C. T. Shively to be postmaster at Rogers, Ohio, in place of George H. Huston. Incumbent's commission expires April 24, 1916.

OKLAHOMA.

Earl E. Le Crone to be postmaster at Forgan, Okla. Office because presidential October 1, 1915.

J. W. Westbrook to be postmaster at Ada, Okla., in place of M. W. Ligon, removed.

OREGON.

W. A. Heylman to be postmaster at Estacada, Oreg., in place of Albert N. Johnson. Incumbent's commission expired December 20, 1915.

Fitzhugh G. Lee to be postmaster at Junction City, Oreg., in place of Albert R. Martin. Incumbent's commission expired January 15, 1916.

Jared W. Moore to be postmaster at Redmond, Oreg., in place of Jared W. Moore. Incumbent's commission expired March 1, 1916.

Katie B. Veatch to be postmaster at Cottage Grove, Oreg., in place of C. H. Van Denburg. Incumbent's commission expired April 5, 1916.

James A. Watkins to be postmaster at Philomath, Oreg., in place of Sarah L. Keczel. Incumbent's commission expired February 8, 1916.

PENNSYLVANIA.

Frederic J. Dahlen to be postmaster at Belleville, Pa., in place of Gilbert B. Brindle. Incumbent's commission expired March 13, 1916.

John H. Driscoll to be postmaster at Clarendon, Pa., in place of Nathaniel B. Miller. Incumbent's commission expired April 5, 1916.

Caroline E. W. Curry to be postmaster at Glen Olden, Pa., in place of William F. Elgin, resigned.

John H. Custer to be postmaster at Stoyestown, Pa. Office became presidential January 1, 1916.

Elias B. Leiby to be postmaster at Marysville, Pa., in place of John W. Beers. Incumbent's commission expired March 4, 1916.

K. A. McLain to be postmaster at Fredericktown, Pa., in place of Joseph A. McLain, resigned.

RHODE ISLAND.

Samuel W. Smith, jr., to be postmaster at Jamestown, R. I., in place of William F. Caswell. Incumbent's commission expires April 24, 1916.

TEXAS.

George W. Locke to be postmaster at Groveton, Tex., in place of Hugh B. Woolridge. Incumbent's commission expired December 12, 1915.

VIRGINIA.

A. Sidney Frances to be postmaster at Boykins, Va., in place of Edgar B. Beaton. Incumbent's commission expires May 1, 1916.

Bayard Mackey to be postmaster at Rossiyn, Va., in place of Crandal Mackey, jr., resigned.

WEST VIRGINIA.

C. L. Perkins to be postmaster at Gassaway, W. Va., in place of R. G. Yoak. Incumbent's commission expired February 6, 1916.

WASHINGTON.

Herbert J. Nunan to be postmaster at Oak Harbor, Wash. Office became presidential January 1, 1916.

WISCONSIN.

Carl J. Cunningham to be postmaster at Chippewa Falls, Wis., in place of Henry J. Goddard. Incumbent's commission expires April 17, 1916.

William Hughes to be postmaster at Pardeeville, Wis., in place of Frank H. Smith. Incumbent's commission expired January 16, 1916.

Joseph L. O'Neil to be postmaster at Gays Mills, Wis. Office became presidential January 1, 1916.

J. L. Palmer to be postmaster at Pittsville, Wis. Office became presidential October 1, 1915.

Ira B. Pierce to be postmaster at Monticello, Wis., in place of Charles D. Kennedy. Incumbent's commission expired January 16, 1916.

Thomas D. Smith to be postmaster at Fairchild, Wis., in place of Ralph E. Arnold. Incumbents' commission expired February 20, 1916.

Joseph H. Sullivan to be postmaster at Spooner, Wis., in place of Walter C. Crocker. Incumbent's commission expires April 17, 1916.

Margaret Sullivan to be postmaster at Hurley, Wis., in place of Owen Sullivan, deceased.

WYOMING.

Ethel A. Berry to be postmaster at Guernsey, Wyo. Office became presidential April 1, 1916.

CONFIRMATION.

Executive nomination confirmed by the Senate April 7 (legislative day of March 30), 1916.

POSTMASTER.

GEORGIA.

Paul Latimer, Fairburn.

WITHDRAWALS.

Executive nominations withdrawn April 7 (legislative day of March 30), 1916.

George K. Smith, jr., to be postmaster at Indianola, Miss.

Sara M. Baum to be postmaster at Pittsville, Wis.

HOUSE OF REPRESENTATIVES.

FRIDAY, *April 7, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We bless Thee, our Father in heaven, for the strong mentality, moral fiber, religious interest, and patriotic zeal which characterizes the Congress of the United States. Otherwise it would be a strong indictment against our public schools, colleges, universities, and educational centers; a strong indictment against the public press, its daily papers, magazines, and periodicals; a terrible indictment against our churches, the clergy, who Sunday after Sunday preach to thousands, for these institutions are largely responsible for the character of our citizens and the molding of public sentiment; a terrible indictment against popular government, since it is the people who are responsible for the personnel and general character of the Congress. Hence we pray for a just estimate of our people and our sacred institutions, and that we may continue to grow intellectually, morally, spiritually. "Blessed is the nation whose God is the Lord and the people whom he hath chosen for his own inheritance." Amen.

The Journal of the proceedings of yesterday was read and approved.

CALL OF THE HOUSE.

Mr. MADDEN. Mr. Speaker, I raise the question that there is no quorum present.

The SPEAKER. The Chair will count.

Mr. KITCHIN. Mr. Speaker, I move a call of the House.

The SPEAKER. Evidently there is no quorum present, and the gentleman from North Carolina [Mr. KITCHIN] moves a call of the House.

A call of the House was ordered.

The SPEAKER. The Doorkeeper will close the doors, the Sergeant at Arms will notify the absentees, and the Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

Abercrombie	Garner	Liebel	Rowland
Aiken	Godwin, N. C.	Lobeck	Sabath
Anthony	Goodwin, Ark.	Loft	Scully
Aswell	Gould	Loud	Sells
Beales	Graham	McAndrews	Shackleford
Bennet	Gray, Ala.	McCulloch	Sinnott
Bruckner	Griest	McDermott	Slayden
Brumbaugh	Hamill	McKenzie	Snyder
Buchanan, Ill.	Hamilton, N. Y.	Maher	Steele, Pa.
Byrnes, S. C.	Hart	Mays	Steenerson
Capstick	Hay	Meeker	Stephens, Miss.
Coady	Hayes	Moon	Stephens, Tex.
Copley	Heaton	Moores, Ind.	Sterling
Crisp	Henry	Morin	Stout
Decker	Hill	Morrison	Swift
Dempsey	Hilliard	Moss, W. Va.	Taylor, Colo.
Dent	Houston	Murray	Tilson
Dewalt	Husted	Nelson	Tinkham
Doremus	Johnson, S. Dak.	Nichols, Mich.	Vare
Drukker	Jones	North	Ward
Dyer	Kearns	Oakey	Watkins
Edwards	Kennedy, Iowa	Oglesby	Watson, Pa.
Fairchild	Kennedy, R. I.	Olney	Webb
Finley	King	Patten	Williams, Wm. E.
Flynn	Kinkaid	Peters	Wilson, Ill.
Focht	Konop	Porter	Wood, Ind.
Gallagher	Lazaro	Price	Young, Tex.
Gard	Lehlbach	Rainey	
Gardner	Lenroot	Roberts, Mass.	
Garland	Lewis	Rodenberg	

The SPEAKER. On this call 316 Members, a quorum, answered to their names.

Mr. KITCHIN. Mr. Speaker, I move that further proceedings under the call be dispensed with.

The motion was agreed to.

EXTENSION OF REMARKS.

Mr. CRAMTON rose.

The SPEAKER. For what purpose does the gentleman from Michigan rise?

Mr. CRAMTON. To make a unanimous-consent request to extend my remarks in the RECORD by inserting a letter from Judge Samuel D. Pepper, the judge advocate general of the Michigan National Guard, with reference to section 76 of the Hay bill.

The SPEAKER. The gentleman from Michigan [Mr. CRAMTON] asks unanimous consent to extend his remarks in the RECORD by inserting a letter from Judge Samuel D. Pepper, judge advocate general of the Michigan National Guard. Is there objection?

There was no objection.

RIVERS AND HARBORS.

Mr. SPARKMAN. Mr. Speaker, I move that the House resolve itself into Committee of the Whole House on the State of the Union for the further consideration of the bill H. R. 12193, the river and harbor appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193, the river and harbor appropriation bill, with Mr. SHERLEY in the chair.

The CHAIRMAN. The Clerk will report the bill by title.

The Clerk read as follows:

A bill (H. R. 12193) making appropriations for the construction, repair, and preservation of certain public works on rivers and harbors, and for other purposes.

The CHAIRMAN. The Clerk will proceed with the reading of the bill for amendment.

The Clerk read as follows:

Red River, Ark. and La.: Continuing improvement and for maintenance below Fulton, Ark., $55,000.

Mr. FREAR. Mr. Speaker, I move to strike out the paragraph.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Wisconsin [Mr. FREAR].

The Clerk read as follows:

Page 18, strike out lines 13, 14, and 15.

Mr. FREAR. Mr. Chairman, this is only a part of the appropriation intended for the Red River. We have appropriated for that river over $2,800,000 thus far. The last year's report, for 1914, showed that the commerce, not including logs and timber on that stream, reached 1,694 tons, after a great many years of improvement. The obstructions removed by the Government during the last two years numbered 240,000. I insert the tonnage and obstructions removed here:

Page 2361, report of 1914, shows $2,805,398 has been appropriated on this "project." Although the commerce, excluding floatable timber, only reached 1,227 tons in 1912, a vigorous injection of $100,000 annual Government serum raised the commerce in 1913 to 1,442 tons, or a net gain on the lower river of 215 tons during the year, which, added to 37 tons gain on the upper river, makes a grand total gain in tonnage of 252 tons for 1913 commerce on upper and lower Red River, in all reaching 1,694 tons floated, exclusive of floatable timber:

We have paid $3,000,000 for this.

	Obstructions removed.	Commerce.
		Tons.
Upper Red (1912)	51,492	.....
Upper Red (1913)	51,529	252
Lower Red (1912)	58,039	.....
Lower Red (1913)	78,982	1,442
Total	240,042	1,694

I move to strike out this item, and desire to discuss it in line with another suggestion that comes to me. Yesterday the House was criticized, particularly on this side, by the gentleman from Pennsylvania [Mr. MOORE], who said that we of the Mississippi Valley did not appreciate the importance of commerce and of waterway improvements on the eastern coast. He also stated in substance that we were influenced particularly by the Chicago Tribune, which has been making an active campaign against these so-called improvements for the past three years. I thank God that we have had the Chicago Tribune. As much as any other one agency, it helped to defeat the last two river and harbor bills.

But I can understand why the gentleman from Pennsylvania referred disparingly to the Chicago Tribune. He has been editing a magazine that berates those who tried to defeat that bill last year and the session before. Naturally there is some jealousy between the editors of two rival publications [laughter], one of which is his Waterway Journal, which has several hundred contributors, and the other is the Chicago Tribune, advertised as the greatest newspaper in the world, and one of the most influential, as we know. I can see why he should have that view. But he has made a mistake. The people on the Atlantic coast do know the character of this bill and other bills of like character.

Let me convince the House that that is so. I wish to read a brief editorial to you, and I trust you will listen for a moment. The Philadelphia Inquirer said editorially, on September 16, 1914:

Gaily the debate over the thieves' bill, commonly known as the rivers and harbors appropriations, goes on in the Senate. Having cut out appropriations of genuine merit to serve the interests of southern statesmen—

Remember, this is a paper published in Philadelphia—

it is interesting to watch the antics of our southern friends in their efforts to defend the great steal. * * * The South is in the saddle, sure enough.

I never said anything like that. [Laughter.]

The Chicago Tribune of September 10, 1914, says:

If the rivers and harbors appropriations were 50 per cent pure, they would be opposed by uncompromising Congressmen determined that filching should not have recognized place in the process of Government. Until the question of internal improvement can be taken up honestly by Congress these bills ought to be opposed.

Mr. CALLAWAY. Mr. Chairman——

The CHAIRMAN. Does the gentleman yield?

Mr. FREAR. May I complete my statement?

The CHAIRMAN. The gentleman's time has expired.

Mr. FREAR. May I have five minutes more?

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent that his time be extended five minutes. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, that is a Philadelphia paper, published at the home of the gentleman from Pennsylvania, one of the leading papers of that city, with several hundred thousand circulation. I have never seen anything in any other paper that compared with it. It was its opinion of the last bill, which was less in amount than this one.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. FREAR. After I finish my statement.

Mr. MOORE of Pennsylvania. Has the gentleman read the Inquirer this morning?

Mr. FREAR. I will tell the gentleman about that. I am coming to that proposition.

Mr. MOORE of Pennsylvania. The Inquirer is in favor of this bill.

Mr. FREAR. I would like to complete my statement.

The CHAIRMAN. The gentleman from Wisconsin declines to yield.

Mr. FREAR. I will say that since that time Philadelphia has received $2,700,000 in this bill, and the Inquirer has changed its tone. That may have been the reason why the Philadelphia Inquirer hammered you gentlemen on the other side of the aisle in that way on the last bill. Did you ever hear of a reply coming from the gentleman from Philadelphia [Mr. MOORE] attempting to defend the other side of the House at that time, or has he ever criticized the Philadelphia Inquirer's position? But to-day, with that great appropriation of $2,700,000, which they failed to get the last time, a shadow has fallen over the editor's window. He sees nothing. But the Chicago Tribune is not afraid, although an appropriation goes to Chicago. The gentleman from Pennsylvania [Mr. MOORE] with his waterway journal can continue to assail as he does those who oppose this bill. He is the head of a great waterway association that wants about $43,000,000 from the Government for his inland waterway, and how much more the Lord only knows.

Mr. CALLAWAY. Does the gentleman mean to say that last year the Philadelphia Inquirer, from the town of the gentleman from Pennsylvania [Mr. MOORE], called this river and harbor bill a steal?

Mr. FREAR. Worse than that. It called it a bill of thieves. I have never before heard used such language as that.

Mr. CALLAWAY. What was the difference between the bill of last year, that the Philadelphia Inquirer said was a bill of thieves, and the bill this year?

Mr. FREAR. It contained $1,200,000 then for the Delaware River and this year it contains $2,700,000 for the same river.

Mr. CALLAWAY. So it is not a bill of thieves now?

Mr. FREAR. Not now.

Mr. MOORE of Pennsylvania. If the gentleman will allow me, the Philadelphia Inquirer was misled last year, after reading the speeches of my colleague, the gentleman from Wisconsin [Mr. FREAR], and my other colleague, the gentleman from Texas [Mr. CALLAWAY]. [Laughter.] It heard about the thieves for the first time then, and took these gentlemen at their word. It was they who applied these terms to our southern friends, and the Philadelphia Inquirer simply fell in line. The difference now is that, justice having at last been done to the Delaware River in this bill, the Philadelphia Inquirer is entirely satisfied. [Laughter.]

Mr. FREAR. You can see the power of persuasion, Mr. Chairman. All it needs is a large appropriation for the city of Philadelphia to cause this change and this conversion of which the gentleman so well speaks.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. FREAR. Yes.

Mr. MOORE of Pennsylvania. The Chicago Tribune is now satisfied, as the gentleman says, because up to 1907——

Mr. FREAR. I yield for just a question.

Mr. MOORE of Pennsylvania. Then I will put it in the form of a question. Is not the Chicago Tribune satisfied because up to 1907 out of a total of $552,000,000 appropriated from the beginning of time, the Mississippi Valley, in the territory of the gentleman from Wisconsin [Mr. FREAR] got $208,000,000 out of the whole?

Mr. FREAR. That may be so, but if it is a steal, as the Philadelphia Inquirer last year said it was, let us inquire into it, and let the Chicago Tribune get after it as well.

Mr. MOORE of Pennsylvania. You see the Chicago Tribune was satisfied before the Philadelphia Inquirer was.

Mr. FREAR. It is not difficult to see what has brought about this change of attitude on the part of that paper within 365 days.

The CHAIRMAN. The gentleman's time has again expired.

Mr. CALLAWAY. I move to strike out the last word.

Mr. SPARKMAN. I ask unanimous consent that the debate on this paragraph and amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate on this paragraph and amendments thereto close in five minutes. Is there objection?

Mr. CALLAWAY. I object, Mr. Chairman. I have not been in on this river and harbor bill before, and I want to say something about it.

Mr. SPARKMAN. I move that all debate on this paragraph and amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida moves that all debate on this paragraph and amendments thereto close in five minutes.

Mr. MANN. I make the point of order that the gentleman from Florida does not have the floor for the purpose of making that motion.

The CHAIRMAN. As the Chair understands, the gentleman from Texas permitted the gentleman from Florida to make the motion.

Mr. MANN. The gentleman from Texas objected.

The CHAIRMAN. He objected to the unanimous consent.

Mr. MANN. He did not yield the floor for that purpose.

The CHAIRMAN. If the gentleman insists upon his recognition, the gentleman from Texas is recognized for five minutes.

Mr. CALLAWAY. Mr. Chairman, I have not had any inning on this river and harbor bill this year. I am entitled to a little time. The only statement I ever saw in the Philadelphia Inquirer that I agreed with was the statement that it made that this bill was a bill of thieves. I am certain that the only reason why the Philadelphia Inquirer saw it in that way at that time was that the Philadelphia Inquirer was not in as deep as the Philadelphia Inquirer wanted to get in. It was in then $1,200,000, and it was then a bill of thieves, according to the Philadelphia Inquirer, and an outrage by the southern Congressmen, perpetrated on the Federal Treasury. But when the Delaware River got in $2,700,000 it was not a bill of thieves. Then it was a bill of virtue, a bill of righteousness, a bill of justice, a bill of proper expenditure, and southern Congressmen were gentlemen. [Laughter and applause.]

I have been calling attention to the river and harbor bill for a number of years, and I have been calling attention to some projects in my State, not because they were less just than projects in other States, but I hate to see my Congressmen being bought up like the Philadelphia Inquirer has been bought up. I do not believe that by hand-outs in different sections of the country such propositions as this ought to be forced into this House; and I think the attention of the people of the country ought to be called to it, and the reason that I called attention to the projects in my own State was because I knew of the projects, and I knew that every Member of the House would know that I knew them and that there was no selfishness and no ulterior motive on my part; and that when I called attention to it the country would know that the deal was an outrage. But it is no more of an outrage in the South than it is in the North. Take it all the way from Mattawan Creek in New Jersey to the Rio Grande where it ends and it is all alike.

Mr. FREAR. Will the gentleman yield?

Mr. CALLAWAY. Yes.

Mr. FREAR. This bill is $5,000,000 more than the one that the Philadelphia Inquirer criticized.

Mr. CALLAWAY. It is not a question of how much steal, it is a question of how much we get, and so it is all the way around.

Now, this intercoastal canal paralleling the ocean for cheap water rates! The only place on earth where we have a cheap rate is on the ocean, and we have got to have an intercoastal canal running from Boston, Mass., all along the Atlantic sea-

board to the Gulf of Mexico, to the Rio Grande River, to give us cheap transportation. [Laughter.]

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. CALLAWAY. Mr. Chairman, I ask to continue for three minutes.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to proceed for three minutes. Is there objection?

Mr. CALLAWAY. Make it five minutes, Mr. Chairman. [Laughter.]

The CHAIRMAN. The gentleman from Texas changes his request to five minutes. Is there objection?

Mr. SPARKMAN. Reserving the right to object, I want to see if I can get unanimous consent that all debate shall close in 10 minutes, 5 minutes to be used by the gentleman from Texas and 5 by the gentleman from Alabama [Mr. HEFLIN].

The CHAIRMAN. The gentleman from Florida asks unanimous consent to amend his request by having all debate close in 10 minutes on this paragraph and amendment thereto, 5 minutes to be used by the gentleman from Texas [Mr. CALLAWAY] and 5 minutes by the gentleman from Alabama [Mr. HEFLIN]. Is there objection?

Mr. MOORE of Pennsylvania. Reserving the right to object, I do not understand that the gentleman from Alabama has been attacked at all in this controversy.

Mr. HEFLIN. I want to say a few words in behalf of the gentleman from Pennsylvania. [Laughter.]

The CHAIRMAN. Is there objection?

Mr. COOPER of Wisconsin. Reserving the right to object, will the gentleman give me five minutes?

Mr. SPARKMAN. Well, Mr. Chairman, I will change my request to 15 minutes.

The CHAIRMAN. The gentleman modifies his request and asks that debate close in 15 minutes. Is there objection?

Mr. MOORE of Pennsylvania. Reserving the right to object, I ask the gentleman to extend it two minutes more, as it may be a matter involving a personal explanation.

Mr. DUPRÉ. Reserving the right to object, I would like to have all the Louisiana items disposed of before the repetition of the old story of Ali Baba and the Forty Thieves goes on. [Laughter.]

The CHAIRMAN. Is there objection to the request of the gentleman from Florida? [After a pause.] The Chair hears none.

Mr. CALLAWAY. Mr. Chairman, my inability to distinguish between the iniquity of this bill when it carries $1,200,000 for the Delaware River and when it carries $2,700,000 for the Delaware River I think may be well understood by any Member of this House because I am not affected directly by that appropriation, and I think also that the attitude of the Philadelphia Inquirer may well be understood by Members of this House because in one instance there is $1,200,000 for the Delaware River which affects the immediate locality where the Inquirer is published, and in the next the proportion may be the same although there is nothing said about the proportion, but the Delaware River carries $2,700,000, and the difference is the difference to the Philadelphia Inquirer, and it is a difference of $2,700,000 in one instance and $1,200,000 in another.

Now I say, not because I am partial to my State but because I wanted to take this thing in a way that anybody could understand that I was not partial in taking it; I was taking it because of the inherent rot in the thing. I first called attention to the projects in my own State; and they rear up on their hind legs and fan themselves with their ears when I say anything about their river. But for the delectation of the House I want to read the engineer's report on one of these rivers for last year.

The item of work performed is as follows—

On the Trinity. I said at the outset that the Trinity is as good as the general projects in this bill, and I am not partial to the Trinity—

Number of miles worked over, 18; snags destroyed, 28—

That is doing work, is it not? [Laughter.]

stumps destroyed, 4; shore snags cut, 758; trees girdled, 204; quarter boat No. 1 started at the dam of White Rock Shoals and worked over 11½ miles. Snags destroyed, 68; stumps destroyed, 14; side jams removed, 5; leaning trees cut, 6.

[Laughter.]

There was expended during the fiscal year for maintenance of the open river navigation on the Trinity River the sum of $11,536.68. The total amount expended on these improvements that year was $192,228.58.

Mr. MADDEN. Will the gentleman state whether there was any navigation there?

Mr. CALLAWAY. Why, no; there will never be any navigation there. [Laughter.] But it is not different from the other streams in this project. The report further says:

The high water of December, 1914, caused a considerable caving of the bank and bed behind and below the north abutment, and a special allotment of $10,000 was received for repairing this damage.

The CHAIRMAN. The time of the gentleman from Texas has expired. The gentleman from Alabama [Mr. HEFLIN] is recognized for five minutes.

Mr. HEFLIN. Mr. Chairman and gentlemen of the committee, in a bill of this kind there are bound to be a few items that are not satisfactory to some gentlemen in the House, and there are some gentlemen in the House who are disappointed because they do not happen to get other items in, and who are ready then to attack all of the worthy items in the bill. I want to say to the gentleman from Wisconsin [Mr. FREAR], who has spent so much time nagging at this bill, that although he talks about the vast sums of money that are appropriated for the rivers and harbors of the country, this House is deliberately going about the consideration of the bill, hours and days having been devoted to its consideration; and I want further to ask the gentleman if he ever made or heard of any Republican protest against the bill put through this House when Senator Burton, then chairman of the Committee on Rivers and Harbors, that bill carrying millions more than this bill carries, was passed under a suspension of the rules when the Republicans were in power?

Mr. FREAR. Mr. Chairman, I will say to the gentleman in reply that at that time I was in my own State legislature trying to get regulation of the railroads of that State.

Mr. HEFLIN. I suppose so. I never heard any protest from the gentleman through the newspapers. He could have raised his voice in the legislature, he could have left his arduous duties for a short while; but he did not, or at least I never heard of it. Did the gentleman or anyone else on that side protest against the passage of the bill when Mr. Alexander, an elegant gentleman from Buffalo, N. Y., a Republican, was chairman of this great committee, when he put through a bill in four hours, general debate and all, that carried millions more than this bill carries? [Applause.] Did anybody on that side object then? No; your lips were sealed; you were silent as the tomb. [Applause.] Do you think that you can deceive the country now by attacking a bill that carries less than either one of those bills carried that passed during Republican control? You must think that most of the people can be deceived in this way. No, gentlemen, they can not be deceived by this claptrap and sometimes demagogic play upon this great bill that seeks to improve the waterways of this country. [Applause.]

I want to say to the gentleman from Pennsylvania [Mr. MOORE], and an able gentleman he is, that I am ready to vote for any worthy project in Pennsylvania, and I am from Alabama. [Applause.] I want to say to other gentlemen on that side that I stand ready as a Representative in this House to vote for any worthy project in any of your States. I am an American citizen. South, East, West, and North should all work together for the good of each, and each for the good of all. [Applause.] Let the time come, and come to stay, when these projects can be tried out on their merits, and then some man seeking to go to the Senate or somewhere else on a record that he makes attacking measures of this kind will not be rising up to say that the project is for the South, and therefore he is against it. [Applause.] I would be ashamed to go back to my constituents and say to them that I voted against a particular project because it was for the North. I am too big for that and so are my constituents. God save you from such an attitude as that. [Applause.]

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. COOPER of Wisconsin. Mr. Chairman, I desire simply to call the attention of the committee to some of the expenditures in other countries for improvement of rivers and harbors. We have heard very much in the public press, we have heard upon this floor a great deal of criticism of the aggregate amounts proposed to be expended by this bill, and of the aggregate amounts which have heretofore been expended in the United States. I desire to call attention to what Mr. Burton said when he was a Member of this House, on April 6, 1896. During the consideration of the river and harbor appropriation bill at that time he said:

France, in the period from 1814 to 1894, inclusive, for which carefully prepared statistics are available, has made expenditures for the betterment of inland waterways and for ports, appearing on the budget in two forms: First, "travaux extraordinaires," improvements and additions intended to be permanent, which when complete will not require to be renewed; second, "travaux ordinaires," expenses of annual occurrence, for care and maintenance, in which are sometimes included branches and permanent improvements of minor importance.

Under the first, or permanent, class there have been expended by France in the 81 years mentioned approximately $500,000,000, of which the sum of $300,000,000 has been for rivers and canals, inland navigation, and $200,000,000 for ports and harbors.

Under the second head of "Care and maintenance," which, equally with the former, should be counted in order to make an accurate comparison, there has been expended in the same time approximately $135,000,000 for inland navigation and $70,000,000 for ports and harbors, making a total for both classes of expenditures, in round numbers, of $435,000,000 for inland navigation and $270,000,000 for harbors; in all, $705,000,000.

France is, I think, about two-thirds of the size of the State of Texas. The United States expended in that time, said Mr. Burton, $273,638,515. It will thus be seen that France, two-thirds of the size of one of our States, expended two and a half times as much as did this great Republic, extending from ocean to ocean and from the Great Lakes to the Gulf.

What about the cities? How much did the city which my good friend from Illinois [Mr. MADDEN] so worthily in part represents receive up to the time mentioned by Mr. Burton when he was chairman of this great committee? Chicago, including Calumet, received $2,272,400, and it gets $700,000 in the pending bill. I do not know how many hundreds of thousands Chicago has received since 1896 up to the time it gets $700,000 in this bill. What about the cities in Europe? On the single port of Havre, France, from 1814 to 1891, according to Mr. Burton, there was expended more than $32,000,000; on the harbor of Marseille, France, $19,000,000; and on the harbor of Dunkirk, France, $20,000,000; and, said Mr. Burton:

The public men and economists of France are practically unanimous in the opinion that these expenditures have been of the greatest benefit to the whole country, and that the amounts required should be supplied by national taxation.

Mr. Chairman, gentlemen who come from inlands districts—where there is no water, except in a few wells and cisterns—ought not to talk too severely about these great amounts, when they have not investigated the harbor conditions of the United States and know nothing about transportation by water except as they get information on this floor and in the reports submitted by the gentleman from Wisconsin [Mr. FREAR]. He has told the House in his speech on the floor—and I speak of him with great respect, because he is my friend, and I hope he will always be my friend—that we have paid out of the Government Treasury over $850,000——

Mr. FREAR. Oh, I corrected the gentleman on that very statement before on the floor.

Mr. COOPER of Wisconsin. One moment. The gentleman's correction was no correction at all, and I can demonstrate that it was not a correction——

Mr. FREAR. Go on; go on.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. COOPER of Wisconsin. I give the gentleman notice that I shall do it at some other time.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired. All time has expired. The question is on the amendment offered by the gentleman from Wisconsin.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Bayous Bartholomew, Macon, D'Arbonne, and Corney, and Boeuf and Tensas Rivers, La.: For maintenance, $10,000.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto close in five minutes. Is there objection?

Mr. FREAR. Give me 5 minutes. Make it 10.

The CHAIRMAN. Is there objection?

Mr. FREAR. Reserving the right to object, make it 10 minutes, and I will not go in on the next.

Mr. SPARKMAN. I can not do that.

Mr. FREAR. I object.

Mr. SPARKMAN. I move, Mr. Chairman——

The CHAIRMAN. The gentleman from Pennsylvania [Mr. MOORE] has been recognized for five minutes.

Mr. MOORE of Pennsylvania. Mr. Chairman, the voluntary attack made upon that great Republican newspaper, the Philadelphia Inquirer, will do it no harm. It will not tend to reduce its ever-increasing circulation. If the purpose of the Chicago Tribune is to agitate for an increased circulation through my distinguished friend from Wisconsin, it is welcome to resort to that means. I know it has a warm spot for the gentleman from Wisconsin [Mr. FREAR] and that he has a warm spot in his heart for the distinguished waterways expert of the country, Mr. Burton, whose name has often been mentioned in this House. And yet some of us, whose memories carry us back 10 years, will remember that nearly every provision for old projects now carried in this bill was put there by the distinguished gentleman from Ohio.

The Trinity River project, concerning which my friend from Texas [Mr. CALLAWAY] complains, and concerning which he heard from the people of his own State, was put in by the distinguished gentleman from Ohio, Mr. Burton. I trust that when the time comes my brother from Wisconsin will rise, as he did in the case of Cold Spring, along the coast of New Jersey, and tell us all about the artesian wells that were suggested for the upper end of the Trinity River. I do not find fault with the Trinity River. If they need navigation down there, even for sanitary purposes, let them have it. I join hands with the gentleman from Ohio and the gentleman from Alabama [Mr. HEFLIN] on that suggestion. The gentleman from Wisconsin [Mr. FREAR] and the gentleman from Texas [Mr. CALLAWAY], the latter of whom objects to projects in his own State, should remember, when we reach the Trinity River, that the sponsor of that project was Mr. Burton, of Ohio, the gentleman who is now the chief reformer in all waterways matters in this country.

Now, so far as the criticism of the Delaware River is concerned, it seems necessary to recur to it once in a while in order that the Members who were not here when we discussed it before shall be informed. It is easy to see that the gentleman who comes from the upper end of the Trinity or somewhere back in the sand hills of Texas can not understand why we must make large appropriations for this billion-dollar country.

Mr. CALLAWAY. Mr. Chairman——

Mr. MOORE of Pennsylvania. The gentleman had 10 minutes and I had only 5.

Mr. CALLAWAY. You had 40 hours.

Mr. MOORE of Pennsylvania. The gentleman was absent when I had time, but I will go over it again for his benefit.

Mr. CALLAWAY. Does the gentleman wish to state to the House that because I come from the sand hills, where I have no rivers and harbors, that that is the reason why I can not subscribe to these iniquities, and that whenever a fellow comes from where rivers and harbors are located that is the reason he has to do with the subject?

Mr. MOORE of Pennsylvania. I fear that has much to do with the case.

Mr. CALLAWAY. I am certain it has all to do with it.

Mr. MOORE of Pennsylvania. I think it has, but I think that because he comes from the section of the country he does, and for which I have very great respect, he does not know why we must make appropriations in proportion to the volume of work to be done. He seems to judge a great community like New York, with 5,000,000 people, and the greatest port in all the world, by his own environment.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MOORE of Pennsylvania. I am sorry. I ask unanimous consent for five minutes more.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that debate on this paragraph and all amendments thereto end now.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto end now. Is there objection? [After a pause.] The Chair hears none. Without objection, the pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

Harbor at Galveston, Tex.: For maintenance, $325,000.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. The gentleman from Texas—brilliant speaker that he is, and forceful as he attempts to be on waterways matters—comes from a section of the country, to which he hies after Congress adjourns, so that he is not enabled to obtain the broad view that other gentlemen get who travel over the country and visit large cities. He keeps himself within the narrow confines of his district, and therefore does not understand the importance of other districts throughout the country. If he will come over to New York, he will see the metropolis of the world——

Mr. HULBERT. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes. I wanted to get a rise out of New York.

Mr. HULBERT. Does not the gentleman know that the gentleman from Texas [Mr. CALLAWAY] was over in New York yesterday arguing against preparedness?

Mr. MOORE of Pennsylvania. If that is so, I am afraid he has come back with the impression that New York is a sunken

city, because the gentleman has not changed his views with respect to the avenues of communication to and from the great metropolis of the country. He finds fault even with the appropriation for the Delaware River, and thinks it is too large this year because it was not so large last year. I congratulate the country, which has a great deal to do with the Delaware River, upon the fact that at last something like equal and exact justice is being done in this bill to the greatest commercial river in the United States.

Mr. GOOD. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. GOOD. How much has been expended of Government funds on the Delaware River around Philadelphia?

Mr. MOORE of Pennsylvania. Since the Constitutional Convention of 1787, less than $20,000,000, which $20,000,000 is turned back every year in customs receipts. Now compare that with the State of Iowa and be happy. [Laughter.]

Mr. GOOD. I will say to the gentleman that but for the State of Iowa Pennsylvania would not have a customhouse. [Laughter.]

Mr. MOORE of Pennsylvania. And I say if it had not been for the city of Philadelphia there would have been no State of Iowa. [Laughter.] Now, I yield to the other gentleman from Iowa [Mr. GREEN], for the defense of his State.

Mr. GREEN of Iowa. For the defense of his statement.

Mr. MOORE of Pennsylvania. That needs no defense.

Mr. GREEN of Iowa. Does the gentleman say that the city of Philadelphia pays the customs receipts of the State of Iowa?

Mr. MOORE of Pennsylvania. We do the work for you; we have a port that we have to maintain for you.

Mr. GOOD. Did the gentleman say "pork"? [Laughter.]

Mr. MOORE of Pennsylvania. No. That is the invention of the gentleman from Iowa. He never applies it to the agricultural bill, but only to a river and harbor bill. He can not see the pork in the appropriations made for hog cholera, but he can see it in the appropriations made for a large city.

Mr. Chairman, as to the Delaware River, we were 5 feet behind New York in the depth of channel when I came here 10 years ago. We were 5 feet behind Baltimore and 5 feet behind Boston, and as we had a great port and as our business was falling off because our channel was insufficient, we succeeded in having Congress authorize an improvement for that port to cost $10,000,000. Six years have elapsed and the appropriations by Congress up to this time have been at the rate, substantially, of $1,000,000 a year. They should have been $2,000,000, in order to complete the work in accordance with the engineers' plans and avoid waste. This year, for the first time, we have been given an appropriation commensurate with the estimates of the engineers and calculated to aid us in completing the work and putting the channel depth at Philadelphia on an equality with New York and Boston and Baltimore. And yet the gentleman from Iowa [Mr. GOOD] and the gentleman from Texas [Mr. CALLAWAY] and the gentleman from Wisconsin [Mr. FREAR] want to hold back these appropriations and to permit the river to silt up, and the waste to go on. On those terms appropriations would continue forever and the work would never be completed. [Applause.] I am grateful we have got a commensurate appropriation this year, because it will hasten completion of the work. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto end now.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate on this paragraph and all amendments thereto be now closed. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Galveston, Channel, Tex.: Continuing improvement by construction of sea-wall extension in accordance with the report submitted in House Document No. 1390, Sixty-second Congress, third session, subject to the conditions therein named, $200,000: *Provided*, That not part of the amount herein appropriated shall be expended and no contract shall be entered into under this appropriation until the county or city of Galveston and other local interests shall have donated the necessary lands to the United States, and shall have quieted all claims to the present San Jacinto Reservation, nor until the said county or city of Galveston shall have obtained a right of way and made provision in a manner satisfactory to the Secretary of War for paying the cost of constructing at least 3,300 feet of similar sea-wall extension in addition to that herein appropriated for: *Provided further*, That the entire work of construction shall be done under the direction of the Secretary of War, and the funds appropriated by Congress and those furnished by the county or city of Galveston shall be expended by him.

Mr. GOOD. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Iowa moves to strike out the last word.

Mr. SPARKMAN. Mr. Chairman, I would like to ask how much time does the gentleman want on this?

Mr. GOOD. So far as I am concerned, I do not care for much time. I just wanted to ask some questions about the item.

Mr. MANN. This is an item that ought to be explained.

Mr. SPARKMAN. If the gentleman wants to explain it or criticize it, I should like to hear from him first. I understood that the gentleman from Massachusetts [Mr. TREADWAY] wanted to say something on it. How much time does the gentleman desire?

Mr. MANN. We had better run for a few minutes. We do not want much time. The gentleman from Texas [Mr. BURGESS] probably wants some time.

Mr. GOOD. Mr. Chairman, I moved to strike out the last word largely to ask the gentleman from Texas [Mr. BURGESS], a member of the committee, with regard to this item. I note that this is to extend a sea wall, and that at the present time the Government does not own the real estate where this wall is to be located, and that there is to be a drive or boulevard constructed there. Looking over the map, I wondered whether or not this was one of those new addition projects or something of that kind.

Mr. BURGESS. That has been corrected now.

Mr. GOOD. But is not this sea wall, or this improvement, intended principally to open up a boulevard to a new addition to Galveston? If it is not, what is the object of it?

Mr. BURGESS. The object of it is to complete the sea wall to the end of the line. You see, the city has already constructed a sea wall at a cost of about $5,000,000. Now they have to run that from where their sea wall stops to the Government property. That is all there is to it.

Mr. GOOD. I understand that this project is not to aid navigation.

Mr. BURGESS. Oh, yes; it is.

Mr. GOOD. In what respect?

Mr. BURGESS. I will read from the document, entitled "Galveston Harbor and Adjacent Waterways, Texas," a letter from the Secretary of War transmitting it. It is Document No. 1390. Has the gentleman that document?

Mr. GOOD. Yes.

Mr. BURGESS. On page 21 the gentleman will see a full discussion of it by a special board. That board was composed of Edward Burr, colonel, Corps of Engineers; Lansing H. Beach, lieutenant colonel, Corps of Engineers; and C. S. Riché, lieutenant colonel, Corps of Engineers.

Mr. GOOD. I have read that report, and I have also read the hearings, and the impression I gained from the hearings and from statements made by the chairman of the committee was to the effect that this would not aid navigation.

Mr. BURGESS. Oh, yes; it will.

Mr. GOOD. I certainly got the wrong impression, then, from statements made before the committee.

Mr. BURGESS. I read section 48 of House Document No. 1390, Sixty-second Congress, third session:

At the time of the great storm of 1900 the water rose from 12 to 14 feet above its usual level, and this storm tide was accompanied by wind of hurricane velocity. Waves and currents swept across the east end of Galveston Island, badly wrecking the shore arm of the South Jetty and making a large fill in the easterly end of Galveston Channel. This caused an immediate and serious obstruction, and it became necessary at once to procure such dredges as were available and at such terms as could be had to dredge a channel through the deposited material, so that the commercial business of the port could be continued.

Mr. GOOD. I have read the report, but it does not seem to me that the report that the gentleman is reading justifies the tremendous expenditure that we are commencing, unless it is to improve some of this real estate lying between the city of Galveston and the port.

Mr. BURGESS. Yes; this item has been in the last bill, and in the bill before last, both of which failed in the Senate.

Mr. GOOD. What is the total expenditure contemplated?

Mr. BURGESS. The total expenditure by the Government is about $1,000,000 and by the city of Galveston about $500,000.

Mr. MANN. Mr. Chairman, I move to strike out the last two words. I should like to ask the gentleman from Texas how this affects navigation?

Mr. BURGESS. It affects the situation vitally. It is necessary for you to understand the whole situation. I wish I had a map, so as to explain it to you. You understand that the city of Galveston is on an island. This is at the east end of the island.

Mr. MANN. How much of a sea wall has been constructed there now?

Mr. BURGESS. Four miles, at a cost of $5,000,000, all paid by the city of Galveston.

Mr. MANN. Does not that protect the harbor?

Mr. BURGESS. No. Now, this completes it to the point of the island where the harbor entrance goes in, and will protect the whole thing and protect the city as well. Does my colleague [Mr. GREGG] wish to make a statement?

Mr. MANN. If the gentleman [Mr. GREGG] is going to explain it, I shall be glad to yield the floor. I have not been able to get it through my head yet. What I am interested in is its relation to navigation.

Mr. BURGESS. My colleague [Mr. GREGG] will explain it.

Mr. GREGG. Mr. Chairman, the Galveston sea wall comes around the end of Galveston Island on the east end. Galveston city lies to the west. Lying north of the city is the Galveston Channel—the harbor. In the space between the Galveston sea wall and the jetty and the Government reservation, Fort San Jacinto, is a low spot, like this center aisle here. Now, when the storm comes from the Gulf it washes in through this low space and fills up the Galveston Channel, which lies just beyond that low space. In the storm of 1900 it took months to dredge out the filling made in the channel by the water washing sand and silt into it.

Mr. MANN. Who owns that low ground?

Mr. GREGG. Six hundred acres of it are to be given to the Government. I do not know who owns the various parcels of ground. I never cared.

Mr. MANN. Still it will be benefited, I suppose?

Mr. GREGG. It will be benefited. There are some wharf privileges down there. I do not think the wharf company owns it, but there will be room for more wharves down there, and it will be a general improvement to Galveston Harbor. In the last storm it was filled in, but not quite so much. It was filled in about 2 feet, and they have been dredging ever since. The depth of the channel was about 30 feet. They have been dredging with the Government dredge *Comstock* since the storm to get it back to its original depth.

Mr. MANN. I thought the gentleman said 600 acres would be given to the Government.

Mr. GREGG. Yes. The Government already has a reservation and fort there, and, according to the report under which this improvement is to be made, 600 acres of land will be donated to the Government, adjacent to the Government reservation, to become part of such reservation.

Mr. MANN. I do not see anything about it in the bill.

Mr. GREGG. It is in the report. It says it is to be done, according to the report, and that report requires the donation of 600 acres to the Government.

Mr. MANN. Oh, no; it says the construction is to be in accordance with the report, but that does not cover anything about the donation of land.

Mr. GREGG. It is understood that it is all one scheme and one project, and that the donation of the 600 acres of land to the Government is a part of the project.

Mr. MANN. The bill particularly requires that there shall be donated to the United States the land necessary to make the improvement, and also to quiet title to the reservation. There is no provision for giving 600 acres to the Government.

Mr. BURGESS. All that has been done.

Mr. MANN. It has been given to the Government?

Mr. BURGESS. Yes.

Mr. MANN. Then the Government owns the land. I was asking who owns the land.

Mr. GREGG. I did not have that information.

Between the Galveston sea wall on the east end of the island and the jetty there is a low strip of land extending to the Galveston Channel. When a storm comes it drives the water over this low strip into the Galveston Channel, carrying silt and sand into the channel and filling it up. This sea wall is to prevent that sweep of water into the Galveston Channel.

Mr. MANN. Is one of the purposes of this to protect the Government reservation from being swept over by water from the storms?

Mr. GREGG. There is a proposition that the wall be extended around the fort. This particular wall will be extended around the 600 acres required to be given to the Government to add to the reservation.

Mr. MANN. Is this 600-acre tract now subject to overflow in case of a storm?

Mr. GREGG. Yes; but it will be protected by this sea wall.

Mr. MANN. But it has no protection now?

Mr. GREGG. No; it has no protection at all now.

Mr. MANN. I thought we had constructed a wall in front of one of the reservations already.

Mr. GREGG. No; not the fort on the east end of the island. The War Department recommends that that be held up until this is completed. This goes up to Fort San Jacinto on the extreme east of the island.

Mr. TREADWAY. May I ask the gentleman from Texas when this project was adopted by Congress?

Mr. GREGG. It passed the House in the bill of 1914. It passed the House in the bill of 1915. In both those bills it went to the Senate, and while Senator Burton defeated both those bills, the committees approved this Galveston project, and Senator Burton made no war upon it. In one of his speeches he stated that the expenditure of money by the Government at Galveston had brought the greatest and most satisfactory results of any expenditure at any place.

Mr. TREADWAY. This project never actually went into a past river and harbor bill.

Mr. GREGG. No; because the bill was defeated.

Mr. TREADWAY. It became lump sums in both bills.

Mr. GREGG. Yes.

Mr. TREADWAY. Then this does not qualify under the rule of the committee that we were not to have any new projects in the bill except the one in New York.

Mr. GREGG. But this is not a new project.

Mr. TREADWAY. A project in order not to be a new project, no matter whether it passed the House or not, must have become a law.

Mr. GREGG. This is a part of the maintenance of Galveston Channel as it now exists. It is like an appropriation for dredging. This is to protect the harbor from filling up, to protect the channel from filling. If is a protective work, a work of maintenance, and is not a new project.

Mr. TREADWAY. The gentleman realizes that in the previous item there is $325,000 for maintenance.

Mr. GREGG. The very object of this work is to prevent the filling up of the channel in the future as it did in the last storm, which filling makes necessary the expenditure of that $325,000. It is to provide against similar expenditures in the future.

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

The committee informally rose; and Mr. BYRNS of Tennessee, having taken the chair as Speaker pro tempore, a message from the President of the United States, by Mr. Sharkey, one of his secretaries, who informed the House of Representatives that the President had approved and signed bills and joint resolution of the following titles:

On March 28, 1916:

H. R. 65. An act to ratify, approve, and confirm an act duly enacted by the Legislature of the Territory of Hawaii relating to certain gas, electric light and power, telephone, railroad, and street railway companies and franchises in the Territory of Hawaii, and amending the laws relating thereto; and

H. R. 3042. An act to ratify, approve, and confirm sections 1, 2, and 3 of an act duly enacted by the Legislature of the Territory of Hawaii relating to the board of harbor commissioners of the Territory, as herein amended, and amending the laws relating thereto.

On March 31, 1916:

H. R. 13043. An act making appropriations to supply further additional urgent deficiencies in appropriations for the fiscal year 1916 and prior fiscal years; and

H. R. 13768. An act making appropriations to supply urgent deficiencies in appropriations for the Military Establishment for the fiscal year 1916.

On April 3, 1916:

H. J. Res. 68. Joint resolution to cede to the State of Maryland temporary jurisdiction over certain lands in the Fort McHenry Military Reservation;

H. R. 2960. An act for the relief of the heirs of John Howard Payne, deceased, late United States consul at Tunis; and

H. R. 8493. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

On April 5, 1916:

S. 4657. An act to authorize the Cincinnati, New Orleans & Texas Pacific Railway Co. to rebuild and reconstruct, maintain, and operate a bridge across the Tennessee River, near Chattanooga, in Hamilton County, in the State of Tennessee;

H. R. 10037. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war; and

H. R. 11078. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said war.

RIVERS AND HARBORS.

The committee resumed its session.

Mr. TREADWAY. Mr. Chairman, I move to strike out the paragraph beginning on line 21, page 18, and ending on line 15, page 19.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend pages 18 and 19 by striking out from line 21 on page 18 including line 15 on page 19.

Mr. TREADWAY. Mr. Chairman, I fail to find in any dictionary a definition of the word "navigation"—under which we appropriate in the river and harbor bill—that defines navigation as a construction of a sea wall, and that is what we are doing under this project. Further, I should like some explanation later on as to whether or not this is a new project.

Mr. SPARKMAN. It is not a new project in any sense. It was an old project, a project that we adopted in the bill of 1913. It was a project adopted then, but with this item deferred until the first part of it should have been completed.

Mr. TREADWAY. I am not resting the point of opposition on the new project part.

Mr. CULLOP. Will the gentleman permit an interruption?

Mr. TREADWAY. Yes.

Mr. CULLOP. It seems from the document referred to, which I desire to call the gentleman's attention to, on page 23, a summary of this matter appears. It says:

In conclusion the recommendations to the board are summarized as follows:

"Entrance channel: That the entrance channel be deepened to 35 feet at mean low tide, provided such deepening can be secured and maintained by dredging alone; and that $200,000 per annum for three years be appropriated for the purpose of determining experimentally the feasibility of such deepening."

Mr. TREADWAY. But there is nothing carried in the bill along that suggestion.

Mr. CULLOP. This is an appropriation of $200,000 for the construction of a sea wall.

Mr. TREADWAY. And more to expected.

Mr. CULLOP. Yes; it was to be $200,000 for three years in succession, and twice it has been recommended, but the bill has been defeated. That would make the $600,000 to make this experiment, and it is only an experiment when made.

Mr. TREADWAY. An experiment costing $600,000.

Mr. CULLOP. According to the recommendation of the engineers, $600,000 is the cost of the experiment.

Mr. SPARKMAN. If the gentleman will allow me, the gentleman from Indiana is mistaken in quoting from the paragraph that he does, for the paragraph does not apply to the matter under discussion. The matter under discussion is on the following page at the bottom, under the head of "Extension of sea wall."

Mr. TREADWAY. Mr. Chairman, I base my opposition to this paragraph on two features: First, certain features of the House Document 1390, and, secondly, the hearings that were held on this very item by our committee January 27, 1916, and I shall refer to both.

In the first place, this report in House Document 1390 is a special report, not made by the General Board of Engineers, but by a special board. Why that was necessary I have never been able to find out, but I assume that the Board of Engineers had turned the project down so hard that in order to get consideration it was necessary to have a special board appointed who might be favorable to the project. There are various interesting expressions that I might read from the report, but I will confine myself to a few.

On page 23, paragraph 56, there is a section that reads as follows——

The CHAIRMAN (Mr. ADAMSON). The time of the gentleman has expired.

Mr. TREADWAY. Mr. Chairman, I ask for five minutes more.

Mr. SPARKMAN. I ask unanimous consent that all debate on this paragraph and amendments thereto end in 15 minutes; 5 to be given to the gentleman from Massachusetts [Mr. TREADWAY], 5 to the gentleman from Indiana [Mr. CULLOP], and 5 to the gentleman from Texas.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this section and amendments thereto be closed in 15 minutes. Is there objection?

There was no objection.

Mr. TREADWAY. Mr. Chairman, I will read from page 23 of House Document 1390:

The front part of the fill next the concrete should be protected by a sidewalk and brick-paved roadway as has been done in the Government's similar extension of the sea wall to and in front of Fort Crockett, and the top of the fill between this roadway and its rear crest should be protected from the blowing away of its material by suitable soil covering and vegetation.

Further on we are informed that it is necessary to secure title to this property first. And then again it says that the Federal Government should build 7,000 feet of sea wall against 3,300 feet to be built by the city and local authorities.

In the item of cost we find that the pavement and roadway will cost $60,000, and the soil covering $200,000, all in the interest of navigation. We can plant nice trees and get good shrubbery there, all in the interest of navigation. It is a new feature to me, but I am glad to know that that is a part of the system to introduce forestry protection, sidewalk, and a brick-paved roadway, and all that sort of a thing into navigation. [Laughter and applause.]

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. TREADWAY. Yes.

Mr. MANN. Is it not a fact that we created an Appalachian forest reserve, partly up in New Hampshire and further down, at an expense of $10,000,000, in the interest of navigation?

Mr. TREADWAY. Yes; I will admit that, but it is a different kind of navigation from the construction of a sea wall. Further, Mr. Chairman, the gentleman from Indiana suggested this is a $600,000 project. I will call his attention to the fact that it is a $1,185,000 project as estimated by the board. Further than that, reference has been made to the storm of 1900, and also to the storm of last year. In the item previous to the one we are now considering we added $275,000 to take care of that great storm. This project has absolutely nothing to do with either storm. I want to refer to statements in the hearings. I want to quote the chairman of our committee, for whom we all have the highest regard. Here are certain statements he made when Mr. Gresham, the lobbyist for this item, was before the committee. The chairman said:

Col. Taylor has nothing in his report to show that any bad effects came from the failure of the Government to finish the sea wall.

Also, further:

The engineers, to whom we look for our information, say the sea wall is not immediately necessary to protect the harbor.

The chairman further says:

I am not in favor of having this work done immediately.

Mr. Chairman, I agree absolutely with the statements made by the chairman in the hearings. Again, we find in the hearings the testimony of the gentleman who says that he has devoted the best part of his life since 1888 in securing this appropriation from the Government, and is sent here by interested parties. I call that as pure and straight lobbying as could be done. Mr. Gresham, the gentleman referred to, admitted that was his object here, and the gentleman from Texas [Mr. BURGESS], a member of the committee, asked this gentleman for his opinion as to whether or not the item that we were preparing to insert in the bill was sufficient to satisfy those interests. He said:

Is this amount in the bill here sufficient?

Then Mr. BURGESS read the item. Mr. Chairman, I for one consider this as pure a piece of pork as ever went into a river and harbor appropriation bill. It is nothing else, and there is not a bit of lean in it. Every bit of it is Galveston's pork, and there is not a bit of lean for poor Uncle Sam. The old nursery ditty about Jack Spratt and his wife would not apply on this project.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. CULLOP. Mr. Chairman, the five minutes allotted to me I desire to be yielded to the gentleman from Texas [Mr. EAGLE].

The CHAIRMAN. If the gentleman declines to use his time, the Chair will recognize the gentleman from Texas [Mr. EAGLE].

Mr. EAGLE. Mr. Chairman, I do not live in or represent the city of Galveston, and therefore any observations I may make in the five minutes allotted to me certainly will have nothing of selfishness or politics in them. The observations just made and all others that criticize this particular item, in my judgment, are wholly unfounded in sound knowledge of the facts or in just deductions to be drawn from those facts. This Government has expended a total of about eight and one-half million dollars in the construction of the harbor of Galveston and about $1,700,000 in the construction of the channel leading up to that harbor, including the jetties. When that work began $636,000 represented the total annual value of imports into Galveston, coming by lighter over the inner bar 9 feet and outer bar of 12 feet of water. Last year the total value of her imports was about $12,000,000. When that work started in making the harbor of Galveston the total value of exports from Galveston, in the year 1891, was about $10,000,000, whereas last year it was about $256,000,000. It is the second port of export in the United States. It is situated on an island some 4 miles

from the shore of the State of Texas. Galveston City and port are on an island called Galveston Island, which is some 30 or 40 miles long and 4 or 5 miles wide on the average. On one side of that island they have constructed this port in Galveston Bay. In order to get deep water into and at the port of Galveston, it was required to put out two jetties some 7 or 8 miles long, one beginning on the mainland to the east, at a point called Bolivar, and the other on the island of Galveston. At the most northern beginning of those two jetties the channel is about 2 miles wide. Those jetties run out about 7 or 8 or 10 miles through the bay to the edge of the Gulf, and they have covered 119,000 acres of land between those jetties with water 30 feet deep. You may go there any day for six or eight months in the year and you will find 5 or 10 or 20 great steamers there from all over the world, taking away the commerce of the great grain-growing regions of the Central West and of the cotton-growing and cattle-producing regions of the Southwest. It is a tremendous port, and in anything we do here to injure it, we will injure 20 States and indirectly injure the whole of the United States.

Addressing myself, then, specifically to the observations of my friend, Mr. TREADWAY, I have this particular thing to suggest to him: This particular item has been criticized as being a new project, and hence, under the rule adopted, not justly susceptible here of appropriations for it. Whether it be a new project or not I am not entirely clear. Others can determine that. But as to the effect of the item, I desire to say that when in the year 1900 the worst storm in the history of the Texas coast struck Galveston it took the sand and other silt from the sea and filled up 16 feet deep in between those two jetties which run out from the city of Galveston 8 or 10 or 11 miles to the deep 35 feet of water in the Gulf. And why? Because it picked up that silt and sand from the bottom of the sea and cast it over the jetties, filling up the roadsted 16 feet deep, thus ruining the navigation, and requiring Congress to appropriate hundreds of thousands of dollars so as again to restore it. In addition, the city of Galveston thereupon constructed for several miles at an expense of many millions, a sea wall large enough to prevent the overflow of the city of Galveston from the Gulf upon such recurring occasions. Farther down than where the city's sea wall extends and parallel with the jetties are about 1,000 acres of land, which are above mean low tide but which will be subject to inundation upon such recurring calamity as that storm of 1900.

It is stated that the city of Galveston, or private interests, own some 200 or 300 acres of that, and others own some 600 or 700 acres of that total of some thousand acres.

The CHAIRMAN (Mr. ADAMSON). The time of the gentleman has expired.

Mr. EAGLE. I would like three or four minutes more. I want the gentleman to understand it.

Mr. MANN. Mr. Chairman, I ask that the gentleman have five minutes more in addition to the limit.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that in addition to the limit already fixed the gentleman from Texas [Mr. EAGLE] be allowed to proceed for five minutes. Is there objection? [After a pause.] The Chair hears none.

Mr. EAGLE. That is indeed gracious of the House, and I heartily appreciate it.

I understand that about 600 acres which the citizens and persons and interests at Galveston own are by this item tendered by fee-simple title to the Government.

Mr. SHERLEY. Will the gentleman yield right at that point, because I am interested in connection with certain items I am going to bring in touching the sea wall protecting the fortification at Fort San Jacinto located on that land? Has that conveyance been actually made to the Government; and if it has not, is there anything in this paragraph that makes it a condition precedent to the spending of this money?

Mr. EAGLE. I will ask the chairman of the committee [Mr. SPARKMAN] to explain that after I shall have concluded. I agree with the inference drawn from the gentleman's interrogatory, that this item ought not to pass except continued upon that consummation. I have no definite information upon that point, I will say to the gentleman from Kentucky, though I am informed that the title papers are drawn and tendered, conditioned upon the appropriation, but I am not certain of that being the fact.

Now, then, upon that side of the land running parallel with the south jetty and upon that said 600 acres of land Fort San Jacinto, a Government fort, is situated.

Mr. TREADWAY. Will the gentleman yield for a question?

Mr. EAGLE. I will.

Mr. TREADWAY. Has the gentleman information as to how much more land there is between Galveston city and where the fort is situated than the 600 acres?

Mr. EAGLE. I have, and I will make that plain to my friend. There is a total of less than 1,000 acres in the entire distance from the end of the sea wall to what I will call Fort San Jacinto Point; and embracing all land from that point back toward the city are some 1,000 acres, and a total of some 600 acres is thus to be tendered to the Government. There is a strip between that and the present sea wall built by the city of Galveston which is owned by Galveston parties, whom I do not know, or owned by the city of Galveston itself. The city of Galveston is going to build that connecting link of the sea wall in front of that two or three hundred acres, and the benefit to come to the city of Galveston from that private expenditure will be that upon the eastern side along the jetty way there will be additional water frontage which may be used for terminals and purposes of shipping. This thing ought by all means to be done. It is absolutely just. There is not an improper motive back of it. There is not a reason in sound logic or economic fact or shipping conditions that does not urgently demand it, and I earnestly hope the House will not strike out this item.

Mr. TREADWAY. Will the gentleman permit one more question?

Mr. EAGLE. I will give the gentleman any information I have.

Mr. TREADWAY. He was referring in his remarks to the storm of 1900——

Mr. EAGLE. Yes.

Mr. TREADWAY. Is not the damage that has recently been done by the storm of last year—1915—which I understand was a very severe one, taken care of in the additional appropriation for Galveston Channel which has just gone into the bill, $275,000 more than the engineers estimated was needed?

Mr. EAGLE. That is true.

Mr. TREADWAY. And is it not also a fact that it appears in our hearings——

Mr. EAGLE. Now, I do not know about the hearings. May I specifically answer the intelligent inquiry directed to me without allowing the gentleman's further questions to get clear away from it?

Mr. TREADWAY. Certainly.

Mr. EAGLE. In reply to the query the gentleman propounds, it is not only true, but it will be true to the end of time, that every time there is a tropical hurricane Congress will be called upon to appropriate in order to get the silt and sediment out of that Galveston Channel unless this sea-wall extension be constructed to keep it out. That is the very point. But if this extension sea wall be constructed, as is provided by this item, never again will we have to make such an expenditure for maintenance of the Galveston Channel, and thereafter Fort San Jacinto, comprising that 600 acres, will always be a safe place for the fort and soldiers. And it ought to do it. [Applause.]

The CHAIRMAN. The time of the gentleman has expired. The gentleman from Texas [Mr. BURGESS] is recognized for five minutes.

Mr. BURGESS. It has been suggested by Members that the city of Galveston deed to the Government 600 acres of land and part of this work. They have to build 3,000 feet of a jetty at a cost of about $500,000, which money they have on hand. About as fine a statement of this is made by the board to which I have referred as can possibly be made, and I wish to read from it. I read:

> The board also wishes to invite attention to another matter of great concern to the safety of Galveston Harbor. This relates to the easterly end of Galveston Island and especially to the narrow neck just east of the sea wall of the city of Galveston and between that and Fort San Jacinto.
>
> Prior to the construction of the jetties a channel known locally as the Hospital Channel from time to time existed across this neck and vessels occasionally used it in passing between Galveston Bay and the Gulf of Mexico.
>
> When the jetties were built, a long extension was made to the South Jetty, known as its shore arm, practically at right angles to the general direction of the jetty and extending to comparatively solid ground in the city of Galveston. This shore arm crossed the old Hospital Channel, causing it to fill, and thus in a measure protected the jetties from being "flanked" by the enlargement of a channel to the south of them which would have produced shoaling in the main entrance.
>
> At the time of the great storm of 1900 the water rose from 12 to 14 feet above its usual level, and this storm tide was accompanied by wind of hurricane velocity. Waves and currents swept across the east end of Galveston Island, badly wrecking the shore arm of the South Jetty and making a large fill in the easterly end of Galveston Channel. This caused an immediate and serious obstruction, and it became necessary at once to procure such dredges as were available and at such terms as could be had to dredge a channel through the deposited material so that the commercial business of the port could be continued. The restoration of this channel to its original dimensions required months, and this with the repair of the shore arm of

the South Jetty has once more produced normal conditions in this locality.

Meanwhile the city of Galveston has protected itself with a sea wall and has raised its grade so that, with a recurrence of such a storm as that of 1900, water forced across the east end of the island will be unable to find relief by spreading over the city, and its force will be concentrated more strongly than in 1900 upon this narrow neck where once existed the Hospital Channel. The shore arm of the South Jetty while now somewhat stronger than in 1900 can not form an efficient obstacle to this increased force that might thus come against it, and the result might easily be disastrous to the inner harbor and by possible resultant flanking of the jetties to the entrance channel between them. The situation, while satisfactory under normal conditions, is far from safe in the event of the repetition of a storm approaching in violence that of 1900.

Mr. SHERLEY. Mr. Chairman, will the gentleman yield?

Mr. BURGESS. Certainly.

Mr. SHERLEY. Can the gentleman give the committee the information as to whether the land that is proposed to be given as an addition to the fortifications there has been given?

Mr. BURGESS. Yes.

Mr. SHERLEY. And whether there is anything that makes it certain that if this money is now appropriated we will get that land?

Mr. BURGESS. Yes; that has been done.

Mr. SHERLEY. The gentleman states that. Has he knowledge of that fact?

Mr. BURGESS. Yes. And I will say, in order that the Government can not be robbed 1 cent——

Mr. SHERLEY. The language of that provision does not cover what I am after at all. The language of the provision simply provides that title shall be given where the wall is to go and that the title shall be cleared as to San Jacinto. But I am talking about the acreage that is to be given in addition to San Jacinto, which is another proposition, and which is not contained in your legislation.

Mr. BURGESS. It is all contained in the same title.

Mr. SHERLEY. There is nothing whatever in this bill that deals with the additional land.

Mr. BURGESS. I think so.

Mr. SHERLEY. I think not. I have just read it.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. SHERLEY. Mr. Chairman, I ask unanimous consent that the gentleman from Texas may have five minutes in addition to the time that has been fixed.

The CHAIRMAN. Is there objection to the request of the gentleman from Kentucky?

There was no objection.

Mr. FERRIS rose.

The CHAIRMAN. For what purpose does the gentleman from Oklahoma rise?

Mr. FERRIS. I wanted to ask the gentleman a question, but I will wait.

Mr. BURGESS. I will read the provision from the bill. I read:

No contract shall be entered into under this appropriation until the county or city of Galveston or other local interests shall have donated the necessary lands to the United States.

Mr. SHERLEY. Oh, that is just it. They are now talking about necessary lands in connection with this improvement. I am talking about land that they were going to give in addition, which is to be a part of the fortification reservation there.

Mr. BURGESS. That is to be included.

Mr. SHERLEY. I beg the gentleman's pardon. We construe the language differently.

Mr. BURGESS. I read:

That no part of the amount herein appropriated shall be expended and no contract shall be entered into under this appropriation until the county or city of Galveston and other local interests shall have donated the necessary lands to the United States and shall have quieted all claims to the present San Jacinto Reservation.

Mr. SHERLEY. I understand. I am not talking about the present reservation. I am talking about the proposal that is contained in the original project, that they shall not only perfect title to the reservation, shall not only provide the land that is necessary to build this wall, but that they propose also to give something like 600 acres.

Mr. BURGESS. Of this reservation.

Mr. SHERLEY. Oh, no. It is not the reservation. It is in addition to the reservation.

Mr. BURGESS. I beg the gentleman's pardon.

Mr. SHERLEY. I beg yours.

Mr. BURGESS. The only title that was out was as to the land comprised in the San Jacinto Reservation.

Mr. SHERLEY. I have had occasion to look into this matter from the fortification end of it. I think the gentleman from Texas is mistaken in the facts. I think his colleague will bear witness to the fact that there is contemplated to be given something like 600 acres in addition to the land mentioned there. That does not cover it.

Mr. BURGESS. Yes; it does.

Mr. GREGG. Mr. Chairman, will my colleague yield?

Mr. BURGESS. Certainly.

Mr. GREGG. Suppose we add right after the words—

That no part of the amount herein appropriated shall be expended and no contract shall be entered into under this appropriation until the city of Galveston and other local interests shall have donated the necessary land to the United States—

I think that means the necessary land to put the sea wall on. Now, let me have the attention of the gentleman from Kentucky. Suppose we add to that these words:

And shall have conveyed to the Government the land that is required in House Document No. 1390, Sixty-second Congress.

Just add that as an amendment, so as to save any point about it.

Mr. BURGESS. You can do that, but it is abundant right now.

Mr. GREGG. It will not hurt anything, but it will make it clear and remove all objections.

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield for a moment?

The CHAIRMAN. Does the gentleman from Texas yield?

Mr. BURGESS. Yes.

Mr. SPARKMAN. This project was adopted on condition that certain requirements should be complied with. Those conditions were stated in the project which we adopted. This provision here goes on to provide that no part of this money shall be expended until all of those conditions have been complied with.

Mr. SHERLEY. That would be all right if that were the fact, but it is not the fact. I am perfectly willing to defer to the gentleman's knowledge of the locality, but I think my judgment is as fair as his touching the construction of English and the law.

Mr. SPARKMAN. The gentleman no doubt thinks he is right, and he may be right. I think I am right.

Mr. SHERLEY. But it is a matter that we ought not to have any doubt about.

Mr. SPARKMAN. I have no doubt about it.

Mr. SHERLEY. If there is any doubt, let us resolve it in favor of the Government.

Mr. SPARKMAN. If there is any doubt, let us amend it so as to cover it. This report says:

That the sea wall be extended for the protection of the harbor from blockade by storms and to permit an extension eastward of the wharf facilities, said work, however, not to be undertaken until the city of Galveston and other local interests first donate certain lands to the Government, quiet all claims to the present San Jacinto Reservation, and provide for the construction of 3,300 feet of similar sea wall extension.

Now, this provision that we have in this bill covers all of those conditions, as I read it. As I understand it, the city has already done its work.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FERRIS. Mr. Chairman, I move to strike out the last word.

Mr. STAFFORD. The time is limited. The gentleman had better ask unanimous consent to proceed for five minutes.

The CHAIRMAN. All debate on this paragraph has been concluded. The question is on the amendment offered by the gentleman from Massachusetts [Mr. TREADWAY].

Mr. STAFFORD. I think the time limit should be waived until we have this matter properly adjusted. The language here is ambiguous.

The CHAIRMAN. The Chair has no control over the matter. The time has been limited by the committee.

Mr. STAFFORD. I ask unanimous consent that the chairman may proceed for five minutes, notwithstanding the arrangement made some time ago.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent for five minutes, so that the chairman of the committee may be allowed to explain the matter. Is there objection?

There was no objection.

Mr. SPARKMAN. We want to take all the time necessary to understand it.

Mr. STAFFORD. I think there is serious question as to the language contained in the bill, whether the Government is really to receive 600 acres, as proposed in House Document 1390, referred to. There should be no objection to clearing up the language there by an amendment, as suggested by the gentleman from Texas [Mr. GREGG], or some other amendment. I have been following this discussion——

Mr. SPARKMAN. Let us see what the conditions are. The condition I have read is as follows:

Until the city of Galveston and other local interests first donate certain lands to the Government—

Now, let us see as to that.

Mr. STAFFORD. Where is the gentleman reading?

Mr. SPARKMAN. I am reading from House Document 1390, Sixty-second Congress, third session, page 3. Now the bill says:

That no part of the amount herein appropriated shall be expended and no contract shall be entered into under this appropriation until the county or city of Galveston and other local interests shall have donated the necessary lands to the United States—

Meaning the land referred to in this report. That is one of the conditions—

and shall have quieted all claims to the present San Jacinto Reservation.

Now, we have covered those two points.

The report further says:

And provide for the construction of 3,300 feet of similar sea-wall extension.

That is covered also by the bill, which says:

And made provision in a manner satisfactory to the Secretary of War for paying the cost of constructing at least 3,300 feet of similar sea-wall extension in addition to that herein appropriated for.

Mr. SHERLEY. Now, will the gentleman yield? What would the gentleman say to this suggested amendment? Instead of letting it read—

Shall have donated the necessary lands to the United States—

Let it read—

Shall have donated the land to the United States as set forth in said Document No. 1390.

Mr. SPARKMAN. I shall not object to that.

Mr. BURGESS. That is all right.

Mr. SHERLEY. The word "necessary" is restrictive.

Mr. BURGESS. The gentleman's proposed amendment is all right.

Mr. SHERLEY. I offer the amendment.

The CHAIRMAN. The amendment of the gentleman from Massachusetts [Mr. TREADWAY] is to strike out the paragraph.

Mr. SHERLEY. I offer an amendment to perfect the text, which is a preferential amendment.

The CHAIRMAN. The gentleman will state his amendment.

Mr. SHERLEY. I move to strike out, on page 19, line 4, the word "necessary," and after the words "United States," in line 5, to insert "as set forth in said Document No. 1390."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 19, line 4, strike out the word "necessary," and after the word "States," in line 5, insert the words "as set forth in said Document No. 1390."

Mr. GREEN of Iowa. Sixty-second Congress, third session.

Mr. SHERLEY. It has already been identified. The words "said document" serve to tie it to the words in lines 23 and 24, on page 18.

Mr. GREEN of Iowa. I wish to ask the chairman of the committee if the language in the present bill is not the same as that which has heretofore been in the river and harbor bill?

Mr. BURGESS. It is identical.

Mr. SPARKMAN. The same language.

Mr. GREEN of Iowa. I called attention to this language when it was up for discussion before, and suggested then, as the gentleman from Kentucky [Mr. SHERLEY] has suggested now, that the language was not sufficiently explicit; but I have examined the matter quite carefully, and I think the proposed amendment will cover all the land.

Mr. SPARKMAN. I have no objection to this amendment, which I think is proper, or not improper; but the language in the bill was drafted by the War Department itself.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Kentucky [Mr. SHERLEY].

The amendment was agreed to.

The CHAIRMAN. The question now is on the motion of the gentleman from Massachusetts [Mr. TREADWAY] to strike out the paragraph.

The motion was rejected.

The Clerk read as follows:

Inland waterway on the coast of Texas: For maintenance of the West Galveston Bay-Brazos River section, $15,000; for maintenance of the Brazos River-Matagorda Bay section, $30,000; for maintenance of the Aransas Pass-Pass Cavallo section, $30,000; for maintenance of Guadalupe River up to Victoria, $23,500; in all, $98,500: *Provided*, That any portion of the amount hereby appropriated for a given section of said waterway may, upon recommendation of the Chief of Engineers, be transferred by the Secretary of War and made available for maintenance of improvement in any other section.

Mr. FERRIS. Mr. Chairman, I want to ask the gentleman from Florida [Mr. SPARKMAN] if this last paragraph read is a part of the intercoastal canal proposition?

Mr. SPARKMAN. It will be, if that system in its entirety is ever finished.

Mr. FERRIS. Is it true that, on page 9, the sum of $1,000,000 is appropriated for a project of that sort also, at Beaufort, N. C., in lines 11 and 12?

Mr. SPARKMAN. There are many links in this proposed intracoastal system of waterways. The Chesapeake and Beaufort waterway is a part of that proposed system. This one away down on the coast of Texas forms another part of it.

Mr. FERRIS. Am I right in thinking there is another on page 17, lines 10, 11, 12, and 13? Is that a part of this same intracoastal canal project?

Mr. BURGESS. That is a part of it.

Mr. FERRIS. Then it is a fact that this bill carries $1,118,500 for certain links and segments in an intercoastal canal?

Mr. SPARKMAN. Yes.

Mr. FERRIS. How much has been appropriated on that system all told?

Mr. SPARKMAN. I can not tell the gentleman exactly now.

Mr. BURGESS. About $3,000,000.

Mr. SPARKMAN. I think it is more than that.

Mr. FERRIS. How much more?

Mr. SPARKMAN. I should think as much as $5,000,000.

Mr. FERRIS. And this intercoastal canal proposes to run from Boston, Mass., around the Atlantic border, around the neck of Florida, around through the Gulf of Mexico, and where does it end?

Mr. SPARKMAN. If I was to answer the question of the gentleman as he puts it I would admit that it begins up there at Boston and runs all the way down to the point mentioned. But that is not quite the case, though if it was carried out in its entirety, as suggested by parties favoring it, it would start up there at or near Boston, come down the Atlantic coast, cross Florida, and then down the Gulf to the boundary line between Texas and Mexico; but there are links in the waterway that have never been recommended by the engineers, and I do not think that they are likely to be reported favorably in the near future. Then, again, some of these recommendations, I fancy, the Rivers and Harbors Committee, as well as Congress, would be somewhat slow to adopt. We have only selected links in the chain that we thought were urgent and meritorious.

Mr. FERRIS. Does the gentleman think seriously, under the present condition of the Treasury and under the spirit of economy, that we ought to give any encouragement to a colossal scheme like this?

Mr. SPARKMAN. I do not know what the gentleman means by "the spirit of economy," but I want to answer by saying, as I wish to say, every time that assertion is made, that if this great Government, which is going to spend billions of dollars on a large standing Army and a greater Navy, can not afford out of its great wealth a few millions to improve the waterways of the country we ought to shut up shop and quit trying to carry on such improvements at all. [Applause.]

The CHAIRMAN (Mr. ADAMSON). The time of the gentleman from Oklahoma has expired.

Mr. FERRIS. I ask unanimous consent for five minutes more.

The CHAIRMAN. At the time the Chair recognized the gentleman from Oklahoma he did not see that a member of the committee was asking for recognition. The gentleman from Wisconsin [Mr. FREAR] is entitled to recognition.

Mr. FERRIS. I simply ask for five minutes more.

The CHAIRMAN. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. FERRIS. Mr. Chairman, it is doubtless apparent to the House and more apparent to me that I know nothing about waterways. I have given but little attention to it in the past; I have always voted rather blindly, but I was willing to follow the committee, and have voted for the river and harbor bill every year. I have, I think, quite uniformly stood by the committee and their amendments. Of course, in my immediate section there is no particular interest in waterway improvement. I am entitled to no particular credit, because my own district is not immediately interested, for voting on any great proposition like this. But as little as I know about waterways, and as little as the bulk of us know about it, we undoubtedly know enough to at least try to avoid being committed to a proposition like this, of building an intracoastal canal clear around from Boston, Mass., around the Atlantic coast, around the coast of Florida to the Gulf, around the Gulf to the edge of Mexico.

That scheme seems to me so preposterous and so entirely without merit as to absolutely condemn the whole proposition.

If I understand correctly, we have spent $400,000,000 plus in digging the Panama Canal, a distance of 35 or 40 miles, and we are not through with it yet. There are still slides there once in a while, which I hope they will soon be able to master; but to start in on a proposition so colossal and never ending as this—it seems to me that the chairman of the committee ought to take hold of this and stop it before it gets too far along. Building a segment here and a segment there will be but the groundwork for additional segments, additional links in the proposition another year. I can not believe it can ever amount to anything, because it can never be accomplished. The Treasury will not stand any such drain, and it is absolutely throwing a monkey wrench into the machinery of honest projects that ought to be taken care of. I am willing to vote, as I always have, for the river and harbor bill, to help take care of the good projects that are worthy and ought to be taken care of, but to go out and dig a canal to parallel one of the great oceans of the world to have an inland route is more than I can stand for. [Applause.]

Mr. FREAR. Mr. Chairman, I am glad that the gentleman from Oklahoma has spoken because I think I can throw some light on the subject in which he will be very much interested. There are a number of questionable projects that we have passed that I have not criticized.

We have an inland waterway that runs all along the coast wherever they can get an appropriation. It is of no value in many cases, and I emphasize it by what people say who live on the waterway——

Mr. CALLAWAY. Will the gentleman yield?

Mr. FREAR. Yes.

Mr. CALLAWAY. These waterways are deep enough to gouge the Treasury, whether they are 5 feet, 6 feet, 10 feet, or 12 feet. It is always used for the purpose of digging into the Treasury.

Mr. FREAR. Let me answer the question by stating what Mr. Holland, as president of the waterways association, at Houston said in his last published speech on the proposition which we have before us, which only carries 200 or 300 tons of commerce outside of the sand, gravel, and floatable timber, on the average, or did in 1913. I put that in my speech before.

Mr. Holland said in his speech in 1913:

> It is not the appropriations that cause the rivers and harbors bill to be called a pork barrel, but the manner of making the appropriations. For instance, it is no secret that the intercoastal canal at a depth of 5 feet does not meet the demands of the lightest draft navigation for boats and barges.

Remember, gentlemen, this is the president of the waterways association who is speaking to its members.

> Nothing less than 9 feet will make a waterway that will meet the demands of commerce, but we have proceeded on the theory that it is easier to secure the small appropriations and have accepted a minimum of 5 feet with the belief that it could be easily deepened to 9 feet by additional appropriations. However, when the first and second appropriations are added together it will cost the Government more than twice as much as it would to have had the original appropriation made on the basis of 9 feet.

And then at the bottom he urges a depth of 12 feet. Mr. Chairman, this is no stranger to the project, but he is the president of the Waterways Association; and in the same article he says that they will contribute twenty-five hundred dollars to have a man here through this session in order to secure the passage of this particular project as it goes in the bill. The gentleman from Oklahoma [Mr. FERRIS] has touched upon the real point. There is no system in this. It is purely a makeshift waterway, here and there, whenever you can get the money, like the barge-canalization project, without anything to show for it. You can take any of the canals of the country, and I will challenge anyone to show me a single case where there has been a substantial increase in commerce. Take the tremendous amount of money appropriated for the Erie Canal. It has decreased 50 per cent in commerce while the country has increased 300 per cent. Take the Hennepin Canal, which Mr. CANNON spoke about the other day. It is true of that also. You can take the inland waterways, and unless they are deep waterways you will find it is so in every case, so far as my examination goes, and I do not think that I am prejudiced about it. I am endeavoring to get the truth, and I am ready to quote Col. Townsend, chairman of the Mississippi River Commission, who suggested that we do away with 58 of the different projects of the Mississippi Valley and proceed with two of them and see if we can not make them successful waterway ventures.

Mr. HULBERT. Do I understand the gentleman to say that the Erie Canal has never been a paying proposition?

Mr. FREAR. Oh, no; I did not intend to be understood in that way.

Mr. HULBERT. Now you have answered the question——

Mr. FREAR. No; I have not fully answered the question. Years ago, it is true, it brought returns, but waterway authorities say that to-day it is impossible for canals anywhere or canalized rivers to compete with the railroads of the country. It is a slow means of communication, and it will not be accepted. The question of building terminals and all these conditions interfere with the speedy transfer of commerce, and it applies to all canals. If you had your Erie Canal built to a depth so that it could carry deep-water vessels, then it would be a profitable investment; but according to the best authority I have been able to find—and I quote Mr. Moulton and others in your home State, in your board of trade—that is the judgment of all of them.

Mr. LONGWORTH. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Yes.

Mr. LONGWORTH. The gentleman referred to Col. Townsend and two propositions that he advocated. Will the gentleman state what they are?

Mr. FREAR. One is from the Mississippi River up to Pittsburgh, on the Ohio, and the other is from St. Louis up to Chicago, for a deep waterway; in both cases I think it is of 14 feet.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. FREAR. Mr. Chairman, I ask unanimous consent to be permitted to proceed for five minutes.

The CHAIRMAN. Is there objection?

Mr. SPARKMAN. Mr. Chairman, I must object to that.

Mr. FREAR. Why, I have not used more than five minutes to-day.

Mr. SPARKMAN. Oh, the gentleman has used a good deal more than that.

Mr. MANN. This is a very important item.

Mr. SPARKMAN. Let us see if we can not agree on time for the ending of discussion on this paragraph. How much time does the gentleman desire?

Mr. FREAR. Five minutes, unless I am interrupted.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto end in 20 minutes, 5 minutes to be used by the gentleman from Wisconsin [Mr. FREAR], 5 minutes by the gentleman from Indiana [Mr. CULLOP], 5 minutes by the gentleman from North Carolina [Mr. SMALL], and 5 minutes by the gentleman from Texas [Mr. BURGESS].

The CHAIRMAN. Is there objection to the request made by the gentleman from Florida?

Mr. HULBERT. Mr. Chairman, reserving the right to object, I would like to ask the gentleman from Wisconsin if he will permit me to propound an additional question?

Mr. FREAR. Surely.

Mr. HULBERT. I have no objection.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. HULBERT. I should like to ask the gentleman if it is not a fact that up to 1888, when the tolls were removed on the Erie Canal, the canal at that time had shown a net profit to the State of New York of over $40,000,000?

Mr. FREAR. I will accept the gentleman's statement without any knowledge of the facts.

Mr. HULBERT. I would like to ask the gentleman if he considers there has been a fair opportunity afforded since the State barge canal was undertaken to demonstrate its practicability?

Mr. FREAR. I can not go on and discuss the Erie Canal or others, excepting to say this, that the opinion of these men is that you can not, without changing your cargo at Buffalo, use the Erie Canal, and New York is spending $170,000,000 with the terminals in order to complete the canal. The statements made by the authorities, not by myself, is that it is an impracticable and not a beneficial commercial proposition.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Yes.

Mr. CALLAWAY. For the benefit of the gentleman from New York [Mr. HULBERT] I want to quote what Mr. H. G. Moulton, one of the best authorities on river transportation in this country, said:

> Evidently the failure of the old Erie Canal was not primarily due to its inadequate depth. Evidently also (even assuming canal transportation is economical) the great part of the present outlays in New York is but a needless sinking of State funds. While the greater width may have been acquired, the extra depth appears to have been almost, if not quite, superfluous. It will be interesting to see, however, if other localities do not cheerfully go and do likewise.

Mr. PARKER of New York. Mr. Chairman, will the gentleman yield for a question?

Mr. FREAR. Just a short question. I have only five minutes.

I am trying here the best I can to show up the iniquities of this bill, and the Chairman says to me that I can not have time.

I do not indulge in personalities or waste time on this floor, but I do insist on the right to show up improprieties in this bill. When I ask for time gentlemen jump up and say that I can not have more.

You have here a canal project that means 5 feet. It is defended on the floor, when the gentlemen who live there say that it will not accommodate the lowest draft vessel. Now, the next link of the channel may be 9 feet, and the next may be 12 feet, and so it goes. For what? As suggested by the gentleman from Pennsylvania [Mr. MOORE] yesterday, for war vessels to go in there when they are wounded.

Mr. HULBERT. Will the gentleman yield?

Mr. FREAR. I yield.

Mr. HULBERT. I would like to ask the gentleman if he thinks that the people who live in the locality where these canals are being improved are the best judges as to their necessity?

Mr. FREAR. I do unquestionably when there is no traffic carried on them and it is a 5-foot project. The very fact is that they do know more about it than the gentleman from New York or myself. I am quoting from the people who know they can not have transportation on that canal, and they say so.

Mr. HULBERT. Does the gentleman know that the people of the State of New York at the last election voted to expend $27,000,000 more for the completion of the State barge canal?

Mr. FREAR. I know that, and it does not change the fact as to what the economic policy amounts to. I will simply give you the authority, and we will wait and see what the result will be. It is an experiment.

Mr. PARKER of New York. Do you consider Gen. Black authority?

Mr. FREAR. No. I will give you the reason why. In the case of the Muscle Shoals he recommended $10,000,000 for navigation at Muscle Shoals, with only 6,000 tons going through. He is the man who approved the Norfolk-Beaufort Canal. He is the man who reversed Deakyn and Townsend on the Missouri River project. Talk about Black? No. I would not accept his statement. When Townsend and Deakyn showed the condition of affairs on the Missouri, it was Black who refused to give us the report. I could not get the report on the Missouri River. Not until the Secretary of War had them sent.

Mr. PARKER of New York. Has not the gentleman referred many times to Gen. Black as authority?

Mr. FREAR. I can not recollect ever having done so.

The CHAIRMAN. The time of the gentleman has expired.

Mr. CULLOP. Mr. Chairman, I think it will be very hard to determine whether a number of these projects have any merit whatever in them. One thing appears to be certain, that the larger the amount of money expended upon them the greater the decrease in the commerce, so that it seems that we are making headway slowly in the improvement of rivers and harbors. There are a number of projects on which millions have been expended and where there is now no commerce upon the river whatever. If this furnishes a lesson of any importance to the people, it is that river transportation is rapidly disappearing and is being supplanted by rail transportation.

Now, a great many reasons have been given as to why this bill should pass. Some of them are anomalous and some of them are amusing. Gentlemen from New York say that we ought to make a large appropriation because a large amount of revenue is collected in the city of New York, and that therefore because citizens of New York pay into the customhouse large amounts of revenues, large appropriations ought to be made. The citizen of New York who pays revenues into the customhouse receives the revenues back from the ultimate consumers all over the country. His expenditure in this regard is not lost by him, but is returned.

Now, my good friend from Pennsylvania [Mr. MOORE] made the argument that we ought to expend a large amount on the Delaware River around Philadelphia, because Philadelphia pays into the customhouse a large amount of revenue. Let me say to the gentleman from Pennsylvania that every dollar his merchant or manufacturer pays into the customhouse in Philadelphia he collects back from the ultimate consumers of the country; and he is really making no expenditure which is not returned to him with profit.

Mr. PARKER of New York. Will the gentleman yield?

Mr. CULLOP. I have not time now. The distinguished and eloquent gentleman from Alabama [Mr. HEFLIN] makes the argument that this bill ought to pass because Mr. Burton, as chairman of the Rivers and Harbors Committee when the Republicans were in power, passed a bill containing a larger amount than this, and, further, Mr. Alexander, of Buffalo, when chairman of the committee, passed a bill containing a larger amount in two hours' time in this House.

Mr. HEFLIN. Will the gentleman yield?

Mr. CULLOP. Not now. If I had the time, I would be glad to do so.

Let us see what is the effect of that argument that if the Republicans did wrong in passing bills for appropriations for rivers and harbors the good old Democratic Party must come and repeat the wrong, because of the precedent that was set by the Republican Party. This argument does not justify the adoption of any items which are not meritorious. If this bill is loaded with "pork," then it is no justification for their adoption, because on prior occasions the Republicans when in power passed bills containing questionable items. It will require a better argument than this to convince the people such items should be incorporated in this measure. One wrong can not justify another, and the country will hold responsible the people who attempt to excuse such things for any such reason.

The CHAIRMAN. The time of the gentleman has expired.

Mr. CULLOP. May I have just a few minutes more? I just want to present one other matter.

Mr. SPARKMAN. The time has been agreed upon, and I regret that I can not give the gentleman more time.

Mr. SMALL. Mr. Chairman, we are renewing the discussion which was had yesterday and before, when we had under discussion the Norfolk-Beaufort inland waterway. I shall not make any reply to the gentleman from Wisconsin [Mr. FREAR], because what he has said to-day was a repetition of what was said by him upon a former occasion. The gentleman from Wisconsin admits that he is a reformer and an unselfish opponent of graft and extravagant appropriations, and he further admits that he is a modest man. In fact, I think the House certainly was unjust to him in not yielding him more time a while ago, because, as he said, he has occupied very little time in the consideration of this bill. [Laughter.]

Mr. FREAR. Only five minutes this afternoon.

Mr. SMALL. The gentleman says "only five minutes this afternoon." I think the House ought, in fairness, to yield more time to the gentleman from Wisconsin, because a reformer, a man who stands against graft and extravagant appropriations, a man who wishes to lead his fellow Members into righteous ways of legislation, ought to have encouragement, and the House ought to hesitate before withholding time to speak, before it is uncouth and discourteous, from a Member with those distinguished qualifications. [Laughter.]

Now, Mr. Chairman, I did wish to say a word in reply to the gentleman from Oklahoma [Mr. FERRIS], who does not happen to be present. I do not see him here. I wish he was. The gentleman admitted that he knew nothing about the intracoastal waterway, either along the Atlantic seaboard or on the Gulf; and I take it that the gentleman from Indiana [Mr. CULLOP] will make a similar admission. I wish to give just a few succinct facts, first, as to the intracoastal waterway along the Atlantic coast.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. SMALL. Yes.

Mr. MOORE of Pennsylvania. I was out for a moment and desire to ask if it was the gentleman from Oklahoma who criticized this bill?

Mr. SMALL. Yes.

Mr. MOORE of Pennsylvania. The same gentleman who is chairman of the Committee on Public Lands?

Mr. SMALL. The same gentleman.

Mr. MOORE of Pennsylvania. Who occasionally brings in a bill for the disposition of the public lands?

Mr. SMALL. Yes; the same gentleman.

Mr. MOORE of Pennsylvania. And he was criticizing the River and Harbor Committee?

Mr. SMALL. Yes. He was afraid the House might go astray in its action on and consideration of the intracoastal waterway.

Now, I just wish to give these facts: The entire project on the Atlantic seaboard, known as the intracoastal waterway, extends from Narragansett Bay, R. I., to St. Johns River, Fla., and includes a total cost of $47,760,000. The waterway from New York Bay to the Delaware River is estimated at a cost of $20,000,000. From the Delaware River to Chesapeake Bay the cost is estimated at $8,000,000.

Now, I wish to say a word about those two links from New York Bay to the Delaware River and from the Delaware River to Chesapeake Bay. The first, as I said, is estimated to cost $20,000,000. The reports of the engineers commend unreservedly and unqualifiedly those two links for their commercial importance, and gentlemen should read the reports, which have been carefully gathered, and which are exact, before attacking a project because, forsooth, they think it is not demanded in the interests of commerce.

But in addition to the commercial importance of those two links, the General Army Board has submitted a report in the last two months, setting forth that as a second arm of defense these two links of the intercoastal waterway from New York to Chesapeake Bay are of transcendent importance and are necessary, absolutely, as a strategic and secondary arm of defense.

Now, the next link, from Chesapeake Bay to Beaufort, N. C., we have discussed before, and it is estimated at a total cost of $5,400,000. I submit, in conclusion, that gentlemen before they criticize should know the facts.

The CHAIRMAN. The time of the gentleman from North Carolina has expired.

Mr. BURGESS. Mr. Chairman, the item that is now under discussion is only for maintenance. All this theoretical discussion amounts to nothing. The item provides for the maintenance of 202 miles of the canal that was recently constructed. And I call the attention of the House to one section of this intercoastal canal. Last year it carried $215,000 worth of commerce; the year before only $48,000.

Now, why was that? Because the intercoastal canal was only recently constructed, and people were under the impression—and it is more or less true—that they could not travel on it, and they did not travel on it. Now, that is all.

This is for maintenance alone of the canal for a distance of 202 miles. Certainly gentlemen do not want to strike out this item. This is not an old project. It is new. All the other canals have been passed, and I submit that they ought to appropriate for this without a moment's hesitation. [Applause and cries of "Vote!" "Vote!"]

The CHAIRMAN. The question is on agreeing to the motion of the gentleman from Wisconsin, to strike out.

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Mouth of Brazos River, Tex.: For maintenance, $175,000.

Mr. HOLLAND and Mr. CULLOP rose.

The CHAIRMAN. The gentleman from Virginia [Mr. HOLLAND] is recognized.

Mr. HOLLAND. Mr. Chairman, in looking over the RECORD——

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield?

Mr. HOLLAND. Yes.

Mr. SPARKMAN. How much time does the gentleman want?

Mr. HOLLAND. Not over five minutes.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto end in 10 minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto close in 10 minutes. Is there objection?

Mr. MANN. Reserving the right to object——

Mr. HUMPHREY of Washington. I want five minutes. I might as well use it here as anywhere else.

Mr. SPARKMAN. Fifteen minutes, then, Mr. Chairman.

The CHAIRMAN. The gentleman from Florida modifies his request to 15 minutes. Is there objection?

There was no objection.

Mr. FREAR. Is this the mouth of the Brazos, I will ask the chairman?

Mr. SPARKMAN. This is the mouth of the Brazos.

The CHAIRMAN. The gentleman from Virginia [Mr. HOLLAND] is recognized for five minutes.

Mr. HOLLAND. Mr. Chairman, I find, in looking over the RECORD, that yesterday, while I was out of the House for a few moments with some constituents, the distinguished gentleman from Washington [Mr. HUMPHREY] expressed a deep interest in the improvement of the Norfolk Harbor. At the last session of Congress I offered an amendment to the river and harbor bill providing for this improvement, and my recollection is that the distinguished gentleman voted against it. I am delighted to know that he is now more deeply interested in this project. It is barely possible that before the close of this session the sincerity of his interest may be put to the test.

It is true there is a pressing and immediate need for the further improvement of the Norfolk Harbor. Anybody ought to know that a channel, whose foreign commerce increased in value from $31,000,000 in 1914 to $131,000,000 in 1915, and which handles annually a water-borne commerce exceeding 36,000,000 tons, and larger than that of any other port on the Atlantic coast, with the single exception of New York, ought to be wider than 400 feet.

But in one respect, at least, Mr. Chairman, the Norfolk Navy Yard is exceedingly fortunate. The channel which leads to it has a depth of 35 feet at mean low water and a depth of 37½ feet at high tide. Unlike the navy yards at Boston, New York, Philadelphia, and Charlestown, it can be reached by our largest battleships at any hour of the day, and without waiting for a change of the tide. That it can be so reached is best evidenced by the fact that during the year ended June 30, 1915, the arrivals and departures of naval vessels to and from this yard numbered 1,830.

I agree with the distinguished gentleman from Washington [Mr. HUMPHREY] that no good excuse can be given for the failure of this committee to provide for this improvement. I desire to say, however, that I have offered no amendment, because I knew if I offered it it would suffer the same fate already suffered by all amendments of a similar character.

Mr. HUMPHREY of Washington. Will the gentleman yield for a question?

Mr. HOLLAND. Certainly.

Mr. HUMPHREY of Washington. Did I understand the gentleman to say that I voted against this Norfolk project?

Mr. HOLLAND. I said it was my recollection that the gentleman did at the last session of Congress.

Mr. HUMPHREY of Washington. The gentleman is certainly mistaken.

Mr. HOLLAND. I am very glad to have the gentleman say that.

Mr. HUMPHREY of Washington. I never voted against the improvement of Norfolk at any time or place, I think. I believe that is a meritorious project.

Mr. TREADWAY. Will the gentleman yield for a question?

Mr. HOLLAND. Certainly.

Mr. TREADWAY. I understood the gentleman to refer to the similar fate of other worthy projects for other harbors. He did not specify any particular one. I infer that he refers to Boston Harbor.

Mr. HOLLAND. I do not hesitate to say, in reply to the gentleman, that I think all the navy-yard channels ought to be improved, and that their improvement ought to have been provided for in this bill.

Mr. KITCHIN. The gentleman from Virginia voted for the Boston amendment, too.

Mr. HOLLAND. I did.

The CHAIRMAN. The gentleman from Indiana [Mr. CULLOP] is recognized.

Mr. CULLOP. The gentleman from Washington [Mr. HUMPHREY] desires to use his time now, and I will wait until he concludes.

Mr. HUMPHREY of Washington. Mr. Chairman, the criticism that I made in reference to the Norfolk yard was that apparently there was no one here offering an amendment in its behalf. I think the gentleman who has just taken his seat [Mr. HOLLAND] is right. I think it would have been a useless performance to offer the amendment, but at the same time I wondered why it was not done. It would not have been a useless performance if the gentleman from Virginia [Mr. HOLLAND] could have brought some political influence to bear on the White House. If he could have gotten the word from the White House that this was needed, it would have gone into the bill; and the reason I was making the comment was because I thought perhaps that side of the House were so subdued that they did not even dare to offer an amendment. That is the reason why I was delighted to see the gentleman from South Carolina [Mr. WHALEY] have the courage to offer his amendment, even if he did not get a special dispensation from the White House to do it.

But that was not what I was going to talk about. Last evening I placed in the RECORD a telegram from the Merchants' Association of Seattle in regard to the condition of our shipping, and I want now to read one from the chamber of commerce, which I received this morning. I think it is a good time to consider the situation now, when we are proposing to spend some $40,000,000 for the improvement of rivers and harbors and yet propose to leave upon the statute books a law that makes the use of these rivers and harbors practically impossible. Here is the telegram:

SEATTLE, WASH., *April 6, 1916.*

WILL E. HUMPHREY,
House of Representatives, Washington, D. C.:

Have just telegraphed Secretary Redfield the following:

"Shipping from Puget Sound greatly hampered by inability to secure sailors under seamen law. Thirteen loaded vessels detained from 3 to 11 days. This, in face of prevailing scarcity of tonnage, is producing a commercial crisis. When honest effort to secure crew demonstrates that certified seamen are not available, is it not possible to permit clearance of vessels with such crews as they can secure? Owners are already refusing to send ships to the Sound because of the situation. When vessels are in such demand as to-day, then are compelled after loading to lie idle, and when additional vessels that could otherwise be brought here refuse to come, the condition becomes desperate."

Please cooperate with other Members of the Washington delegation.

SEATTLE CHAMBER OF COMMERCE,
By J. E. CHILBERG,
Chairman Foreign Trade Committee.

I call the attention of both sides of the House, and especially of that side, to the fact that if the Committee on the Merchant Marine and Fisheries would consume some of their time in framing and reporting a law to amend or repeal this seaman's law instead of spending their time on the socialistic proposition of Government ownership they would be doing something for the shipping of the country. [Applause on the Republican side.] I hoped, although I did not expect, so near the campaign, that something might be done to relieve this situation. In the last session we wrote upon the statute book that law, which immediately drove every American ship from the Pacific Ocean into the foreign trade. Now it is paralyzing our coastwise trade, and all of the trade on the Pacific Ocean. Yesterday I put in a telegram showing that eight vessels had been detained for a total of 53 days after they were loaded because they were unable to comply with this law.

Mr. CULLOP. Mr. Chairman, further referring to the many arguments that have been made in its behalf in the consideration of this bill, I desire to call the attention of the committee to the argument of the distinguished chairman of the committee [Mr. SPARKMAN], just made in answer to the gentleman from Oklahoma [Mr. FERRIS], who called upon him to give some justification for the project known as the intercoastal canal. The reply of the distinguished chairman [Mr. SPARKMAN] was this, as I understood him, that if this Government had money to appropriate millions of dollars for the Army and the Navy, it likewise had money to appropriate for the improvement of rivers and harbors. Mr. Chairman, that is not a very good reason; there is a better reason than that, and I hope that before this session of Congress closes the gentleman from Florida [Mr. SPARKMAN] will be able to give a better answer and a more logical reason to the country for the enormous expenditures carried in this bill, many of them being of a questionable nature. The country will want to hear it, and it is his duty to give it, in order that this bill, if passed, may be justified.

The project of the intercoastal canal along the eastern line of the Atlantic Ocean can certainly not be justified in this House, much less by the people of this country in the coming campaign. If it can not be justified here, how does he expect the people to justify it. Here is an attempt to parallel the ocean with a waterway along the shore of one of the great ocean highways of the world, dumping into this questionable project, the cost of which no man can estimate, entailing millions after millions of money to pay the cost thereof, when the commerce upon it is rapidly decreasing instead of increasing from year to year.

When population comes that will justify large expenditure, the people will build railroads that will carry their commerce more rapidly to the markets of the world, and for equally as low a rate of transportation. It is not only what the owners of the vessels are charging, but the expenditure by the people of this country in the money that you are paying out to improve these waterways, making the total cost greater than was ever charged by any railroad in this country for the transportation of products upon it. Remember, if you please, that the cost of transportation to shippers charged by the owners of vessels is not the whole cost, but there must be added the amount appropriated to improve these waterways. The two items must be taken into consideration in ascertaining the actual cost for transportation. The two aggregate costly transportation. I know gentlemen supporting this measure refer to what ships charge for carrying products, but they are not adding the cost of improvements to the cost for shipping, which the people must pay, taxed to raise the money to build the improvements of these waterways, many of which are costing more in taxes than they could realize in low transportation for all they will carry in more than a century to come. Do not overlook the real cost; if you do, the people will not, as they fully understand what the real cost is.

The CHAIRMAN. The gentleman's time has expired. All time has expired, and the Clerk will read.

The Clerk read as follows:

Brazos River, Tex.: Continuing improvement from Old Washington to Waco by the construction of locks and dams heretofore authorized, $200,000; continuing improvement and for maintenance by open-channel work from Velasco to Old Washington, $15,000; in all, $215,000.

Mr. FREAR. Mr. Chairman, I move to strike out the paragraph.

Mr. SPARKMAN. Mr. Chairman, I would like to see if we can not agree on time. I ask unanimous consent that all debate on this paragraph and amendments thereto close in 18 minutes, 5 to be used by the gentleman from Wisconsin [Mr. FREAR], 5 by the gentleman from Minnesota [Mr. SMITH], 3 by the gentleman from Massachusetts [Mr. TREADWAY], and 5 by the gentleman from Texas [Mr. CALLAWAY].

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto close in 18 minutes. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, I realize that when one attacks any of these projects it may make him the center of personal abuse by those particularly interested in the project. Ordinarily I do not reply, and I will not in this case. I have no hesitation in some circumstances, but under these I will not take the opportunity afforded me. I will say this, however, that we have appropriated $1,777,000, with a possibility of ten or twenty millions expenditure on this river. One boat runs on the lower river and no boats runs on the upper river. Nor will there be one until the project is completed. To my mind, it is one of the most inexcusable projects here. I can not see how anyone can come to a different conclusion if he is unprejudiced.

I want to give you testimony that means something, as I did a few minutes ago, from Houston. Here is a letter I have received, dated January 26, 1916, addressed to me from a man who is one of the leading Democrats, I understand, in his community, president of a bank, as well as vice president of other banks, and connected with other business interests:

WALLIS, TEX., *January 26, 1916.*

Hon. JAMES A. FREAR,
Washington, D. C.

DEAR SIR: Noticing in the press your attitude respecting appropriations toward improvement of various streams and more particularly those applying to the Brazos and Trinity Rivers of Texas, I felt constrained to write you expressing my complete approval of your course. I am a native Texan, born and raised within 2 miles of the Brazos River; am 50 years old. My father and myself have owned land bordering on the Brazos for 58 years. I now own one tract which borders river for about 3 miles. I beg your pardon for mentioning these items. It is done to evidence my familiarity with the subject. The Brazos is an alluvial-banked stream, easily caves in banks. The work the Government has done and is doing is so utterly useless that it is contemptible and farcical, and apart from the absolute, complete, total, utter waste of such appropriations, engineers have made regulations which are costing the people along the banks of said streams large sums of money.

I will mention two. If I should put in a ferry I have to raise my cable 60 feet above low water—40 feet ordinarily would do. This additional height necessitates longer cables and stronger and more costly posts for elevating. The same applies to bridges. It has cost the people of Fort Bend County at least $40,000 excess to erect four bridges across the river, and this same expense will apply to every bridge and ferry from the mouth to Waco. The reason given for this is to allow height sufficient to clear steamboats. Now, I have lived on Brazos for 50 years and my father since 1858, and never in all that time has there ever been a steamboat either up or down, except the Government snag boat and possibly one or two small gasoline launches sent out by Waco boosters to prove the navigability of the stream. I am not a civil engineer, but I believe it would be cheaper to dig a canal from the Gulf to Waco than attempt to deepen the Brazos, and if an honest, capable engineer would investigate without being wined and feted by those interested, it would be overwhelmingly defeated. Our politicians seemed to be governed by those who make the loudest noise and the common people have no horns or bands or champions.

I wish you every success. No patriotic American can continue to support such heartless graft. We educate our children that it is proper and commendable to steal from the Government. You are welcome to use my name.

Yours, respectfully, R. W. GUYLER.

Now, Mr. Chairman, I would suggest to the people of Texas that here is an honest man, a man who shows statesmanship, who will not be carried away with the idea of a little "pork" for his home country, and will be a good candidate, in view of the vacancy which may occur, as I am informed, in that district. [Laughter.]

Mr. CALLAWAY. Mr. Chairman, I am acquainted with the Brazos River. I and mine have been acquainted with it as long as Mr. Guyler, and we know it nearly as well. Our friends from Texas, if they do not get appropriations for the Brazos, Trinity, and Red Rivers, would not vote for the intercoastal canal. [Laughter.]

Let us look at the Brazos. As I said when I was talking about the Trinity, I am not partial to the Brazos. It is as good as many other projects in the bill. It is as good as the Trinity, and they look alike. They are both infinitely better than the intercoastal canal.

From the mouth of the Brazos to old Washington we have spent $425,462.15. From old Washington to Waco, the present head of navigation—from old Washington to Waco we have spent up to the present time $1,350,654.74.

Mr. TREADWAY. Will the gentleman yield?

Mr. CALLAWAY. Yes.

Mr. TREADWAY. Has the gentleman any explanation of what we have got for the amount we have expended?

Mr. CALLAWAY. You had a Congressman here for 18 years. [Laughter.] My colleague Mr. HENRY could say like the gentleman from Missouri [Mr. BORLAND] of the Missouri River, that he knows it is navigable because he has navigated it time and time again to Congress. [Laughter.] Now we have expended

up to the present time on these sections $1,776,116.89 and we are asked to appropriate $215,000 additional on that proposition, making $1,900,000 in round numbers that we have spent on the Brazos River up to the present time. Let us see what they say about the commerce. The Engineer's report says:

No freight is now carried on this section of the river. There can be no commercial effect of the improvement until it is completed.

Mr. Chairman, it is estimated that it will cost about $10,000,000. They have been at work on it for 15 years. They have spent up to the present time about $2,000,000. In 15 years if they have spent $2,000,000 and no traffic can go up the river until it is completed, and if we work in the future as we have in the past, we will spend $10,000,000 in five times 15 years, or 75 years from the time it begun, or 60 years yet.

About the same proposition applies to the Trinity. It is estimated to cost $10,000,000, and according to the way they are working at it it will take 41 years yet to complete it. Children of the men who are getting the appropriation for the river may see this project completed. A large part of the time there is no water in the river to furnish navigation, even if they had locks and dams.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. CALLAWAY. Yes.

Mr. MADDEN. Does the gentleman wish the House to understand that there is no water in either the Trinity or the Brazos?

Mr. CALLAWAY. Oh, there is some water. You can find water at times. [Laughter.]

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. SMITH of Minnesota. Mr. Chairman, I wish to reply briefly to my distinguished colleague from Indiana [Mr. CULLOP] in reference to the railroads taking care of the traffic of the country. There are a great many rivers in the country that have a sufficient quantity of water for navigation purposes that should not be improved, and my distinguished colleague from Wisconsin [Mr. FREAR] called attention yesterday to one of them when he referred to the St. Croix River. It has as much water as the upper Mississippi and it could be used for navigation purposes if it were in demand. It is only 56 miles from the Mississippi to Taylor Falls, which is the length of the navigable portion. In these days of railroads no one is going to ship by water for a distance of only 56 miles.

THE COORDINATION OF RIVER AND RAIL TRANSPORTATION.

Inland waterways are a mere link in our transportation system. Their improvement, where the physical conditions make it feasible, is necessary, even though the cost seems high in some instances. Of course, there are many streams that should not be improved, because the cost would be out of all proportion to the benefits to be derived, but in the majority of cases this fact can be readily ascertained. Therefore all river improvements should not be condemned because some projects have no prospect of ever becoming commercially profitable. It may be possible at a slight expense to improve the channel of a river so as to convey large boats, but if it has no present or prospective tonnage along its course it would be very unwise to improve it even at a slight cost. On the other hand, the improvement of a certain river or the construction of a canal may be quite expensive, still it would be good business to make the improvement if tonnage, either present or prospective, that it will secure or affect is of sufficient value to yield a fair return, either directly or indirectly, on the investment. The Mississippi River, as well as a great number of other rivers of this country, is in this latter class. There are several substantial reasons why it is wise to improve such rivers. First and foremost, traffic can be carried by water much cheaper than by rail; secondly, by the direct saving through the reduction of railway rates due to the competition of water routes.

While it is true that water rates are lower than rail rates, the amount of this difference largely depends upon whether it is by canal, river, lake, or ocean, and the physical characteristics of the waterways employed and the number and size of vessels that can be used thereon. In the Great Lakes traffic this difference is so great on some commodities as to make it impossible for the railways to compete. This condition also applies to coastwise traffic, and under some conditions it applies to inland river commerce, which varies according to the length of the navigable route, depth of channel, wharfage facilities, and so forth. For instance, coal and lumber are carried on the river route from Pittsburgh to New Orleans by way of the Ohio and Mississippi Rivers at a cost of $2 per ton, or less than 1 mill per ton-mile. Moreover, it is claimed that the actual cost does not exceed $1 per ton, or less than one-half mill per ton-mile. The cost by rail for this same service is from 7 to 8 mills per ton-mile.

As soon as Lock and Dam No. 1 are completed similar routes can be established from Pittsburgh to the Twin Cities by way of the Ohio and Mississippi Rivers; from Peoria, Ill., to the Twin Cities by way of the Illinois and Mississippi Rivers; from Riverton, Ala., to the Twin Cities by way of the Tennessee and Mississippi Rivers; from Nashville, Tenn., to the Twin Cities by way of the Cumberland and Mississippi Rivers; from Omaha and Kansas City to the Twin Cities by way of the Missouri and Mississippi Rivers; and from New Orleans and St. Louis to the Twin Cities by way of the Mississippi River. Also, all coast towns would be accessible to the Twin Cities by way of the Panama Canal and the Mississippi River.

By the use of modern barges and the erection of suitable terminals, traffic can be handled on the upper Mississippi for about 1½ mills per ton-mile and not to exceed ¼ mills per ton-mile. The average rail rate in this valley is 7.8 to 8 mills per ton-mile.

Even with the present antiquated transportation equipment and facilities the water rates between St. Louis and St. Paul are only about 66 per cent of the rail rates.

The fact that the river is prepared to carry tonnage will have a wholesome effect on freight rates, not only at river points but for several hundred miles on either side of the river, as is shown by the report of the Chief of Engineers:

It is well known that wherever water transportation exists, whether by river, canal, or lake, its effect on freight rates is always beneficial to the public, and so long as navigation of the Mississippi River is feasible, and largely in proportion to its feasibility, such benefits will accrue, even if but little river commerce is actually carried on.

Further proof of this statement is evidenced by the commercial and industrial growth of sections of our country that are situated not on a river but in such relation to it that their produce and manufacture had convenient and ready access to river transportation. Hence, not only Minneapolis and St. Paul and other river towns will be benefited, but South and North Dakota, Iowa, Montana, Wisconsin, Illinois, and the whole of Minnesota will derive a direct benefit from river traffic on the upper Mississippi.

The future agricultural and industrial growth of this splendid section of the United States depends now more than ever before upon its ability to float its commerce on the Mississippi and its tributaries, for the reason that the favored conditions which these North Central States have heretofore enjoyed in the way of nondiscriminatory rail rates have been destroyed by a readjustment of those rates to meet, it is alleged, the new condition created by the opening of the Panama Canal. Since the opening of the canal, freight rates have been reduced 35 to 60 per cent by ocean carrying companies. Transcontinental railroads claim they can not meet these rates. It has been determined that 93 per cent of competitive freight from coast to coast points could be carried by water; hence the bulk of that competitive freight may be produced at the seaboard and shipped by way of the Panama Canal to the Pacific coast, and there sent eastward to compete with goods from Mississippi River and other Central West points, because these goods, on account of the combined water and rail rates, can be laid down in those localities cheaper than goods shipped from central interior points. By reason of the advantage given to coast towns by water transportation, the distributing territory of our Central West cities will be greatly decreased and the sales territory of the coast towns will be in like proportion increased. Therefore, in place of the Central West furnishing 75 per cent of the merchandise, as heretofore, for the territory between the Mississippi River and the Pacific coast and the Atlantic coast furnishing only 25 per cent, the Atlantic coast will furnish the 75 per cent and the Central West but 25 per cent. The loss of this competitive traffic to the Central West will be tremendous, and this loss can be retrieved only in one way, and that is by putting the Mississippi River in shape to give this section of the country water transportation.

WHY TRAFFIC ON WATERWAYS HAS DECLINED.

The opponents of inland waterways improvements contend that these once great highways of commerce are no longer possible or necessary transportation agencies and, as proof of their contention, point to a decline of navigation on them. While we must admit that there has been a decline of traffic on waterways we believe there is a satisfactory explanation for it. The Inland Waterway Commission found that railway interests, in a great many instances, conducted a successful campaign against waterway traffic by control of waterway fronts and terminals, purchase of competing vessels, discriminating tariffs, adverse placement of tracks and structures, and other unneutral acts and practices. A campaign waged along the foregoing line, together with legitimate competition, caused a decline in river traffic. While water traffic is confined to the channel, railways extend their operations over large territories, and thus can

readily make up in receipts for reductions made at river points. The lack of properly constructed boats and modern terminals, such as the terminal at St. Louis with its up-to-date loading and unloading devices, and the one now being constructed at Minneapolis, which will contain every device and accommodation known to engineering skill for the economic handling of freight, handicaps river traffic as much as the opposition from the railroads, if not more. The Government, through a board of engineers created for the purpose of investigating the subject of river barges and terminals, has designed an experimental barge of a type especially designed to take care of river traffic economically and safely, and municipally owned modern terminals are either being constructed or planned for in all important towns along the Mississippi River. European countries have had wonderful success in developing inland waterway transportation in connection with their railway systems, and their success is due in a large part to a recognition of the fact that up-to-date public terminals and harbors must be maintained. In some instances the amount expended for river and harbor facilities exceeds the amount expended on the channel itself. The expenditure of the different States along the Rhine for this purpose amounts to nearly $25,000,000.

Fortunately, all the difficulties in the way of developing river traffic, as heretofore pointed out, can be overcome. Railway rates and service are now subject to public control. The roads can be compelled, under existing laws, to make physical connections with water terminals, make through bills of lading, and to prorate charges with water transportation companies. Furthermore, under section 4 of the interstate-commerce act, a railroad in competition with a water route is prohibited under certain conditions from reducing its rates to and from competitive points.

While waterways will continue to act as competitors and regulators of railroads in the most part, they will furnish greatly needed additional transportation facilities, in cooperation with those furnished by the great and extensive railway systems. The railroads recognize that in order to properly handle the rapidly increasing traffic of the country the present transportation facilities must be largely increased.

The president of the New York, New Haven & Hartford Railroad Co., Mr. Howard Elliott, one of the best-posted railroad men in America, in an address before the Chamber of Commerce of the United States on February 9, 1916, had this to say in reference to the necessity for increased transportation facilities:

> In a time of profound peace in this country the railways are congested and can not carry satisfactorily the total load. What could they do in their present condition if the added burden of war were thrown upon them? Many industries would have to stop, because the railway's first duty would be to handle the men and material incident to war.
>
> The serious freight congestion of 1906–7 and the recent one emphasize the fact that the railways have a very small "factor of safety" with which to meet the strain of a sudden and increased load.
>
> It is difficult to estimate how much money will be necessary to bring the railways of the United States up to the point of efficiency demanded by the business of the country, but it is likely to be more than any of the estimates yet made. An interesting and instructive report upon this subject was made in 1912 by the committee on internal trade and improvements of the New York State Chamber of Commerce, of which Mr. Samuel W. Fairchild was and is now chairman. This report stated, in part:
>
> "It is estimated that it will require in the next five years to maintain railroad facilities equal to the enormous traffic of the country the immense sum of $8,500,000,000. Some idea of the magnitude of this sum may be had from the fact that it is eight times the national debt, it is more than two and a half times the amount of money in circulation, it is equal to all the deposits in the National and State banks, and nearly equal to the entire money value of all the farm products of the country in one year. It is over three times the annual gross revenue of the railroads, and it amounts to nearly one-half of the existing railway capital represented by stocks and bonds.
>
> "The question of obtaining the $8,500,000,000 necessary to make railroad facilities equal to the expanding traffic of the country during the next five years therefore constitutes the most important problem now confronting business men."

Notwithstanding that the majority of railroads of the country have been permitted within the past year to raise their traffic rates 5 per cent, they still contend that they are powerless to meet this almost imperative demand so graphically described my Mr. Elliott, unless they are permitted further to greatly increase their rates; and if this right to raise their traffic rates is denied them, they can not fulfill their mission or be of great service to the people or provide for the future transportation needs of the country.

Thus it is plain to see that the public must foot the bills in the way of increased rates for additional railway facilities.

Since waterways are natural highways and can in the majority of cases be put in a condition to carry traffic for less money than it takes to build railways and construct necessary additional terminals, would it not be a wise policy to spend a part of this money for the improvement of waterways where they can be improved to advantage?

If bulky traffic could be restored to the waterways "where it economically belongs," so aptly stated by the Inland Waterways Commission, "and leave the railway equipment available for traffic properly moving by land, at the same time making possible a reduction of the other rail rates by cutting off business done at a loss and by increasing the volume of profitable business on the railroads," the same amount of traffic could be carried with a much smaller original investment of capital, which would redound to the advantage of the public and at the same time would enable the railroads to more efficiently handle traffic peculiarly adapted to that form of transportation.

There is no doubt but what an advantageous reciprocal relation could be established between railroads and waterways if all parties, including the Government, would come together in the spirit of mutual help and assistance. At least the demand that something be done to cheapen, and not increase, present traffic rates is so great that the parties concerned should make an honest effort to so reconcile any past differences they may have had and cooperate wherever cooperation is possible. [Applause.]

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. TREADWAY rose.

Mr. SPARKMAN. Mr. Chairman, just one moment. I ask unanimous consent that the time be extended for five minutes in order that I may have five minutes after the gentleman from Massachusetts [Mr. TREADWAY] is through.

The CHAIRMAN. Without objection, it will be so ordered.

There was no objection.

Mr. TREADWAY. Mr. Chairman, in the speech and the report of the chairman of the committee he refers to the way in which items have been cut down from the engineer's report. I am very glad that this is one of them. The engineer's report asks for $250,000 for the Brazos River from old Washington to Waco, and this item carries $215,000. We are therefore wasting only $215,000 instead of $250,000. The amount so far appropriated for the Brazos River is $2,556,250. That amount of Government money has been wasted, and I say that it is time that we stopped. It is a poor place to put more money after the amount already wasted upon that stream. No commerce has been developed or can be developed.

Mr. BURGESS. Mr. Chairman, will the gentleman yield?

Mr. TREADWAY. Another thing to which I wish to call attention is the remark that I made about this same item last year, and that is the idea that I am presenting now. I have not seen any occasion to change my view since that time. At that time I said:

> A grievous error was made when any appropriation was ever passed to commence such excuse for a navigable project as this. Let us manfully acknowledge that error now, regard the money expended as lost, and cease appropriating Government money in the hope of artificially constructing a river over a hundred miles or more in length. The item should never have been in a rivers and harbors bill.

That is what we ought to do—acknowledge the mistake made 10 years ago when this project was adopted and cease this extravagant expenditure.

Mr. BURGESS. Mr. Chairman, will the gentleman yield?

Mr. TREADWAY. I have only three minutes, and that is almost gone.

Mr. BURGESS. Just a question.

Mr. TREADWAY. I yield.

Mr. BURGESS. Does not this item show that it is for the construction of locks and dams heretofore authorized?

Mr. TREADWAY. I do not know just exactly what they want to expend the money on. I do not know what past appropriations have been expended on. You can not show any results up to date; there has not been a particle of commerce on the river. The engineers' reports show that, and if we can not get commerce by an expenditure of $2,565,000, where are we going to get it? The engineers themselves say in their estimate to our committee that the amount required to complete this is indefinite. In other words, it is indefinite so far as the amount you have to expend in order to put the Brazos River in a navigable condition. We have experimented long enough in the expenditure of two and a half millions of dollars. Let us call that waste money, a big mistake that the Government ever undertook the project, and not go into what the engineers themselves say is an indefinite extension of the amount you will be obliged to expend.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. SPARKMAN. Mr. Chairman, before I reply to the remark made concerning the Brazos River, I wish to call attention to some of these inland waterways which have been criticized here

to-day. In the case of all of them except one the appropriations made here are for maintenance. The one exception is the waterway from Chesapeake Bay to Albemarle Sound. All of these except the one last mentioned were in one or the other of the bills of 1889, 1899, 1902, 1907, and 1910. I merely call attention to that fact to show the members of this committee that we are merely endeavoring to carry on work authorized years ago, or rather, I should say, to maintain work that we have already done, in the hope that the waterways thus improved will become useful avenues of commerce.

Now, with regard to the Brazos River. That is to be a canalized stream, and can not be used until the whole lock and dam system is completed. It runs through a country rich in agricultural resources, and it is supposed, whenever it is completed, that it will perform a good work and that the country will receive ample returns for the money invested in it.

Mr. CALLAWAY. Mr. Chairman——

Mr. SPARKMAN. Just one moment. It is to cost when completed something like $4,000,000, nearly half of which has already been appropriated. Now, the appropriation in this bill is for the purpose of continuing this work of improvement—this work of canalization—without which the money we have already expended will be thrown away, without which no test whatever can be made as to the efficiency of the work provided for in the projects that the Government engineers have laid down and which Congress years ago entered upon.

Mr. CALLAWAY. How long have we been appropriating money for this Brazos River project?

Mr. SPARKMAN. It was adopted, I think, in the 1905 bill.

Mr. CALLAWAY. In 1902.

Mr. SPARKMAN. Well, say 1902.

Mr. CALLAWAY. Now, can you tell the House how long it will be before this project will be completed?

Mr. SPARKMAN. That will depend upon the appropriation we make. We could appropriate money here to-day sufficient to complete it perhaps in the next two years, but we are not undertaking to do that. Perhaps it would be better if we did.

Mr. CALLAWAY. Have not the engineers said all along that the amount necessary to complete it was not yet determinable, and they have never attempted to give a definite estimate?

Mr. SPARKMAN. The gentleman is correct about that. They have not been able to estimate precisely what it will cost, but it is somewhere between four and five millions of dollars, according to the estimates. Now, if we are going to complete this work, we must go on with the appropriations. As to that, Congress must judge. This House can knock out the item if it wants to do so. I believe the work ought to go on to completion. I can not but believe that this river, running as it does through a great agricultural section of the country, will be a useful artery of commerce whenever it is completed.

Now, if this House does not want to complete it, here is the place to put on the brakes and to cut it out, but I do not advise it.

The CHAIRMAN. The question is on agreeing to the amendment. All debate has expired by order of the committee.

Mr. BURGESS. Mr. Chairman, I ask unanimous consent that the gentleman from Texas [Mr. HARDY] may have five minutes.

The CHAIRMAN. Is there objection?

Mr. EAGLE. Reserving the right to object, I ask unanimous consent that I may proceed for 10 minutes in order to make the facts about this Brazos River plain, after my colleague [Mr. HARDY] has addressed the committee.

The CHAIRMAN. The gentleman from Texas [Mr. EAGLE] asks unanimous consent that he may continue for 10 minutes additional.

Mr. MANN. I hope the gentleman will give me five minutes.

Mr. HARDY. Mr. Chairman, instead of making any talk myself, I will yield to my colleague [Mr. EAGLE] to make a 5-minute talk, or a 10-minute talk if he wishes to do so.

Mr. SMALL. Mr. Chairman, I ask unanimous consent that 10 minutes be allowed to the gentleman from Texas [Mr. EAGLE] and 5 minutes to the gentleman from Illinois [Mr. MANN].

Mr. MANN. I want to hear the gentleman from Texas [Mr. HARDY], too, and I will not take the five minutes if it keeps it away from him.

Mr. SMALL. I ask for 20 minutes then.

The CHAIRMAN. The gentleman from North Carolina asks unanimous consent for 20 minutes additional. Is there objection?

Mr. SPARKMAN. Mr. Chairman, it occurs to me we might as well vote on this. I do not want to cut it out, though——

The CHAIRMAN. Is there objection?

Mr. MADDEN. Reserving the right to object, this is a very interesting topic, and I think the gentleman from Texas [Mr. EAGLE] ought to have an opportunity to present his side of the case as well as his colleague Mr. HARDY.

The CHAIRMAN. Is there objection?

Mr. SPARKMAN. I shall have to object, Mr. Chairman.

The CHAIRMAN. Objection is heard. The question is on the amendment offered by the gentleman from Wisconsin [Mr. FREAR].

The question was taken, and the Chairman announced that the noes seemed to have it.

Mr. FREAR. Division, Mr. Chairman.

The committee divided; and there were—ayes 30, noes 44.

Mr. MANN. I make the point of order, Mr. Chairman, that there is no quorum present.

The CHAIRMAN. The Chair will count. [After counting.] One hundred and five gentlemen are present, a quorum.

Mr. MANN. Mr. Chairman, I ask for tellers.

The CHAIRMAN. Tellers are requested.

Tellers were ordered, and the Chairman appointed Mr. SPARKMAN and Mr. MANN.

The CHAIRMAN. The Chair was about to inquire whether the gentleman from Illinois desired tellers on the amendment or tellers on the presence of a quorum?

Mr. MANN. There is no such thing, except by unanimous consent, as tellers on a quorum.

The CHAIRMAN. The committee would have the right to question the count of the Chair. The question is on the motion of the gentleman from Wisconsin [Mr. FREAR].

The committee again divided; and the tellers reported—ayes 41, noes 61.

So the motion was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Trinity River, Tex.: Continuing improvement and for maintenance by open-channel work, $50,000; for improvement by the construction of Locks and Dams Nos. 3 and 5, $250,000: *Provided*, That no part of the latter amount shall be expended until the city of Dallas or other local interests shall have contributed the sum of $50,000 toward the improvement.

Mr. TREADWAY. Mr. Chairman, I move to strike out the paragraph covering lines 1 to 7, inclusive, on page 21.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Massachusetts [Mr. TREADWAY].

The Clerk read as follows:

Strike out the paragraph, lines 1 to 7, inclusive, on page 21.

Mr. SPARKMAN. Mr. Chairman, I would like to see if we can not arrange for limiting the debate.

Mr. MANN. This is too important an item, Mr. Chairman, to attempt to fix debate. I think the gentleman from Florida was very unfair on the last item.

The CHAIRMAN. The gentleman from Massachusetts [Mr. TREADWAY] is recognized.

Mr. TREADWAY. Mr. Chairman, in order that I may not be accused of making any unfair or incorrect statement, I want to read what I have to say about the Trinity River. It is based upon the details contained in the engineers' report. It is useless to make the motion to strike out, for the friends of the item are here in force, but people ought to know about these provisions, and what we are voting on. I read:

"As the Chairman has referred to the Trinity River appropriation in his report, a word may be said relative to this notorious, if not noted, stream. The extract from the engineers' report, published as an appendix to the committee report, gives some idea of the return Uncle Sam is likely to receive for the extravagant appropriations carried in this bill as well as in past ones, and the anticipation of future ones.

"The Trinity River is 650 miles long. It is 512½ miles from Dallas to Galveston Bay. Appropriation was first made in 1902, and from that time to June 30, 1915, there has been expended on this notorious stream $2,069,262.42. In 1905 the people of Dallas showed their generosity by contributing $66,000, and thereby doing exactly what they are trying to do in this bill—secure continuation of appropriation by a comparatively small local contribution.

"The engineers do not consider that the project has been adopted in its entirety, but only such portions as specifically are appropriated for. House Document No. 409, Fifty-sixth Congress, first session, calls for 37 locks and dams with incidental dredging and open-channel work, thereby securing six-foot navigation at a cost of $4,650,000, and $280,000 annually for maintenance. Out of the 37 locks and dams only 7 have been specifically appropriated for, and the location of two others authorized.

"Navigation of this river is still impracticable for even light-draft boats above Liberty at ordinary low-water stages except in the disconnected pools formed by the completed dam.

"Think of it, gentlemen of the committee, that we have already spent over $2,000,000 of Uncle Sam's money, and there is to date no possibility of navigation. Only one-fifth of the project has been provided for at a cost of nearly one-half the original estimate for the entire project.

"The tonnage on the river has decreased enormously as shown by the engineer's statement. In the year 1914 there was 12,610 short tons handled, at a value of $102,000, whereas in 1912, 60,677 tons are recorded, at a value of $768,715. This consists mainly of logs in rafts.

"Is it any wonder that a Government engineer at one time suggested that artesian wells should be dug to supply water for this stream, and that the ardent advocate of the appropriation should have offered as a possible explanation of this idea at the committee hearing that if the water was flowing underneath it might be well to get it above the surface through boring into it.

"The committee report states: 'It is believed that greatly increased river traffic will result even upon the completion of this section, as it will materially lengthen the period each year during which the river can be used.'

"I dread to think what the result will be when that section is completed in proportion to the present statistics of decreased transportation of logs. Would it not be much less expensive for Uncle Sam to buy the standing timber, for a national park, and try to induce some water to remain either above or below, rather than cut down the timber and pay such tremendous prices for an opportunity to transport it by water over this stretch of 650 dry miles in the section of the 'Lone Star' State so ably represented by our delightful companion, the ardent supporter of Trinity River appropriations, our genial friend and kindly associate, Mr. SUMNERS. Much more could be said of the merits of Trinity River as an arid proposition, as an artesian well development, and as a sink hole for Uncle Sam's money."

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. COOPER of Wisconsin. Mr. Chairman, I know nothing whatever of this project, having never seen the Trinity River, and therefore I am obliged to rely upon the report of the committee and the opinion of experts. That there is no greater expert in the world than former Senator Burton has been certified to over and over again by my good friend, my colleague from Wisconsin [Mr. FREAR]. He does this in his minority report and in his speeches in and out of Congress. He has done it in the speeches he has made here during the discussion of this bill.

Mr. FREAR. Mr. Chairman, will my colleague yield?

The CHAIRMAN. Does the gentleman yield?

Mr. COOPER of Wisconsin. I can not yield.

Mr. FREAR. How many years ago was that report made?

The CHAIRMAN. The gentleman declines to yield.

Mr. FREAR. The gentleman refers to me personally.

Mr. COOPER of Wisconsin. I can not yield.

The CHAIRMAN. The gentleman declines to yield.

Mr. COOPER of Wisconsin. In 1901 Mr. Burton was chairman of the Committee on Rivers and Harbors of the House.

Mr. FREAR. That was 15 years ago.

Mr. COOPER of Wisconsin. That does not make any difference. He was an expert. But apparently he is an expert only when his opinion agrees with the opinion of the gentleman from Wisconsin [laughter]—if that is the comment which the gentleman interjects here in violation of the well-known rules of the House.

Mr. FREAR. Mr. Chairman——

The CHAIRMAN. Does the gentleman yield?

Mr. COOPER of Wisconsin. I do not.

Mr. FREAR. I object, Mr. Chairman, to the gentleman addressing me in that way.

The CHAIRMAN. The gentleman will proceed in order.

Mr. COOPER of Wisconsin. I will withdraw that, Mr. Chairman, if the gentleman objects. But I wish to call the attention of the House to the opinion of the well-recognized expert, Senator Burton, who, in the language of my colleague from Wisconsin, knows more about waterways and waterway projects and the whole science of waterway improvement than any other man in the United States. On January 9, 1901, Mr. Burton, then a Member of the House, said:

Mr. Chairman, the Committee on Rivers and Harbors present this bill with the confidence that no measure before Congress confers greater benefit upon the country.

I turn now to the next page, page 780 of the RECORD of that date, where he discusses specifically the Trinity River in Texas. He says:

We have not included in this bill any new projects for locks and dams, except in Trinity River, in the State of Texas, where we have appropriated or authorized $750,000, part for general improvements and part for the construction of locks and dams.

I am frank to say to the committee that on first examining this project I did not think favorably of it, but I gave it a good deal of consideration. The committee called before them the engineer having the improvement in charge, and it seemed to us that an expenditure of this amount was justified. The river is easily capable of improvement. It has stable banks, and the construction of locks and dams is a comparatively easy problem. There is a great amount of traffic in prospect, both from the source to the mouth and from the mouth toward the source. In this particular it differs from many other rivers, where the bulk of the traffic must necessarily be one way. Great quantities of cotton and grain will be carried toward the mouth and from the mouth toward the source timber and building material for the large expanse of prairie tributary to Dallas toward the north.

Mr. Chairman, when Mr. Burton, then a Member of the House, in the rôle of a prophet foretold the great commerce to develop on that river he had in mind the completion of the project. That project is not yet completed, nor nearly completed. The unwise practice of the Government has been to appropriate in driblets, necessitating additional and unnecessary expenditures from the Public Treasury, and delaying the completion of much needed works.

As I have said, I know nothing about the Trinity River, and am merely citing the opinion of an expert, Mr. Burton.

Mr. TREADWAY. Will the gentleman yield?

Mr. COOPER of Wisconsin. I can not yield now.

Mr. Chairman, it is said here that there is no business development on this river. That, I believe, is very true. Business could not well develop where there is a depth of 3 or 4 or 5 feet of water part of the way and then a shoal where the water is only a foot deep. Business can not increase, because there is no opportunity for continuous traffic.

The CHAIRMAN. The time of the gentleman has expired.

Mr. COOPER of Wisconsin. I ask unanimous consent to proceed for five minutes.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent that he may proceed for five minutes. Is there objection?

There was no objection.

Mr. COOPER of Wisconsin. Suppose, after we had expended $250,000,000 on the Panama Canal and only partly completed it, somebody had said, "It is a failure. No boat has yet gone through it, and yet we have expended $250,000,000 on the infamously wasteful project!" Is that a fair way to discuss a proposition like this? Not at all. Absolutely, the only way in which it could be told whether the prophecy of that great expert, Senator Burton, was well founded or not would be to complete the project.

Mr. CALLAWAY. Mr. Chairman——

The CHAIRMAN. Does the gentleman yield?

Mr. COOPER of Wisconsin. I can not yield. Senator Burton is responsible for putting this river under improvement by the Government. He is responsible for putting the Brazos under improvement. And yet now he repudiates repeatedly, in statements and arguments made since he left this body, every argument that he made while here. Under such circumstances a man is not necessarily a thief, a believer in the plundering of the Public Treasury, because he listens to the great Committee on Rivers and Harbors, which has reported this bill, containing no new project except one—and that the one insisted upon by the President of the United States—a bill making appropriations only for work upon projects already begun and which the committee, in their judgment, think it would be better to complete by proper appropriations than it would be to throw away everything which the Government has already invested. That is all. Never before have I heard the word "thieves" applied as it was by the gentleman from Texas [Mr. CALLAWAY] in his remarks.

Mr. CALLAWAY. Mr. Chairman——

Mr. COOPER of Wisconsin. He said that the bill from beginning to end—and I quote him literally—from alpha to omega, was a fraud—a "thieves'" bill.

Mr. CALLAWAY. Mr. Chairman——

Mr. COOPER of Wisconsin. There is one appropriation in this bill in which I am interested, and I am free to acknowledge it. I hear the laughter of my friend from Iowa [Mr. GOOD], who, as I said, has very little water in his district, excepting in a few cisterns. [Laughter.]

Mr. GOOD. I was laughing simply because some one observed that it was needless for the gentleman from Wisconsin to say that.

Mr. COOPER of Wisconsin. The project for my home city is so good that it has received the unanimous report of the committee of the present House, as it did also of the committee of the last House—so good that it passed this body without an adverse comment and was incorporated in the substitute bill which Senator Burton himself proposed in the Senate.

No honest man ever has to vouch for his own integrity, and no honest man ought to arise in the House of Representatives of

the Congress of the United States and charge his colleagues indiscriminately with supporting a thieves' bill. [Applause.]

The CHAIRMAN. The gentleman's time has expired.

Mr. CALLAWAY. Mr. Chairman——

Mr. SPARKMAN. I should like to see if we can not agree on a time for closing debate.

Mr. CALLAWAY. I should like to have five minutes.

Mr. TREADWAY. I should like to have five minutes.

Mr. GOOD. I should like to have five minutes.

Mr. SUMNERS. I should like 15 minutes.

Mr. SPARKMAN. Will not 10 minutes do the gentleman?

Mr. SUMNERS. I do not think so. This project has been very severely attacked. I should like 15 minutes. I have not spoken at all on this bill.

Mr. SPARKMAN. How much time is desired on the other side?

Mr. MANN. Twenty minutes over here.

Mr. SPARKMAN. I ask unanimous consent that debate on this paragraph and all amendments thereto close in 40 minutes, 20 minutes to be controlled by myself and 20 minutes by the gentleman from Illinois [Mr. MANN].

The CHAIRMAN. The gentleman from Florida asks unanimouse consent that debate on this paragraph and amendments thereto close in 40 minutes, 20 minutes to be controlled by himself and 20 minutes by the gentleman from Illinois [Mr. MANN]. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Florida [Mr. SPARKMAN] is recognized for 20 minutes.

Mr. CALLAWAY. I thought I had the floor.

Mr. SPARKMAN. Did the gentleman have five minutes to himself?

The CHAIRMAN. No; the gentleman's five minutes will have to come out of the time agreed upon.

Mr. SPARKMAN. I will yield five minutes to the gentleman from Texas.

Mr. CALLAWAY. Mr. Chairman, the gentleman from Wisconsin [Mr. COOPER] gets himself worked up by twisting what I said. A man ought not to go out looking for trouble, and twist what somebody has said in order to get it; he may be able to find it in that way. I never meant that the committee were a set of thieves, and never so stated. What I did was to read from the Philadelphia Inquirer, a newspaper published in the territory of the gentleman from Pennsylvania [Mr. MOORE]. The Philadelphia Inquirer stated that the bill was a thieves' bill. I said that I could see no difference in the world between the bill that carried $1,200,000 for the Philadelphia Inquirer's territory and a bill that carried $2,700,000 for the Philadelphia Inquirer's territory; they were morally the same. But the Philadelphia Inquirer saw all the difference in the world, due to the difference between the appropriation of $1,200,000 and an appropriation of $2,700,000. The gentleman from Wisconsin wants to torture that into my saying that the bill was a thieves' bill.

Mr. COOPER of Wisconsin. Will the gentleman permit an interruption?

Mr. CALLAWAY. Yes.

Mr. COOPER of Wisconsin. The gentleman read that, and did not the gentleman then say that that was one of the few utterances of the Philadelphia Inquirer with which he agreed?

Mr. CALLAWAY. Well, now, the gentleman certainly does not want to torture that into saying that it was a thieves' bill. I did not make any such statement as that. I do say that you could look always for a motive in votes of Members on this floor. Sometimes there are exceptions to it, but you look to the motive, and with a few exceptions you will find that those who stand for the things have projects in their own districts in the bill. Nobody believes in it except the men interested.

Mr. PLATT. Will the gentleman yield?

Mr. CALLAWAY. Yes.

Mr. PLATT. Does not the gentleman think that this will make a nice, beautiful, motor-boat project?

Mr. CALLAWAY. Oh, it is not good even for motor boats.

Mr. MOORE of Pennsylvania. Does not the gentleman think that is good wit when it comes from up alongside of the Erie banks?

Mr. CALLAWAY. It is good in any particular locality where money is poured out and for the reason that the money in the Treasury is emptied into that locality. You talk about a 7-foot canal or a 5-foot canal, and we have demonstrated on this floor time and again by producing the facts that a 7-foot canal from Buffalo, N. Y., across to the Hudson River failed. They are trying to deepen it to make a 12-foot canal; but, according to the showing on all inland streams, the thing will fail like the 7-foot canal failed. Why? Because there is only one kind of deep-water transportation that is keeping up, and that is where the boats can go with their own propellers carrying over a thousand tons of freight directly upon the waterway. The Mississippi River transportation failed. Can anybody say that is because they have not got water enough?

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. MANN. I yield five minutes to the gentleman from Iowa [Mr. TOWNER].

Mr. TOWNER. Mr. Chairman, I have high regard for the opinion of Senator Burton on these projects. As we all know, Senator Burton was a very ardent advocate of the canalization of the rivers in the United States. I do not know whether his opinion regarding that great general proposition is changed or not. In my judgment it has very materially changed. This proposition for the improvement of the Trinity River is a pure canalization proposition. There are hundreds of rivers in the United States that I believe would offer better prospects for successful canalization on this scale than this particular river in Texas.

Mr. SPARKMAN. Will the gentleman name one or two of those streams.

Mr. TOWNER. I think we have two in the State of Iowa. I will say the Cedar River and the Des Moines River, and such rivers are all over the United States.

I do not find fault with gentlemen who believe in the canalization proposition, but I suggest to the gentlemen at this time who have this particular project in view that there is no justification for the expenditure of $250,000 for the building of two more dams. In the first place these dams can not be built for less than $300,000, if the engineer's report is to be believed. Fifty thousand dollars for the continuation or keeping up of the work is all that can possibly be justified at this time. I think gentlemen absolutely ignore the fact that we have no right to spend one single dollar of unnecessary money at this time. We have no right now, in view of the tremendously increased expenditures that will necessarily be before this Congress for passage, to incur such a questionable expense as this.

I will say to gentlemen on the other side, who must in the last resort assume the responsibility for the passage of this bill, that, in my judgment, there was no necessity for taking up and passing this bill at this time, and if it had been brought before us in any form, it ought to have been brought before us in the form in which only necessary and inevitable expenditures were provided for. I voted against the consideration of the bill, I think it is unwise now, and it will be a load for the Democratic Party to carry in the coming campaign. The party will not be able to justify the expenditure of these millions of unnecessary money in view of the condition of the Treasury and in view of the calls that will be made upon it. The majority will not be able to justify the passage of this bill, carrying these enormous expenditures of money, in view of the fact that you will be called upon to lay upon the people an enormous burden in taxation, that will necessarily have to be laid upon them to pass the necessary defense bills. [Applause.]

Mr. MANN. I yield five minutes to the gentleman from Wisconsin [Mr. FREAR].

Mr. FREAR. Mr. Chairman, the gentleman from Wisconsin [Mr. COOPER] has twice this morning criticized me. He has on several occasions heretofore exercised the same right of criticism which is his, I acknowledge. I have not yet replied in a single instance, and I wish the House to bear evidence of that fact. I say to him and to the House that I have the highest respect for him personally, because he is an old Member, and I have exercised the fairest disposition toward him on all occasions, although when desiring to interrupt him and make corrections he refuses.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Mr. Chairman, I can not yield now. Time after time the gentleman has challenged some statement made by me. I am ready to answer any question but do not expect to reply in kind. I regret very much that he has made his criticisms personal. On the 1914 bill he had a right to vote for the bill if he chose; he did so, and I voted against it. On the second 1915 bill he had the right to vote for that bill if he chose; he did, and I voted against that. And on this bill he has the right to vote for it, and I have the right to and shall vote against it. He can challenge Senator Burton if he chooses, but the unfairness of it all lies in this, that while Senator Burton many years ago believed the Trinity River canalization was a good project, on the floor of the Senate he has said repeatedly in debate that he has seen the mistake not only in this case but in many others. And why? Because Senator Burton was chosen as the leading waterway expert of the country by Congress

and sent to Europe as chairman of the National Waterways Commission. He made a careful investigation of many canalization schemes there, and he came back with changed ideas, because he found that they were not a success, with the exception of the Rhine and a very few other projects where conditions differed widely from those found in this country.

Mr. Chairman, I understand that Senator Burton included the project of the gentleman from Wisconsin [Mr. COOPER] in his statement. I should have done so, because it is an imperative case on a harbor carrying a valuable commerce. It is a harbor on Lake Michigan, but why that should stand side by side with the Brazos and Trinity and many other questionable projects I fail to understand. It seems to me that that can be no defense to such items. If the gentleman has any inquiry to make of me and will give me a chance to reply, which he refuses every time, I shall be very glad to answer. I do say of Senator Burton that I understand that his judgment was based upon his trip to Europe and that he was disappointed in conditions found there, and when he came back he made statements on the floor of the Senate repeatedly about the Trinity and other rivers, giving reasons for their abandonment. He has shown the weakness of those projects from a commercial standpoint.

Mr. COOPER of Wisconsin rose.

Mr. FREAR. I shall be glad to reply at any time, if the gentleman desires, as to any project criticized or any statement I have made. The charge made to-day and the other day is and was that I have said $850,000,000 had been expended by the Government on waterways. It was a mistake in expression. I should have said "appropriated," for no man can tell exactly how much has been expended. It varies hundreds of thousands of dollars every day. Eight hundred and fifty million dollars have been appropriated by this Government for waterways, and no one can deny it. Over $800,000,000 had been expended eight months ago; but surely no importance can be attached to that statement, because it was fully explained in general debate.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. MANN. Mr. Chairman, I yield five minutes to the gentleman from Iowa [Mr. GOOD].

Mr. GOOD. Mr. Chairman, it seems to me that the discussion of this bill has demonstrated the false principle on which the bill is founded. When these questionable items are discussed gentlemen upon that side and the gentleman from Philadelphia [Mr. MOORE] on this side point to something that Senator Burton has said as a justification for the item carrying a useless expenditure to-day. During the past 15 years we have appropriated for the improvement of waterways and rivers and harbors in the United States more than $300,000,000. Since Senator Burton first placed some of these items in the river and harbor bill, we have expended millions upon them. Senator Burton then thought and argued on the floor of this House that the improvement of them would increase the commerce upon those rivers, and during the latter years of his service as a Member of Congress he observed that the more money we spent the less the commerce on some of these streams, and hence Senator Burton assailed such items. He favored them when he thought their improvement would aid commerce, and when he found the expenditure of public money was useless, he was against them, and he gave good and sufficient reasons for his stand at all times. Mr. Chairman, when the statement was read here to-day, and a serious indictment made against that side of the House, I have wondered why some one on that side did not answer it, an indictment by a great newspaper in Philadelphia that this bill was controlled by thieves or something to that extent. Of course we expected an answer to this serious charge by those in control of the bill. I do not believe it, but it is a serious indictment, and I noticed when the gentleman from Wisconsin [Mr. COOPER] referred to it the gentleman from Philadelphia [Mr. MOORE] applauded. Whether he applauded the sentiment or applauded the criticism, I am unable to say.

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield?

Mr. GOOD. I can not yield unless the gentleman will get me more time.

Mr. MOORE of Pennsylvania. The gentleman will not yield to me, although he is attacking me. [Laughter.]

Mr. GOOD. Mr. Chairman, there is another great paper published in Philadelphia, and it is the Bulletin of the Inland Deep Waterways Association.

Mr. MOORE of Pennsylvania. Oh, the title is incorrect.

Mr. GOOD. And by referring to page 2 of this paper I observe that the editor is J. HAMPTON MOORE, Esq.

Mr. MOORE of Pennsylvania. The gentleman is again in error. The title is wrong and he has read the wrong editorial name.

Mr. GOOD. It is signed by J. HAMPTON MOORE as president. There appears to be no editor. The gentleman from Pennsylvania [Mr. MOORE] seems to be the whole thing.

Mr. MOORE of Pennsylvania. Whatever he signs is all right; but the gentleman is in error.

Mr. GOOD. I observe that on the third page of this paper, fathered at least, I understand, by the gentleman from Pennsylvania——

Mr. MOORE of Pennsylvania rose.

The CHAIRMAN. The gentleman declines to yield.

Mr. GOOD. There is a beautiful picture of the Falls of Minnehaha, and under the picture are the words, "The Falls of Minnehaha," and then follows this statement: "This is not the Mississippi, but boats would have to ascend most of this height to get from St. Paul to Minneapolis. Mr. FREAR must have been thinking of hydroplanes." The gentleman who wrote that must have been thinking of submarines or something of the kind, because Minnehaha Falls are not on the Mississippi River. One does not go up Minnehaha Falls to go from St. Paul to Minneapolis, but the editor of this paper seems to think that is the case. At least, the statement is to the effect that one must go up most of the falls to go from St. Paul to Minneapolis, and so we are led to conclude that Minneapolis is located some place midway between the top and the bottom of Minnehaha Falls. [Laughter.]

Mr. MOORE of Pennsylvania. Why, the writer was quoting the statement of the gentleman from Wisconsin [Mr. FREAR].

Mr. GOOD. This bill seems to be predicated upon just such statements as that.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. MANN. The gentleman from New York [Mr. PLATT] desires to offer an amendment, and then I will yield him some time.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 21, line 7, strike out "$50,000" and insert in lieu thereof "$250,000."

Mr. MANN. Mr. Chairman, I yield to the gentleman two minutes.

Mr. PLATT. Mr. Chairman, up in the State of New York we are just about completing a canal which has been there a good many years, deepening it to 12 feet. I think the gentleman from Texas was probably right when he said that the Erie Canal deepened to 12 feet would be a failure, but the people of New York will have paid for it themselves. I think that in the canalizing of the Trinity River, since so much of it has been done, the United States Government might pay half and let the State of Texas pay the other half. I have introduced an amendment to equal the Government appropriation of $250,000 with $250,000 from the city of Dallas or the State of Texas. I believe that it ought to be tried. And where any locality will pay half, it may be worth while to go into these projects. They could be made to pay. We could pass a law preventing railroads from putting down their rates and driving the boats out of the business. That is what we ought to do. [Laughter.] We ought in some cases to compel the railroads to put the rates up so as to let the people use these rivers, inasmuch as we have spent such great amounts of our money on them. If we are going to have water transportation, let us have water transportation. Let us use the water.

The CHAIRMAN. The question is on the amendment.

Mr. MANN. Mr. Chairman, we ought not to disguise to ourselves the fact that the river and harbor bills are under suspicion and that Congress itself is under some suspicion in the minds of a very large share of the public in the way of making appropriations. Many people throughout the country believe that our appropriations and our actions here generally are on the "pork-barrel" theory. One of the items which has been seriously attacked in the river and harbor bill is this canalization of the Trinity River and another was the Brazos River. I think that we owe it to ourselves before we make further appropriations for the improving of projects of this kind that we should in some way require a new examination of the projects and a report to Congress, because if we go ahead making appropriations of this kind without further examination the people will come to the conclusion that Congress makes appropriations largely upon the graft theory.

Mr. SPARKMAN. Will the gentleman yield? I wanted to say that we authorized such an examination and that it is going on now. It is authorized by Congress, and at least two bills—in 1912, as I recall, and I believe in the last bill, of 1915.

Mr. MANN. I am sorry that the gentleman undertakes to talk in my time when he refuses to yield time. Of course, I have read the bill of 1915 and the bill of 1914 and the other

bills, but there is no reexamination of this thing, upon which we are depending, at least.

Mr. SPARKMAN. We authorize this at this time, for a part of it.

The CHAIRMAN. Does the gentleman from Illinois yield to the gentleman from Florida?

Mr. MANN. I do not yield. The gentleman from Florida, who insists on closing debate all the time, wants to take all the time I have. If I had a second left, I would yield.

Why do we not make an appropriation now? There is no reexamination of this project being made in a way that would satisfy anybody in the country. There ought to be. In justice to ourselves these things ought not to be open to dispute in the country as to whether Congress is merely acting upon a "pork-barrel" theory or whether it is endeavoring to make appropriations really in the interest of commerce. I do not know anything about the Trinity River, although I have listened to debate upon it by the hour in this House. I do not think the gentlemen who talk about it know a great deal in the way of expertness on the subject. We ought to know. The people ought to know that Congress is not proceeding upon the idea of dividing up the money in the Treasury to their districts for their own personal benefit, and that appropriations made here ought to be made and are made upon the theory that they are needed, are useful, and on the square. [Applause.]

Mr. SPARKMAN. Mr. Chairman, I yield 15 minutes to the gentleman from Texas [Mr. SUMNERS].

Mr. SUMNERS. Mr. Chairman, I am persuaded that, under the circumstances, the best reply that could be made to the criticism which Members have directed against the Trinity River is to state the facts with reference to that stream.

The Trinity River, as the name indicates, has three branches. One is the West Fork, which rises in Archer County, to the northwest of Dallas, flows through the counties of Jack, Wise, and Tarrant, and is united with the Elm Fork just above Dallas. The Elm Fork rises in Montague County, flowing south through the counties of Cook and Denton. From the upper point of the West Fork watershed to the city of Dallas on an air line is approximately 100 miles, and by river 150 miles. The distance across the upper edge of the watershed of these two branches is approximately 100 miles. The watershed above the city of Dallas is approximately 7,000 square miles. The East Fork of the Trinity River rises northeast of Dallas, drains a part of the counties of Grayson, Fannin, all of Collin, and flows through the counties of Rockwall and Kaufman, joining the united West and Elm Forks 50 miles below Dallas. The average rainfall on the watershed above Dallas is as great as that in the States of Illinois, New York, Iowa, Pennsylvania, Missouri, Wisconsin, Michigan, and Ohio. The rainfall on the East Fork watershed exceeds that of the watersheds of the other two branches.

From Dallas to the Gulf of Mexico by river is 511 miles, with a practically uniform fall of considerably less than a foot per mile. The plan for the navigation of the Trinity River under which the improvements have been made has always and now deals with it as a canalization project. The gentlemen who criticize this project know this, but they will not do the project the justice to discuss it from that standpoint.

The plan submitted by Col. Riché, under which work is being done, calls for 37 locks and dams, each with a lift of 10 feet, between the city of Dallas and tidewater, some forty-odd miles above the Gulf of Mexico. The Trinity River is unlike any other stream that I know of in this country, and in my judgment that difference is responsible for the fact that the casual observer has often not been impressed with its feasibility, while no investigator of the project from the first investigation in 1852 down has pronounced it nonfeasible. Nobody, at least for 20 years, has contended that money should be expended upon the Trinity River except in the promotion of its canalization. Nature has dug the canal deep and narrow through heavy gumbo soil that holds water almost like a jug. Its deep, relatively narrow channel and stable banks would enable locks and dams to be constructed at the minimum costs. I want to emphasize that it is unlike the average river, with caving banks and shifting channel, with sandbars forming and changing with every flood. There would be no danger of a lock and dam built across the channel being rendered worthless by a change of channel. There is another important consideration. It would not require anything like the same amount of water for the purpose of navigation that would be required in the ordinary canalized river, with sandy banks through which the water percolates easily, and with a broad surface exposed to evaporation. These are definite and distinctive merits which the Trinity River has.

Of all the projects now in this bill not one can compare with the Trinity in these important essentials. No stream in the world traverses a more fertile country, or one in which there is greater present or prospective development. The gentleman from Texas [Mr. CALLAWAY] says it can never be navigated.

THE ENGINEER'S REPORT.

In the report of the engineer made in 1899 it was stated that with these locks and dams navigation could be maintained at least eight months in the year. Unfortunately for the project, as it has developed, it was stated therein that $200,000 might be expended in sinking artesian wells along the banks of the stream to supplement the natural flow in order to make sure a longer period of navigation. This part of the report has been seized upon by those who have sought to make themselves famous by ridiculing this project. In this debate two members of the Rivers and Harbors Committee have referred to it. Mr. Chairman, I recognize that there is a difference of position among Members of the House as to the wisdom of improving inland waterways, but there should be no difference of opinion as to the obligation which rests upon a member of the Rivers and Harbors Committee when he comes before the House to report upon the facts developed in the hearings held before his committee. In his criticism of the Trinity River, the member of the committee from Wisconsin [Mr. FREAR] refers to the Trinity River as the stream which needs artesian wells for moisture. The gentleman from Massachusetts [Mr. TREADWAY] makes a similar reference. These gentlemen evidently purpose to create the impression that the sinking of artesian wells along the Trinity River was deemed by the engineer who made the report necessary to the navigability of the stream. They make these statements here and try to create that impression, notwithstanding the fact that I put into the record when this matter was presented to their committee a statement which nobody questioned then and nobody has undertaken to contradict, because nobody can contradict it, that by measurement beginning with October, 1898, and extending for a period of 26½ months, or during 774 days, with the exception of 73 days in that 26½ months, it was shown that enough water came down the Elm Fork of the Trinity alone to operate the contemplated locks and dams on the basis of one lockage every 20 minutes. Now, the Elm Fork is the shortest one of the two branches of the Trinity which flow by the city of Dallas. Of course, this test demonstrated the sufficiency of the natural flow of water during 8 to 10 months each year, which is far more than the average period of river navigation. But it is fair to the eminent engineer who made that report that the House knew that at the time the report was made $200,000 would have brought to the channel of the river from the artesian strata enough water to make more than 40 lockages per day and would have bridged over most, if not all, of such conditions as existed during the 73 days mentioned. That is clearly what the engineer meant and in effect what he said. These critics do not quote the report. They deliberately try to create the impression that as a part of the general scheme for navigation during usual conditions artesian wells were deemed necessary.

It is by this sort of method that this project is sought to be ridiculed into discredit. These gentlemen, and particularly the one from Wisconsin [Mr. FREAR], complain that they are being criticized as seekers of political notoriety. I want to say this, Mr. Chairman: When members of the committee deal thus with a project they not only invite that criticism but they arouse that suspicion. These projects are entitled to stand or fall upon an analysis of them and a fair, candid discussion of their characteristics. Of course there are periods of drought in Texas. There were 73 days during the 2 years and 2 months which I have referred to in which there was a drought, and navigation doubtless would have been suspended during that time.

DROUGHT AS AGAINST ICE.

The gentleman from Massachusetts and the gentleman from Wisconsin seem to regard that as evidence of the unfeasibility of the Trinity River project. If interruption of traffic for 73 days during 2 years and 2 months were a test of the feasibility of a river for the purpose of navigation, not one stream in the section of the country from which these gentlemen come could stand that test. In February I came down the Hudson River Valley and not one boat was in operation upon that river, not one boat had been in operation on that river for months, and I doubt if they are in operation yet. They did not have a drought in that country, but they had just as well have had. Not only during this winter, but during every winter, their streams are frozen solidly. Not a boat can move. The trouble with these gentlemen and with a good many others from other sections of the country who talk about "pork" is that everything is "pork" which does not "grease" their "barrel." I do not defend, and no man can defend, the appropriation of money for a project which is not meritorious.

THE FAITH OF DALLAS.

This project is one in which a vast majority of the people living in that section believe. The people in the city of Dallas, which I represent, have never been called upon by the Federal Government for any contribution with regard to this project to which they have not responded. They paid for the lock and dam sites. They put in $66,000 at one time. They have diverted their sewerage and raised their bridges at large expenditures. They are now offering, if the Federal Government will make an appropriation sufficient to complete this project, to put $3,000,000 into it, and this particular item, which is looking to the completing of section 1 at a cost of $600,000, one hundred thousand of local money is to go into the project.

I stated a moment ago that this project has never been unfavorably reported upon by the experts who have examined it. The first report was made on the Trinity River for the Federal Government by Lieut. William H. C. Whiting on the 23d day of January, 1853, from which I quote as follows:

THE FIRST REPORT.

For the purpose of navigation this stream is practical. During the time of high water being about 600 miles; during low water, at present, being 100 miles. Passes through very rich cotton, wheat, corn, and sugar lands. Season of high water is generally from about the 1st of January to the last of June. The river, however, has been known to remain up for 18 months. Transition from high to low water is not, as in most of Texas rivers, sudden. The great length and depth of the stream retains the water for a long time. At this time seven steamboats are engaged upon the river, and despite the difficulties three of them are now returning from a point 600 miles from the mouth. The Trinity is the deepest and least obstructed river in the State of Texas. Its size, length, depth, and the section of the country through which it flows entitles it to consideration.

The next report was made in 1890 by Maj. Allen, and was a preliminary survey from the mouth to Dallas, in compliance with the rivers and harbors act of 1890. His report was not unfavorable from the standpoint of navigability, but the necessary expenditure was not advised on the ground that in his opinion present and prospective commerce would not justify the expense of improvement. In his report he stated that the Trinity was one of the most important avenues of commerce in the State until the building of railroads.

DEVELOPMENT OF DALLAS.

Maj. Allen, of course, did not find the immediate prospects for commerce upon the river at that time to justify such an expenditure, and he failed in his vision of the future. The Trinity River Valley at that time had no commerce to speak of; the bottoms were vast wastes of timber, and the prospect of these bottoms being subjected to cultivation were remote. There was not a city upon its banks from the Gulf of Mexico to its headwaters. It was 10 years after that time before the city of Dallas had reached a population of 42,000; 10 years after that report its postal receipts were less than $200,000; its city assessment was only $23,000,000; its building permits, $674,000; its real estate transfers, $4,500,000; and its banks' deposits, $7,000,000. About this period that great southwestern section began to emerge from the second state of a country's development. It had already passed through the pioneer stage, and was emerging from a strictly agricultural and retail business stage to the stage of city building and the beginning of caring for its own manufacturing, jobbing, and financial interests. From 1900 to 1910 the population of the city of Dallas increased 116 per cent. Its postal receipts trebled; its city assessments trebled; its building permits increased 700 per cent; its real estate transfers went from $4,000,000 to $26,000,000; and its banks' deposits from $7,000,000 to $26,000,000.

From 1910 to this time its population has increased from 92,000 to at least 125,000; by 1914 its postal receipts had increased from $667,000 in 1910 to $1,075,000, its city assessments from $74,000,000 to $116,000,000, its building permits from $4,000,000 to $6,000,000, its real-estate transfers from $26,000,000 to $45,000,000, and its bank deposits from $26,000,000 to $31,000,000. In addition to this character of development, the vast bottom lands which lie between the city of Dallas and the Gulf of Mexico are being brought into cultivation. Two million acres of timber are between the city of Dallas and the Gulf which ought to be utilized, and would be utilized if transportation facilities were offered. There are vast lignite-coal deposits contiguous to the river, many sorts of clay, and the last engineer's report made states that large beds of merchantable iron ore are along the river.

There are no railroads paralleling this stream for any considerable distance, except at a distance from the stream of 25, 30, or 40 miles. I am sure that if Maj. Allen could have foreseen this development he would not have concluded that the prospective commerce upon this river would not justify the expenditure of money, especially if he could have seen the development of the vast section of the country to the north of Dallas, and could have appreciated the necessity of the agricultural and other products coming down from the great northwestern section to find cheaper transportation to the ocean.

RICHÉ'S REPORT.

The third and last survey of the river was made by Col. Riché, under the act of March 3, 1899. He stated in his report that the watershed of the river had an area of 16,500 square miles (a territory equal to the States of Massachusetts, Connecticut, Rhode Island, and Delaware), that the river traversed a fertile section capable of greatest development, and stated that locks and dams could be erected without excessive costs, because of the river's narrow, high, firm banks affording good foundation for the necessary structure. He concluded his report by saying that he considered 4-foot navigation of the Trinity from Dallas to the mouth to be not only advisable but urgently necessary, and that it would accomplish much good for a great many people. He also states in his report that the making of this river navigable would develop the rich bottom lands along the river and the adjacent territory. That report, as stated, was made March 3, 1899, when Dallas was a city of 40,000 inhabitants, with a more or less uncertain future and no considerable development along broader commercial and manufacturing lines. The need and the opportunity for the use of this navigation is, of course, much greater to-day than it was when his report was made. Following this report, the Trinity River project was incorporated in the rivers and harbors bill, and Senator Burton, chairman of the Rivers and Harbors Committee at that time, in his speech in the House on January 9, 1901, in discussing this item, said:

SENATOR BURTON'S COMMENT.

We have not included in the bill any new projects for locks and dams except the Trinity River, in the State of Texas, where we have appropriated or authorized $750,000, part for general improvements and part for the construction of locks and dams. I am frank to say to the committee that on first examining this project I did not think favorably of it, but I gave it a good deal of consideration. The committee called before them the engineers having the improvement in charge, and it seemed to us that an expenditure of this amount was justified. The river is easily capable of improvement. It has stable banks, and the construction of locks and dams is a comparatively easy problem. There is a great amount of traffic in prospect both from the source to the mouth and from the mouth toward the source. In this particular it differs from many other rivers, where the bulk of the traffic must necessarily be one way. Great quantities of cotton and grain will be carried toward the mouth, and from the mouth toward the source timber and building material for the large expanse of prairie tributary to Dallas toward the north.

I understand, of course, that Senator Burton has changed his general attitude with regard to these inland improvements, and while he may have changed his conclusions he can not change the facts stated in his speech upon which his conclusions were based.

In the report of Col. Riché the Trinity River was divided into five sections, and it was estimated that a 4-foot navigation would require 37 locks and dams, which he estimated would cost $4,000,000, and $550,000 more for 6-foot navigation. For the first section, which is the section from the city of Dallas to about 50 miles downstream, where the East Fork of the Trinity unites with the stream flowing by the city of Dallas, five locks and dams were originally contemplated. This is the most difficult section, and to this original number two locks and dams have been added, making a total of seven, all of which are either completed or under process of construction, except locks and dams 3 and 5, for which the present item in this bill is intended. It is the opinion of many of those who are intimately familiar with the Trinity River that with this section completed, which would enable commerce from Dallas to reach the point where the East Fork joins, and with the stream cleared from there of snags and other obstructions, a considerable commerce could reach the Gulf, but with these two locks and dams not completed no use can be made, of course, of the expenditures of the Government heretofore made. It is as though a chain of seven links had been contemplated and two of the intermeditary links of which had not been made.

It is not possible at this time, as the chairman of the committee advises me, to deal with the entire project, because the engineers who were directed, under the act of 1912, to reexamine the Trinity, with the exception of section 1, have not yet made their report, and it is rather an interesting fact, in view of the criticisms which have been levied against this stream, that the reason given by the engineers for not having completed this report is that they have been prevented from making the survey by the high water along the river.

These two locks and dams—3 and 5—are to cost $600,000. This bill carries an item of $250,000, being the amount which has been estimated to be expended this year, the remaining $50,000 to be provided by the citizens of that section. In this

connection I want to put into the RECORD a list of boats which, prior to the time the railroads were built in this country, operated upon the Trinity River, as follows:

Vesta, Belle of Texas, Josiah H. Bell, Texas, Silver Cloud, Black Cloud, Col. Stelle, Lucy Gwinn, Justice, Ida Reese, Pearl, Eva, Early Bird, C. B. Lee, Jack Hayes, Magnolia, Gov. Pease, Nora, Como, Col. D. L. Cage, Republic, John J. Carr, John S. Sellers, Henry A. Jones, Correro, Trinity No. 1, 1839, Trinity No. 2, Star State, Grapeshot, Yellow Stone, Warsaw, Laura, Constitution, Lafayette, Galveston, Emblem, Sabine, Delrenott, Sparta, Albert Gallatin, Friend, Rufus, Palmetta, Sam Houston, Rodney, Dayton, City of Houston, Putnam, Mary Leonard, Eclipse, J. B. Sydnor, Ogden, Matamoras, Thomas N. McKinney, Orleans, Bay State, Frank T. Archer, Belle, Neptune No. 1, Neptune No. 2, John Jenkins, J. D. Hindes, Harris, Fort Henry, Mollie Hambleton, Camargo, Uncle Ben, Cleona, Sunflower, Diana, and *Comanche.*

I wish to again call attention to the statement made by Lieut. Whiting, in 1853, that at that time seven boats were regularly plying upon the river, and two were on their return voyage from a point which must have been as far up as the city of Dallas.

WHY RIVER COMMERCE IS DISAPPEARING.

Now, Mr. Chairman, it has been stated in this debate that commerce is disappearing from American rivers, notwithstanding the vast amount of money which the Government is expending for their improvement, and it is argued that the fact that this commerce is disappearing shows that these expenditures ought not to be made. At first consideration it might seem that this argument is sound, but the fact remains that transportation by water is the cheapest method of transportation known to man. Whenever a stream is made navigable railroads reduce their rates in order to meet the water transportation. Now, if water transportation were not the cheapest means of transportation, railroads would not do this. Nobody ever heard of steamboats reducing their rate in order to meet ordinary railroad transportation. The reason why traffic is being driven from the streams is not difficult to understand if gentlemen really want to understand. Railroad lines deliberately reduce their transportation charges where they come into competition with waterborne traffic until they drive the boats from the streams.

Mr. PLATT. Will the gentleman yield?

Mr. SUMNERS. Certainly.

Mr. PLATT. Does not the gentleman agree with me that the railroads ought to be prevented from putting their rates down to a point where they can drive the traffic off the rivers?

Mr. SUMNERS. I do agree most heartily with the gentleman. They use their revenue collected at other points just exactly as the trusts use their revenues collected at other points to crush competition at a given point. When the Central Railroad was built into Dallas cotton was being carried from in that neighborhood to the Gulf at less than $1.50 per bale. I have seen advertisements of the Central Railroad issued at that time in which it offered to carry cotton for $1.15 per bale. The result was that with the difficulty in keeping the channel cleared and the various hazards incident to navigation upon the streams receiving no public attention, boats were driven from them, and then the railroads put the freight on cotton up to $3 per bale, and that same thing is happening all over the United States.

In the report of the Industrial Commission of 1897, I believe it was, that commission was trying to discover why traffic was disappearing from the American rivers. Among the witnesses whose testimony it took was an old captain on the Mississippi River. He told the whole story in a sentence when he directed the attention of the commission to the fact that the railroads were hauling cotton from a point 250 miles from New Orleans to that city for 50 cents a bale, whereas at a point at right angles to that point and equal distance from New Orleans the railroads were charging $2 per bale.

Now, I have no complaints to make at the railroads. I recognize that they are absolutely essential, and, of course, ought to be protected in the earning of a fair revenue, but unless there is something which has not reached my attention, I am sure it is contrary to the best economic interest of the country not to utilize also the streams of this country for the transportation of heavy freight not requiring rapid movement, and the utilization of the railroads for the transportation of passengers and the other character of freight. With the power of rate control which the Federal Government and the several States possess and exercise, railroad tracks ought not to be permitted to parallel each other, and thus put upon a community the burden of maintaining two or more railroads when one would serve the purpose, and certainly ought not to be permitted to parallel each other when there is a navigable stream that could be utilized.

We are not unfriendly to the railroads in my section of the country, but with the rapid development of that country, we need also to utilize the Trinity River to give the cheaper rates of transportation, which a navigable stream alone makes possible, for those commodities which do not require the rapidity of movement which the railroads afford. Not only is this project important to the people who live in the city of Dallas and the territory which lies between that point and the Gulf of Mexico, but it is important to those sections which lie to the north of the city of Dallas; to the grain growers of Oklahoma and Kansas. Its benefits will be shared by our neighboring country, towns and cities, perhaps not to the direct extent that those immediately upon the stream would profit.

Mr. MOORE of Pennsylvania. Will the gentleman yield for a question?

Mr. SUMNERS. I will.

Mr. MOORE of Pennsylvania. Does the gentleman know that the railroads in my vicinity, round about Pennsylvania and New York, have placed an embargo upon the products from the gentleman's section of country, so that they can not at times reach the seaboard?

Mr. SUMNERS. I don not know that.

Mr. EAGLE. And that there are more than 50,000 loaded freight cars at the present time in that vicinity which can not discharge their contents?

Mr. SUMNERS. Summing up what I have said and addressing myself particularly to the critics of this river, I want to make this statement: The Trinity River, from the standpoint of navigation, is a canal already dug; a deep, narrow channel cut through gumbo soil; stable banks; no sand bars; having therefore the minimum of percolation, the minimum of evaporation, the minimum of expenditure for the keeping of the channel open because of its noncaving banks, and absence of sand bars, the minimum danger of having the stream cut a channel around the lock constructed (there is no such danger), the minimum expenditure for the locks and dams for volume of water impounded, and the maximum of territory to be developed and served. As such, I present this project for comparison with any project in the world, and challenge critics of the project to meet these specific statements. To those from the North and East who object to this stream because we sometimes have droughts in that section, I ask them to name a river in their section that is not put out of commission three times as long each year as this stream would be unable to afford the water to make the necessary lockages per day, to carry a vast commerce. I recognize the difficulty which Members have who want to be fair about this matter. Their knowledge of rivers is limited to the average stream in this country which flows with a shifting current between wide shallow banks. With such a stream where there is large percolation and evaporation and channel obstruction, greater volume of water is necessary in order to make navigation possible, than with this stream which I represent. It is a canal, gentlemen, already dug.

I have the statement upon good authority, though I have not made the comparisons myself, that during the period in which the measurement was taken to which I have referred, with the exception of the 73 days mentioned, more water came down the Elm Fork of the Trinity than was utilized at that time for moving the vast commerce then on the Erie Canal.

The CHAIRMAN. The time of the gentleman has expired. The question is on the amendment offered by the gentleman from New York [Mr. PLATT].

The question being taken, the amendment was rejected.

Mr. GOOD. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Iowa offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. GOOD: Page 21, line 7, after the word "improvement," change the period to a colon and insert: "*Provided*, That no part thereof shall be expended until after a reexamination by the Secretary of War and a favorable report thereon to Congress."

The CHAIRMAN. The question is on the amendment of the gentleman from Iowa.

The question being taken, on a division (demanded by Mr. MANN) there were—ayes 40, noes 65.

Accordingly the amendment was rejected.

Mr. TOWNER. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Iowa offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. TOWNER: Page 21, line 2, after the figures "50,000," strike out the semicolon and in lieu insert a period, and strike out the remainder of the paragraph.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa.

The amendment was rejected.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts [Mr. TREADWAY] to strike out the paragraph.

The question being taken, the amendment was rejected.

The Clerk read as follows:

Cypress Bayou and waterway between Jefferson, Tex., and Shreveport, La.: For maintenance, $5,000.

Mr. CLARK of Florida. Mr. Chairman, I move to strike out the last word. The gentleman from Wisconsin [Mr. FREAR] put a speech in the RECORD on the 13th of January last in which he went out of his way to talk about public buildings. He had something to say about a $60,000 building in a $5,000 town. I want to state to the gentleman that if he is going to make a fight on "pork-barrel" legislation, as he calls it, he ought to at least be partially consistent. In the last Congress the gentleman from Wisconsin [Mr. FREAR] introduced a bill to appropriate $75,000 for the purchase of a site and the construction of a building thereon in a town in his district with 2,810 population. [Laughter.] The postal receipts are $10,748.63, just over the line. He introduced another bill to construct a building at Rice Lake, Wis., costing $75,000, where they had 3,963 population and twelve thousand and some odd dollars postal receipts.

Now, I want to say that I am in favor of constructing buildings in towns of that character. I think it ought to be done. But the gentleman from Wisconsin denounces that kind of legislation as "pork," and it seems to me that the gentleman is in favor of "pork" if he can get his slice of it. [Laughter.]

I want to say further that the gentleman from Indiana [Mr. CULLOP], my distinguished friend, has at the present time five bills pending in committee for the purchase of sites and the construction of buildings, and one of these is for a town called Bicknell, Ind., where the postal receipts are $6,971.09, the population is 2,794 people, and he asks for $100,000 appropriation. [Laughter.] He goes my friend from Wisconsin $25,000 better. It does seem to me that these gentlemen who have got no rivers and harbors in their districts to be taken care of ought not to join the yellow press of the country in indiscriminately denouncing "pork-barrel" legislation; but if they do, they ought to be consistent in their course and not prefer these bills.

Mr. FREAR. Will the gentleman yield?

Mr. CLARK of Florida. Yes.

Mr. FREAR. It was that very thought that induced me to refuse to introduce any more such bills into Congress. I could explain to the gentleman, but I did not understand when I first came here, and I introduced those bills. I stopped as soon as I discovered it.

Mr. CLARK of Florida. The gentleman has reformed in that regard.

Mr. FREAR. I have refused since to introduce further bills of that kind.

Mr. CLARK of Florida. The gentleman made the same fight against the river and harbor legislation in the last Congress, when these bills were pending.

Mr. FREAR. Yes; but I could not withdraw the bills after I had introduced them.

Mr. MADDEN. Mr. Chairman, I believe that the public-building legislation is the most iniquitous legislation that this Congress undertakes. I believe that no public building ought to be erected in any town of less than 25,000 people. I do not believe that any public building ought to be erected in towns of 9,000 or 12,000 or 15,000.

Mr. CLARK of Florida. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. CLARK of Florida. I want to ask the gentleman if it is not true that there is already available in Chicago a million and three-quarters dollars simply for a post-office site?

Mr. MADDEN. Yes.

Mr. CLARK of Florida. And is not the greater part of the Chicago delegation, including the gentleman himself, asking for an addition of four and a quarter million dollars for the site, making it $6,000,000?

Mr. MADDEN. Yes.

Mr. CLARK of Florida. If Chicago has $6,000,000 to buy a site, does not the gentleman believe that in good conscience these enterprising towns in the rural districts ought to have $25,000 or $50,000 to buy a site and put up a building?

Mr. MADDEN. I will be frank with the gentleman from Florida. I really do not think that any city in America of less than 25,000 people ought to have a public building unless it is a city where they have the courts. I think so for this reason: Everybody knows that in a town of 900 or 1,000, or even 5,000, the postal facilities can be furnished at an expense of not exceeding $1,000 or $1,200 a year. Everybody also knows that when a public building is erected the cost to the Government for rent and service runs not only to $1,200 but up to five and six thousand dollars a year. That is one of the reasons why the Post Office Department runs behind in the conduct of its business. The money of the people is invested in buildings in places where there is no justification for their erection, because the business of the community is not sufficient to warrant the expenditure. To put these buildings up as a monument to the community is unfair. We ought to put the public buildings up where they are needed and where the business of the country will justify it.

Mr. ADAMSON. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. ADAMSON. I want to ask the gentleman, and I will ask unanimous consent to extend his time—does not the gentleman think that he has a better reply to the gentleman from Florida in that the Scripture justifies his contention that we ought to favor the large cities instead of the small towns where it says that the rich shall grow richer and the poor shall grow poorer, and to him that hath shall be given, and to him that hath not shall be taken away even the little that he has? [Laughter.]

Mr. RUCKER. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. RUCKER. I understand the gentleman to say that he would not build a post-office building in a town with less than 25,000 inhabitants unless they had the Federal court in it.

Mr. MADDEN. Yes.

Mr. RUCKER. And that court would be in session perhaps only four weeks during the year, while a post-office building is doing business the whole 12 months. What does the Federal court add to it?

Mr. MADDEN. I would build the building where it was most economical to have it. Now, as to Chicago and its post office. I desire to state to the gentleman from Georgia, the gentleman from Florida, the gentleman from Missouri, and to all the gentlemen here that the city of Chicago has a population of 2,500,000 people. It has postal receipts of $26,000,000 a year. It turns into the Treasury of the United States $20,000,000 a year over and above the expenses for conducting the post office. Its postal business is increasing beyond the dreams of men. We can not keep pace with the increased business. We went into the building we are occupying now in 1907. The receipts of the office were $12,000,000, and to-day the receipts are $26,000,000.

We have a city with 39 great trunk lines of railroad, representing over 125,000 miles of railroad. We are in the center of the country geographically. We are the distributing point for all the mail that comes from every section of the country, and we must have facilities to conduct that business. It is not Chicago that wants this appropriation, it is the people of the United States.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. ADAMSON. Mr. Chairman, I ask unanimous consent that the time of the gentleman may be extended for one minute. I would like to get some information.

Mr. MADDEN. Mr. Chairman, I ask unanimous consent for five minutes.

The CHAIRMAN. Is there objection?

Mr. SPARKMAN. Mr. Chairman, I must object to that.

Mr. MADDEN. Oh, it is only fair that I should be given an opportunity to reply to the gentleman from Florida.

Mr. SPARKMAN. But this is foreign to the subject under discussion.

Mr. MADDEN. That is true; but no objection was made to the discussion of the gentleman from Florida [Mr. CLARK].

Mr. SPARKMAN. But he was talking to the bill.

Mr. ADAMSON. The same principle applies to the rivers and harbor of the country. They want to give everything to the big places and cut out the little ones.

Mr. CLARK of Florida. Mr. Chairman, I ask unanimous consent that the gentleman from Illinois may be permitted to proceed for five minutes more, although I did not take my full time.

Mr. MADDEN. I simply want to reply to the gentleman.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that the time of the gentleman from Illinois may be extended for five minutes. Is there objection?

Mr. SPARKMAN. Mr. Chairman, I will not object at this time, but I will to any such further extension.

The CHAIRMAN. The Chair hears no objection.

Mr. ADAMSON. Mr. Chairman, I will ask the gentleman if it is not true that the magnificent growth and the transcendent prosperity of Chicago, of which he boasts and of which we are all so proud, is largely owing to the fact that they have done business with all of the small towns within hundreds of miles of that city?

Mr. MADDEN. Of course it is true, and we are proud that they are so connected with us that we can do business with them; but the fact still remains that in asking for facilities with which to transact the public business there we do not do that because we want an appropriation, but we do it because we want to further expedite the public business.

Mr. SUMNERS. Mr. Chairman, will the gentleman yield?

Mr. GREENE of Vermont. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. You can not take it away from Chicago if you want to. It is the place where you have to go to do the business.

Mr. ADAMSON. Is the gentleman not willing to let some of the other towns get some business?

Mr. MADDEN. We have facilities to send the mail into every section of the country.

Mr. GREENE of Vermont. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. GREENE of Vermont. I understood the gentleman to say that he would not put a public building in a town of less than 25,000 inhabitants?

Mr. MADDEN. That is what I say, and I will say it again.

Mr. GREENE of Vermont. Then, following the line that the gentleman has just stated, that this building should be for the public convenience, would the gentleman not put a public building in a town that was a customs collection district, where they need the offices, as well as the post office?

Mr. MADDEN. Of course, if you have the customs collection district there and the headquarters of the courts and the town is smaller than 25,000 inhabitants, I would make an exception in that case, but it all comes back to this: If you can get the facilities to transact the public business for $1,000 a year, there is no reason on earth why we should spend $5,000 a year to do that same work.

Mr. SUMNERS. Mr. Chairman, will the gentleman yield?

Mr. CLARK of Florida. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. CLARK of Florida. I want to ask the gentleman this: I think the gentleman will agree with me that the Government does not rent the post office at any of these smaller towns except when the owner of the building gets at least 8 or 10 per cent out of it. It would not be business to rent it for any smaller rate than that.

Mr. MADDEN. I do not know what the rate is.

Mr. CLARK of Florida. If that is true, and the Government can get money for 2½ or 3 per cent, does not the gentleman think it would be a good business proposition to put buildings in those towns, provided you put ordinary workshop buildings there and did not build monuments?

Mr. MADDEN. If the construction of a public building will not cost the people of the United States any more than the rent of a private building, I then would say surely put the public building up, but that is not the case, has not been the case, and will not be the case, because every place we put up a public building we increase the cost of operating the department three, four, and five hundred per cent.

Mr. CLARK of Florida. One more question?

Mr. MADDEN. Yes.

Mr. CLARK of Florida. And is it not true that that is occasioned by reason of the fact that the Government employs expensive janitors, and so forth, to take care of the buildings, which is not done by the private owners in any of the small towns, and that there is no necessity for janitors at $1,000 and $1,200 a year?

Mr. MANN. Oh, $1,000 and $1,200 a year, nonsense! The janitors get $45 a month in most of these places.

Mr. MADDEN. That is all, but it is the amount of money we invest in the building that adds to the cost.

Mr. RUCKER. Mr. Chairman, will the gentleman yield?

Mr. MADDEN. Yes.

Mr. RUCKER. The gentleman advocates the doctrine of renting wherever the rental would be cheaper than the interest upon the investment and the expense of maintaining it.

Mr. MADDEN. Yes.

Mr. RUCKER. If that is good for the Goverment, would it not likewise be good for the citizenship of this country?

Mr. MADDEN. Certainly.

Mr. RUCKER. Then, would it not be well for men who are able to own their own homes to rent homes if they can get them more cheaply than they can maintain their own homes?

Mr. MADDEN. Yes.

Mr. RUCKER. Is that done?

Mr. MADDEN. All men who are wise——

Mr. RUCKER. Does the gentleman believe it would be a good thing in this country if men did not own their homes but lived in rented homes?

Mr. MADDEN. Where a man can own his home I advise it, but where he can live more economically by renting, I advise that.

Mr. MANN. Mr. Chairman, I move to strike out the last two words, just for a moment. A few moments ago we had under consideration an amendment to strike out the appropriation for the further improvement of the Trinity River. I made the observation that I thought this project, in view of the situation, ought to be reexamined. The distinguished gentleman from Florida, the chairman of the Committee on Rivers and Harbors, interrupted me to ask if I did not know that it was already provided for in the river and harbor bill of last year. I said that I did not, although I had read the bill; when he informed me that it was provided for, and he reiterated the statement it was provided for, and came in again and said it was so provided. I have again refreshed my recollection, and I find this.:

> The following projects now under improvement shall be reexamined, in accordance with the law for the original examination of rivers and harbors, with a view to obtaining reports whether the adopted projects shall be modified or the improvement abandoned.

But the Trinity River is not in the list.

Mr. HULBERT. Mr. Chairman, has the gentleman looked at the previous——

Mr. MANN. I do not ask the gentleman from New York to interrupt me.

Mr. HULBERT. I merely wanted to ask the gentleman a question.

Mr. SPARKMAN. Mr. Chairman——

Mr. MANN. I have not finished yet, although I have scored. There is no provision in the bill or the law for the reexamination of the Trinity project. There is a general provision at the end of this section directing the Chief of Engineers to make a report upon other projects, river or harbor, the further improvement of which, under present conditions, is undesirable, or in which modifications of the plans of projects should be made. But there is no authorization for reexamination. We could not spend a dollar on it. If they find something anywhere in the United States at any time, irrespective of that provision, they can report it ought to be abandoned, but they never have and never will. But the gentleman from Florida was mistaken. He thought that the Trinity River was in this list, and it is not.

Mr. SPARKMAN. Mr. Chairman, I knew what I was talking about. I was entirely frank with the House and I was not trying to deceive the gentleman from Illinois. If there is anybody on the floor of this House except my friend the gentleman from Illinois who can not see that the language in the act of 1915 embraces every river and harbor in the country I would like to have him rise and state it.

Section 14 of that act says:

> That the following projects now under improvement shall be reexamined, in accordance with the law for the original examination of rivers and harbors, with a view to obtaining reports whether the adopted projects shall be modified or the improvement abandoned.

Then, after naming several waterways upon which reports are directed the section proceeds:

> And the Chief of Engineers is directed to make a report upon any other project, river or harbor, the further improvement of which under present conditions is undesirable, or in which modifications of the plans or projects should be made.

Certainly this language embraces not only the Trinity River, but every other waterway under improvement in the country. In addition to that, Mr. Chairman, the act of 1912 had this provision in regard to the Trinity River:

> Improving Trinity River, Tex.: Continuing improvement with a view to obtaining a depth of 6 feet between the mouth and Dallas by the construction of locks and dams heretofore authorized, and for an accurate instrumental survey of the river as recommended in the Annual Report of the Chief of Engineers for 1911, $425,000.

Now, there was a provision specifically requiring the reexamination of the Trinity River, and an instrumental survey—whatever that may mean. Now, that survey has been going on ever since, and is not yet completed. The engineers, however, considering that the first section of that river, from Dallas down to a point about 50 miles below that city, was not embraced in that provision for the reason that it was already adopted and under improvement, and for the further reason, perhaps, that they do not think it necessary to make another survey of that section, have been confining their investigations to the lower part of the river, the balance of the 511 miles, and expect to report upon the same between now and the next session of Congress, so that the portion of the river outside of the first section is being thoroughly examined, and a complete report will no

doubt be made upon it prior to the next session of Congress and in time for use, if need be, at that session.

Again, I want to say that, under the provision contained in the act of 1915, not only are the engineers examining and reporting from time to time upon the 10 projects mentioned, but they are also examining and will continue to examine other projects until they have completed the examination of all of them now under way, or such of them as they may consider undesirable or that should be modified.

Now, I regret that the gentleman should have seen proper to question my good intentions here. I did not intend to deceive this House, the gentleman, nor anyone else. I hope I shall never stoop so low as to attempt any such thing, either here or elsewhere. [Applause.]

Mr. SMITH of Minnesota. Mr. Chairman, I rise in opposition to the motion of the chairman of the committee.

Mr. SPARKMAN. Mr. Chairman, how much time does the gentleman want?

Mr. SMITH of Minnesota. Five minutes.

Mr. SPARKMAN. I ask unanimous consent, Mr. Chairman, that all debate on this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto close in five minutes.

Mr. HUMPHREY of Washington. Mr. Chairman, will the gentleman extend that to 10 minutes? I would like to have 5 minutes.

Mr. SPARKMAN. Could not the gentleman speak on some other item?

Mr. HUMPHREY of Washington. I could; but it might as well be here. I want to follow the gentleman. I want only five minutes.

Mr. SPARKMAN. I ask to extend it, then, Mr. Chairman, to 10 minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto close in 10 minutes. Is there objection?

There was no objection.

[Mr. SMITH of Minnesota addressed the committee. See Appendix.]

Mr. HUMPHREY of Washington. Mr. Chairman, during this entire discussion there has been a great deal said back and forth in the way of insinuation about certain Members on both sides of the aisle being interested in certain propositions. The truth of it is that we are practically all alike. We are none of us saints, and none of us very great sinners.

The situation was illustrated a little while ago in the debate that took place. Here was my distinguished friend from Texas [Mr. CALLAWAY] and my distinguished friend from Iowa [Mr. TOWNER], and my other distinguished friend from Iowa [Mr. GOOD]; they were very much opposed to river and harbor bills. To their eyes a river and harbor bill is a "pork barrel." It is "graft." But remember they do not have a river in their own districts sufficiently large in which to take a respectable bath. [Laughter.] They lose nothing by attacking this river and harbor bill. They have an opportunity to get a little political advertisement, with perfect safety, at the expense of somebody else.

Then there was my distinguished friend from Chicago [Mr. MADDEN], and he thinks that an appropriation for a great city is a splendid thing, but if it is for a small town it is wrong, it is outrageous, it is "pork." And then there is my good friend, Judge CULLOP, of Indiana, who thinks that an appropriation on a river and harbor bill is an outrage, that it is wrong and infamous, but that it is a good thing to get a hundred thousand dollars for a public building for a little town in his district. [Laughter.] It all depends upon whether or not it happens to strike the particular Member.

Now, I have been a Member of this House for almost 14 years, and I have never yet seen a man that refused to take anything that was for his own district; and if there is one in this House, let him stand up, so that we may all see him. [Laughter.]

Take even my distinguished friend here from Wisconsin, Mr. FREAR, who has occupied so much time in referring to the "pork" contained in the river and harbor bill, and only a few moments ago he turned around in that magnificent and apologizing way of his to his colleague and said, "I have a very friendly disposition toward your project." That project is in Wisconsin. [Laughter.] He also has a very "friendly disposition," so far as I know, toward all the projects in Wisconsin. They are close to his district. His disposition grows friendly as he approaches home.

Now, if there is any man on either side of this aisle that has ever refused an appropriation for his district, he ought to have his photograph taken, so that it might be placed in the gallery of the immortals, and coming generations could gaze upon his benign and saintly countenance. [Applause.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Red River, Ark. and Tex.: Continuing improvement and for maintenance between Fulton, Ark., and Washita River, Tex., $25,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin moves to strike out the last word.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto end in five minutes.

Mr. SLOAN. Mr. Chairman, I desire five minutes.

Mr. STAFFORD. Mr. Chairman, will the gentleman make it 10 minutes? I asked the gentleman to postpone his request until the following item.

Mr. FREAR. I want only five minutes.

Mr. SPARKMAN. Then I make it 12 minutes, Mr. Chairman; 5 to be controlled by the gentleman from Wisconsin [Mr. FREAR], and 5 by the gentlemen from Nebraska [Mr. SLOAN], and 2 by myself, if I need it.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto close in 12 minutes. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, the gentleman who has just preceded me [Mr. HUMPHREY of Washington] has questioned my interruptions of the work of the committee here. I have spoken thus far on three different occasions, I believe, during the whole day, not very often; and he questions whether or not I favor anything that is not in Wisconsin.

Why, assuredly, there is not a gentleman who can put himself in any other position who is in favor of waterways, and it is useless to iterate and reiterate such a proposition. But no waterway that fails to develop commerce after a fair test, and has had none in the past, should receive encouragement. If we are going to establish any rule of public honesty in waterway expenditures, we ought to criticize them and strike them out.

I do not insist upon my own views; I do not question projects like that for the improvement of New York Harbor and many others. There is no question about those, and no gentleman would criticize them.

But here is the Red River. Probably you are going to pass it. There is a $25,000 appropriation here. We have already appropriated over half a million dollars—$520,000—for this stream. What traffic do you find for last year? Outside of logs and timber that floated down, just 5 tons, and you are asked to give $25,000 in this case. Does it not seem preposterous after many years of Government work? Five hundred and twenty thousand dollars have been spent on the river since 1886. It has been improved for a great many years, and 5 tons is the result, and $25,000 more is asked in the bill.

In this connection I wish to read a letter which I have read before, and which is from a man who lives on this upper Red River:

KIOMATIA PLANTERS' CO.,
Kiomatia, Tex., June 13, 1914.

Hon. Mr. FREAR, M. C.,
Washington, D. C.

DEAR SIR: In the June 6th edition of the Saturday Evening Post the first article in the editorials is one with reference to yourself and your proposed investigation of the waste of the public money on rivers and harbors.

Allow me to congratulate you on the step you have taken, and wish you great success in your much-needed probe.

As a Red River planter, one who has spent 20 years on Red River, allow me to say (and it is the consensus of opinion of all my neighbors) that the improvement (?) of Red River this high up by snag boats is not only a farce, but actually detrimental to navigation—were such a thing possible—and to the land on the banks of the river. It is even a joke among the crews of the snag boats themselves. I will not go into figures and dates as to the number of boats navigating Red River, amount of money spent on it, etc., as you have all these at hand. But as for the good it does, I can speak. There has not been a boat (except a snag boat) on the river here in six years, and the last one was a booster boat that went to Shreveport to prove that Red River was navigable this high up, and it went down on the biggest rise we have had since 1843. The crews of these snag boats quit at 4 p. m.

I wish you to know that this plantation has actually suffered from the work of the Government snag boats.

These snag boats are all right in their places, but this Simple Simon business is the limit.

I understand the work on the Trinity is even more foolish and wasteful of money.

If this matter is of interest to you, I will gladly get up some more facts for you. At any rate, I would be pleased to have you keep me posted as to the headway you are making in this line.

GEORGE T. WRIGHT.

Mr. WINGO. Does not the gentleman know that the writer of that letter lives far above what is recognized as the limit of improvements on that river?

Mr. FREAR. I take it not beyond the limit, because the snag boats work opposite his place, he says.

Mr. WINGO. I will say to the gentleman that the man who wrote that letter, if his plantation is near his post office, can not know anything at all personally about the operations on the river.

Mr. FREAR. He has observed the snag boats on the Red River, and he speaks from actual observation, if he is a reputable man, as I assume him to be.

Mr. WINGO. Then he must have been visiting a hundred miles below his home, because his plantation is not anywhere near where the river improvements are going on.

Mr. FREAR. This letter speaks for itself. It is like the letter I introduced a few minutes ago, from some one who wrote to me about the Brazos.

Mr. BURGESS. What is the date of that letter?

Mr. FREAR. June 13, 1914. I read it during the consideration of the last bill.

Mr. WINGO. What is the name of the town?

Mr. FREAR. Klomatia, Red River County.

Mr. WINGO. If the gentleman will refer to a map he will see how far north that is of the limit of operations on the Red River.

Mr. FREAR. I can not yield further. Now, when we come to actual projects and we find that after the expenditure of over half a million dollars on this upper river the engineers say you have got 5 tons of actual commerce, apart from a little timber that floated down, do not you think it is time we examined into some of these projects? Are we to accept them all irrespective of their merits? I am not disposed to do so.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SPARKMAN. I yield my two minutes to the gentleman from Arkansas [Mr. WINGO].

[Mr. WINGO addressed the committee. See Appendix.]

Mr. SLOAN. Mr. Chairman, I regret that the chairman of the committee, Mr. SPARKMAN, refused me the five minutes' time that I asked following the speech of the gentleman from Illinois [Mr. MADDEN], as I have used little time during the consideration of this bill. I desired at that particular time to challenge the statement of the gentleman from Illinois [Mr. MADDEN], who issued the metropolitan edict to this House and the country, that there shall be no public buildings in this country, except in cities of 25,000 inhabitants or more. I want to say to the gentleman that a city of 2,000 has just as good a right to the money from the Treasury of the United States to establish a place for the legitimate public business as has the great city of Chicago. [Applause.] I have no public-building bill pending now, but I propose to have one or two pending. I am willing to make an issue between those of us who have in our districts cities of less than 25,000 population and the gentleman and his lakeside metropolis. He boasts that Chicago, the city on the Lake——

Mr. COX. The Windy City.

Mr. SLOAN. The city that the rural population of this country have made, is entitled to large expenditures, because it does the business. Gentlemen of the committee, the business done by the Chicago post office is no more to the credit of the great aggregation of people and houses up there on the Lake than the making of the wealth in a bank is to the credit of the paying teller and the receiving teller. [Applause.] It is simply a matter of distribution. Has it come to this, that the people of this country have built up four or five cities of a million or more, and when they have received from the Treasury the golden store of millions and erected great marble and granite buildings for doing the public business, after they are all fixed and have all they want, they are to say, "There shall be no place in the small cities of this country over which the American flag shall float, no structure of which the people may say, 'This belongs to the Government. Something to connect us with Uncle Sam.'" Chicago has invested now in public buildings and grounds $6,982,166.99, and still are not satisfied. That would build 140 public buildings in our smaller cities.

Mr. MADDEN. Will the gentleman yield for a question?

Mr. SLOAN. Oh, I will yield to my friend—or to temptation, either, on occasion—and this time it is to my friend.

Mr. MADDEN. I wish to ask the gentleman from Nebraska whether he would be willing to go on record in favor of paying $5,000 a year to maintain a public building in a town if he could find means by which the public business could be transacted at a cost of $1,000?

Mr. SLOAN. That was not the rule the gentleman laid down to the House. The rule he laid down to the House was a matter of population and not a matter of expense.

Mr. MADDEN. I laid down both.

Mr. SLOAN. And I took him up on the one that is the easiest to dispose of. [Laughter.] The other involves a condition unreasonable and unusual, a condition not necessarily connected with a prudent public-building policy. It may be that in this country we have built up a number of Frankensteins in New York and Boston and Philadelphia—I do not forget Philadelphia, the home of my ancestors—which may turn and crush us.

Mr. MADDEN. And Lincoln, Nebr.

Mr. SLOAN. Yes. The gentleman from Pennsylvania said the other day that all the good in Iowa came from Philadelphia. That is largely true; my father and mother came from there. [Applause.] It was a time of great exodus and they left, but the gentleman from Pennsylvania and his ancestors remained. The best went to Iowa, where I was born. [Laughter.]

The CHAIRMAN. The time of the gentleman from Nebraska has expired.

The Clerk read as follows:

Ouachita River, Ark. and La.: Continuing improvement by the construction of locks and dams heretofore authorized, $474,000; for maintenance of improvement by open-channel work up to Camden, $25,000; in all, $499,000.

Mr. FREAR. Mr. Chairman, I move to strike out, in line 13, beginning with the word "continuing," down to the figures "$474,000"; also the words and figures, in lines 16 and 17, "in all, $499,000."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Amend, page 21, line 13, by striking out the language, beginning at line 13 with the word "continuing," down to the figures "$474,000," and also strike out the words "in all, $499,000," in lines 16 and 17.

Mr. FREAR. So that the paragraph will read, "for an appropriation of $25,000."

Mr. Chairman, for Ouachita River we have had an appropriation of $3,700,000, and $499,000 in this bill. Deducting the sand, gravel, and logs, about 26,000 tons of commerce float in the stream. There is some traffic that ought to be taken care of unquestionably. But I am impressed very much with the opinion of the gentleman who is to-day the chief of the Mississippi River Commission, Col. Townsend. He has urged in this case and all other cases with two exceptions that we stop the canalization of rivers, stop what he considers is waste, until we can ascertain what we are receiving for the moneys we have been expending. I have quoted a part of his remarks to this effect. I read again from page 16 of the report:

Specifically the writer would not abandon any navigable stream in the Mississippi Valley that has been partially improved but would leave 58 of them in their statu quo confining operations to snagging and maintenance of existing works. * * * If facilities afforded by the Government are utilized, greater improvement of the Ohio and lower Mississippi, the upper Mississippi and the Missouri should then receive attention.

We can not get any higher authority than that. Let us determine whether or not any of these streams will bring good results, and let us do no more than appropriate for maintenance in the meantime. In this connection the book of Prof. Moulton, in his thorough discussion of waterways, is enlightening, and I will just quote a paragraph in which he gives the experience of Europe:

We have found from our study that everywhere in Europe no less than in the United States there has occurred with the development of the railways a rapid decline in the amount of traffic carried on inland waterways. * * * To attempt now to return to the antiquated system of transportation of a half century ago * * * is to attempt to turn backward the clock of time.

Mr. PARKER of New York. Will the gentleman yield?

Mr. FREAR. Yes.

Mr. PARKER of New York. I understood the gentleman to say that he never quoted Army engineers.

Mr. FREAR. Oh, no.

Mr. PARKER of New York. I think the RECORD will so show.

Mr. FREAR. Let the gentleman find the RECORD and read it on me. Here is what Ex-Waterway Commissioner Reid says:

Our river traffic has rapidly declined. European Governments prevent railways from maintaining direct competition and foreign bargemen are content with a few cents a day for their service. Conditions here are far more difficult to overcome, and a return to practical inland river transportation is possible only with radically changed conditions, not affected by expensive river improvements. (Ex-Waterway Commissioner Reid.)

To the same effect is the opinion of Barnhard, a man engaged in the construction of boats for river use. We have the water in many streams, but practically no commerce. Let us try out some stream and not spend money aimlessly on hopeless projects all over the country.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph close in seven minutes—five minutes for the gentleman from Texas [Mr. CALLAWAY] and two for myself.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto close in seven minutes. Is there objection?

There was no objection.

Mr. CALLAWAY. Mr. Chairman, the gentleman from Texas [Mr. SUMNERS] says he does not like my position on the Trinity River, and then he says that, of course, I am a neighbor to him and live in a rival city, and that we want the trade at Forth Worth. Do you know where the town of Waxahachie is? They are neighbors and constituents of the gentleman and own property on the Trinity River below Dallas. The Trinity runs down through Ellis County, and Waxahachie is the county seat of that county, and that is one of the counties of the gentleman's district. There are two distinguished citizens—one O. E. Dunlap, president of the Citizens' National Bank, and the other is R. W. Getzendaner, the wealthiest man in Dallas County. Let us see what they say about the Trinity River. I have not got anything against the Trinity. The only reason I have said anything about the Trinity and the Brazos was because I wanted to show the fallacy in the whole bill, and to do that I called attention to the two streams in my own State that I know all about. Then the gentleman tries to defend them by saying that I am a neighbor to them and live in a rival city. Here are the letters:

CITIZENS' NATIONAL BANK,
Waxahachie, Tex., January 30, 1913.

Hon. OSCAR CALLAWAY,
Washington, D. C.

DEAR SIR: I wish to commend you for your course on the rivers and harbors appropriation bill. That you are right in your position there can be no question. Money appropriated to make navigable dry creeks hundreds of miles away from tidewater is money wasted. How so-called engineers can make favorable reports on such schemes is past comprehension. But they do it. Many seem to think the Government a big institution, with money without limit, and that every dollar they can get from the Government by any means is fair, and that the people are gainers to that extent, when in truth all governments as purely governments are paupers. Every dollar the Government has must come from the people. If all these foolish appropriations were placed where good results would follow, it would be commended. Why Congressmen will vote for such wild, foolish appropriations is passing strange. It can only be assigned to ignorance or insincerity. The people are getting tired of such foolishness. I have heard many commend you for your stand.

Yours, truly, O. E. DUNLAP.

Here is a letter from a man who has some interest in this appropriation. Listen to what he says:

THE CITIZENS' NATIONAL BANK,
Waxahachie, Tex., April 1, 1914.

Hon. OSCAR CALLAWAY,
Washington, D. C.

DEAR SIR: From press reports I note that you have been opposed to further appropriations for the furtherance of the proposed navigation of the Trinity River. I do not think this a practical project at all, and I wish to congratulate you on the fair, unprejudiced stand you have taken, especially so in the face of all the opposition and criticism this stand has brought upon you. Personally the cleaning and clearing of the underbrush along the river would be of much personal benefit to me, as I have considerable land adjoining same, but I do not think it right that the funds of the Federal Government should be used in bringing this about, although, as stated, should the Trinity be made a navigable stream it would be of considerable benefit to me and a project which would meet with my hearty support could I conscientiously believe it practicable, which I do not.

With best wishes to yourself, I am,
Yours, very truly, R. W. GETZENDANER.

Mr. WILSON of Louisiana. Mr. Chairman, if I felt that it had grown out of an unbiased and unprejudiced investigation and an earnest desire to secure the facts, and to make criticisms solely with a view of serving the public interests, I would say that I was both grieved and disappointed to find in the minority report filed by the gentleman from Wisconsin [Mr. FREAR], a member of the Committee on Rivers and Harbors, and also in his speech recently delivered in the House, an attack upon the Ouachita and Black Rivers in my district. When a man attacks a few things, it might be said that he had made a discriminating investigation; but when he attacks everything, it is evidence of the fact that he is simply against things generally and that his researches are for the purpose of making up a record for an indiscriminate onslaught. This seems to be his position, especially in relation to the rivers in this country.

It would be hard to find a more interesting situation than that presented by the Ouachita and Black Rivers, with their tributaries in Arkansas and Louisiana, or any place where a greater number of miles of navigable waters would be made available for navigation and commerce than the proposed improvement of these rivers.

The Ouachita River rises in Polk County, Ark., and flows in a southeasterly direction through the States of Arkansas and Louisiana, and is about 500 miles in length. A number of navigable streams flowing through a very fertile region empty into the Ouachita, these being the Bayou Bartholomew, the Bayou D'Arbonne, Boeuf River, Bayou Macon, Tensas River, and the Little River. The Tensas and Little Rivers, it would be more correct to say, join the Ouachita at Jonesville, La., and form what is known as the Black River. Black River is 56.8 miles in length, and flows into the Red River. Bayou Bartholomew is 300 miles long; Bayou D'Arbonne, 37 miles; Bayou Macon, 270 miles; Tensas River, 235 miles; Boeuf River, 300 miles; and the Little River about 100 miles in length. This project is for the improvement of the Ouachita River from the mouth of the Black River to a distance of about 10 miles above Camden, Ark., a total distance of 360 miles. The plan of this project was adopted by the Fifty-seventh Congress, and was originally for the construction of nine locks and movable dams. The river and harbor act of March 2, 1907, provided—

That, in the discretion of the Secretary of War, the location of the locks and dams contemplated by this improvement might be changed, and under this authority the arrangement of the series has been modified so as to omit Lock and Dam No. 1 altogether. (See Annual Reports of Chief of Engineers, United States Army, vol. 2, 1915.)

No provision has been made for Locks Nos. 5 and 9, and nothing is asked for in that respect in the present bill. Nos. 4, 6, and 8 are complete. No. 2 has been provided for, and is now under construction. No. 3 is 24.8 per cent complete; No. 7 is 0.2 per cent complete. To be more exact, the site has been acquired for No. 7. The present bill provides for the completion of Nos. 3 and 7.

From any standpoint it would be an unbusinesslike procedure for the Government to abandon this project. Lock and Dam No. 2 is located at Harrisonburg, La., 72.6 miles above the mouth of the Black River, and will soon be complete. Lock No. 4 is at Monroe, La., a distance of 179 miles above the mouth of the Black River, and is complete, while No. 3, at Call Landing, La., is 133.6 miles above the mouth of the Black River and is 24.8 per cent complete, and is provided for in this bill. The report of the Chief of Engineers in respect to No. 3 is that unless completed, it will constitute an obstruction to navigation. The remainder of the project is north of Monroe, La., and presents a like situation as that south of Monroe. Lock and Dam No. 6 near Felsanthal, Ark., 238 miles above the mouth of Black River, is complete, and the same is true of No. 8 at Franklin Shoals, Ark., 297.2 miles above the mouth of the Black River, while No. 7, provided for in this bill, is located between the two last named and is 268.5 miles above the mouth of Black River. For the construction of Nos. 6 and 8 the Government has paid $1,143,024. The expenditure of this sum will be to no purpose without the completion of Lock and Dam No. 7. This, in my opinion, would be an extremely unbusinesslike policy for the Government to pursue, and especially when the expenditure for the completion of this project is entirely justified by all the facts.

The Ouachita River, its tributaries, and confluent streams constitute 1,500 miles of navigable waters. This river has always been an important artery of commerce in that section, as the following data from the annual reports of the War Department will show:

For the section of the Ouchita River included between Black River and a point 10 miles above Camden, Ark., a distance of 360 miles, the traffic, in short tons, was:

Fiscal year ending June 30, 1913: Tonnage, 48,222, valued at $1,894,839; 1914, tonnage, 64,874, valued at $1,923,231; 1915, tonnage, 70,619, valued at $3,074,465.

The freight carried during the last fiscal year consisted of lumber and logs, farm products and general merchandise.

Improvement of the river has caused considerable reduction in freight rates. Railroad rates to river points are much less than to near-by places without water competition. (United States War Department, Annual Reports, 1915; vol. 2, Rept. Chief of Engineers, 1915.)

The commerce of the Ouachita River and its tributaries is considerable, and consists of shipments of cotton, cotton seed, lumber, staves, saw logs, and miscellaneous articles, with return freights of general merchandise and plantation supplies. Most of the cotton is shipped to New Orleans, and large quantities of staves for export are sent to that city. The volume of commerce as reported for 22 years ranges between 57,684 and 313,863 short tons per annum, with values estimated at $357,220 to $10,234,259. The average is 165,389 short tons, valued at $5,561,044. The variations are due to crop yields, the uncertainty of navigation, droughts, and other causes, and the improvement by locks and dams is for an extension of benefits by affording navigation to Camden the year round.

The project has effected a reduction of railroad rates from New Orleans to Monrose, La., and points below meet the steamboat rates. Railroad rates from Monroe, La., to inland towns as a rule are greatly in excess of those to points where there is water competition. The benefits to be derived from slack-water navigation will tend to a greater uniformity and larger volume of commerce. (Rept. of Chief of Engineers, 1912, vol. 2, p. 759.)

The following figures are given for 14 counties in Arkansas which are tributary to the Ouachita River: These 14 counties comprise a total of more than 6,500,000 acres, with a total population of more than 300,000, with 748,268 head of live stock,

1,363,719 acres in growing crops, and with combined mercantile and industrial investments of more than $100,000,000 in capital and doing an annual mercantile trade of over $43,000,000 and shipping annually to outside markets more than 800,000,000 board feet of lumber. The uncut and merchantable timber of this territory totals more than 29,000,000,000 board feet.

There are 13 other parishes in Louisiana, also tributary to the Ouachita River, which are equally as large, rich, fertile, and productive, and to which the improvement of the Ouachita River is equally important.

Now, with all this rich territory, vast and undeveloped resources, insuring a large and steadily increasing volume of commerce, does not the Ouachita River present a most worthy project, and one which deserves the consideration and support of this Congress in its improvement? The waterways of the country are the people's highways of commerce, and are the only safety valves they have against oppressive rates by the railroads. They are the only avenues of transportation and travel, equally open to all and not subject to monopoly, and it is therefore the duty of the Government to continue the work of their improvement where and whenever a worthy project is presented.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Wisconsin.

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Arkansas River, Ark. and Okla.: For maintenance of improvement, including works at Pine Bluff and the operation of dredging plant, $209,700.

Mr. TREADWAY. Mr. Chairman, I move to strike out the item.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 21, strike out lines 18, 19, and 20.

Mr. TREADWAY. Mr. Chairman, in rising to oppose various items in the present bill, I have endeavored to base my remarks solely on the evidence before Congress or before the Committee on Rivers and Harbors. I dislike from my own personal feelings very much indeed to oppose the present item, because I know it is of direct interest to one of my colleagues on the committee, the gentleman from Arkansas [Mr. TAYLOR], for whom I have the very highest regard, and with whom my association has been extremely pleasant upon the committee. But I hold in my hand the report of the Secretary of War, House Document No. 461, Sixty-fourth Congress, first session. It includes in it the resurvey asked for in the last river and harbor appropriation bill, and the fact is that the Chief of Engineers in that resurvey, dated December 17, 1915, distinctly does not recommend continuing this appropriation.

The Arkansas River has had so far $3,588,638 appropriated for it, and this item is for $207,700. That report to which I refer was made after the estimate on which the item is based, and so this is one that is strictly up to date. I call the attention of the House to section 4 of Gen. Kingman's report, in which he says:

After due consideration of the above-mentioned reports I concur in the views of the division engineer and the Board of Engineers for Rivers and Harbors, and therefore recommend that legislation be enacted modifying the existing project for improvement of Arkansas River, so as to limit the work of snagging the river from its mouth to the mouth of the Neosho, at any annual cost of about $35,000, and authorizing the transfer without charge of the dredges and other plant not required for snagging to such other works of improvement as the Chief of Engineers may designate.

If we intend to place any confidence whatsoever in the report of the engineers, it does seem to me that the very latest report they furnish us, dated December 17, 1915, the direct result of the River and Harbor Committee in its bill last year, for a reexamination of this project named in the bill, ought to have some weight and influence with the House. Gen. Kingman's view is supported by Col. Black, for whom I have a higher regard, I assure him, than does my friend from Wisconsin [Mr. FREAR]. I think Col. Black is a very distinguished engineer, and his appearance before the Committee on Rivers and Harbors in the New York hearings impressed me with his ability to judge of these projects. Col. Black says:

The commerce has been decreasing, and now amounts to only about 55,000 tons, a large part of which consists of forest products, which can usually be handled at medium and high stages without improvement. Gradually the large vessels which formerly navigated this river have disappeared, and the little business that is now done is by a few small boats operating over short distances.

He asks that the sum given be limited to the $35,000 to which I have already referred. Then Col. Townsend, the division engineer, also refers in his report to the decline of the river traffic on this stream, and recommends that the improvement at the present time of the Arkansas River be confined to snagging. He says:

It is therefore recommended that the improvement of the Arkansas River be at present confined to snagging, which is warranted by the existing commerce, and that all attempts to permanently improve the river channel be deferred until there is an appreciable revival of commerce on the Mississippi River. The dredging proposed by the district officer is considered a waste of public funds. It can have no effect on the permanent improvement of the river. It is insufficient even to maintain a temporary channel from the river mouth to Pine Bluff. The transfer of the dredges built for the Arkansas River to the Ohio is suggested, where they would be of some practical use.

This is certainly an unfavorable report, and if we place this item in the bill we will do so contrary to the established method of procedure of the committee.

I place the situation as regards the Arkansas River before the House on the testimony of the engineers, from the division engineer clear through the line, including the Chief of Engineers, Gen. Kingman.

The CHAIRMAN. The time of the gentleman has expired.

Mr. TAYLOR of Arkansas. Mr. Chairman, I appreciate the kind words expressed of me by my friend from Massachusetts [Mr. TREADWAY]. He sits at my right hand in the committee, and we are sure enough friends.

Now, I want to say to the House that I am rather proud of the fact that Arkansas has more navigable rivers within its borders than any other State in the Union, and that the Arkansas River stands next in importance as to length to the Mississippi River. The Arkansas River is 1,460 miles in length. It rises in the Tennessee Pass, in central Colorado, comes down through Oklahoma, and into Arkansas, and travels 400 miles or more until it empties into the great Father of Waters. It passes through the most fertile country, I believe, in all of our land. From the time it reaches the western borders of Oklahoma I do not believe there is any country richer than is traversed by this great river.

This project was adopted by Congress in 1879, as I now recall, and year after year this project has been carried on by appropriations.

Now, the gentleman from Massachusetts speaks about the Board of Engineers, and what Col. Townsend and what Gen. Kingman have said about this river. This is what the local engineer, Maj. A. B. Putnam, said:

The commercial importance of the valley is increasing all the time, as is natural under an increase of population. While this increase is not reflected in the river commerce, I can not hold that the absence of such reflection is an indication of the unworthiness of the improvement of the river.

In line with the foregoing I must report that I think the project for the improvement of the river should be modified to read:

"The improvement of the river from its mouth to the mouth of Grand River (461 miles) by snagging operation, by revetting of banks, and by dredging operations, with a view to producing at ordinary low-water channel depths of 3½ feet to Little Rock, 3 feet from there to Ozark, 2½ feet from there to the mouth of the Canadian River, and 2 feet from there to the mouth of Neosho River."

I saw engineers measure the depth of this river last summer at high tide. It showed 70 feet. When you talk about the commerce of the country, last year in my county alone (Jefferson) we produced 61,000 bales of cotton. Value that cotton as it is sold, at an average of $80 a bale, and you will see something about commerce within that county.

Mr. MANN. Will the gentleman yield?

Mr. TAYLOR of Arkansas. I will.

Mr. MANN. How is this cotton carried to market?

Mr. TAYLOR of Arkansas. Why, sir, it is now being carried to market by the railroads, because the snags are in the river and the sand bars are in the river, and the boats can not travel. I am glad you asked me that question, because it leads me to say that it costs $2 a bale to take it by railroad to New Orleans, and it costs us by the river, when it is fit for transportation, $1 a bale. [Applause.]

Mr. MANN. How much money have we spent on the improvement of this river?

Mr. TAYLOR of Arkansas. Offhand I can not tell you that.

Mr. MANN. Is it used at all now for the carrying of cotton down the river?

Mr. TAYLOR of Arkansas. Yes. Let me state to the gentleman that on the north side of the river, the next county in my district, there was produced last year 1,500,000 bushels of rice that brought $1.05 a bushel. That shows the kind of commerce we have in our country.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. TAYLOR of Arkansas. Mr. Chairman, I do not usually take much time of the committee, and I ask unanimous consent that I may have five minutes more.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. TAYLOR of Arkansas. I think, Mr. Chairman, that a Congressman may serve his country better when he does not romance, as my friend, Mr. CLARK of Florida says, but talks to the question.

Now, gentlemen of the committee, this is a great river. It is traversed on both sides by railroads, and they have charge of the commerce of our country. We have in our country the most fertile land that can be found anywhere from Fort Smith down to the mouth, where the Arkansas enters the Mississippi River. This river passes by the great city of Fort Smith—great for our country because in the South we do not have great cities, but a city now and then of 35,000 or 40,000 people we think a great city, and Fort Smith is nearly in this class. The river comes along down and passes the capital of our State—Little Rock—with a population of about 70,000 people. It comes down to my home city, with 27,000 people, and then the river flows around through the fertile and great cotton and rice-producing lands to the Mississippi.

Now, think of the commerce that lies along this river. This Board of Engineers in Washington, who probably never saw the Arkansas River, will make a report in the face of poor Maj. Putnam, the district engineer, who is dead. He was on the ground and did not have to look upon this river and the commerce upon its bank from Washington.

Within 22 miles of this river is the greatest bauxite plant in the world. All the aluminum that you have in your homes in the form of utensils made for the home, that your wives and daughters use in their cooking, comes from that great bauxite mine. They are asking and begging Congress to give them an opportunity to improve this river, so that they may float the ore to Pittsburgh and St. Louis and Chicago, so that it may be delivered to consumers at a cheaper rate. There is a little of this bauxite in Spain and a little of it in Georgia, but Arkansas has all the rest. It has all except that which is contained in a few mountains elsewhere.

In my own city, Pine Bluff, we control great manufacturing plants. There is one mill that makes a cut of 400,000 feet of lumber a day, and yet that lumber has got to be carried over the railroads at an enormous expense.

Now, what we want is this Government to give us money enough to take the sand bars out when they come, to pull up the snags in the Arkansas River, so that that commerce may float upon its bosom. This river is being navigated to-day by three or four boats.

Now, Mr. Chairman, this very Board of Engineers, in its Book of Estimates, which you can turn to and read, states to the House that $209,000, the amount mentioned in the bill, can be profitably expended upon this river, in the fiscal year ending June 30, 1917. [Applause.]

I do not know so much about the commerce at Fort Smith, but Little Rock handles over 200,000 bales of cotton every year. Pine Bluff handles from 225,000 to 250,000 bales of cotton every year. The bauxite plant, of which I spoke, is 22 miles from Little Rock, and this plant lies in my district. They work 500 or 600 men, producing about 400,000 tons of ore every year. This ore could easily be brought to Little Rock on trucks to be placed on the Arkansas River for transportation. This river passes through a great coal, cotton, and rice-growing region, and great lumber mills are all along its banks. The cities to which I refer contain many large wholesale establishments and manufacturing concerns of all characters. The great railroad shops of the Iron Mountain Railroad are located at Little Rock and at McGehee. The railroad shops of the St. Louis Southern are located at Pine Bluff, right on the banks of this river. There is no use to discuss the question of tonnage along the Arkansas River, it is there and is growing every year, and unless this river is improved and kept up as rivers are in other sections of the country, our boats will be driven out of it and our great commerce will fall into the arms of the large railroad corporations.

The CHAIRMAN. The time of the gentleman from Arkansas has expired. [Applause.]

Mr. GREEN of Iowa rose.

Mr. SPARKMAN. Mr. Chairman, how much time does the gentleman desire?

Mr. GREEN of Iowa. Five minutes. That is all.

The CHAIRMAN. The gentleman from Iowa is recognized for five minutes.

Mr. GREEN of Iowa. Mr. Chairman, like the gentleman from Massachusetts [Mr. TREADWAY], I dislike to oppose a project that seems to have the support of so many excellent gentlemen, and in which the gentleman from Arkansas [Mr. TAYLOR] seems to be so much interested; but I would say, Mr. Chairman, that to my mind, of all the projects that are contained in this bill, this project is the most utterly indefensible.

The Board of Engineers has condemned it. The Chief of Engineers has condemned it. The district engineer has condemned it. There are some of these projects—in fact, the most of them—that have the support of the Board of Engineers. I know of no other, at least, that has been condemned by three separate board as this project has been. There are some of these projects where it may take years for them to be finished, perhaps 50 years or a hundred years, according to the statements of some gentlemen; but they probably can be finished some time. But no engineer has ever undertaken to predict that this work would ever be finished. There are some projects as to which there is some theory that they will be successful, but the only theory that has been advanced in support of this proposition has been tried and has failed. There are projects that can be tried and carried to a successful conclusion by the unlimited expenditure of money, but, according to the engineers, this particular project can never be completed, no matter how much money is expended on it.

This is a dredging project, outside of cutting snags out of the river. I know something of the character of this river. This is about the same as the Missouri, along the banks of which I reside. It changes its course nearly every day. It wends its course through alluvial soil, and forms a sand bar one day and the next day it cuts another channel and forms a deep place. As fast as the river is dredged out down there it will fill up, and in a short time another channel will be formed. Why, Mr. Chairman, you might just as well try to bale out the Atlantic Ocean with a tablespoon as to dredge out the Arkansas River.

That was the conclusion, I believe, that all these engineers have come to, except Maj. Putnam, who was the local engineer, and who was entertained and cared for so nicely, with that superb hospitality which we in the North can not equal. In fact, he was so splendidly entertained down there that I fancy he could not resist returning a favorable report upon the proposition. I do not wonder at it, nor do I wonder, under the circumstances, that the committee has inserted the provision in this bill.

They have acted somewhat like the unjust judge in the Scriptures. There have been boards organized and associations formed to get this waterway provided for. They have had their meetings; they have had their organizations; they have labored within and without, in season and out of season, with the Arkansas delegation and with the members of this committee, until at last, and in spite of the report of the engineers, and in spite of all the circumstances I have detailed, they have provided for this improvement; but I trust it will be stricken out.

Mr. DAVENPORT. Mr. Chairman, I desire to take issue with my good friend the gentleman from Iowa [Mr. GREEN] and oppose any motion to strike the item for the improvement of the Arkansas River from the bill. The only fault I find with the item, the amount is not sufficient to enable the engineer to do such work as is necessary to improve the river as it has been improved in the past. I would like that the language in the bill be changed, and instead of the provision reading as follows:

Arkansas River, Ark. and Okla.: For maintenance of improvement, including works at Pine Bluff and the operation of dredging plant, $209,700—

I would make it read:

Arkansas River, Ark. and Okla.: For maintenance of improvements, including works at Pine Bluff and the operating of dredging plant and dredging and snagging, $300,000, $50,000 of said sum hereby appropriated to be used in the dredging, snagging, and revetment work on the Arkansas River, in the State of Oklahoma, between the line of the State of Arkansas and the head of navigation on said river at a point near the city of Tulsa, Okla.

The Arkansas River should be improved, and this Congress ought to be as liberal with the Arkansas River as it has been, and as this bill attempts to be with many other rivers in the United States. If Congress should be liberal, you would soon see many steamboats making regular trips and carrying the commerce along said river to and from market much cheaper than it is now being carried by rail. In order to properly understand why so many are now opposing the appropriation for the Arkansas River, it is not out of place to briefly direct the attention of the House to past legislation on this subject.

This is not a new project, nor is it one of experiment. It is an old project and one upon which many thousands of dollars have been expended, and for many years the river was successfully navigated. The Congress of the United States first turned its attention to the improvement of the Arkansas River in 1832, under a project then designated as Arkansas and Kansas. The first appropriation was to remove snags and wrecks. Subsequent to the first appropriation the project was enlarged and the appropriation increased for improvements providing for remov-

ing snags and rocks and the construction of dams at some of the worst shoals along said river. Under the projects for which appropriations had been made up to June 30, 1902, there had been expended upon the Arkansas River $968,256.81. By the act of August 11, 1888, Congress adopted a general project, which is set forth as follows:

That the Secretary of War shall expend the appropriation under this head with reference to the final improvement of this river as contemplated in the Report of the Chief of Engineers for the year ending July 1, 1885, and as authorized in the act for the improvement of rivers and harbors approved August 5, 1886, and in House Executive Document No. 90, Forty-ninth Congress, first session, said methods to be applied as the Secretary of War may direct at such points between Wichita, Kans., and the navigable mouth of the Arkansas River at its junction with the Mississippi River, as he may deem for the best interest of commerce.

It will be seen from the above authority given to the Secretary of War under the act of August 11, 1888, that discretion for the first time was vested in the Secretary of War as to how the appropriation should be expended. Prior to the adoption of the act of Congress of August 11, 1888, a railroad had been constructed from Little Rock, Ark., to Fort Smith, Ark., along the east bank of said Arkansas River, and just prior to the adoption of the act of August 11, 1888, a road had been constructed from Fort Smith, Ark., upon the north and east banks of the Arkansas River, through what was then Indian Territory, and on to Coffeyville, Kans.

It is important to note that from the date of the connection of the railroad between Fort Smith, Ark., and Coffeyville, Kans., making connection with the lines of railroads in Kansas, that the interest in improving the Arkansas River and making appropriations for the same gradually began to decline, and it seems the engineers who were then reporting as to the necessary appropriation required to improve the river, lost interest or began to believe it unwise to continue to make any great appropriation for the improvement of said river, notwithstanding the records show that steamboats plied the river and carried the commerce regularly from Fort Gibson, Ind. T.; Forth Smith, Ark.; Van Buren, Ark.; Dardanelle and Pine Bluff, Ark.; and Little Rock, Ark., to the Mississippi River, all of the time up to the latter part of the eighties or up until about 1890. At each succeeding Congress after the year 1888 reports were made changing or merging the projects by the engineers and showing sentiment and disposition not to have the river further improved.

By the act of Congress of February 27, 1911, the project was merged and brought down to the following:

The improvement of the river from its mouth to Ozark (318 miles) by operating two suction dredges; from its mouth to the head of navigation by snagging operations, by dredging operations, and by contraction works, holding the improved channel by revetment where necessary; and maintenance of the works at Pine Bluff, Ark.

The Arkansas River runs through one of the most fertile valleys in Oklahoma and Arkansas. It is unequaled in production in any State in the Union. The climatic conditions are such that any cereal known to the agricultural world can be produced upon the same farm, which can not be done in any other section of the United States. On the same plantation or farm along the Arkansas Valley you can successfully grow your corn, cotton, wheat, oats, potatoes, melons, and any other product the farmer grows. This can not be done to the north or to the south of us. Going to the south you can successfully grow your cotton and corn, but you can not always successfully grow your small grains or your potatoes. To the north of us you can grow your potatoes and your corn and small grains, but you can not successfully grow your cotton. But in the Arkansas Valley, as heretofore stated, every product can be successfully grown upon the same farm. It is highly important that the Arkansas River should be improved, and that we should have our local commerce handled by boat where we could get a much cheaper freight rate than we can from the railroads.

A great many Members of Congress are interested in the development of the waterways of their section of the State, and because of the fact that they are nearer large rivers or the coast or the Lakes, feel that their section of the country is more entitled to an appropriation for improvements of its waterways than are the sections of other parts of the country, because of the fact that we have the Arkansas River and it is many miles from the head of navigation to the Mississippi. There are other reasons why the Arkansas River should be improved than the agricultural industries along its valleys. In the State of Oklahoma and Arkansas coal is found in unlimited quantities, and if we could get a cheap water rate for its transportation it would be a great benefit to the consumers of coal wherever it be transported. Along the banks of the Arkansas River and near to its tributaries there is one of the greatest oil fields in the world, and it is important to this industry and those operating in the oil fields that every means of facilities be provided for in order to assist them in carrying on that great business so important to the industrial world at this time.

My colleagues have directed the attention of the House to the tonnage that would probably be shipped if this river was properly improved, and I will not take the time to call attention to that fact, but I do want to say that the Arkansas River is a navigable stream and can be improved and successfully navigated if Congress would do its duty.

I want to say to my distinguished friend, for whom I have a very high regard, the gentleman from Iowa [Mr. GREEN], that I take issue with him upon the question of the navigability of the Arkansas River. I regret to contradict anything that he has said, but I know that he is mistaken when he states that the Arkansas River does not have water sufficient to make it navigable. I first located near the Arkansas River, a short distance from Little Rock, Ark., in the year 1880, and lived near the banks of the river in Arkansas for many years, and during the time I lived in Arkansas, from 1880 up until about 1890, steamboats made regular trips carrying the commerce of the country on said river; and it was not until about the years 1888 to 1890, after the railroads were constructed parallel to the river, that the freight began to decrease that was carried by boat on the river, and the engineer began to report recommending smaller appropriations.

Since 1890 I have lived near and have been interested in industries along the Arkansas River from Little Rock to Muskogee, Okla.; and a great many boats carrying freight, since I have lived near the Arkansas River, have made trips as far up the river as Fort Gibson, Okla., which is only a short distance from the city of Muskogee, one of the most progressive and modernly constructed cities in the world. If this river should be improved and receive appropriations to which the people along this river are entitled to receive, boats could make regular trips upon this river from a point near the city of Tulsa, in Tulsa County, Okla., to the mouth of the river.

Some criticism has been made of the report made by Maj. Putman as to the improvement of the river, and some suggestion has been made that this report might have been influenced by reason of the splendid treatment accorded Maj. Putman by those interested in having the Arkansas River improved. I think this criticism unjust and without sufficient foundation, but I do think the facts warrant the report by Maj. Putman and that the statement in the report is based upon the actual facts and his knowledge of the conditions of the Arkansas River and the country along its banks.

There are many rivers in the United States that receive appropriations annually that have no more water in them than has the Arkansas River. I admit that some of the banks of the Arkansas River cave in occasionally, and that requires revetment work to keep the banks from caving; but notwithstanding this, if you will discharge your duties as you should toward the people along the Arkansas Valley and make a sufficient appropriation to remove the snags from the channel and do some dredging on the shoals and places where the channel is subject to shifting, you could carry on navigation for at least six months or more in each year. Notwithstanding the report of some of the Army engineers is adverse to the navigation of this stream, and to the effect that if this river is navigated it will not aid the people materially in freight rates, I want to say that if this river is navigated any portion of the year it will be of great advantage to the people along the Arkansas Valley and the river in obtaining lower freight rates, and especially reduce freight rates on commerce that is shipped to the different towns and cities along the river from Tulsa, Okla., to the point where the river empties into the Mississippi.

The fact that the river has been declared a navigable stream to a point near the city of Tulsa, Okla., and that boats have run upon said river to that point, which is 157 miles from Fort Smith, Ark., gives to the river towns and cities a better freight rate than we can get 40 or 50 miles or more away from the river, and if we could get a sufficient appropriation for the Arkansas River, many thousands of tons of freight will be yearly handled upon the stream, and I want to appeal to you gentlemen to discharge your duties as you should, and not strike this appropriation out of the bill; but if you do anything, increase the amount of the appropriation.

In conclusion, I want to say to my friend from Iowa [Mr. GREEN] that I do not believe the good citizens of Arkansas did any too much in the way of entertaining the engineer when he was at Little Rock, nor do I believe what they did to entertain him had any influence upon him in making his report as it is submitted. I think the committees representing the different localities along the river from its mouth to the head of navigation presented to the engineer the facts, and that he made a

personal investigation of the same sufficient to ascertain the true conditions, and which warranted him in believing that the good people along the Arkansas River and valley were being denied their just rights and were not receiving a sufficient appropriation for the improvement of the Arkansas River.

I am persuaded to believe that some of the reports filed by some of the engineers were made by men who had not made a personal investigation of that stream and had not personally gone up and down the river to ascertain the condition of its channel and its banks in order to make an accurate report.

The gentleman from Iowa [Mr. GREEN] makes a statement and says that—

> You might as well try to dip up the ocean with a spoon as to try to dredge the channel of the Arkansas and make it navigable.

I am not going to take issue with the gentleman upon that point, because when I am out upon the ocean I am a very poor sailor. My friend from Wisconsin [Mr. FREAR] and the gentleman from Pennsylvania [Mr. BARCHFELD] could rise in their places and dispute my word with accuracy if I should undertake to say that I could stay well long enough to dip a very small portion of the water from the ocean with a spoon; but I do say, if you provide proper dredges, handled by efficient men, and make the necessary appropriation to which we are entitled in the improvement of the Arkansas River, we can make the stream navigable and operate boats upon the river for at least six months in each year, and by so doing we will give to the people of the States of Arkansas and Oklahoma water transportation along the Arkansas Valley, and thereby reduce freight rates materially, and by doing so will do them a great and lasting good. [Applause.]

Mr. McLAUGHLIN. Mr. Chairman, I rise to say that I find in this appropriation the committee has followed a rule which seems to me entirely different from the one announced by the distinguished gentleman from Florida, the chairman of the committee, when he made his opening statement at the time of general debate, when he said that the committee followed the report of the Chief of Engineers; that if the report was unfavorable that settled it, or words to that effect. Here, in relation to the Arkansas River, we find the Board of Engineers made an unfavorable report as far as the amount and character of appropriation is concerned, and that after the Board of Engineers made its report the Chief of Engineers, the authority which finally investigates the matter, made an unfavorable report; but the committee overrides both the board and the chief and goes back and takes up and accepts the report of the local engineer.

The Chief of Engineers and the Board of Review recommended that no work be done on the river by way of carrying out the original project, except an annual job of dredging, costing $35,000 a year. This appropriation is directly contrary to the recommendation and calls for an appropriation of $209,000, to be expended in accordance with the provisions of the original project, which was one of dredging and revetment and different kinds of work of improvement of an extensive character. If the committee is going to follow the Chief of Engineers and the Board of Review, as the chairman of the committee announced its policy to be—and I know they did that more than once, to my sorrow—it ought to do it in respect to these projects and all projects or acknowledge that it does not treat all projects alike; that it has one rule for one when it suits its members and a different rule for another when it suits them.

Mr. JACOWAY. Mr. Chairman, I think everybody takes judicial knowledge of the fact that Arkansas is a great State, and that the Arkansas River is a magnificent stream, potential in its commercial possibilities, if only the Federal Government will do it simple justice. This House to-day is engaged in a congressional ascertainment of the real truth about this river. It is my purpose on this occasion to submit for the benefit of the committee not my individual ideas relative to the improvement of the Arkansas River, for I am not a civil engineer by profession, and besides I may be more or less biased or prejudiced, and for the further reason that in light of these facts my testimony might not be considered the best. May I also suggest to the House that it will not suffer itself to take the individual ideas of gentlemen who oppose the improvement of this great stream by the Federal Government, and who occupy the opposite of the issue from me? May I further request that to-day the House get down to the bare and leafless pole of this proposition and see what the real facts relative to this river are, and which are abundantly reflected in the testimony of the men who are competent to judge, who are expert engineers, and who are worthy representatives of a great branch of the Government activities, and who form a part of the Engineering Department of this Government? When this is done, and we further see what tonnage this river in years past has carried, and the inchoate tonnage that will necessarily float upon it, then if this body will register its decision in the light of this testimony I will be more than satisfied as to what the result of this Congress will be, sitting as a jury upon the real merits of the question at issue.

One of the greatest local engineers that was ever stationed at Little Rock, Ark., was Col. Tabor. By all he was regarded as an honest man, and in a report that he made in regard to the Arkansas River, he said:

> The rapid increase in prosperity in this State [Arkansas] during the two years spent at this office reminds me more of the frontier growth of the West than of the growth of a State of the age of this one.
>
> It is a difficult matter to give in condensed form any idea of the immense quantity of produce that is waiting the opening of this river to navigation.
>
> In a short reach from Dardanelle to Fort Smith, on the south side of the river only, about 70,000 bales of cotton are raised now, and the amount is steadily increasing. This cotton can be sent to New Orleans at 60 cents per bale by boat. If sent by rail, it costs $2.25 per bale, exclusive of ferriage and cost of hauling by wagons. Corn and wheat command good prices in Little Rock, but the railroad rates are so high that it can not be moved.
>
> Timber that sells in Little Rock as high as $75 per 1,000 is abundant in this section, but can not be marketed owing to the high freight rates.
>
> What has been said about this section applies with greater or less force to the entire reach from Little Rock to Fort Smith. A just conception of what benefits are likely to accrue can only be found by looking at some great fertile river valley in the Northern or Eastern States as they were years ago and as they are now, since settled up and with its river improved.
>
> What benefits have accrued to that community will surely accrue to this, with this addition, that the mineral resources of this valley are to be added. Its coal products alone and its wealth of timber will place it well to the fore.
>
> When the vast acreage of the Indian Territory is brought under cultivation its products must go this way. That already well known and exceedingly fertile State of Kansas will find Fort Smith or Little Rock its nearest water outlet eventually.
>
> It will be seen how difficult it is to handle this question briefly if it is borne in mind that, with deep water to New Orleans from the Gulf, the Mississippi improved, and the Arkansas River navigable to Little Rock by boats drawing 5 feet of water, we have the conditions likely to exist when the improvements are completed.
>
> I have, therefore, only attempted to outline this matter, and trust that when this portion of the report is read a map of the territory covered may be had in mind, as this will probably be of itself the strongest proof that the benefits likely to accrue can but be too vast to summarize in a report like this.
>
> This plan, with the estimates, is condensed from the fact that the time to prepare it has been limited. Time has been given to elaboration in examinations rather than to elaboration in this plan. The data is at hand for elaboration if the same is desired.

Among other things he said about the possibilities of the Arkansas River, in the then Indian Territory but now the State of Oklahoma, upon which I will not comment due to the fact that my time is severely limited and I want to address myself to the facts at issue which are before the House at this time. Not only is the report of Maj. Tabor most favorable to this project, but gentlemen upon the other side of the aisle insist that this issue be decided upon recent testimony, and it is a pleasure to me to accede to this proposition and to join issue with them upon their own ground.

In an extensive report emanating from the office of the local engineer, under date of March 24, 1915, Maj. Putman, in his recommendation, went further than any other local engineer has ever gone, and concluded this report in the following language:

> The improvement of the river from its mouth to the mouth of Grand River (461 miles) by snagging operation, by revetting of banks, and by dredging operations, with a view to producing at ordinary low water channel depths of 3½ feet to Little Rock, 3 feet from there to Ozark, 2½ feet from there to the mouth of the Canadian River, and 2 feet from there to the mouth of Neosho River.

From this report it can be seen that Maj. Putnam recommends the improvement of this river by snagging operations, by revetting of banks, and by dredging operations, with a view to producing at ordinary low water channel depths of 3½ feet to Little Rock, 3 feet from there to Ozark, 2½ feet from there to the mouth of the Canadian River, and 2 feet from there to the mouth of Neosho River. To be frank with the committee, I will add that the report of Maj. Putnam is not concurred in by the district engineer, by the Board of Engineers of the War Department, or by the Chief of Engineers, Gen. Dan C. Kingman, but I submit that the testimony of Maj. Putnam as shown in his report is worthy of greater weight than either that of the division engineer, the Board of Engineers, or the Chief of Engineers of the War Department, due to the fact that for a number of years he has been intimately associated with the Arkansas River. He is familiar with its physical attributes from its mouth up to at least the Oklahoma line, and is better able to judge as to what improvements are necessary than those who know but little of this river, who probably have never traversed it for a distance of over 80 miles, and whose knowledge is gained only from hearsay testimony in the form of documents and reports and by an examination of the geography of the country as viewed from the United States map.

Allow me to introduce for your further consideration the testimony of Maj. M. L. Walker, Corps of Engineers, and who was also local engineer at Little Rock, preceding Maj. Putman, in an extensive report, which he made upon the Arkansas River under date of May 27, 1909. I will also state that this report was not based upon hearsay testimony, but is the product of an unbiased mind of a competent engineer, who made a personal and physical examination of the river from its mouth almost up to the Oklahoma State line. In a hasty and running summary, permit me to submit that, among many other things, he stated, in terms not dubious but certain and clear, that if the Arkansas River were improved in accordance with what in common justice the dignity of that stream demanded, that the saving in freight rates alone on coal to the towns of Ozark, Coal Hill, Clarksville, London, Russellville, Morroltown, Dardanelle, Conway, and Argenta would approach the magnificent sum of $86,850 a year. He called attention to the fact that during the year of 1908, seven years ago, that Little Rock consumed 193,000 tons of coal—practically one-third of the output of the fields adjacent to the reaches of the Arkansas River, and as a result of not reducing the freight rates on this coal which would be carried by the Arkansas River, as opposed to railroad transportation, there would be an additional saving to the city of Little Rock of $86,850. I regret there is no data available to show the amount of coal used annually by the towns just mentioned by me, and what the savings to these towns would be with the Arkansas River made navigable. Maj. Walker called attention to the fact in that report that freight rates on coal sent from the fields near Little Rock is exorbitant as compared with the rates from other fields, and drew the conclusion that the average rate out of southern Illinois fields to the several places which I have mentioned was 4.7 mills a ton, while the rate out of the Arkansas fields near by was 12 mills a ton per mile, notwithstanding that the Illinois fields were many hundreds of miles separated from Little Rock, while the Arkansas coal fields were but 119 miles from that city.

Mr. Chairman, when you consider this it is an anomaly within an anomaly. It is a sad commentary when you come to think that when coal is right at our back doors we are forced to ship it from a foreign State employing foreign capital, foreign labor, and paying tribute to foreign genius and foreign capital because it can be delivered cheaper by water rate from a distant State than by a railroad that penetrates the heart of the coal fields of Arkansas.

In Maj. Walker's report he further finds that if the Arkansas River is made navigable from its mouth up to Ozark, in Franklin County, there will be a saving in freight rates to the people of Arkansas in the sum of approximately $700,000. This finding alone, if not supported by other argument, should receive the careful and painstaking consideration of Congress to-day and elicit an unstinted admiration of the vast possibilities of the Arkansas River when it is made navigable, as it should be, and to give to the Arkansas at the very lowest calculation the amount carried in this bill at the present time.

TONNAGE.

The gentleman from Iowa a few moments ago announced as his belief that of all the projects incorporated in this present river and harbor bill that the Arkansas River was the least meritorious. In this assumption I dare say he was intensely honest, and this judgment was the result of not being acquainted with all the testimony bearing upon the matter at bar. I take especial pleasure in joining issue with him upon the premise he so broadly assumes, and I appeal to the recitations in the RECORD for the proof. Located a short distance from Little Rock are the holdings of the American Aluminum Co. that has expended millions of money in developing their properties and employs many hundred men.

When the Arkansas River is made navigable up at least as far as Little Rock, this company guarantees to give annually to river transportation 400,000 tons of bauxite alone. Arguing further in opposition to the contention of the gentleman from Iowa, I desire to state that along the stretches of the Arkansas River, and in close proximity to it, is located one of the most magnificent fields of semianthracite coal in all this country. To be definitely specific, this acreage is distributed as follows:

	Acres.
Shinn Basin	3,000
Ocita Basin	3,000
Spadra (north side of river)	14,000
Prairie View (south side of river)	20,000
Denning	3,000
Paris	4,000
Sebastian	35,000
Eastern Oklahoma	50,000

Making a total of 132,000 acres.

As a result of tests most practical, it is shown that there are 800,000,000 tons of coal, the great majority of which will find a sale in the markets of the world after having been floated over the Arkansas River.

THE ACTUAL COAL MINED.

It may not be amiss at this juncture to call the attention of the committee to the fact that the present production of coal in this great field is as follows:

	Tons.
Russellville, about	60,000
Ocita, about	15,000
Spadra, about	200,000
Denning, about	175,000
Paris, about	20,000
Sebastian, about	350,000
Eastern Oklahoma, about	150,000

Making an approximate total of 970,000 tons.

CRUSHED ROCK TONNAGE.

The Big Rock Stone & Construction Co. last year shipped 160,000 tons of crushed rock from Little Rock, Ark., to be used in revetment work upon the Mississippi River. I feel safe in saying that this volume of freight would be shipped entirely over the Arkansas when the river is made navigable.

COTTON TONNAGE.

Answering the question of the distinguished leader of the minority, Mr. MANN, of Illinois, in regard to the tonnage of cotton, I beg to say that yearly the State of Arkansas produces about 1,000,000 bales of cotton, to say nothing of cotton seed and cottonseed meal and other numerous products of field and forest; and I am sure no one will accuse me of a wild flight of imagination when I say a great volume of this magnificent tonnage will find an outlet to the market by river transportation.

MEETING OF THE BOARD OF ARMY ENGINEERS AT LITTLE ROCK, NOVEMBER, 1915.

My time will not permit, but I want the attention of the committee to be called to the records of the meeting held at Little Rock in November last by a committee from the Board of Engineers of the War Department and other interested parties. If you so desire, read the stenographic statement adduced at this meeting of Senator JAMES P. CLARKE, Senator JOSEPH T. ROBINSON, Messrs. W. M. Taylor, C. L. Holland, E. N. Adams, George Sengel, James P. Hoye, Carl J. Baer, H. F. Anten, Mr. Fox, Capt. James Evans, Capt. H. C. Daniels, and others, and I think beyond question that the most doubting will be driven unerringly to the conclusion that the Arkansas River from an engineering standpoint is both feasible and practicable and that the Federal Congress should deal with this stream most generously in the form of appropriations. In doing so it will only be to accord to that great stream, possessed of such great commercial possibilities, that which is justly and equitably hers by right from every viewpoint. Arkansas is a great State, whose citizenship is most intelligent, progressive, and patriotic, and until the Federal Government improves the streams of Arkansas and makes them highways of commerce, as has been done in other sections of this country, even simple justice has not been done to Arkansas.

CONCLUSION.

Many and varied are other arguments that might be presented on this occasion why the Arkansas River should be made navigable at the earliest possible moment. I regret that my time is so limited that I can not indulge myself in this regard. If I did not have a faith abiding in the permanent merits of the Arkansas River, and which is occasioned by the clean and clear-cut preponderance of the testimony emanating from most worthy and eminent sources, I would not stultify myself by insisting upon the appropriation. I feel that I know my case, and in view of the facts presented to you I feel confident that the committee will sustain me in my contention and give to the Arkansas River that appropriation carried in this bill of $209,000. To do less would be for Congress to be unjust, inequitably and selfishly discriminating, partial, and partisan. [Applause.]

Mr. Chairman, I wish to incorporate into my remarks at this time an argument made by me before the Committee on Rivers and Harbors of the House, February 2, 1916:

[The matter referred to will be found in the Appendix, p. 734.]

Mr. HASTINGS. Mr. Chairman, the development of the Arkansas River is of great importance to the States of Arkansas and Oklahoma, and, for that matter, to the entire country, because the prosperity of all the country is dependent upon the prosperity of the separate States and the smaller subdivisions.

This river is approximately 1,460 miles long. Rising in the State of Colorado, it flows through the States of Kansas, Oklahoma, and Arkansas and empties into the Mississippi River. There is no more fertile valley in the United States, and its development during the past few years has been phenomenal. Since 1832 it has been the subject of congressional appropriations and

held to be navigable. The money expended upon this river up to June 30, 1914, amounts to $3,243,650.91. During the past few years the importance of the Arkansas River has been greatly underestimated, although the development of the valley through which it flows and the contiguous country has been marvelous.

Only a few years ago the eastern part of Oklahoma was the Indian Territory, and the lands were held in common by the members of the Five Civilized Tribes and the Osage Nation. These lands have practically all been allotted within the past 15 years, and the vast resources of that section have attracted people from almost every State in the Union, until now the population of Oklahoma numbers more than 2,000,000. Where once were rolling prairies and heavily timbered bottoms, with few inhabitants, you now see the entire country settled by prosperous farmers, with comfortable homes, and the land in a splendid state of cultivation. Every variety of farm product is grown in that section.

In addition to Oklahoma being a great agricultural State, coal is found under thousands of acres in the eastern half, and mines are now being operated. Within the past 10 years great pools of oil have been discovered and are being brought to the surface, until the State ranks as one of the first in point of production of petroleum.

Near the confluence of the Grand, Verdigris, and Arkansas Rivers, 461 miles from the mouth, historic old Fort Gibson is located on the east bank, while on the west bank you see the thriving, prosperous city of Muskogee, with approximately 50,000 people. Only a few years ago Muskogee was an Indian village, with only one railroad. To-day it is the commercial center of eastern Oklahoma and the Southwest. It has miles of paved streets, water works, electric lights, street railways, railroad shops, oil refineries, cotton compresses, numerous wholesale houses, splendid hotels, magnificent office buildings, banks with deposits of many millions, schools and churches, and, in fact, every modern convenience.

Since 1832, when the tonnage was negligible, Government aid was given in rendering this stream navigable. In 1888 it was paralleled to the north and east by a railroad, and within the last few years to the south and east by another railroad. Other railroads gridiron the State.

The development of this river would be of vast importance to my district and State. This bill carries an appropriation for it amounting to $209,700, to be spent in Arkansas and Oklahoma. I want to express the hope that some portion, at least, of this appropriation will be used on the river in Oklahoma. I am not an engineer, but the reports of engineers for the past 75 years show that this stream has been regarded as navigable, and up until the time it was paralleled by railroads, boats made regular trips up as far as Fort Gibson and Muskogee for nine months of the year.

The importance of this work can not be overestimated. We need cheap transportation for that section of our country. When the river is placed in proper condition untold thousands of tons of coal will be mined. The products of the vast oil fields, drawn from beneath the surface, will be carried to the markets of the world on it. It would stimulate the building of factories in the cities and towns along its banks, and by reducing freight rates farm products in eastern Oklahoma would increase in value and farm lands would also be enhanced.

A large number of wholesale houses of every kind are now located in the city of Muskogee. With comparatively small amount expended in improving this river by snagging, reveting the banks, and removing shoals here and there this river could be utilized almost the entire year.

During the past year, the commercial bodies of Muskogee and Tulsa, Okla., and Fort Smith, Ark., have renewed their interest in this movement. They held numerous meetings at Muskogee and Little Rock, which were largely attended, evidencing the importance the people attach to it. A great deal of data as to the resources of the valley was collected.

Maj. A. B. Putnam, Corps of Engineers, in a report dated March 24, 1915, reviews at length this project, stating that work had been done on the river by removing snags, and so forth, since the act of Congress approved July 3, 1832. By the act of March 3, 1879, Congress extended the improvement of the river to Wichita, Kans. The report invites attention to its use by packet companies up to the mouth of the Grand River (Neosho) at Fort Gibson, Okla., and strongly advises against the abandonment of the project, as follows:

I am not of the opinion that the improvement of the Arkansas River should be abandoned, but am inclined to the belief that the work of revetting the banks should be revived. The commercial importance of the valley is increasing all the time, as is natural under an increase of population. While this increase is not reflected in the river commerce, I can not hold that the absence of such reflection is an indication of the unworthiness of the improvement of the river.

In line with the foregoing, I must report that I think the project for the improvement of the river should be modified to read:

"The improvement of the river from its mouth to the mouth of Grand River (461 miles) by snagging operation, by revetting of banks, and by dredging operations, with a view to producing at ordinary low water channel depths of 3½ feet to Little Rock, 3 feet from there to Ozark, 2½ feet from there to the mouth of the Canadian River, and 2 feet from there to the mouth of Neosho River."

The familiar argument used against the expenditure of money for this purpose has been the loss of tonnage. This is not a sufficient reason to deny congressional assistance. Accurate data is not available as to the amount of actual tonnage upon the river, but its disuse for the past few years may be accounted for upon the following grounds:

First. The building of railroads paralleling the river, and the erection of depots convenient for the loading and unloading of freight. No such means for handling freight were provided along the river, thereby discouraging the movement of freight up and down the river.

Second. Sufficient appropriations have not been made for the improvement of the river by snagging it, removing the worst shoals, and revetting the banks. In the meantime the channel has filled with sand and alluvial soil.

The building of railroads develops tonnage and aids in the development of the contiguous territory. More products are raised by farmers, and the population is increased, and the volume of business is augmented over the various lines. An undug canal carries no tonnage, and an unimproved canal or river with competitive railroads parallel to it will lose tonnage.

If the State of New York could profitably spend millions in digging a canal across the State, and if the State of Illinois could profitably expend millions in digging a canal to aid the future development of sections of their country—furnishing water transportation, decreasing freight rates, and aiding the great commercial centers which they connect—we insist that the Government of the United States could profitably spend a much smaller sum of money in keeping open one of the greatest channels—lengthy canals—west of the Mississippi River. Give this river the legislative assistance it should have and make it navigable for light boats, and even the dreamer of the future would be amazed at the vast amount of tonnage carried over it and distributed to the commercial centers of the world.

The business man does not need to be educated to the advantages of this project. He understands that the higher the inbound freight rates are the more he must sell his goods for, and his reasoning is the same as to outbound freight, because he knows that freight charges must be deducted from every barrel of oil, every ton of coal, and from all manufactured products. The farmer is beginning to realize that the prices he receives for his farm products and live stock depend upon the cost of getting them to market. A bushel of wheat from which must be deducted excessive freight, yields a smaller return to the farmer, and the same is true of cotton, potatoes, and all other farm products. Hence, the farmer as well as the business man is deeply interested in the reduction of freight rates and the development of the country. The farmer also appreciates that the development of cities and towns in the various communities affords him home markets.

If this river receives the assistance that it is justly entitled to, Muskogee, Fort Gibson, and the other towns along its banks would in the near future be filled with factories, and the vast deposits of cheap fuel, such as coal, oil, and gas, would be utilized and the raw material would be made into the finished product.

At a hearing in Little Rock, Ark., the following table, showing inbound and outbound freight, was filed by the representative of the Chamber of Commerce of Tulsa, Okla.:

Statement of Mr. E. N. Adams in re Tulsa, Okla.

Inbound freight:	Tons.
Groceries	16,616
Structural iron	3,000
Bar iron	5,563
Steel plates	6,531
Galvanized iron	839
Pig iron	667
Woven wire	100
Plain wire	30
Barbed wire	200
Coke	527
Coke facings	22
Boilers and machinery	48
Pumps	44
Paint	50
Pipe and pipe fittings	29,394
Oil-well supplies	5,772
Miscellaneous	1,853
Total	70,591

	Tons.
Outbound freight:	
Refined oil to points in the United States	462,290
Refined oil for export through the ports of New Orleans, La., and Port Arthur, Tex	250,255
Total	712,545

And the Greater Muskogee Association submitted tonnage statistics, as follows:

Statement of Greater Muskogee Association.

Grains and grain products	4,490
Fruit and fruit products	180
Total	35,744

Attention is invited to the fact that the statistics submitted on behalf of Muskogee do not include any tonnage on account of coal or oil, except refined oil, nor do they include farm products, except those handled by four companies in Muskogee, nor do they include live stock. It would be difficult, indeed, to estimate the tonnage that would be carried on this river with its proper improvement. I have invited attention to this matter for the purpose of showing its great possibilities, and what its development means to Oklahoma and the entire country, as well as to emphasize the interest I have in this project, and express the sincere hope that part of the appropriation will be utilized in the State of Oklahoma, as is evidently the purpose of the paragraph in the bill providing as follows:

Arkansas River, Ark. and Okla.: For maintenance of improvement, including works at Pine Bluff and the operation of dredging plant, $209,700.

Every thoughtful citizen of the Republic appreciates that because of the disastrous war in Europe our imports have been greatly decreased, and as a consequence our revenues from duties have been reduced. Unexpected demands are made upon the Treasury because of this war and conditions in Mexico. It is necessary to economize along all lines. For these reasons I have refrained from offering at this session an amendment to increase the appropriation for the Arkansas River to the amount its improvement justifies.

Pardon me for suggesting that close watch will be kept by Oklahoma upon the expenditure of the amount appropriated in this bill, in the hope that it will be equitably distributed along the river in both the States of Arkansas and Oklahoma, as is contemplated by the item incorporated herein. [Applause.]

Mr. McLAUGHLIN. Mr. Chairman, I make the point of order that there is no quorum present.

The CHAIRMAN (Mr. SHERLEY). The gentleman from Michigan makes the point of order that there is no quorum present. The Chair will count. [After counting.] Ninety-two Members present, not a quorum,

Mr. SPARKMAN. Mr. Chairman, I move that the committee do now rise.

The question was taken; and on a division (demanded by Mr. FOSTER) there were—ayes 43, noes 45.

Mr. FOSTER. Mr. Chairman, I demand tellers.

The CHAIRMAN. No quorum being present, the Clerk will call the roll.

Mr. HARRISON. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. HARRISON. The gentleman from Illinois asked for tellers just as soon as the Chair announced the result of the vote.

The CHAIRMAN. Tellers are demanded.

Tellers were ordered, and Mr. MCLAUGHLIN and Mr. SPARKMAN took their places as tellers.

The committee divided; and the tellers reported—ayes 3, noes 79.

So the committee refused to rise.

The CHAIRMAN. The Chair directs the Clerk to call the roll for the determination of a quorum.

Mr. HARRISON. Mr. Chairman, a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. HARRISON. The question upon which the division was made was whether or not the committee rises. The committee refuses to rise. Is it in order now for the Chair, when a quorum is developed——

The CHAIRMAN. A quorum has not developed, and the Chair announced that a quorum was not present, whereupon a motion was made that the committee rise. That motion having been defeated, it seems to the Chair it is his duty, under the rule, to direct the roll to be called in order to report the matter to the House.

Mr. BORLAND. Mr. Chairman, is it possible for the Chair to count the Members here, but not passing between the tellers?

The CHAIRMAN. The Chair ascertained by an accurate count that a quorum was not present. The Chair then could only entertain the motion that the committee rise. That motion not having been agreed to, it occurs to the Chair that the only thing now, under the rule, is for the calling of the roll in order that report may be made to the House.

Mr. HOWARD. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. HOWARD. Suppose in a case of this kind there were sufficient Members on the floor of the House, but not going between the tellers, to make a quorum, has not the Chair the right to take cognizance of those who were present but not going through the tellers?

The CHAIRMAN. The point of no quorum was made. The Chair counted the Members in the Chamber, and did not find a quorum present. Whereupon a motion was made that the committee rise. Upon that motion the Chair is not at liberty, as at present advised, to count those not voting in order to redetermine what has been determined, that a quorum was not present.

Mr. BARNHART. A parliamentary inquiry, Mr. Chairman.

The CHAIRMAN. The gentleman will state it.

Mr. BARNHART. In the event that there have been sufficient occurrences since that proceeding was taken that would indicate that there is a quorum present, might not the Chair, under that presumption, again make a count, in order to ascertain whether or not a quorum was present?

The CHAIRMAN. The Chair would reply to the gentleman's inquiry that always after the roll is ordered to be called there develops at some stage more than a quorum of the committee. That does not vitiate the call. The call has to continue. Then it is the duty of the Chairman to report to the House what occurred in the committee and what the roll has disclosed.

Mr. MCKELLAR. Mr. Chairman, if the roll call has not been begun, and the Chair can see that there is a quorum in the Chamber, would it not be entirely proper to announce it?

The CHAIRMAN. The Chair is of opinion that the rule is mandatory that upon the committee finding itself without a quorum the Chair shall instruct the roll to be called. Now, the Chair entertained the motion that the committee rise, and that having been denied by the committee, the Chair is of the opinion that the only thing now in order is to direct the Clerk to call the roll.

Mr. KITCHIN. If the Chair is now of the opinion that a count now would disclose a quorum, could he not revoke his own order?

The CHAIRMAN. The Chair determined that a quorum was not present at the time the question was raised, and the question now of the presence of a quorum is not before the Chair for consideration.

Mr. REAVIS. I demand the regular order, Mr. Chairman.

Mr. GARRETT. I do not question the integrity of the Chair, but I question the count of the Chair, and I ask that the Chair count again.

Mr. STAFFORD. Mr. Chairman, I make the point of order on that proposition.

The CHAIRMAN. The Chair holds that that request can not now be entertained by the Chair. The Chair will gladly submit the question to the committee, if it desires, and the committee may overrule the Chair if it thinks he is in error.

Mr. ADAIR. Mr. Chairman, I call for the regular order.

The CHAIRMAN. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

Abercrombie	Gardner	Lazaro	Rainey
Aiken	Garland	Lehlbach	Riordan
Anthony	Gillett	Lewis	Roberts, Mass.
Aswell	Good	Liebel	Roberts, Nev.
Barchfeld	Goodwin, Ark.	Linthicum	Rodenberg
Beales	Gould	Littlepage	Rowland
Bennet	Graham	Lobeck	Sabath
Bruckner	Gray, Ala.	Loft	Scott, Pa.
Brumbaugh	Gregg	Loud	Scully
Buchanan, Ill.	Griest	McAndrews	Sells
Butler	Hamill	McArthur	Sherwood
Byrnes, S. C.	Hamilton, Mich.	McCulloch	Sisson
Callaway	Hamilton, N. Y.	McDermott	Slayden
Campbell	Hamlin	McKenzie	Slemp
Capstick	Hart	Madden	Smith, N. Y.
Carlin	Hay	Magee	Snell
Carter, Mass.	Hayes	Maher	Snyder
Chiperfield	Heaton	Meeker	Stedman
Coady	Heflin	Miller, Del.	Steele, Pa.
Copley	Helm	Montague	Stephens, Miss.
Crago	Henry	Mooney	Stephens, Nebr.
Dale, N. Y.	Hill	Morgan, La.	Stephens, Tex.
Danforth	Hilliard	Morin	Stiness
Darrow	Holland	Morrison	Swift
Davis, Minn.	Hopwood	Moss, W. Va.	Tague
Decker	Houston	Mott	Talbott
Dempsey	Huddleston	Mudd	Tinkham
Dent	Hull, Iowa	Murray	Vare
Dewalt	Husted	Nelson	Volstead
Dooling	Hutchinson	Nichols, Mich.	Ward
Doremus	James	North	Wason
Drukker	Johnson, S. Dak.	Oglesby	Watkins
Dyer	Jones	Padgett	Watson, Pa.
Edwards	Kahn	Paige, Mass.	Watson, Va.
Elston	Kelley	Patten	Williams, W. E.

Finley	Kent	Porter	Wood, Ind.
Flynn	Kincheloe	Pou	Young, N. Dak.
Foss	Konop	Powers	Young, Tex.
Gallagher	Kreider	Price	
Gard	Lafean	Ragsdale	

The committee rose; and the Speaker having resumed the chair, Mr. SHERLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee having under consideration the bill H. R. 12193, the river and harbor appropriation bill, and finding itself without a quorum, he had caused the roll to be called, whereupon 267 Members had answered to their names, and that the list had been furnished to the Clerk of those failing to answer.

The SPEAKER. The Chairman of the Committee of the Whole House on the state of the Union reports that that committee, having under consideration the river and harbor bill, had found itself without a quorum, and under the rules he had caused the roll to be called, when 267 Members answered to their names, a quorum; and he had caused the names of the absentees to be handed in for printing in the RECORD. The committee will resume its sitting.

The committee resumed its session.

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193, the river and harbor bill.

Mr. SPARKMAN. Mr. Chairman, in view of the criticisms that have been made against this item, it is not inappropriate that I should say a few words in conclusion.

This project, in so far as the construction of two large dredges is concerned, was adopted in 1910, when provision for them was made, in the bill of that year, at a cost of more than $350,000, as I recall; certainly their construction had cost, when completed, about $350,000.

Those dredges were built for the purpose of making a test on the Arkansas River, to determine whether or not it was practicable to keep that channel open by dredging. They were completed in August or September, 1914, and had been in operation a little less than a year at the close of the last fiscal year.

Under the dragnet provision contained in the act of 1915, the engineers did reinvestigate that project, and made a report, recommending its partial abandonment. That is, the board and the chief recommended the abandonment of the dredging and the confining of work to snagging.

Now, when the committee came to investigate the matter and to pass upon it in the preparation of this bill, they reached the conclusion that no thorough test had been made of the two dredges; that the work with them had not progressed far enough for that; and that they should be tested there for another year, so as to give them a fair trial.

Now, it requires $209,000 to do that, and the committee after very careful consideration concluded to make the appropriation and operate the dredges for at least another year.

Now, we have not turned down the report of the engineers. It is still pending. We can act upon it when we prepare the next bill, if we see proper to do so, and confine the operation to snagging, as recommended.

One word in reply to the gentleman who was criticizing me a while ago on account of the remarks I made in my opening statement here the other day. Mr. Chairman, I was then dealing with an original report—a report that comes before the committee and made pursuant to a provision for an original survey when it first comes before the committee and Congress for adoption or rejection; and I stated that when a report was made, if it was adverse nothing more was usually done with it. As I said, I was dealing then with an original report, not a report like this, recommending the modification or abandonment of a project, which we may hold in abeyance as long as Congress may choose and act upon now or hereafter.

There was the Sandy Bay Breakwater, for instance, with a report not so liberal as the one concerning the Arkansas River. We have not abandoned that as yet. It is still on the books untouched, except that not being satisfied with the report, we have sent it back to the Board of Engineers for a reexamination, but we can continue it if we choose to do so. Now, we were not altogether satisfied with the report the engineers made on the Arkansas River project, because we did not think a thorough test had been made with the dredges, and we concluded to make this appropriation, and that is all there is to it.

Mr. HUMPHREY of Washington. Will the gentleman yield?

Mr. SPARKMAN. Yes; I yield to the gentleman from Washington.

Mr. HUMPHREY of Washington. Unfortunately, I was not present when the committee considered this item; but was not this report on the Arkansas River, in Arkansas and Oklahoma, under date of December 17, 1915, before the committee when this item was considered?

Mr. SPARKMAN. Oh, yes; and we considered it.

The CHAIRMAN. The gentleman's time has expired.

Mr. SPARKMAN. I ask unanimous consent for two minutes more, so that I may answer the gentleman's question.

The CHAIRMAN. The gentleman from Florida asks unanimous consent to proceed for two minutes. Is there objection?

There was no objection.

Mr. HUMPHREY of Washington. Mr. Chairman, I will occupy only a moment. In that report it says:

> The dredging proposed by the district officer is considered a waste of public funds. It can have no effect on the permanent improvement of the river. It is insufficient even to maintain a temporary channel from the river mouth to Pine Bluff. The transfer of the dredges built for the Arkansas River to the Ohio is suggested, where they would be of some practical use.

Now, it seems to me the committee are violating that portion of the report.

Mr. SPARKMAN. We are not violating the report; we are simply holding it in abeyance for the present. We may perhaps take it up and consider it later on; but a majority of the committee thought it would be unfair to spend $350,000 on the construction of two dredges and then not use them for a reasonable time there. The district engineer, Maj. Putnam, advised that we go back and work on the more expensive project, one requiring not only dredging but revetment and snagging as well.

Mr. HUMPHREY of Washington. But the Board of Engineers say that would be a waste of public funds.

Mr. SPARKMAN. Yes; the board did say that; but in another report they had recommended the dredges. Now, both the reports are before the House with one action, and it can do as it pleases with them and this item.

Mr. McLAUGHLIN. I move to strike out the last word.

Mr. SPARKMAN. How much time does the gentleman want?

The CHAIRMAN. The gentleman from Michigan is recognized for five minutes.

Mr. SPARKMAN. I ask unanimous consent that debate on this item and all amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate on this item and all amendments thereto close in five minutes. Is there objection?

There was no objection.

Mr. McLAUGHLIN. Mr. Chairman, in my judgment the committee is deliberately violating the rule that it has laid down—that it will follow the report of the Chief of Engineers and refuse an appropriation when that report is unfavorable. The committee not only violates its rule, but it is evident also that the committee is not willing to permit the abandonment of a project which time and the expenditure of an immense sum of money have shown to be a worthless proposition. They evidently believe that if a project is begun it must be carried out regardless of cost and regardless of consequences, along the lines followed by the committee in some of these New Jersey projects, which were criticized so severely, where the later reports of the engineers said the carrying out of the projects and the expenditure of large sums of money so far has resulted only in draining land, exterminating mosquitoes, providing further building sites, and providing a harbor for racing yachts. The reports in those cases were unfavorable, and the engineers were trying to get away from those projects, but this committee would not let them quit spending money.

Here is a project on which hundreds of thousands of dollars have been expended, and after years of the most strenuous effort on the part of the engineers, with all the money which Congress has placed at their disposal, they have been unable to make a navigable stream of that river, they recommend abandonment of the original project and that $35,000 only shall be expended, and that to be used for dredging.

The committee, deliberately in my judgment, violating the rule by themselves laid down and enforced against many Members of the House, including myself, on more than one occasion, of which I make no complaint, because I understood the rule was general and because I see justice in it, disregarding the reports of the Chief Engineer and of the board of review, and accepting the recommendation of the junior officer, disregarding the recommendations of six of his superior officers, refusing to permit the engineers to get away from a worthless proposition, insists upon spending the public money on this worthless proposition. It gives color to the statement so generally made over the country, which people are beginning to believe, that this is unwise and improper legislation. I always have been, and still am, in favor of liberal appropriations for rivers and harbors. I started out favorably disposed toward this bill and expected and hoped sincerely to be able to support it, but after days of consideration here in the House, hearing the reports read and learning more than I knew before of the disposition of the committee and the course it has pursued, I have come to the conclusion that this bill contains many very objectionable and indefensible propositions. I reach this conclusion reluctantly. I regret that my action in making it necessary to have a call of the House has inconvenienced the Members and that so much time has been taken at this hour, but I believe if we have emphasized to the country the course that has been pursued by the committee and pursued by the House the time has not been wasted.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Massachusetts.

Mr. NORTON. Can we have the amendment reported?

The amendment was again reported.

The question was taken, and the amendment was rejected.

[Mr. WINGO and Mr. TAYLOR of Arkansas had leave to extend their remarks in the RECORD.]

Mr. SPARKMAN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the Chair, Mr. SHERLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12193, the river and harbor bill, and had come to no resolution thereon.

WITHDRAWAL OF PAPERS.

Mr. OLDFIELD, by unanimous consent, was given leave to withdraw from the files of the House without leaving copies papers in the case of Bertha Oglesby, Sixty-second Congress, no adverse report having been made thereon.

LEAVE OF ABSENCE.

Mr. WILSON of Florida, by unanimous consent, was given leave of absence, for 10 days, on account of important business.

IMMIGRATION BILL.

Mr. BURNETT. Mr. Speaker, I ask unanimous consent for the present consideration of the following privileged resolution.

The Clerk read as follows:

Resolved by the House of Representatives, That the Senate is hereby requested to return H. R. 10384, an act to regulate the immigration of aliens to and the residence of aliens in the United States, passed by the House of Representatives March 30 (calendar day Mar. 31), 1916, for the purpose of correcting an error in the engrossment of the same.

The SPEAKER. Is there objection?

There was no objection.

Mr. MANN. Mr. Speaker, I think it is proper to say that I have examined the original bill as it passed the House and that the error is not the error of the engrossing clerk.

Mr. BURNETT. Mr. Speaker, I want to confirm that. It is in regard to the Humphrey amendment. The Humphrey amendment was adopted, and the next day was amended by substitute, and both of these were sent to the engrossing clerk and O. K'd.

The SPEAKER. The question is on the resolution.

The resolution was agreed to.

LEAVE TO PRINT.

Mr. SLOAN, Mr. TAVENNER, and Mr. LINDBERGH asked unanimous consent for leave to print remarks in the RECORD.

Mr. BARNHART. Mr. Speaker, reserving the right to object, I trust that when these requests are made to extend remarks in the RECORD it will be in order for gentlemen to state what they are going to talk about. I observe that a Member had leave to extend remarks the other day and took a number of pages of the RECORD to print the names of Indians, and there are two or three other cases that have occurred in which the privilege has been grossly abused.

Mr. SLOAN. I desire to extend very briefly what I said this afternoon. I desire the House to know something about the investment in public buildings in the city of Chicago.

The SPEAKER. Is there objection to the request of the gentleman from Nebraska, the gentleman from Illinois, and the gentleman from Minnesota?

There was no objection.

SENATE BILL REFERRED.

Under clause 2, Rule XXIV, Senate bill of the following title was taken from the Speaker's table and referred to the appropriate committee, as indicated below:

S. 3560. An act to validate a certain title whereon the purchase money has been paid on a private sale by order of the United States district court for the middle district of Pennsylvania, at No. 83, June term, 1910, sitting in bankruptcy; to the Committee on the Judiciary.

ENROLLED BILL SIGNED.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 1048. An act for the relief of Warren E. Day.

BILLS PRESENTED TO THE PRESIDENT FOR HIS APPROVAL.

Mr. LAZARO, from the Committee on Enrolled Bills, reported that this day they had presented to the President of the United States, for his approval, the following bills:

H. R. 13769. An act to authorize the Secretary of War to supply tents for temporary use of the sufferers from the recent conflagration in Paris, Tex., and for other purposes; and

H. R. 8466. An act to relieve J. Lawrence Latham, postmaster at Eupora, Webster County, Miss., of the payment of cash and funds stolen from the post office.

IMMIGRATION.

Mr. QUIN. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD upon the subject of immigration.

The SPEAKER. Is there objection?

There was no objection.

HOUR OF MEETING TO-MORROW.

Mr. KITCHIN. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. to-morrow.

The SPEAKER. Is there objection?

There was no objection.

ADJOURNMENT.

Mr. KITCHIN. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 6 o'clock and 6 minutes p. m.) the House adjourned until to-morrow, Saturday, April 8, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Acting Secretary of the Treasury transmitting copy of a communication from the Secretary of War submitting an estimate of appropriation in the sum of $60,000 for radio installations on the Mexican border (H. Doc. No. 990); to the Committee on Appropriations and ordered to be printed.

2. A letter from the Secretary of War transmitting, with a letter from the Chief of Engineers, report on reexamination of Browns Creek, N. Y. (H. Doc. No. 991); to the Committee on Rivers and Harbors and ordered to be printed.

3. A letter from the Secretary of War transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Lake Charlotte, Tex. (H. Doc. No. 992); to the Committee on Rivers and Harbors and ordered to be printed.

4. A letter from the Secretary of War transmitting, in addition to list of claims adjusted and settled by the Chief of Engineers, United States Army (letter of Feb. 5, 1916), reports on two additional claims which have been adjusted and settled since date above mentioned (H. Doc. No. 993); to the Committee on Expenditures in the War Department and ordered to be printed.

5. A letter from the Acting Secretary of the Treasury, transmitting a tentative draft of legislation authorizing the extension, remodeling, etc., of the Federal building at Beaver Falls, Pa. (H. Doc. No. 994); to the Committee on Public Buildings and Grounds and ordered to be printed.

6. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of Jonesport Harbor, Me., including Moosabec Bar (H. Doc. No. 995); to the Committee on Rivers and Harbors and ordered to be printed.

7. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, report on preliminary examination of Shetucket and Quinebaug Rivers, Conn., and French River, Conn. and Mass., with a view to securing slack-water navigation between Norwich, Conn., and Worcester, Mass. (H. Doc. No. 996); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

8. A letter from the Secretary of War, transmitting, with a letter from the Chief of Engineers, reports on preliminary examination and survey of Ashtabula Harbor, Ohio (H. Doc. No. 997); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

9. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Catherine Weirick, widow of Ephraim B. Weirick, *v.* The United States (H. Doc. No. 998); to the Committee on War Claims and ordered to be printed.

10. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Jessie M. Phinney, widow of Lorenzo Phinney, deceased, *v.* The United States (H. Doc. No. 999); to the Committee on War Claims and ordered to be printed.

11. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Clanton G. Welsh et al., heirs of Merit C. Welsh, deceased, *v.* The United States (H. Doc. No. 1000); to the Committee on War Claims and ordered to be printed.

12. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of George D. McKinney *v.* The United States (H. Doc. No. 1001); to the Committee on War Claims and ordered to be printed.

13. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of James B. Smith *v.* The United States (H. Doc. No. 1002); to the Committee on War Claims and ordered to be printed.

14. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of John C. Andrew *v.* The United States (H. Doc. No. 1003); to the Committee on War Claims and ordered to be printed.

15. A letter from the chief clerk of the Court of Claims, transmitting a copy of the findings of the court in the case of Lucy A. Durant, widow of Martin Durant, deceased, *v.* The United States (H. Doc. No. 1004); to the Committee on War Claims and ordered to be printed.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. McCLINTIC, from the Committee on the Public Lands, to which was referred the bill (S. 1793) granting to the State of Kansas title to certain lands in said State for use as a game preserve, reported the same with amendment, accompanied by a report (No. 500), which said bill and report were referred to the Committee on the Whole House on the state of the Union.

Mr. TIMBERLAKE, from the Committee on the Public Lands, to which was referred the bill (H. R. 10124) to add to the Rocky Mountain National Park, Colo., certain lands, reported the same with amendment, accompanied by a report (No. 502), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. MAYS, from the Committee on the Public Lands, to which was referred the bill (S. 35) to authorize the Secretary of the Interior to issue patents for certain lands to the town of Myton, Utah, reported the same without amendment accompanied by a report (No. 503), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. TAYLOR of Colorado, from the Committee on the Public Lands, to which was referred the bill (S. 1066) authorizing leave of absence to homestead settlers upon unsurveyed lands, reported the same without amendment, accompanied by a report (No. 504), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. JOHNSON of Kentucky, from the Committee on the District of Columbia, to which was referred the bill (S. 2290) authorizing the health officer of the District of Columbia to issue a permit for the removal of the remains of the late Elsie McCaulley from Glenwood Cemetery, District of Columbia, to Philadelphia, Pa., reported the same without amendment, accompanied by a report (No. 501), which said bill and report were referred to the Private Calendar.

Mr. MAYS, from the Committee on the Public Lands, to which was referred the bill (S. 33) for the relief of Daniel M. Frost, reported the same without amendment, accompanied by a report (No. 505), which said bill and report were referred to the Private Calendar.

He also, from the same committee, to which was referred the bill (S. 6) authorizing issuance of patent for certain lands to Thomas L. Griffiths, reported the same without amendment, accompanied by a report (No. 506), which said bill and report were referred to the Private Calendar.

He also, from the same committee, to which was referred the bill (S. 31) for the relief of John L. Sevy, reported the same without amendment, accompanied by a report (No. 507), which said bill and report were referred to the Private Calendar.

MOTION TO DISCHARGE COMMITTEE.

Under clause 4 of Rule XXVII, a motion to discharge a committee was filed, as follows:

By Mr. TREADWAY: To discharge the Committee on the Judiciary from the further consideration of the bill (H. R. 476) to provide compensation for employees of the United States suffering injuries or occupational diseases in the course of their employment, and for other purposes.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Claims was discharged from the consideration of the bill (H. R. 13994) for the relief of the estate of John Boyer, deceased, and the same was referred to the Committee on War Claims.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and a memorial were introduced and severally referred as follows:

By Mr. ALEXANDER: A bill (H. R. 14337) to regulate carriers by water engaged in the foreign and interstate commerce of the United States; to the Committee on the Merchant Marine and Fisheries.

By Mr. ADAMSON: A bill (H. R. 14338) to authorize aids to navigation and for other works in the Lighthouse Service, and for other purposes; to the Committee on Interstate and Foreign Commerce.

By Mr. GLASS: A bill (H. R. 14339) to limit the use of the words "Federal" and "reserve"; to the Committee on Banking and Currency.

By Mr. ADAMSON: A bill (H. R. 14340) to furnish all seagoing vessels in the Lighthouse Service and all other seagoing vessels of the Department of Commerce with radio equipment and auxiliary power for the operation thereof; to the Committee on Interstate and Foreign Commerce.

By Mr. HULL of Iowa: A bill (H. R. 14341) to appropriate $700,000 for a building and facilities for the manufacture of aeroplanes and aircrafts at the Rock Island Arsenal; to the Committee on Military Affairs.

By Mr. HASTINGS: A bill (H. R. 14342) providing for a survey of Arkansas River, in the State of Oklahoma, with the view to making same navigable; to the Committee on Rivers and Harbors.

By Mr. GRIFFIN: A bill (H. R. 14343) providing for the removal of the remains of Samuel Chester Reid from Greenwood Cemetery, Brooklyn, N. Y., to the National Cemetery at Arlington, Va., and placing a suitable memorial to his memory; to the Committee on the Library.

By Mr. RIORDAN: A bill (H. R. 14344) to authorize the Secretary of the Treasury to sell the present assay office, at New York City, and to provide for the purchase of a new site and the erection of a building thereon; to the Committee on Public Buildings and Grounds.

By Mr. HEFLIN: Resolution (H. Res. 195) to investigate the conduct of the New York Cotton Exchange; to the Committee on Rules.

By Mr. MOTT: Memorial of the Legislature of the State of New York, favoring adequate preparedness; to the Committee on Military Affairs.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. ALMON: A bill (H. R. 14345) to reimburse J. B. Patterson, postmaster of Lacon, Morgan County, Ala., for certain postage stamps stolen; to the Committee on the Post Office and Post Roads.

By Mr. BORLAND: A bill (H. R. 14346) granting an increase of pension to Ellen Taylor; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14347) granting an increase of pension to Nathan Baker; to the Committee on Invalid Pensions.

By Mr. CANTRILL: A bill (H. R. 14348) granting an increase of pension to O. H. Peters; to the Committee on Invalid Pensions.

By Mr. DAVENPORT: A bill (H. R. 14349) granting an increase of pension to Martin Fleming; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14350) granting an increase of pension to John E. Hobbs; to the Committee on Invalid Pensions.

By Mr. DENISON: A bill (H. R. 14351) granting an increase of pension to Maberry Riggs; to the Committee on Invalid Pensions.

By Mr. EDMONDS: A bill (H. R. 14352) granting a pension to Ellen Murphy; to the Committee on Pensions.

Also, a bill (H. R. 14353) to reinstate I. Franklin Cohn as a passed assistant surgeon in the United States Navy; to the Committee on Naval Affairs.

By Mr. FARR: A bill (H. R. 14354) for the relief of the widow of Wallace Whitesell; to the Committee on Military Affairs.

Also, a bill (H. R. 14355) granting an increase of pension to Bridget McAndrew; to the Committee on Invalid Pensions.

By Mr. FERRIS: A bill (H. R. 14356) granting an increase of pension to Amos Potter; to the Committee on Invalid Pensions.

By Mr. FOCHT: A bill (H. R. 14357) granting a pension to Laura D. Bricker; to the Committee on Pensions.

By Mr. GRAHAM: A bill (H. R. 14358) for the relief of John S. Winslow; to the Committee on Naval Affairs.

By Mr. GRIFFIN: A bill (H. R. 14359) reinstating William S. Barriger to his former grade and rank in the United States Army; to the Committee on Military Affairs.

By Mr. HULL of Iowa: A bill (H. R. 14360) granting an increase of pension to Aaron Angle; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14361) granting an increase of pension to Richard H. Crone; to the Committee on Invalid Pensions.

By Mr. HUMPHREY of Washington: A bill (H. R. 14362) granting an increase of pension to George W. Wells; to the Committee on Invalid Pensions.

By Mr. KEARNS: A bill (H. R. 14363) granting an increase of pension to Mary A. Allen; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14364) granting an increase of pension to Adam Snyder; to the Committee on Invalid Pensions.

By Mr. KEATING: A bill (H. R. 14365) granting an increase of pension to John Givens; to the Committee on Invalid Pensions.

By Mr. KEY of Ohio: A bill (H. R. 14366) to remove the charge of desertion and grant an honorable discharge to Samuel Bordner; to the Committee on Military Affairs.

By Mr. KIESS of Pennsylvania: A bill (H. R. 14367) providing for the promotion of Col. George A. Dodd, United States Army; to the Committee on Military Affairs.

By Mr. LAFEAN: A bill (H. R. 14368) granting an increase of pension to Bridget Trainor; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14369) granting an increase of pension to Matilda W. Leightner; to the Committee on Invalid Pensions.

By Mr. LESHER: A bill (H. R. 14370) granting a pension to Mary J. Rockefellow; to the Committee on Pensions.

By Mr. McCRACKEN: A bill (H. R. 14371) granting an increase of pension to Charles E. Bradish; to the Committee on Invalid Pensions.

By Mr. OVERMYER: A bill (H. R. 14372) granting an increase of pension to Peter Capp; to the Committee on Invalid Pensions.

By Mr. PETERS: A bill (H. R. 14373) granting an increase of pension to Katie W. De Beck; to the Committee on Invalid Pensions.

By Mr. RANDALL: A bill (H. R. 14374) granting a pension to James W. McCullah; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14375) granting a pension to Mrs. F. G. Cahoon; to the Committee on Invalid Pensions.

Kinner, J. J. Wickham, Levi Larrison, Barney Harris, and J. G. Cooley, all of Elmira; Robert Gardner, of Horseheads; L. S. Wilson, of Corning; and L. F. Dennis, of Hornell, all of the State of New York, all employees of the Washington Navy Yard, favoring the passage of House bill 11168, granting 30 days' leave of absence in each year, without forfeiture of pay during such leave, to employees at United States navy yards, gun factories, naval stations, and arsenals; to the Committee on Naval Affairs.

By Mr. ROWE: Petition of McWilliams Bros., of New York, against passage of House bill 8036, relative to eight-hour law for officers of tugboats; to the Committee on the Merchant Marine and Fisheries.

Also, petition of James F. Jarvis, of Brooklyn, N. Y., favoring the passage of the Nolan bill, relative to adjustment of salaries of Government employees; to the Committee on Reform in the Civil Service.

Also, petition of Charles W. Kotcher, of Detroit, Mich., and John Aspinwall, of Newburgh, N. Y., against passage of House bill 9411, relative to numbers on motor boats; to the Committee on the Merchant Marine and Fisheries.

Also, petition of James J. McKay, of Brooklyn, N. Y., favoring passage of House bill 6915, relative to postal employees; to the Committee on the Post Office and Post Roads.

Also, petition of W. W. Best, of Brooklyn, N. Y., favoring House bill 13671, relative to Army headquarters and quartermaster clerks; to the Committee on Military Affairs.

By Mr. RUSSELL of Ohio: Petition of F. S. Switzer and others, of Spencerville, Allen County, Ohio, and vicinity, asking Congress not to pass House bill 6468, to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. SANFORD: Papers to accompany House bill 13372, for relief of Henry C. Romaine; to the Committee on Military Affairs.

By Mr. SINNOTT: Petition of 29 residents of Freewater and 20 residents of Hood River, Oreg., against House bills 6468 and 491; to the Committe on the Post Office and Post Roads.

Also, petitions of 23 residents of Hood River, Oreg., against House bill 652; to the Committee on the District of Columbia.

Also, petition of citizens of Hood River, Oreg., favoring national prohibition; to the Committee on the Judiciary.

By Mr. SLOAN: Petition of R. H. Pigg and 31 others, in opposition to House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

Also, petition of Mrs. M. A. Gamble and 43 others, opposed to a bill to amend the postal laws, House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

By Mr. SMITH of Idaho: Petition of sundry citizens of Washington County; to the Committee on the Post Office and Post Roads.

Also, memorial of Bi-Farmers' Union, of Naples, Idaho, urging the enactment of rural-credit legislation; to the Committee on Banking and Currency.

Also, petition of 80 people of Couer d'Alene, Christian Church of Couer d'Alene, Baptist Church of 275 people of Couer d'Alene, all in the State of Idaho, favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of Kaumalapau Junior Christian Endeavor Society of Hawaii, the Kaumalapau Intermediate Christian Endeavor Society of Hawaii, and the Kaumalapau Sunday School, Hawaii, urging the adoption of a prohibition amendment to the Constitution; to the Committee on the Judiciary.

By Mr. STINESS: Papers to accompany bill for relief of Patience B. Nicholas; to the Committee on Invalid Pensions.

Also, papers to accompany bill for relief of Alexander Reid; to the Committee on Invalid Pensions.

By Mr. TAYLOR of Arkansas: Petition of J. C. Riggan, Ross Wylie, and others, of Dallas County, Ark., favoring freedom of speech and press; to the Committee on the Post Office and Post Roads.

By Mr. TAYLOR of Colorado: Petition of citizens of Paonia, Colo., against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of citizens of Olathe, Colo., favoring passage of the Caraway rural credit bill; to the Committee on Banking and Currency.

By Mr. TIMBERLAKE: Petition of citizens of Fort Morgan, Colo., against the Sunday-observance bill for the District of Columbia; to the Committee on the District of Columbia.

Also, petition of citizens of Timnath, Fort Collins, and Loveland, Larimer County, and Fort Morgan, Colo., against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. VARE: Petition of citizens of Philadelphia, Pa., against bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

SENATE.

SATURDAY, *April 8, 1916.*

(Legislative day of Thursday, March 30, 1916.)

The Senate reassembled at 11 o'clock a. m., on the expiration of the recess.

Mr. JONES. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. Let the Secretary call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Jones	Pittman	Sutherland
Brady	Kenyon	Poindexter	Swanson
Chamberlain	Kern	Ransdell	Taggart
Clapp	Lane	Reed	Thomas
Clarke, Ark.	Lodge	Robinson	Thompson
Cummins	McCumber	Saulsbury	Tillman
Curtis	Martin, Va.	Shafroth	Vardaman
Dillingham	Myers	Sheppard	Warren
du Pont	Nelson	Smith, Ga.	Weeks
Gallinger	Norris	Smith, S. C.	Williams
Husting	Overman	Smoot	
Johnson, Me.	Owen	Sterling	
Johnson, S. Dak.	Page	Stone	

Mr. KERN. I desire to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER] on official business. He is paired with the Senator from Idaho [Mr. BRADY].

I also desire to announce the unavoidable absence of the Senator from Arizona [Mr. SMITH] on account of illness. These announcements will stand for the day.

The PRESIDENT pro tempore. Forty-eight Senators have answered to their names. A quorum of the Senate is not present. The Secretary will furnish the Sergeant at Arms with a list of absentees and that officer is directed to request their attendance.

Mr. HARDWICK entered the Chamber and answered to his name.

The PRESIDENT pro tempore. Forty-nine Senators have answered to their names. A quorum of the Senate is present.

POTOMAC POWER PLANT.

Mr. TAGGART. Mr. President, I have a communication from the Indianapolis Board of Trade, which I ask may be read and referred to the Committee on the District of Columbia.

There being no objection, the communication was read and referred to the Committee on the District of Columbia, as follows:

THE INDIANAPOLIS BOARD OF TRADE,
Indianapolis, Ind., April 6, 1916.

Hon. THOMAS TAGGART.

DEAR SIR: In accordance with action taken by the governing committee of the Indianapolis Board of Trade, I am inclosing copy of resolution relative to the Government power plant at Washington, adopted by the committee at its regular monthly meeting, Monday evening, April 3, 1916.

Yours, very truly, WM. H. HOWARD, *Secretary.*

The governing committee of the Indianapolis Board of Trade, at its regular monthly meeting, April 3, adopted the following resolution:

"Whereas the Park Commission plans for the future development of Washington resulting from the careful study of the many plans and able suggestions offered to the Government from time to time are based on the plan laid out over 100 years ago by Washington and Jefferson; and

"Whereas these plans offer to the Nation's Capital a tangible, economical system for the location of its public buildings, bridges, statuary, highways, neighborhood parks, and a practical solution for connecting Potomac Park, National Zoological Park, Rock Creek Park, Soldiers' Home Park, and the Eastern Branch Park, the Arsenal, the Mall, and Arlington through a system of smaller parks, drives, and bridges; and

"Whereas the Park Commission plans have been indorsed by two Presidents, by the Government-appointed Fine Arts Council, the National Commission of Fine Arts, the Lincoln Memorial Commission, and by many local, national, and foreign, business, civic, municipal, architectural, labor, scientific, patriotic, and landscape societies; and

"Whereas the location of a Government power plant near the center of the park system composed of East Potomac Park, Riverside Park, Arlington, and the Mall—this building and site has been condemned as unsightly and marring the Park Commission plans by the National Commission of Fine Arts, and the location has been proved uneconomical by eminent electrical and mechanical engineers—will interfere with the development of the river front, and the building and smokestacks will detract from the dignity of the buildings, monuments, and parks, and be destructive of the beauty of the parks: Therefore be it

"*Resolved*, That the governing committee of the Indianapolis Board of Trade approve the Park Commission plans and earnestly urge upon Congress the importance of enacting a law directing that the development of Washington be according to these plans under the advice of the National Commission of Fine Arts; and be it

"*Resolved*, That we urge upon the President of the United States and the Congress of the United States that they reconsider the location of the Government power plant on the site selected; and be it further

"*Resolved*, That a copy of these resolutions be mailed to the President, our representatives in both branches of Congress, our local newspapers, and to Glenn Brown, chairman of the Committee of One Hundred on the Development of Washington, 806 Seventeenth Street NW., Washington, D. C."

GEO. H. EVANS, *President.*

Attest:

WM. H. HOWARD, *Secretary.*

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, requested the Senate to return to the House the bill (H. R. 10384) to regulate the immigration of aliens to and the residence of aliens in the United States.

IMMIGRATION.

The PRESIDENT pro tempore. The Chair lays before the Senate the request of the House of Representatives for the return of the bill (H. R. 10384) to regulate the immigration of aliens to and the residence of aliens in the United States. The Committee on Immigration will be discharged from the further consideration of the bill and the request of the House of Representatives will be complied with.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

The PRESIDENT pro tempore. The pending question is on the amendment of the Senator from South Carolina [Mr. SMITH] to the amendment of the Committee on Military Affairs.

Mr. DU PONT. Mr. President, in connection with the recent debate on that portion of the bill now before us which referred to the Federal volunteers, and incidentally to the military training camps, I present a letter from the secretary of the Military Training Camps Association, together with a copy of a letter to the governing committee of that association from the Secretary of War, which, as throwing light on the whole question, which was so long debated, I ask may be read.

The PRESIDENT pro tempore. The Secretary will read, unless there is objection. The Chair hears none.

The Secretary read as follows:

NEW YORK CITY, *April 6, 1916.*

Hon. HENRY A. DU PONT,
United States Senate, the Capitol, Washington, D. C.

DEAR SIR: In connection with the debate on the Federal volunteer provision (sec. 56) of the Chamberlain bill, questions have been raised as to the precise extent and character of the Federal training-camp movement. We wish the Senate to have full and authentic information as to the scope and present status of the camps, and respectfully present the following facts.

Camps announced for 1916 by the commanders of the four military departments are as follows:

EASTERN DEPARTMENT.

Fort Oglethorpe, Ga.: Three camps—May 3 to August 8.
Plattsburg, N. Y.: Five camps—June 3 to October 5.

CENTRAL DEPARTMENT.

Fort Benjamin Harrison, Indianapolis, Ind.: Three camps—July 5 to October 5.

SOUTHERN DEPARTMENT.

San Antonio, Tex.: One camp—June 12 to July 8.
Galveston, Tex.: One camp—June 5 to July 1.

WESTERN DEPARTMENT.

Monterey, Cal.: One camp—July 10 to August 5.
Salt Lake City, Utah: July.
American Lake, Wash.: July.

Recruiting for these camps has hardly yet been started, but already 3,503 men have actually signed for the Plattsburg camps and considerable numbers (exact figures not at hand) for the other camps. Plattsburg enrollments are coming in at the rate of over 100 per day; and as enrollments for all camps will greatly increase later in the season, we can safely estimate a minimum final enrollment as follows:

Eastern department camps	15,000
Central department camps	7,000
Southern department camps	2,000
Western department camps	6,000
Total	30,000

We are informed that requests for camps are being made by various States and communities, especially in the Central West, which the War Department can not grant because of a lack of officers and troops.

The Military Training Camps Association is national in scope, and maintains various offices and local committees at a number of points in all sections of the country. It is directed by a governing committee of 50, including representative citizens who have attended the camps and a number of university presidents.

The camps have always had the approval and support of the War Department, but never any legislative recognition or support. The men have paid their own expenses, including transportation and uniforms, the total amounting to an average of at least $60 per man. The enrollments for the 1916 camps are being made on the same basis, due to lack of any Federal legislation.

The great employers, such as the Pennsylvania Railroad Co., the Western Union Telegraph Co., and the United States Steel Corporation, have offered their cooperation and will grant four weeks' vacation for their employees to attend.

A recent letter from the Secretary of War, indicating his full approval of the training-camp movement, is inclosed. We shall be glad to furnish any further information desired by any Senator.

We have no quarrel with the National Guard. Many of our most active men are National Guardsmen.

We wish only to be given authority to continue our work, in which thousands of men, from coast to coast, are interested.

Yours, respectfully,

EXECUTIVE COMMITTEE, MILITARY TRAINING CAMPS ASSOCIATION OF THE UNITED STATES,
By GRANVILLE CLARK, *Secretary.*

WAR DEPARTMENT,
Washington, D. C., March 16, 1916.

To the Governing Committee of the Military Training Camps Association of the United States.

GENTLEMEN: I heartily approve and indorse the valuable and patriotic service that is being rendered to the country by the Army training camps for civilians.

I believe in the work of these camps, not only from the military point of view but as of value to the Nation educationally in promoting discipline, order, and good citizenship. The camps are exactly in line with the sound policy of reliance upon a citizenry trained to arms as our main safeguard for defense.

I appreciate highly the service rendered by the university presidents and civilian committees who are forwarding this movement.

These camps were originated by the War Department in 1913 for the training of students, and have been since extended for the benefit of other citizens with gratifying results.

You may rest assured that in continuing your work of developing and promoting these camps on a national scale you will have the continued cooperation and support of the War Department.

Yours, most sincerely,

NEWTON D. BAKER,
Secretary of War.

Mr. LEWIS. Mr. President, in connection with the communication tendered by the Senator from Delaware [Mr. DU PONT] there is an observation I wish to make with a view of clarifying what appears to be some obscure or certainly confused situation.

The vast number of telegrams which have come into this body indicate that in certain sections of the country there has been expressed the conviction that the Senate on one side or the other is opposing these training camps. I should like to have it clear that there has been no issue in the Senate as to these training camps, and on neither side of the Senate has there been expressed any opposition whatever, and no vote and no debate on either side of the Senate has involved the question.

Since there seems to be a mistaken idea throughout all parts of the country that section 56 involves that question, it is well to have it clear now that up to the present time, I think all Senators on both sides will agree, there has been no opposition whatever expressed to the camps, but every expression of encouragement.

SCIENCE OF HOME ECONOMICS.

Mr. SMOOT. Mr. President, in accordance with the notice I gave last evening, I desire to address the Senate for a few moments.

Mr. President, the Senate has been considering for some days past the question of increasing the Army of the United States for the better protection of our country, and I am now going to make a few brief remarks on a bill introduced by me on March 25 providing for an increased annual appropriation for agricultural experiment stations, to be used in researches and experiments in home economics and regulating the expenditure thereof, the purpose of which is to better prepare the girls and mothers of our country for the life duties of practically all of them. For the past four years I have been endeavoring to secure favorable action by the Senate on bills of similar import, and sincerely trust that at this session of Congress legislation along the lines outlined in the bill will be enacted into law.

As each year passes the necessity for such legislation becomes more and more apparent. I hope I can have the attention of the Senate for a short time while I give some of the reasons why I have been pressing such legislation and why I believe favorable action should be taken on my bill and at the same time, if possible, on the bill now upon the calendar in which the Senator from Georgia [Mr. SMITH] and many of us are so deeply interested. Similar bills introduced by me have in the past received the hearty approval of the Department of Agriculture, also the support of hundreds of the leading educators, both men and women, of our country, and of a very great number of women's organizations. I have the letters of indorsement, but will not burden the RECORD with them. A letter signed by Hon. B. T. Galloway, then Acting Secretary of Agriculture, dated February 14, 1914, addressed to Senator GORE, chairman of the Committee on Agriculture and Forestry of the Senate, in answer to a request that a report be made on Senate bill 280, contains this statement:

I beg to acknowledge receipt of your recent letter, together with Senate bill 280, providing for an increased annual appropriation for agricultural experiment stations, to be used in researches in home economics, etc. I note your request that a report be made on this bill.

The bill would provide for the experimental study in the agricultural experiment stations of home economics, including both domestic science and domestic art problems; i. e., it would provide for the experimental study of the nature and use in the home of food materials, wool, cotton, and other agricultural products which the housekeeper uses to feed, clothe, and otherwise care for her family and home. It is with such problems that home economics is concerned. The teaching of home economics has already been organized in the agricultural and other colleges and in numerous schools throughout the United States. In recent years the extension movement has been organized on a large scale, and this includes the dissemination and demonstration of information on home economics. The Congress has just passed a bill granting money to all the States for extension work in home economics as well as agriculture. This independent movement for instructions and demonstration in home economics can not be developed properly unless there are back of it agencies for investigation, through which tested, reliable, and new knowledge on the subject may be constantly acquired. There would, therefore, appear to be need for experimental inquiries in home economics at the present time.

The bill S. 280, as drawn, follows practically the language used in the act of March 16, 1906, commonly known as the Adams Act. Since the passage of the Adams Act there has been a material change in public sentiment with regard to the relation of the Federal Government and the States in so far as concerns educational and similar work.

The Hoke Smith-Lever bill, above referred to, lays down a principle which, it seems, should be given due weight in considering any further legislation affecting the agricultural colleges and the State experiment stations. It is a principle involving the equal sharing by the States and the Federal Government of the expenses of the work. We believe this principle should be adopted in connection with the bill under consideration. We believe, furthermore, that the appropriation, if made, should begin with a moderate sum and be cumulative, just as is the case with the Hoke Smith-Lever bill. I have submitted this proposition to some of the leading experiment-stations workers and they for the most part approve the plan. Their comments are submitted herewith as Exhibit A.

It is our view that it would be unwise at this time to make so large an appropriation as $10,000 to each State. Research in home economics opens a new field. The work, therefore, should be begun in a conservative way. We are of the opinion that $2,500 would suffice to inaugurate this work, with an additional $2,500 thereafter for three years, provided the States appropriate an equal amount. In any event, each station would receive $2,500 from the Federal Government and $2,500 each year for three consecutive years, provided the States meet the appropriation until the total from the Federal Government would equal $10,000. Thereafter the appropriation would be $10,000 annually. Some further changes are made in the bill to make it conform in general to the plan worked out in the Hoke Smith-Lever measure. All these amendments we have brought together in the form of a new bill, which is submitted as Exhibit B. There is also submitted, as Exhibit C, Senate bill No. 280, with the amendments proposed inserted, in order that the committee may see exactly what changes have been made.

I shall be pleased to furnish any additional information if such is required.

Exhibit A, referred to in the letter of the Acting Secretary, consists of letters addressed to him by Hon. Charles E. Thorne, director of the Ohio Agricultural Experiment Station; Hon. F. B. Mumford, dean and director of the College of Agriculture and Experiment Station of the University of Missouri; Hon. A. F. Woods, dean and director of the department of agriculture of the University of Minnesota; and Hon. H. J. Waters, president of the Kansas State Agricultural College, which I ask to have incorporated in the RECORD at the end of my remarks without reading.

It is generally acknowledged that upon our splendid system of popular education, as much as any other single influence, rests the greatness and glory of our Nation. Notwithstanding the splendid results of our school system, it still falls short of present-day requirements. We should not forget that it is less than 100 years since it was a debatable question in New England whether the State was justified in teaching more than "readin', writin', and cipherin'," and whether it was worth while at all to educate the girls. The change has been gradual; every advance has met with opposition. I predict the day will come when every child in America, rich or poor, will be required by law to have an education and training necessary for a life of usefulness and good citizenship. Our girls must be so educated in order to insure successful homes, which are the basis of all powerful and self-sustaining nations.

The education furnished by our agricultural colleges should be that which will make for the highest and most useful citizenship and best fit the individual for the duties and responsibilities of life that must be met and assumed. As much attention should be given to the preparation and education of the girl as the boy; as much demonstration work taken to the home as is carried to the farm. In order that this may be accomplished our agricultural experiment stations must have the appropriation provided for in my bill so that the necessary researches and experiments can be carried on and the acquired information taken by the demonstrators provided for in the recent Smith-Lever bill.

The question as to whether "it is worth while to educate girls" has been answered unequivocally in the affirmative. In this twentieth century the woman is no longer a mere drudge, a convenience, a something to satisfy the wishes and demands of the man. To-day, in America at least, we find her as counselor and partner, as God intended her to be.

In our struggle for liberty and higher national ideals woman has been our inspiration in the past and is our hope for the future. No matter what woman's aims, her hopes, or ambitions may be, or what avocations she may decide to enter, it will always remain for her to find her greatest reward and happiness as a successful home maker. The most unselfish and holy duties in our existence have been committed by our Heavenly Father to the wife and mother. What shall we think of a person or a people so ignorant or so parsimonious that would deny her any opportunity to fit herself for this special calling? Not only is the individual benefited by an education but the Nation is immensely profited by every one of its citizens receiving a sensible and practical education. Such an education means to a nation better citizenship, unquestioned loyalty, and temporal development. To the individual it means increased chances in obtaining positions of responsibility and power; self-independence; a broader view and conception of life; loftier ideals; greater usefulness to one's self; and greater appreciation for the wonders and beauties of nature. No school, college, or university that fails to fit the individual for the duties and responsibilities of life, that fails to teach morality, thrift, and industry can, in my opinion, be classed as successful. I believe in and am an advocate of vocational education for our boys and a complete home economics course for our girls. Let the student come in contact with the actual affairs of life as well as the theories. Direct their hands and eyes as well as their minds. Teach them not to be idle, "for he that is idle shall not eat the bread, nor wear the garments of the laborer." Impress upon them all that work is honorable.

The household is a unit of social progress. It implies marriage, family, and the home. Household science is so closely related to sociology or human experience in social living that sociologists often make the statement that household science is but an application of their ideals. The home ought to and by right should be the place in which the soul can develop and grow. Contentions, ignorance, wastefulness, idleness, and a lack of harmony retard that development and growth and blunt the finer sensibilities of every inmate of the household. Home economics inspires an interest in home life and daily duties. It stimulates economy, industry, neatness, individuality, and self-control. Knowing this to be true, I hope that nothing will be left undone in providing an opportunity for all American girls of every walk of life to study the real things of life—the fascinating problems of home economics.

I am one who believes that much of the world's poverty, misery, drunkenness, and disease come from poorly prepared food. It is a crime, and is wicked in the sight of God to have the products of the farm made next to useless by poor cooking. Tens of thousands of homes are ruined by helpless and ignorant housekeepers, and the American garbage can is the fattest in all the world. No one questions the fact that the food consumption per capita in America is larger than that of any other country in the world and nearly twice that of thrifty France. The way to lessen these evils is to provide an annual appropriation for agricultural experiment stations to be used in researches and experiments in home economics; and if this step is taken by Congress it will not be many years until the same system is established throughout our entire school system. Our present plan of education will be changed, or perhaps I had better say extended, and when that blessed day arrives our schools, colleges, and universities will studiously employ themselves in carrying civilization with all its blessings downward to the girls of the home and the boys and men of the farm. In saying this I do not wish to be understood as meaning there will be a lowering of standards of scholarship, culture, discipline, or research in our future system of education. Such a thing is unthinkable; it can not be, as every course of study will be dedicated to the better preparation of students for the higher and nobler duties of life. Such an education will not only develop a more contented, healthy, loyal, and home-loving people, but it will prevent billions of dollars of waste that is worse than loss to the American homes to-day. I shall briefly refer to some facts we are all familiar with to demonstrate what I mean. It is a well-known fact that the aggregate value of farm products for the year 1913 was placed at $10,000,000,000 by our Department of Agriculture. The approximate cash income of the farmers of the United States, even in ordinary times, is known to be at least $5,000,000,000. It is hardly possible for the ordinary mind to grasp the full meaning of $10,000,000,000, but comparisons are sometimes easier to understand, so I will say that the value of the farm products of the United States in 1913 was twice as great as their value in 1899 and over a billion and a half dollars greater than they were in the year 1909. These figures tell the story as forcibly as it is possible to do of the advancing cost of living, for the volume of increase of farm crops since 1899 has not kept pace with the increase of values. Any action on the part of organizations or State legislatures, any legislation by Congress that will assist the people in acquiring a knowledge that will prevent the destruction or waste of products of the farm or factory will be the greatest blessing that can be conferred upon the American home and Nation.

We must not forget that the influences that affect the family to a degree affect the Nation. In my opinion, waste and extravagance in their thousand forms are among the curses of the age, and no people upon the face of the earth is so guilty of both of these evils as our own American people. The people of the United States—I bar no class—have been living at a higher and higher standard for the last 15 years. The time has arrived when further advances in the mode of living must cease, and it is really desirous from every point of view for a retrenchment; but I recognize that a return to the old methods of economizing is hardly possible. I know it is a difficult matter for a family either to begin or to determine just where or how to begin to economize. It is so much easier to add comforts to home life than eliminate them. Extravagance and waste, which devour so much of the substance of the people, have much to do with the cost that is severely felt; that is, the cost to people of small means, who find it hard to get on in comfort with such incomes as they possess.

There is a fundamental principle of economics, so simple that it ought to be easily understood, and yet its significance is almost unheeded. It is this: Everything that goes to support life and to satisfy human wants must be continually produced for that purpose by human effort through the employment of capital and labor from the resources of nature. There is only what is thus produced to live upon; that is the supply. It is a question of how much is consumed in living, and it can not be more than the production, at least for any length of time. If products are squandered or wasted or thrown away after they are ready for consumption, the supply will be diminished, while the demand remains the same, and the cost of living will be higher than it would otherwise be. These are not questions of abstract theory, but are elementary facts within the comprehension of any ordinary man. We need to be reminded that whatever goes to waste and extravagance, which is reckoned in terms of money, is not a mere throwing away of dollars or depleting of bank accounts or getting away with inherited or accumulated property. It is using up the fruits of labor, which is going on from day to day. This is exceeding the supply of products and turning from the form of necessities and comforts to those of luxuries. It is largely the voluntary cost of high living that causes the involuntary cost of low living.

In a very short investigation and from sources I have every confidence in, I find that domestic science is not taught in a single one of the following colleges for women: Wellesley, at Wellesley, Mass.; Bryn Mawr, Bryn Mawr, Pa.; Vassar, at Poughkeepsie, N. Y.; Mount Holyoke, at South Hadley, Mass.; Smith's, at Northampton, Mass.; and Swarthmore, coeducational, at Swarthmore, Pa. In nearly all of these schools four years of preparatory Latin are positively required. A permit to substitute four years of German for three years of Latin is denied. Perhaps it can be expressed better by saying that these colleges consider proficiency in a dead language of more importance than proficiency in a modern language.

Mr. GALLINGER. Mr. President, will the Senator permit me?

The PESIDENT pro tempore. Does the Senator from Utah yield to the Senator from New Hampshire?

Mr. SMOOT. I do.

Mr. GALLINGER. The Senator may be accurate in the list of colleges he has given where household economics are not taught, but it is a fact that I think is undeniable that in the preparatory schools from which the girls go to these colleges they do have training in economics.

Mr. SMOOT. That is true, Mr. President, in almost every State in the Union, but only to a limited degree.

This simply means that our leading schools for girls do not teach the one thing that every girl should be taught, namely, how to manage a home. I am in full sympathy with the splendid work accomplished by our magnificent schools for girls. I believe in the refining influences they exert upon their students. I am an advocate of the highest education possible for woman, but I do believe no woman's education is complete until she knows how to and could, if required, manage a home successfully.

I know you often hear it said college women will not have to do their own work; but will be able, if single or married, to keep household servants. This implies that washing dishes, sweeping and dusting, and cleaning are all there is to house-

keeping. Never was there a greater mistake. Even where the financial condition of the family will allow paying the present high wages, competent servants are few and hard to find. The best servants are those trained by a woman capable of showing them how everything should be done in a well-managed home. The wife of a man with a limited income can make a home happier in proportion to her ability to make the most of every cent she receives and prepare the food for the family in the most tasty and wholesome way. The wife of a wealthy man has even greater opportunities for making the home ideal, but whether it is a home of affluence or poverty it is of the greatest importance that the wife should be capable of properly performing or directing her own household affairs. We can not deny that untold numbers of wives and mothers in this country spend their time and energy in the preparation of the meals for the family without the least knowledge of the nutritive value of the food selected. How humiliating it must be to a wife and how discouraging to a husband to have good, fresh, wholesome foodstuffs made into the most indigestible dishes, and perhaps half the time absolutely ruined by poor cooking.

A few years ago in a bulletin issued in the course of home economics in the University of Wisconsin this statement was made:

More than ten billions are spent in the United States annually for food, shelter, and clothing; that 90 per cent of this vast sum is spent by women who have no adequate knowledge of money values.

It is pointed out that in any other avocation of life the persons intrusted with such expenditures would be required to pass through a rigid system of training. The State is taxed to provide instructions in the principles governing the production of raw material and the manufacture of those raw materials into the finished product. Woman should be trained to use this material so that there will be the least possible waste of time or money and the best results obtained.

The day will come when it will be unpopular for a young girl to boast that she does not know the first thing about housekeeping; that she doubts whether she could boil water without scorching it; and that she never sewed a stitch in her life. If I am mistaken in this prediction, God have mercy on our future American homes! The mothers of any of these same girls would never consent, and I approve of their position, to the marriage of her daughter to a man without preparation or capacity for making a living and providing a home for her; yet she would not think it improper on her part to let that daughter marry a good, honest, hard-working man with absolutely no knowledge of how to take care of a home.

The alarming increase in divorce, in wrecked homes, in increased doctor bills, is due to ignorance of woman's highest responsibilities. The press and magazines of the country are filled with articles advocating legislation for the better education of our boys. Plans for improving our present educational system are being constantly suggested and adopted. In the CONGRESSIONAL RECORD is often found the expressions of Members of Congress along the same line, the greater part of which I most heartily approve; but we seldom see or hear one word in advocacy of the better preparation and education of our girls. In my opinion, it is just as important that woman should be properly educated as that man should be.

I had the pleasure of spending an evening a short time ago with a very dear friend of mine, a man who has spent hundreds of thousands of dollars in general educational work. He remarked that if he was beginning life anew he would interest himself more in the education of girls than of boys, because the mother is the most potent force in the establishment of the highest character of the home.

Let us never forget that good housekeepers have much to do with making ideal and happy homes. I deprecate the growing tendency among the middle and well-to-do class of our girls of classifying domestic work with that done by the most ignorant servants. Home economics in its truest sense stands for culture, science, and art, and requires the broadest kind of general education. There are more real advantages to a people and greater blessings to a home gained through a knowledge of the fundamental principles of home economics than through any other kind of education for woman. Show me the woman who takes a personal interest in the preparation of the food for the home and is not dependent upon a servant to tell her how it should be cooked or served, takes an interest in her flowers and is not afraid to dig in the dirt, and I will show you a woman that is happy and a good wife.

The addition of home economics in the truest form to our educational system must come and will come as soon as it is properly understood by Congress. Increased production from the soil and the problem of properly feeding our ever-increasing numbers will tax the abilities of our statesmen. The passage of the Smith-Lever bill has assisted the farmers of our country; the passage of Senate bill 5273 will be of untold value to American homes. The Smith-Lever bill provides for the demonstration work; my bill provides for conducting original or confirmatory researches or experiments bearing directly upon home economics, including both domestic science and domestic art, and disseminating the results.

Miss Clement, of New York, highly educated in the culinary art, says:

The wife who can not cook or superintend the housekeeping takes her husband's pay envelope on false pretenses. She does not know her business. When a couple marry, the girl expects her husband to hand her over most of his salary, and he, in turn, expects that her management of that money will make it go as far as possible. It is his business to earn the money. It is hers to spend it. Surely one part is as important as the other. Correct feeding is becoming a science and we are awakening to the fact that it is as important to combine food properly for the adult as it is for the baby. No woman need think that she is too intellectual to bother with cooking. Cooking is a science as well as an art, and one can go on learning forever. The bride who has a good foundation of culinary knowledge and takes an interest in cooking will find no end of possibilities to it. Right in her own kitchen she can join the great movement to reduce the high cost of living. She can use up every scrap of left-over material. It is the clever cook alone who can make left-over food tasty and never waste anything. The smaller the income the more intelligence it takes on the part of the bride to manage her share of the domestic partnership, and the more she needs to study and plan her daily bills of fare. A man comes home after a hard day's work and sees the same old things served, sometimes purchased from a pastry shop just before dinner. If he is easy-going he says nothing, but after a while he grows grouchy. There are more grouches caused by bad cooking than by bad luck.

Every housewife should know the simple food principles underlying their cookery. Knowing this she can give to the family the proper kind of food, prepared in the best way to produce strength, health, and contentment. She raises the standard of the home and the effect can not be other than happier homes which mean better men and women, true and loyal American citizens. I can not understand why girls of the working classes are ashamed to confess and rather pride themselves upon their ignorance of the simplest form of cooking. Then, after marriage they bewail their fate if their husbands, tormented by dyspepsia, seek relief at the restaurant or in many cases in strong drink. I have often heard it said and I believe it "that few men abandon or get a divorce from a woman who is a good cook." A great painter was once asked how he mixed his paints. He answered "I mix them with brains." In order to be a successful cook a girl must mix her food with brains. The love of the home, the field, and the garden brings true happiness to a greater number of the human family than the knowledge of dead languages or accumulated wealth. If you would be truly cultivated associate with plants and flowers, with babies and home folks.

The servant-girl problem is one that is always with us and will be until home economics becomes as much a part of our educational system as the studies in the higher grades of our district schools. Lively discussions have taken place by intelligent women with a view of solving this problem for the benefit of the housekeeper who is sorely tried with incompetent help. I desire to say in passing that in my opinion much of the complaint of incompetency can be traced to the incompetent housewife, but I sympathize with both parties—the woman who hired and paid for work that was done unsatisfactorily and being at the mercy of the girl who did not know how to do her work, and also the girl who was obliged "to work out" to make her living, and, try as she would, she could not give satisfaction, being human, having high aspirations that were born in her, and still feeling that she was an underling and in many cases looked upon with contempt. A perfect system of education is the only way to correct this widespread, unfortunate, and destructive system.

There is nothing in this world of more importance than the daily supply of food. The family meal should consist of a reasonable variety, must be regularly provided, and ought to be suitably and properly cooked. This standard must be attained in order to reach the highest degree of happiness and contentment. Every girl should be taught what to eat, how to eat, and how to cook. In order for us to live we must eat, and the question of healthful and nutritious food is a very important one of life. Providence designed eating to be no inconsiderable part of our daily requirements. An old lady about to pass to her future reward was asked while on her deathbed by her pastor which of all the divine mercies she was most thankful for at such a time, and she replied: "Well, I have always enjoyed my victuals." Home economics teaches all that is necessary to know about the sanitation of the home, the absolute need of cleanliness in every part of the home, in the cellar, the garret, and particularly every corner of the home. It shows the value of ventilation, light, and warmth, and the best methods of securing them. It points the way to make the home and all

its surroundings tasteful, comfortable, healthful. Every girl should be taught to cut, fit, and, with her own hands, make the ordinary clothing commonly used in the family. If I had a dozen daughters and was able to give each of them a million dollars the day of her marriage, I would still want each one to know how to cook, make her own clothes, and, in fact, be a superior housekeeper. It is far better for the child that a father be a worthless nonentity than the mother. Girls should educate and prepare themselves for the higher duties of life.

Mr. Robert J. Shores, essayist, once known to me as Bob Shores, the reporter, in his new book entitled "New Brooms" capitally presents, by a pretended cook, a world of philosophy on the subject in the following brief passage:

I do not believe, as many seem to believe, that every man or woman who can juggle a skillet or wield an egg beater is a cook. Merely to follow a formula in a cookery book does not make one a cook any more than compounding a prescription makes one a physician. Cooking is an art as well as a science. The violinist can not express his personality in the strains of his instrument more fully than can the cook in his cooking. The favorite dishes of a race are characteristic of that race. The Spaniard, like his chili con carne and his tamale, is hot, peppery, and economical. The Frenchman, like his many concoctions, is full of spice, imagination, and extravagance. The Italian is indolent and averse to exertion, as is evidenced by his macaroni and spaghetti. The Englishman is red and hearty like his roast beef. The German is fat and fair like his sausages. The Russian is odd and interesting like his caviar. The American, like his diet, is cosmopolitan.

And as the cooking of a nation or a race is characteristic of that nation or race, so the cooking of an individual is characteristic of that individual. Coarse people do not prepare dainty dishes. * * * If there be the feeblest spark of charity in a man's breast, a good dinner will fan it into flame. A bad dinner, on the other hand, will bring to the surface all that is mean and ignoble in his nature. Indigestion, I surmise, has been the cause of most of the cruelty of men. Viewing history in this light, it is easier to understand the apparently wanton slaughter among barbarians. Fed upon ill-conditioned food, the barbarian is attacked in his most sensitive part—his stomach. * * * It is to be observed that the science of cookery and the progress of civilization advance together. Well-fed men are slow to wrath and easily appeased. At the height of the Roman civilization the Romans became epicures and ceased to be warriors. War has no charms for the man who is at peace with his own stomach.

With the proper management housekeeping ceases to be a drudgery and becomes the highest, broadest, and most ennobling occupation for a woman. It is in no sense circumscribed in effort, energy, or talent. There is no bigger business in the world than home making in the sense that there is none more important, none more essential to the welfare of the race. History teaches us that the dominant nations of this world have attained their strength gradually, reached maturity, became diseased, and died. It is worth while to call attention to the fact that nearly every one of such nations has traveled the same road in attaining greatness and has died from the same cause. Most of the world powers have in their early history been agricultural countries and derived their manhood from the farm and their womanhood from the home. As wealth and power increased, so did the neglect of the farm and the home. Great cities were built and became the centers of commerce, social and political activities. To maintain these activities the best men of the nation were drawn to those centers. Extravagances and excesses became the rule; vice and corruption began to creep in; the home and children considered a burden; patriotism and the race began to weaken; the fertility and products of the soil decreased; the consumption of the cities increased; the cost of living rose higher and higher; discontent became universal; stronger races, living nearer to nature and God's laws, found it easy to capture or destroy the diseased nation. The death is traceable to the decay of the home and the abandonment of the farm. God grant that if the germ of this same disease is finding its way into our national life Congress will do all it can to stop and destroy it; and, in my opinion, the best way to begin it is to instruct and demonstrate to the women of our country the advantages of maintaining a clean, cheerful, and contented home, and our men the independence and profitable avocation of an intelligent farmer.

EXHIBIT A.

OHIO AGRICULTURAL EXPERIMENT STATION.

WOOSTER, OHIO, *February 2, 1914.*

Hon. B. T. GALLOWAY,
Assistant Secretary of Agriculture, Washington, D. C.

DEAR SIR: I have yours of the 29th, and am pleased to learn of the institution of such a measure as that of Senator SMOOT. This measure is a necessary adjunct to the Lever bill. It is a matter of history that the agricultural colleges failed to find themselves until the experiment stations had begun to accumulate a fund of definite information in agricultural science, and it is to be expected that before the colleges of agriculture can effectively furnish the instruction and demonstrations in domestic science required by the Lever bill a similar fund of information must be accumulated through such scientific research as the experiment stations are prepared to conduct.

While it is eminently proper that all work allied to teaching should be conducted by the colleges, it is equally proper that all lines of scientific research and experiment should be conducted by the experiment stations.

As to the amount of the appropriations, I am inclined to agree with you that it would be better to begin with a smaller amount than $10,000. My own suggestion would be $2,500 for the first year, with an increase of a like amount each year for three successive years, following somewhat after the plan of the Lever bill in this respect.

I fully agree that the State should be required to meet the national appropriation with a similar sum. The history of the Hatch and Adams Acts shows that many States have been disposed to shift all responsibility for such work on to the National Government, and I do not believe this a good thing for the State or the institution.

I think it would be necessary for the expenditure of this fund to be supervised by the national department, as that of the Hatch and Adams funds are. It will sometimes be difficult to draw the line between work in domestic science and that in general agriculture.

This station is already expending annually nearly or quite as much in work that would properly come under the scope of the proposed bill as that measure contemplates.

Thanking you for the information you have given respecting this measure, I am,

Yours, respectfully, CHAS. E. THORNE, *Director.*

UNIVERSITY OF MISSOURI,
Columbia, February 3, 1914.

Dr. B. T. GALLOWAY,
Assistant Secretary, Department of Agriculture,
Washington, D. C.

DEAR DR. GALLOWAY: I have your letter of January 29 and a copy of bill introduced by Senator SMOOT. The bill is a worthy measure. There is undoubtedly a large need for fundamental investigations in the whole range of subjects included in the general term, "home economics." A fund for investigation in home economics will stimulate the teaching and practical application of this subject as much as investigations in agriculture have stimulated teaching and practical application in agricultural subjects.

I am in favor of making the Federal appropriations conditional upon State appropriations. The people themselves must have a direct interest in public activities, and the surest way to interest them and to win their support and prepare them for taking advantage of the investigations conducted and the teaching offered is to support in whole or in part these activities by direct taxation.

It would seem to me that an initial appropriation of $5,000 a year, which is conditional upon the appropriation of an equal amount by the States, would be sufficient for a good beginning and could be efficiently administered through the present experiment station organization.

Very truly, yours,

F. B. MUMFORD.

THE UNIVERSITY OF MINNESOTA,
DEPARTMENT OF AGRICULTURE,
University Farm, St. Paul, February 6, 1914.

Dr. B. T. GALLOWAY,
Department of Agriculture, Washington, D. C.

DEAR DR. GALLOWAY: I am very much interested in the bill introduced by Senator SMOOT (S. 280) to provide for an increased annual appropriation for agricultural experiment stations to be used in research in home economics. I think the general idea of the measure is timely and good. There is certainly a need for research work bearing upon home economics. A measure of this kind would stimulate special interest and undoubtedly result in great good. I believe, however, that it would be better to start with an appropriation of $2,500 from the Government, given on condition of a similar appropriation by the State, and increasing each year until it reaches $10,000, making a total of $20,000, including the amount appropriated by the State. The general plan of the Lever bill should, in my opinion, be followed. In section 2 of the measure, line 10, I would cut out the phrase "at least once in six months" in the requirement of publication of bulletins, and I would modify the statement regarding the distribution to "each newspaper" to read "copies should be sent to the various newspapers of the State," as it would hardly be practicable to discover each newspaper. Otherwise I think the measure is a good one.

Thanking you very much for sending me a copy, and with kindest regards, I am,

Very truly, yours, A. F. WOODS,
Dean and Director.

KANSAS STATE AGRICULTURAL COLLEGE,
Manhattan, February 9, 1914.

Dr. B. T. GALLOWAY,
Assistant Secretary of Agriculture, Washington, D. C.

MY DEAR DR. GALLOWAY: Your letter of January 29, in relation to Senator SMOOT'S bill seeking further to endow the experiment stations, came during my absence from the office. I have just had time to go over the matter.

I think the bill is an excellent one and should receive our heartiest support. There are some details that might need attention, but these could be handled in the hearing on the matter. I question the advisability of requiring the States to meet half of the expense, especially following immediately upon the heels of the Lever bill. I believe we could rely upon the States doing their share within a very few years, as they are now doing in supporting the work started under the Hatch fund.

With best wishes, I am,

Very cordially, yours, H. J. WATERS,
President.

NATIONAL DEFENSE.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

The PRESIDING OFFICER (Mr. GALLINGER in the chair). The question is on the amendment submitted by the Senator from South Carolina.

Mr. HARDWICK. I move to amend the amendment, in line 17, page 2, by striking out the words "and useful in the manufacture of fertilizers."

The PRESIDING OFFICER. The proposed amendment will be stated.

The SECRETARY. On line 17, page 2, it is proposed to strike out the words "and useful in the manufacture of fertilizers."

Mr. KENYON. Mr. President, I desire to speak on the amendment now before the Senate. It is something of an anticlimax from the highly elevating speech of the Senator from Utah [Mr. SMOOT] to come to the commonplace subject of nitric acid.

I feel it a duty to say a few words concerning the amendment of the Senator from South Carolina [Mr. SMITH] and the amendment of the Senator from Alabama [Mr. UNDERWOOD]. The amendment of the Senator from Alabama is not as yet before the Senate, but the two amendments are very closely related and can be discussed together.

I am a member of the Committee on Agriculture and Forestry, and voted to report out the bill—now the amendment—of the Senator from South Carolina. I am not altogether satisfied with it, and am not altogether satisfied with the statement in the report that full and complete hearings were had. The matter was rather rushed along—I say this in no spirit of criticism—by the Senator from South Carolina with an enthusiam and power that would indicate that in times of trouble, if we could multiply the Senator of South Carolina many times, we would not need much of a factory for the production of dynamic force. It was thought that the question should come out for a full discussion upon the floor.

I rather wish that the Senator from South Carolina would not press this amendment at this time, and that the Senator from Alabama would not press his amendment, as amendments to this bill. This bill is for the reorganization of the Army; no other propositions should be attached to it unless necessary.

The question of a plant for the fixation of nitrogen from the atmosphere for the development of fertilizers does not seem to be exactly in harmony with the purpose of this bill, and I think it ought to come up here for a free discussion as an independent proposition. But the Senator from South Carolina has in his good judgment seemed to believe that there was a better opportunity to secure what he believes is necessary and what we all realize is important, some way of developing a sufficient supply of nitric acid in time of war, and so, as I understand it, he insists upon his amendment to this bill being considered now.

I wish to suggest to the Senator from South Carolina that he should change his amendment in one respect at least. As the amendment now stands in the copy before me the Secretary of War is given all this power. I do not like that. I think the War Department through its Board of Army Engineers is absolutely committed to one power site in this country. This measure comes from the Agricultural Committee. It is partially an agricultural proposition. The Secretary of Agriculture would be a very proper party to join with the Secretary of War in this project. I think an amendment to that effect would be in the third degree or I should offer the amendment, but I make the suggestion to the Senator from South Carolina as he can perfect his amendment in that way. I should feel much more like voting for this proposition if the Secretary of Agriculture was included.

Mr. President, if we must come to a choice between the amendment of the Senator from Alabama [Mr. UNDERWOOD] and that of the Senator from South Carolina I shall feel it my duty to vote for the amendment of the Senator from South Carolina, but do wish that they could be absolutely divorced from this bill, because they do not belong here; and one of the means by which bad legislation is so often accomplished is to place amendments upon bills that while possibly germane ought to be considered as independent propositions.

Again, Mr. President, I have a little doubt in my mind about the success of these various processes. We tried to find out something about it from the War Department and from the Navy Department. I do not believe that the War Department or the Navy Department have as yet made a sufficient investigation to be absolutely certain about these processes. I am not here to dispute the statement of the distinguished Senator from Alabama as to the absolute necessity, as we are at present advised, of taking some steps in any plan of preparedness, for the manufacture of nitric acid. It is a marvelous thing that we can get out of the air what may be essential for the development of this very necessary war material. But I do take some issue with the proposition which seems to be accepted by various Senators, that the processes so far as they have been developed are the best that we can look for or that the last word has been given us by the chemists in regard to this matter. However, I am willing to run some risk on the question, as we must in propositions of this kind. We know not what the future of development along chemical lines may be.

Now, we are met with a statement by the distinguished Senator from Alabama, a few days ago, that section 82 in the House, as the bill was introduced, which is similar to this or covers the same ground, was defeated by the influence, as I remember the words, of the Powder Trust, the Republican Party, and certain people calling themselves conservationists. I hold no brief for the Powder Trust and have no particular love for the Powder Trust. I have spent some hard weeks of my life in working on briefs against the Powder Trust. I do have some love for the Republican Party, and am sorry to see it coupled up with the Powder Trust even in accusation. But charges like that, of course, are easy to be made; however, coming from such a distinguished source they are entitled to consideration and should be investigated. I trust they may be.

On the other hand, it was freely charged in the House, if I may refer to that, that those supporting section 82 of that bill were influenced by the Water Power Trust or that representatives thereof had been active in its support. So we have ourselves in the situation of the Powder Trust on one hand and the Water Power Trust on the other hand, and if I may be permitted to borrow a phrase of the distinguished Senator from New Jersey [Mr. MARTINE], "God pity us under those circumstances." I want to see an investigation of both charges. Possibly when trusts fall out the Government may know the truth.

Now, this comes along here as a preparedness proposition.

Mr. LODGE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Massachusetts?

Mr. LODGE. Simply for a question. The Senator referred to section 82 of the House bill. He means section 82 of the bill as introduced, not as it comes to us?

Mr. KENYON. Section 82 of the bill introduced. I thank the Senator. I think I so stated heretofore.

This comes along now as a proposition for preparedness. Nearly everything that has been introduced here at this session has been something in relation to preparedness. I sometimes wonder where it is going to stop. We spent five weeks on a power-dam bill. It was insisted that it was a question of preparedness. We passed from that to another power-dam bill, and that was a question of preparedness. Now we seem to have another dam proposition. It seems as if we have just one dam bill after another. Everything is under the cloak of preparedness. I think my colleague [Mr. CUMMINS] suggested the other day, paraphrasing the phrase "O Liberty! Liberty! how many crimes are committed in thy name?" by "Preparedness, how many?" Not all crimes by any means; but "preparedness" now seems to be the vehicle to carry everything through Congress.

The child-labor bill is, I think, a good preparedness measure, and likewise a rural-credits bill. I suppose when the river and harbor bill comes along every appropriation for Podunk Creek will be for preparedness, and when the public-buildings bill comes along every appropriation for a public building will be for preparedness.

I have a letter from a citizen who moved away from my State a good many years ago. It is along that line, and I have had it copied and will read it. I will not give the name of the town, but it illustrates how all legislation now apparently is to get ready against the invader whose foot some can almost feel upon our shores and shows a conception of the general situation shared in by many of our countrymen.

DEAR SENATOR: As a former resident of your State, I make bold to write you concerning one feature of preparedness to which Congress does not seem to be paying the attention it should, and that is the question of appropriations for public buildings. I know you have in the past opposed items in the public buildings bill for public buildings in small towns.

Now, my dear Senator, please don't do so any more. We are expecting a public building in our town. Our Member of Congress promised it to us during the campaign and we are entitled to it. Besides, think of what it may mean along the lines of preparedness. The public buildings to be constructed in the future should be constructed as a sort of fort. A round building is just as feasible as a square one for post-office purposes; then, when we are at the front fighting the battles of our country our wives and children can stay in the public building, if it is constructed as a fort, and we will feel that they are safe from foreign invaders.

If you are really a lover of your country do not oppose any appropriations for public buildings. Of course, if you intend to side against your country and sympathize with its foes and be untrue to the flag that means so much to us, then we can not expect any help from you in securing our public building.

Truly yours, ————.

[Laughter.]

I have not given the place or the name. It is as well to omit them.

Mr. President, this question of preparedness in securing nitrogen for nitric acid is, of course, an important one. We are dependent now upon securing saltpeter or sodium nitrate from Chile. Germany has found itself able in this war to develop some plan. I do not believe anyone knows what that plan is and I do believe that that plan ought to be investigated, if it is

possible and if war is not so imminent for us, before we do settle down to any system in this country.

Nor am I so alarmed about the proposition that we must at once secure a plant for the manufacture of nitric acid. Dr. Baekeland, who was before our committee, said that the chemists of this country could become active; that they could through steam development take care of the question in an emergency, and experts of the Navy Department said that they kept enough of the Chilean product for a year of any kind of an ordinary war, whatever that may be.

Mr. SMITH of Georgia. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Georgia?

Mr. KENYON. I do.

Mr. SMITH of Georgia. That was for anything except war.

Mr. KENYON. I understood him to say that it would cover any kind of an ordinary war, but I may be mistaken.

Mr. SMITH of Georgia. I thought it was for ordinary service outside of war.

Mr. KENYON. The evidence was not taken down, as the Senator remembers, but in any event the Navy Department provides itself with a very large supply of the Chilean product for any cases of emergency. Possibly not enough for a year of war. It would be hard to determine, of course, how much was essential.

I believe in the Government doing this work, and building and operating the plant, because I believe that the Government should make its munitions of war. I voted for the armor-plate bill on that theory. The profits should be taken out of war, and there would be less demand for war in certain quarters.

Now, as to the fertilizer proposition, I am as much interested in that as the Senator from South Carolina. Of course we do not need as much fertilizer in Iowa for our soil as they need in South Carolina. All this nitrogen out of the air or any fertilizer I do not think could make the soil of South Carolina anywhere near as fertile as the soil of Iowa, but at the same time I am anxious that the Southern States, without such good soil, shall have their fertilizer, and I am willing that the Government shall do that, although the more I see of the Government going into business the less enthusiastic I become about the proposition. The Government does not seem to be able to run its own business, to say nothing to going into other businesses. If there is any general indictment that could be drawn against the Government it is the absolute lack of efficiency in carrying on its own affairs. The question of the conservation of our soil is as important a question as the people of this Nation have to face. And so I am inclined to vote for a Government plant to make nitric acid in war and fertilizer in peace.

I know the minute you talk about this you bump up against the Constitution, and I expected that my friend from Utah [Mr. SUTHERLAND] would get up and ask me something about it. I am glad he has not, because I realize there are some constitutional difficulties in the proposition. There are more constitutional difficulties in the proposition than there are in the child-labor bill which my friend from South Carolina has so strongly urged as unconstitutional.

Mr. President, as to whether or not these various processes are a success was discussed by the Senator from Massachusetts [Mr. LODGE], and I can not add anything to that, but I want to put into the RECORD some statements about it simply for information. Mr. Washburn, of whom we have heard a great deal and whose pamphlets drop upon us mornings like the manna of intelligence in our sphere of ignorance, delivered an address before the American Electro-Chemical Society on this subject. It was subjected after his delivering it to a good deal of discussion. I want to place some of those statements in the RECORD without reading all of them.

The PRESIDING OFFICER. Without objection, permission is granted.

Mr. KENYON. I will read what Mr. Leland L. Summers said:

> Personally I do not accept the unqualified statement in regard to the success of the cyanamid process that Mr. Washburn puts forth, because, while it has been successful, I do not think that engineers by any means accept it as the final word in nitrogen fixation.

Then I insert also remarks of Dr. C. W. Bennett on the same subject:

> No one denies that the preparation of cyanamid is the cheapest working process for the fixation of nitrogen. Nitrogen from cyanamid, however, is not as cheap as nitrogen from other sources. We must all admit that by-product ammonia can be placed on the market as ammonium sulphate at a profit for very much less, approximately one-fourth the selling price of cyanamid. This industry, as is pointed out in another communication, is increasing steadily in this country and in others, and it will take the development of only a few other by-products to enormously increase the output of by-product ammonia. * * * No process in operation to-day for the fixation of nitrogen, as has been pointed out a number of times, can hope to compete with by-product ammonia. In drawing conclusions we can not compare alone the processes for the fixation of nitrogen, but we must also compare the price of the product in question prepared from other sources, because the final user does not care whether his ammonia comes from the distillation of coal or from atmospheric nitrogen.

Mr. Summers says in his comprehensive paper on Fixation of Atmospheric Nitrogen:

> It would be hopeless to attempt to put this acid (derived from fixation of atmospheric nitrogen) into a product to compete with fertilizer prices, for they are some 50 per cent lower. * * * It is useless to look only to cheap power as a solution of this problem, as the real solution is in the improvement of processes (p. 373).

I insert also the remarks of Dr. L. H. Baekeland:

> USELESS EXPENSE IN MARKETING, NOT MANUFACTURING.
>
> We have heard the statement that in many cases it is more expensive to buy fertilizer than to have a low yield per acre. This is very true; and if the price of fertilizer gets too high, a low yield per acre becomes practically unavoidable. Unfortunately, in this country we are almost everywhere confronted with the detrimental economic condition of too many middlemen. * * * The time will come * * * when you will no longer speak about an excess of ammonia production in gas or coke ovens. There will not be such a thing as excess of ammonia. All ammonia will be saved.

During this discussion of Mr. Washburn's paper the secretary of the society, Joseph W. Richards, said:

> Mr. Landis, chief technologist of the American Cyanamid Co. (Mr. Washburn's), has said that his company confidently expects radical changes in nitrogen fixation processes in the next 5 or 10 years, and that it is prepared, if necessary, to scrap its whole plant inside of 20 years, thinking there might very possibly be no cyanamid process in use at that time. (P. 405.)

Dr. Sumners said:

> Dr. Peacock's paper is very much to the point. Undoubtedly you all know that Dr. Peacock is one of the best authorities in America on fertilizer, * * * is thoroughly familiar with everything that has been connected with the use of nitrogen in fertilizers.
>
> As a commercial undertaking nitrogen fixation must remain substantially dormant so long as the ammonia produced as a by-product of coal distillation remains of such relative amount that it is capable of controlling the rewards of capital invested in nitrogen fixation. It may be accepted as a fact that no nitrogen fixation method has as yet been publicly proposed which can produce nitrogen as cheaply as coal by-product of ammonia.

Gen. Crozier, when before the House Committee on Military Affairs, testified that there were two ways of getting nitric acid independently of the outside sources of supply: one by the use of ammonia, which is one of the by-products of coke making, gotten from coke ovens. He could not say the extent to which we could rely on that, but said it was chemically possible to produce it in that way and there was a good deal of the coke-making industry in this country. He did say the best reliance would be upon the fixation of atmospheric nitrogen, which requires a very considerable amount of cheap electric power in order to compete with the imported nitrate. He said that the expense of manufacturing nitric acid by the fixation of atmospheric nitrogen is not prohibitive if we consider even steam power, if water power can not be obtained at all; that anybody would have difficulty in surviving, commercially, in competition with the imported article.

There are two processes, he states, one the arc process and the other known as the cyanamid process. The cyanamid process requires less horsepower than the arc process, but it requires other expenses in addition, so there is a difference of opinion as to which would ultimately be the cheaper.

> In view of the right of control of the Federal Government of the sources of water power, it ought to be possible to permit their development by private parties, under such conditions of consent that the Government would be assured of their utilization for military purposes when needed, at a reasonable cost, and as the great bulk of the output of the plants would be for commercial purposes it would not appear that the Government should itself embark in this development and production.

There should be provision made, he says, that if the Government cooperated with private plants the cooperation should be accompanied by the condition that the Government should have sufficient hold on these plants to insure that it could get what it wanted at reasonable prices, both in times of peace and of war.

Some one asked on yesterday about the effect on the atmosphere of the taking of the nitrogen from it. At the hearings of the Agricultural Committee a gentleman from my State, who is a good deal of a mathematician and interested in this subject, was present and asked me to ask Dr. Baekeland that question when he was on the stand. I did so, and the Doctor cast it aside rather flippantly, saying that 1 acre of air would be sufficient for all the nitrogen we would ever desire. My friend when traveling through the South wrote me a letter from Charleston about it. He said:

> Being of a somewhat mathematical turn of mind, I thought I would do a little figuring in regard to the amount of nitrogen in the air. It is a well-known fact that at sea level the pressure of the air on the earth's surface is 15 pounds per square inch. That would make 2,160 pounds per square foot or 1.08 tons of 2,000 pounds each. Multiply by 43,560 square feet per acre and we have 47,044.8 tons. Multiply this by 640, the number of acres in a square mile, and we have 30,108,672 tons, the weight of the air on a square mile of the earth's surface. If I remember correctly the air is four-fifths nitrogen and one-fifth oxygen, and they must necessarily be of the same specific gravity or they would not mix and stay mixed in the proper propor-

tion to sustain animal life. By taking four-fifths of the weight of the air we find that there will be 24,086,937.6 tons of nitrogen in the air pressing on the surface of 1 square mile of the earth.

I have not verified the figures, but I know the man as a thoughtful, painstaking man, and the figures are very surprising.

In the Washington Herald a few days ago, as bearing on the question as to whether we have reached anything that is certain about this nitrogen proposition, a little item struck me. In speaking of the battle of Verdun this correspondent says:

These great guns seem to know that back in Germany the scientists have discovered substitutes for gunpowder and nitric acid and they seem to be celebrating their independence of the blockade, for at times hundreds of them resemble nothing so much as troops answering the roll call.

In times of trouble we certainly would not be so absolutely helpless as has been pictured here. American chemistry and American ingenuity would find some way, as Germany has found, to handle the question. I do not say this in any way to indicate that I do not fully realize the necessity of our Government being in condition to command an adequate supply of nitric acid in case of war.

Mr. CUMMINS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to his colleague?

Mr. KENYON. I do.

Mr. CUMMINS. The question I shall now ask is purely for information. It has been stated many times that cheap water power was necessary in order to compete with the Chilean nitrates, but I assume that the nitrogen of the air could be fixed with steam power just the same as with water power. I should like to know if the examination before the committee indicated or developed the kind of machinery or apparatus necessary to take the power and complete the process?

Mr. KENYON. It did not.

Mr. CUMMINS. My question is based on the idea that in time of war, if we should have it speedily, a question of cost would not be so material, and I ask whether we could take steam power anywhere without much delay and prepare for the use of the process?

Mr. KENYON. I am not prepared to answer the Senator, because that fact was not developed before our committee. I rather gather that it would take considerable changes to develop the process.

Mr. SMITH of South Carolina. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from South Carolina?

Mr. KENYON. I do.

Mr. SMITH of South Carolina. Will the Senator from Iowa allow me to make a brief statement in his time without involving his right to the floor?

Mr. KENYON. I do not want to lose the floor.

Mr. SMITH of South Carolina. That was the reason I put my question in that form. I should like to state that the process by which steam power is used in the extraction of nitrogen is, of course, exactly the same as where water power is used. In the transformation of the energy produced, the nitrogen from the air, the apparatus would be identically the same. Now, if the Senator will allow me, I want to read just a few lines from the two individuals in this country upon whom——

The PRESIDING OFFICER. The Chair will take occasion to say, reminding the Senator from Iowa of the rule which seems to have been established, that he must be his own judge as to whether or not the Senator from South Carolina is asking a question or is proceeding to a discussion.

Mr. KENYON. I think the rule to which the Chair refers is a very salutary one. I should be glad to have the suggestion of the Senator from South Carolina, but I believe that I would forfeit the floor if I should permit the Senator to speak in my time. If the Senator from South Carolina will put his suggestion in the form of a question, very well.

Mr. SMITH of South Carolina. I would not have the Senator forfeit the floor, but I wished to make the suggestion right at this point, as I was afraid that the Senate might be misled regarding the process. I shall, however, in my own time state it.

Mr. KENYON. Mr. President, we are confronted with the two amendments. If I vote for the Smith amendment, as I rather expect to if a change is made in it, I shall do so knowing it does not compel the Government, as I understand it, to spend the money. If the Government is not satisfied as to the processes it need not go ahead. The Underwood proposition, it seems to me—though I may be mistaken about it, because the Senator from Alabama says not, and I have the greatest respect for his judgment and ability, of course—but it seems to me that under the amendment of the Senator from Alabama we might just as well write into the amendment that this plant is to be located at one particular place, and that is Muscle Shoals.

Mr. SMITH of Georgia. Will the Senator allow me to ask him to tell us why he says that?

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Georgia?

Mr. KENYON. I am going to try to state just exactly what the Senator from Georgia asks me to do. I want to marshal the evidence on the proposition made. I do not want to misjudge anybody, and have nothing to say about anybody or any reflection to make on anybody.

If Muscle Shoals is the great water power which it is pictured to us to be, it may be entirely true that Muscle Shoals is the proper place for the location of one of the plants. If it is, I have absolutely no objection to the location there; but I want that determined by some board that is not already committed to the proposition, and determined by a board on which there will be some scientists and somebody who has the fertilizer interest at heart as well as the war question.

Mr. BANKHEAD. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Alabama?

Mr. KENYON. I do.

Mr. BANKHEAD. I want to make a statement for the information of the Senator.

Mr. KENYON. I yield to the Senator for a question, but I do not want to lose my right to the floor.

Mr. BANKHEAD. My interruption will take but a moment. I want to state on this floor that there is not a single engineer on this board that ever had anything to do with the Muscle Shoals proposition except one.

Mr. KENYON. And that engineer is the one who has just recently overruled one of the other engineers on the Missouri River proposition, as I understand it—I may be in error on that, however.

Mr. BANKHEAD. His name is Newcomb. I repeat, he is the only one who has ever had anything to do with the proposition.

Mr. KENYON. This amendment recites that this matter shall be handled by the Board of Engineers for Rivers and Harbors, subject to the approval of the Secretary of War. They are authorized and directed, first, to hold hearings and conduct negotiations for the purpose of determining upon a suitable air nitrogen process. It must occur to anybody at the inception of reading that amendment, why should this be limited to an investigation of a suitable air process? Why not investigate a steam process or any other process?

Mr. SMITH of Georgia. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Georgia?

Mr. KENYON. I yield for a question.

Mr. SMITH of Georgia. I desire to ask a question. If steam is used, it is still an air process of obtaining nitrogen, is it not?

Mr. KENYON. It comes out of the air, of course, but this is the air process. It may be that the steam process is covered; perhaps the Senator is correct; I am inclined upon reflection to think he is, but I think it should be broadened a little to cover everything and every process. That is what I am insisting upon first. Of course, the process is out of the air. This amendment provides:

Second, to select a suitable site on a navigable stream in the United States for the construction of the necessary dam, locks, substructure, power house, and hydroelectric equipment.

The Board of Engineers is there given the power to select the site. This amendment provides for only one site. The Smith amendment provides, I think, for four or five different plants, and I say that the Board of Engineers of Rivers and Harbors have committed themselves—perhaps not all of these engineers, but as a board—to the Muscle Shoals project, not as a nitrogen proposition—for that had not been thought of at that time—but as a power proposition in connection with navigation.

Mr. SMITH of Georgia. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Georgia?

Mr. KENYON. I do.

Mr. SMITH of Georgia. Does the Senator mean that the Board of Engineers has reached the conclusion that the Muscle Shoals power is the best power east of the Mississippi River?

Mr. KENYON. I will refer to the document in a moment or two and see just what they have decided. The Government gave a land grant of 400,000 acres of land to Alabama to build, as I understand, two canals at Muscle Shoals. We have expended there, as a navigation proposition, something like four million dollars. I understand that of the last lump appropriation $150,000 was allotted by the engineers for borings at Muscle Shoals, although Mr. Washburn, before our committee, practically stated that the navigation project there was of no use.

The Muscle Shoals development has been in Congress as a river and harbor proposition; it has been in Congress as a military proposition; it has been before committees as a fertilizer proposition. If Muscle Shoals is the proper site for these enterprises, and that is determined by a commission or a board who will take every question into consideration, I am not here to say a word against Muscle Shoals; but if that is the place in contemplation, let us have it so stated in black and white.

Its advocates certainly can not be accused of lack of persistence. I follow my line of evidence along. Mr. Worthington, who is president of the Muscle Shoals Hydroelectric Co. and director of several other companies to which I will refer, is referred to in the Decatur Daily, of Decatur, Ala., of March 9, 1916, and an article which I wish to read winds up with his statement. This is from the paper at Florence:

FLORENCE, ALA., *March 9.*

That Florentines have unlimited faith in Muscle Shoals development was conclusively proven at a mass meeting held in the courthouse at Florence last night when the circuit court room was taxed to its capacity.

The Muscle Shoals finance committee asked for $2,500, which was subscribed as fast as the secretaries, H. A. Bradshaw and W. H. Mitchell, could take the names of the contributors. This brought the Florence donation for the furtherance of the Muscle Shoals development up to $10,000 during the last few months. This money is being used to defray the expenses of those actively engaged in the oversight of the public's interest in this all-important project.

R. T. Simpson, president of the commercial club, introduced Col. C. W. Ashcraft, who said people from one end of this country to the other are talking Muscle Shoals. Instead of impoverishing other sections, as is often the case in big enterprises, our progress in the Muscle Shoals development is the progress of every section of the United States. It stands head and shoulders above everything else in Washington. Many of the important congressional committees are considering it simultaneously.

The speaker complimented the Shields bill and said it removes obstacles that have heretofore existed. He declared our "preparedness" is our salvation. The surveys and plans for Muscle Shoals development are made, and it stands 999 chances out of 1,000 to be selected as the site of a Government nitrate plant.

Mr. N. C. Elting, chairman of the finance committee, said, according to this newspaper article: "I presume every man, woman, and child in Lauderdale country is for preparedness. If all had been prepared, the fearful war now raging would never have been." He said the conditions relative to Muscle Shoals are indeed optimistic. He read the following telegrams from Washington:

WASHINGTON, D. C., *March 7.*

N. C. ELTING, *Florence, Ala.:*

Will you please extend my thanks and hearty feeling of congratulations and encouragement to the courageous, upstanding, constructive people of Florence, and tell them that the bill introduced in the House by the Military Committee authorizing the development of water power and construction of atmospheric nitrogen nitric-acid plants, and Chairman HAY, in his report on the bill, in part says:

"The committee consider this question of the first importance in the consideration of preparedness for national security." Our efforts supported by the lead of Florence secured the authorization for the proposed development, and if Florence will stand pat, put up and see us through, we will get these plants. The total development with fertilizer plants established to cost $50,000,000.

J. W. WORTHINGTON.

On March 7 he sent this telegram:

WASHINGTON, *March 7, 1916.*

N. C. ELTING, *Florence, Ala.:*

Vote on Shields bill will not be taken until to-morrow and probably not until Thursday. Its passage is conceded.

J. W. WORTHINGTON.

These statements were set forth in the CONGRESSIONAL RECORD some time ago and as they have not been denied we are warranted in accepting them.

Now, who is Mr. Worthington? The distinguished Senator from Massachusetts [Mr. LODGE] yesterday inserted in the RECORD some of the connections of these various people. Mr. Worthington, who sent this disptach concerning Muscle Shoals, I understand is the president of the Muscle Shoals Hydroelectric Power Co., director of the American Cyanamid Co., director of the Alabama Power Co., director of the Alabama Interstate Power Co., director of the Little River Power Co. The Alabama Traction, Light & Power Co. is the parent of the Muscle Shoals & Alabama Power Co., owning its stock, according to Moody's Manual. Mr. Washburn, who has so kindly appeared before the various committees, is the president of the American Cyanamid Co., of which Mr. Worthington is a director; he is a director of the Muscle Shoals Hydroelectric Co., of which Mr. Worthington is president; a director of the Alabama Light & Power Co. and of the Alabama Traction, Light & Power Co., chairman of the board of the Alabama Power Co., vice president of the Alabama Interstate Power Co., director of the Birmingham, Montgomery & Gulf Power Co., and of the Little River Power Co.—or was until a short time ago, when the matter came up in Congress. It seems that he has recently resigned from a number of these companies.

It is quite evident that he is not a witness with absolutely no self-interest.

Mr. Cooper, who is vice president of the six-million-dollar fertilizer company, known as the Duke Fertilizer Co., is the general manager of the American Cyanimid Co. The American Cyanimid Co., in their statement of assets, schedule "Founding and propaganda, $230,589" as a part of their assets. So, we find Mr. Worthington sending a dispatch from Washington that Muscle Shoals stands 999 chances out of 1,000 of getting the nitrate plant; we find Mr. Washburn connected with many kinds of corporations interested in water-power development, and the two, it was charged on the floor of the House, practically control the water power of Alabama through their companies. The report of the Secretary of Agriculture, I think, was to the effect that 87 per cent of the water power of Alabama was controlled by the Alabama Traction, Light & Power Co. We find all this commingling of these interests in this project.

Now, what about Mr. Washburn, and what about the board of engineers being committed to the Muscle Shoals proposition? In 1914 the Chief of Engineers of the United States Army in document No. 20 made a report. The House Committee on Rivers and Harbors had passed a resolution, as I understand, asking for a resurvey of these various propositions. Document No. 20 consists of a letter from Gen. Kingman, of May 18, 1914, to the chairman of the Committee on Rivers and Harbors of the House. It is in reply to a letter from the chairman, inclosing a copy of the resolution of the Committee on Rivers and Harbors, of February 24, 1912, requesting the Board of Engineers to review the previous reports or surveys of the Tennessee River. Mr. Worthington, the same gentleman who sends the encouraging dispatch, submitted to the Board of Army Engineers a proposition on the part of the Muscle Shoals Hydro-Electric Power Co., signed "J. W. Worthington, President," found on page 76 of this document. This proposition was that Muscle Shoals was to be improved in connection with the Muscle Shoals Hydro-Electric Power Co. at an estimated cost of $18,701,000. It was a proposition in connection with which the Army Engineers approved of the Government loaning the money, or furnishing it for the benefit of a private institution to be paid back in annual payments running for 100 years.

Out of this, the amount properly chargeable to navigation, they found, was $8,575,000. The remainder was the amount chargeable to power development. The board advised that this was the proper thing for the United States to do, and just a short time later this same engineer advised that in the case of the Great Falls project out here, in which the whole city of Washington was interested, financial conditions were too close to do anything with it. I shall not take the time to put his statements as to that in the RECORD. Evidently he did not regard Great Falls as comparable with Muscle Shoals.

Evidently the matter of nitric acid had not been thought of so seriously at the time this proposition was up to take care of Muscle Shoals, nor after this, when the question came up in the other branch of Congress of appropriating the $150,000 which the engineers said in this report ought to be immediately done so that the work should not stop. That question was fought out on the floor of the House and defeated.

I want to read just one or two little things from the report of these Army engineers who fathered this most remarkable attempt of the Government to help a great private company that had a monopoly, that owned the power sites, as I shall show from the evidence, they and their associates now owning all the patents on this process, and before the committee Mr. Washburn said substantially that they did not propose that anybody should ever compete with them.

After its exhaustive study and full discussion of this subject the special board concludes with the recommendation that the United States undertake this improvement in connection with the Muscle Shoals Hydro-Electric Co. under certain conditions specified:

"The Board of Engineers for Rivers and Harbors has carefully considered this plan, and is in general accord with the views and recommendations of the special board. The project contemplates primarily the conservation of one of the great natural resources of the Nation by the development of power in large amount and incidentally the improvement for navigation throughout the year of a reach of about 82 miles of the Tennessee River. An expenditure by the United States of $18,701,000 within a period of five years is contemplated. Of this total $8,575,000 is estimated as the cost of the portion of the work which properly may be considered as an improvement of navigation."

The Board of Engineers says:

As this is the first project recommended for cooperation of the United States with power interests in river work on a very large scale, the board invites attention to the unusual demands such work will make upon the public funds. The development and utilization of the power of the streams of the United States will require an investment of great sums of money, and to insure the required continuity of action through successive lease periods other large sums must be available from time to time. There is little doubt that such investments are justifiable and wise, and that the utilization of this power of the streams now being wasted will increase prosperity in a measure hard to be determined.

If the United States is to have full control and is to guarantee continuity of operation it is apparent that at times it will be called upon, for longer or shorter periods, not possible of being foredetermined, to make expenditures comparable with the original sums invested by corporations, and that these expenditures will be returned only after considerable delays, perhaps of years. Whether the annual income of the United States is great enough to supply such large sums, and whether justice to the present generation would warrant such a use of income, are economic questions requiring legislative determination.

The first indication of some regard for the income of the United States that has appeared for some time.

And when one of the engineers was not willing that the Government should pay for the overflow, amounting to $1,700,000, this board overruled him and decided that the Government should pay even for that.

Following out that chain of evidence, the Board of Army Engineers approving this Muscle Shoals project in the past wanting the Government to advance $18,500,000 on the proposition, and the Mr. Worthington who made that proposition to the Board of Army Engineers that was accepted being the same party now sending the telegram down to his State that Muscle Shoals is to secure this plant, or has 999 chances out of 1,000 to secure it, I think we are progressing along the line of showing that the Board of Army Engineers ought not alone—and that is all I am insisting on—to determine this proposition.

Mr. SMITH of Georgia. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Georgia?

Mr. KENYON. I do, for a question.

Mr. SMITH of Georgia. Will the Senator state what the $18,000,000 was to be spent for? What was to be done with that $18,000,000?

Mr. KENYON. I did state that, but I can state it better, perhaps, from a souvenir that I hold in my hand of "A visit to the Tennessee River" of a number of Congressmen and Senators to view the Muscle Shoals proposition in May of last year. That is set out in this document, which contains a number of very fine pictures of Senators and Members of Congress. Here was the plan recommended by the United States Engineers in Document No. 20:

United States Engineers' estimate of cost of project, exclusive of equipment and power-house superstructures, $18,701,000.
Power company's cash contribution, $3,000,000.
Leaving a total of $15,701,000.
Total amount chargeable to navigation, as estimated by United States Engineers, $8,575,000.
Investment of the Federal Government chargeable to power, as estimated by United States Engineers, $7,126,000.
Estimated initial expenditure of the power company—

I do not know that the Senator desires that.

Mr. SMITH of Georgia. I do not know whether or not that means that the additional $7,000,000 was to be spent to build the power plant, and that only $8,000,000 was necessary to construct the dams, and so forth.

Mr. KENYON. I understand it that way—that the $8,000,000 was for the dam for navigation, and the additional amount, necessary for power. That is, the Board of Army Engineers determined what amount they could properly charge to navigation, which, I assume, would be for the building of a dam, without the power purposes.

Mr. LODGE. They exclude the power project, do they not?

Mr. KENYON. This is exclusive of equipment and power-house superstructures.

Mr. LODGE. Yes. This $7,000,000 is to be used in the development of power, is it not?

Mr. KENYON. It is.

Mr. LODGE. And not needed for navigation?

Mr. KENYON. Not needed for navigation.

Mr. SMITH of Georgia. I suppose, then, Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Georgia?

Mr. KENYON. I yield, for a question.

Mr. SMITH of Georgia. Then I will ask the Senator whether it means that the $8,000,000 would be necessary to build a dam for navigation purposes, and $7,000,000 more would be necessary if it were fully developed with power?

Mr. KENYON. Exactly, as I understand it, for power purposes; so they divided the total amount between the two, and the $8,000,000, I assume, might be the proper charge to the Government for purely navigation purposes.

Mr. SMITH of Georgia. But it was all in the line of construction of dams for creating power, and not machinery for the power plant?

Mr. KENYON. That is true.

In the hearings before the House Committee on Military Affairs—I want to follow up this line of evidence—Mr. Washburn was there. He was asked as to this matter, and as to his plan. He said:

From the nature of the industry there are very few power sites available to it in the United States.

And he took the instance of Muscle Shoals and developed that, showing it as the cooperative plan. This is found on page 158 of the hearings before the Military Affairs Committee of the House. I will not take the time to read that. Mr. McKENZIE of Illinois asked him this question, which makes it fairly plain:

Let me see if I understand just what you mean. If I understand you, your plan of cooperative work is to take a power site where the Government has constructed a dam for purposes of navigation, or to aid navigation, and the company that would manufacture this product would then erect its structure alongside of this power site, and the Government would permit them to use the power, and they would pay, as I understand you, 3 per cent on the cost of the construction of the dam. In other words, the Government would build the dam and the company would erect a structure for the manufacture of the product, cooperating with the manufacturing concern, and the company would manufacture this product to be used for fertilizer during time of peace, and the Government would have the right to take the entire product during time of war, and that the company should pay annually to the Government 3 per cent on the investment in the dam. Is that correct?

Mr. WASHBURN. Upon the investment of the dam and such hydro-electric equipment as was necessary to put the power upon the switchboard. The Government investment, devoted to power purposes, normally would include the dam; and the power house and its equipment and the power would be paid for by the nitrogen industry at 3 per cent of the cost. That would be an annual tax upon the nitrogen industry.

Mr. McKenzie also asked him:

After a careful investigation of this whole subject, it is your judgment that this industry can not be successfully developed without some Government assistance in this country?

Mr. WASHBURN. I am very definitely of the opinion that private capital can not take the risk of the necessarily great investment compared with the return on the costs we would have in the United States, and therefore the industry will not be developed in the United States, but in time will be developed elsewhere, and the product will be imported into the United States.

Again, speaking of his plan:

The $24,000,000 the Government would expend under that plan would be used exclusively for the production of the single product, nitric acid. The $48,000,000 would be used not only upon some devices which answer the requirements for making nitric acid but would also be used for the payment of the cost of appliances for manufacturing fertilizer.

With regards to Muscle Shoals there is a good deal said, but I will not take the time to read it.

Before the Committee on Agriculture of the House Mr. Washburn spoke of this same general plan, but it should be stated in fairness to him that he said he had no proposition of any kind to make to the Government. He was asked about the patents covering it. The chairman asked him concerning the patents. He said:

They are controlled by one concern under patents.
The CHAIRMAN. Under patents?
Mr. WASHBURN. United States patents and Canadian patents.
The CHAIRMAN. So that any immediate development of the nitrogen industry in this country would be through the Government subsidy to a monopoly controlling the process?
Mr. WASHBURN. I should not call it a subsidy.

He is asked as to who controls this cyanamid process in this country:

Your company?
Yes.

And he is asked these questions at page 925 of the record of the House Committee on Agriculture:

Mr. RUBEY. What is the date of your patent?
Mr. WASHBURN. You mean of the patent?
Mr. RUBEY. Yes.
Mr. WASHBURN. We have not any single patents. We have about a hundred patents.
Mr. RUBEY. And then the next year and the next year you would have additional patents so that the time never would come——
Mr. WASHBURN. We do not propose that it ever shall come when anybody can compete with us if it is within our power.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Idaho?

Mr. KENYON. I do, for a question.

Mr. BORAH. How does he anticipate that he will prevent that competition, if he discloses that?

Mr. KENYON. I will say that it is all controlled by patents, of which I think it is fair to say that Mr. Washburn and his associates control practically all. I have seen a list of patents from the Patent Office. I know he controls some of them, and he was asked here:

Who controls this process in this country, your company?
Yes.

That is, the Cyanamid Co.

Mr. BORAH. I had supposed it was likely by reason of the patents; but that is a monopoly which has been granted to him by the Government already.

Mr. KENYON. It has been granted to him by the Government, and as I understand the Government is powerless to use any of these processes without violation of the patents, just the same as any private individual—or, rather, they might be able to use them and then the patentees would have their recourse in the Court of Claims.

Mr. SMITH of South Carolina. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from South Carolina?

Mr. KENYON. I do, for a question.

Mr. SMITH of South Carolina. I wish to ask the Senator from Iowa if he considers that that is final? I have before me a statement on the exact process about which the question was asked a moment ago, to the effect that the fundamental patents have expired. Various minor modifications and improvements have been patented from time to time during the past 15 years. They are mostly under the control of the Cyanamid Co. They are not absolutely essential, however, to the economical production of powder by this process.

I have received that statement this morning. I wanted to have a thorough investigation, and I received it this morning from Dr. Norton.

Mr. KENYON. As I understand, when the time comes near for the patent to expire, improvements are patented, and the time is extended. That is evidently what the colloquy meant before the Agricultural Committee of the House, when Mr. Washburn said that they did not propose that the time ever should come when anybody would compete with them if it was within their power.

It has been charged that these same parties, for whose company the Board of Engineers have been willing in the past to have the Government loan or invest some $18,000,000, not only owned the patents on this process, but also controlled the water-power sites around the Muscle Shoals proposition. That question was asked of Mr. Washburn in the Committee on Agriculture and Forestry of the Senate. This Muscle Shoals project bobs up before so many committees that it is difficult to keep track of it.

Senator KENYON. Have other people associated with your company been working on the Shields bill, or on this proposition?
Mr. WASHBURN. Yes; in connection with the Shields bill.
Senator KENYON. And on this proposition, too?
Mr. WASHBURN. Yes.
Senator KENYON. Mr. Worthington?
Mr. WASHBURN. Mr. Worthington has worked in connection with the proposed development at Muscle Shoals primarily, as it originally was in the interest of the Muscle Shoals Hydro-Electric Power Co., which owns certain rights, etc., at Muscle Shoals.

Mr. MARTINE of New Jersey. Mr. President, I should like to ask the Senator the date of that hearing.

Mr. KENYON. This hearing was March 16 and 17, 1916.

Mr. MARTINE of New Jersey. Very close at hand?

Mr. KENYON. Very close at hand.

Mr. Washburn's plan, which is very similar to the plan set forth in Document 20, has been elucidated by him before the Military Committee of the House, before the Committee on Agriculture of the House, before the Committee on Agriculture of the Senate, and the plan is substantially the same plan, with some variations, as the one the Army engineers reported in favor of. That is why I have said that, in my judgment, the evidence is sufficient to show sufficient basis for the statement made that under the Underwood amendment we might just as well write the location Muscle Shoals.

I should like to see an amendment that would be a sort of halfway between these matters that would provide for a complete investigation of all processes by some competent body not already committed and an investigation of proper sites. I do not want to legislate on something that is simply going to be an assistance to private corporations in this country and no benefit to the rest of the people. I have not meant to say that Muscle Shoals was not a great proposition and possibly the proper place for it. I do not know. This great water power placed there by the Almighty should be used by the Government for the benefit of all and no monopoly permitted to control it.

I want to read from the hearings one or two things. On page 908, House Agriculture Committee, Mr. Washburn stated that the great development had come through using steam power. That is in the German nitrogen plants. On page 910 he spoke of the power site on the Columbia River. I think I should say that his claim was that there are only two proper power sites in this country for this development, one on the Columbia River at Priest Rapids and the other at Muscle Shoals. Dr. Baekeland, before the Committee on Agriculture and Forestry of the Senate, said that those power sites in the far West were no better than if the plant were in Iceland, because of the railroad rates in transporting the product.

Mr. JONES. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Washington?

Mr. KENYON. I do.

Mr. JONES. In other words, the qualification in these two amendments with reference to fertilizers would cut out of consideration those plants in the West?

Mr. KENYON. I think so. I think it cuts them out. It does not cut out Niagara Falls, of course. The astounding statement was made there that the water power at Niagara Falls would be sufficient, if used for fertilizers, to increase the wheat crop of this country 3,000,000 bushels per day.

Mr. JONES. What I meant was that the qualification requiring the plant to be developed with a view to getting fertilizer would necessarily exclude the consideration of a plant in a far-western State.

Mr. KENYON. To be perfectly frank with the Senator, I think it does do that practically because of the cost of transportation.

Mr. SMITH of Georgia. I did not hear the question of the Senator from Washington.

Mr. KENYON. He inquired if the fertilizer part of this amendment did not result in practically cutting out the power sites of the West because of the cost of transportation. As I stated, Dr. Baekeland, who seems to be a very eminent authority, said we might as well have the plant in Iceland, that the rates would be less to that country than to that part of this country needing the fertilizers if the plant were in any of the extreme Western States.

Mr. SMITH of Georgia. That would not——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Georgia?

Mr. KENYON. I do.

Mr. SMITH of Georgia. That would not be true if the stream were navigable and reasonably near the Pacific, would it?

Mr. KENYON. I assume not, if they could get a rate down through the Panama Canal, but I have not studied that proposition.

Mr. THOMAS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Colorado?

Mr. KENYON. I do for a question.

Mr. THOMAS. If the railway rates are so excessive as to prohibit an otherwise desirable site for a power plant in the development of this proposed method of producing nitrogen, does it not suggest either a further extension of Governmental control of the railway systems or the possession of them, as Germany has taken possession of them, as a part of the general scheme of preparedness? In other words, if we are going to prepare national defenses upon an adequate scale, does not that situation suggest the prime necessity, among other things, of controlling the lines of transportation of the country?

Mr. KENYON. Does the Senator believe we are going into a military camp in this country?

Mr. THOMAS. I do not, but many want us to do it; and yet those who are anxious for an extreme plan of preparedness have not thus far suggested what seems to me to be a prime element in such a plan, an element which Germany recognized 40 years ago, and that is the acquisition or the control by the Government of the various lines of transportation in the country.

Mr. KENYON. I will not go into a discussion of that. It is too broad a field, and I have talked about long enough. I do not want to delay this bill.

From the Manufacturers' Record of March 9, 1916, I place in the RECORD as evidence on the proposition I am discussing the statement of the Alabama Power Co., in a part of which they say:

In connection with the occasion for employing the $96,000,000, not covered by immediate plans, it is stated that "the Alabama Co.'s ultimate development in Alabama is predicated upon legislation regarding power sites now sought in Washington and bears special reference to the use of Muscle Shoals. The large water-power site owners of the country are pressing certain legislation which is being as stoutly resisted by others who claim that too much encroachment upon the rights of the public is contemplated in the form in which the power-site owners desire this legislation. The use of the remainder of the $100,000,000 available bears relation to the ultimate future and the possibilities of favorable legislation."

Certainly the impression has been conveyed to the good people who live in the region of Muscle Shoals that the Government is going to engage in a wonderful development there. I do not take a great deal of stock in lobby investigations. Of course, if the powder trust is doing what the Senator from Alabama said, it probably should be investigated. If others are doing what has been charged on the House side, they probably ought to be investigated also. I do not think as a general thing Members of Congress are particularly influenced by anybody coming to see

them. For my part, I am always glad to see anyone who has any information, and think I have been able to stand up against any influences thus far. But if there was to be any investigation of the powder company I want to see it go far enough to investigate the activities of the water-power companies also.

I received an invitation to visit Muscle Shoals last May, my expenses to be paid from the point of departure, and the exact time of departure being given, but as I have been opposed to the proposition in the past and expected to be opposed to it in the future I did not accept the very kindly hospitality. However, there were evidently some acceptances, and I hold in my hand a paper which leads me to believe that the good people down in Alabama at least believe that this is a project for Muscle Shoals. This paper is the Huntsville Daily Times of May 12, 1915. It is headed "Dam Muscle Shoals." There is no typographical error in that, I think.

Mr. NORRIS. That is what the Senator has been doing very effectively.

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Nebraska? The Chair will admonish Senators that the rules provide that before interrupting a Senator the Chair shall be addressed and permission granted by the Senator occupying the floor.

Mr. KENYON. This write up of the meeting down there and various Members of Congress who attended it is very interesting. I am not going to read it all. I merely cite it as a part of the line of evidence I have been trying to introduce in support of my statement that we might as well write Muscle Shoals into the Underwood amendment and be done with it. Certainly that is the impression in the vicinity of Muscle Shoals. This paper, the Huntsville Daily Times, says:

> Between 5,000 and 6,000 people shout the merits of Muscle Shoals, and with one voice say, "Dam it, we need it." Occasion a gala one and success comes in near future.
>
> United pull to extract the cork from the Tennessee and make the river a blessing to mankind. Big system of cooperation between private capital and the Government. Joint congressional inspection of proposed waterway a pleasing and stupendous success.
>
> It was indeed—

The paper says—

> the greatest event of its kind ever celebrated in the United States, and if any of the congressional party had any doubts as to the desire of this people and their complete interest in the development of this matchless enterprise it was forever removed when they visited Muscle Shoals and saw with their own eyes the water power that will bring a new world to this country.
>
> * * * * * * *
>
> It was a memorable occasion, the demonstration being marked by a wonderful outpouring of people of the immediate counties surrounding the proposed and completed navigation development at Muscle Shoals, and from the nine vitally interested near-by States.
>
> * * * * * * *
>
> A huge impression was made on the visitors and the only regret is that the whole of Congress could not be there on this or any other occasion and see the real good. It is actual, a substantial business proposition, not the hope of a dreamer. Impressions satisfactory were made on the visitors, and when they face their colleagues in December there should be a prompt adoption of the United States Army engineers' recommendation and let the final work proceed. Confidence believes this will be done promptly.
>
> That Niagara is a baby compared with the tremendous value and importance of Muscle Shoals possibilities goes without saying.

So it proceeds. I will not read the speeches of the various Members of the House and Members of the Senate upon that very enthusiastic occasion, but I want to refer to the conclusion of the article:

> The Tennessee River Improvement Association declares that the Muscle Shoals project is a challenge to the courage and genius of the President, the Secretary of War, and the Congress of the United States for immediate adoption.

Mr. President, that may be so.

> If our visitors would know the inspiration for the hope and confident belief of the Tennessee River Improvement Association, that the first session of the Sixty-fourth Congress will adopt the Muscle Shoals project as recommended by the United States engineers, they will find our hopes and our sentiments expressed in the last annual message of President Wilson to Congress as follows:

The poor President is drawn in to sustain the Muscle Shoals proposition, although I can not find that he says a single word about it; but such things read well in a newspaper.

> The Chief of Engineers of the United States Army—

This paper says—

> the greatest and most competent in the world have said the project is practical, feasible, and good. They are the captains, the final judges to make the decision. This has been done and this people call upon Congress to say amen to it.

That has been some of the business of Congress for some time, not entirely, I understand, confined to this branch.

> The Muscle Shoals project having been recommended for congressional adoption by the United States Engineers, it was very appropriate of course for the keynote of the occasion to be Dam Muscle Shoals and dam it now.

Now, Mr. President, I have not intended in my brief and rather scattering remarks to say anything to reflect upon anyone. I have placed some matters before the Senate that seemed a duty. These gentlemen have the right to believe, as they do believe with basis for it, that Muscle Shoals is a great project. If some board to be appointed should, after considering all the facts, be in favor of Muscle Shoals for our Government plant, I should not raise my voice against it, but I am objecting to adopting an amendment to this bill which gives to the Army Engineers the power to select a site when the record, statements, and documents show that the Army Engineers some years ago had practically adopted this as the best site for a great water power. If the Board of Army Engineers have determined that question what is the use in having them do it again? If the Government is to build and maintain these plants they should be located in different parts of the country where in time of peace they may be of the most good to the greatest number of our people.

Mr. SMITH of Georgia. Mr. President, I regret that there are expressions in the able speech of the Senator from Iowa [Mr. KENYON] who has just taken his seat and whom I admire very much, that I think are calculated to draw attention from the real merits of the question and to arouse prejudice against a great water power and men who may develop it. I never heard of Mr. Washburn until the day he appeared before the Committee on Agriculture about three weeks ago. I knew there was a cyanamide process and that fertilizers were being manufactured in Canada by somebody and shipped into the United States. I had heard that that plant would have been located on the Muscle Shoals, Tennessee River, but for the fact that a bill allowing the development of that water power passed by Congress some time ago was vetoed.

Mr. BANKHEAD. The Coosa River.

Mr. SMITH of Georgia. The Coosa River. I thought it was the Muscle Shoals. It was somewhere in northern Alabama.

Mr. President, the importance of producing nitrates inside of the United States and from the air can not be overestimated. Unquestionably if our Nation were involved in war with any nation possessing a substantial fleet the supply of nitrate of sodium or saltpeter from Chile would be cut off to a dangerous extent.

It was shown before the Committee on Agriculture that while Germany had laid in a large supply of the raw material out of which nitric acid was to be manufactured for military supplies, it was exhausted in three months after the war began, and but for the capacity of Germany to produce nitric acid from the air they would have been almost helpless.

It is essential to the production of food also in our country. It increases largely our food supply. In case of war it is essential.

It seems that there are two processes for extracting nitrogen from the air, one of which is called the arc process and the other the cyanamide process. So far only those two processes have been perfected. The arc process requires a much greater water power, the principal plants using this process being located in Norway. Germany adopted the cyanamide process for lack of greater water power. A plant can not be economically operated without 100,000 horsepower all the time.

Mr. President, if we have a water power of that kind it ought to be used, and it is the part of wisdom to take the necessary steps to have it prepared for use at once.

Reference has been made to Niagara Falls. It was fully brought to the attention of the Committee on Agriculture that we are limited in the use of Niagara Falls by treaty, and we are now using practically all the water power we could from Niagara Falls. The commercial requirements of New York State are at present consuming practically the entire water-power product that can be had from those Falls. Then, again, it is not a proper location for a plant upon which the United States should depend for military purposes. Any wise selection would involve going reasonably far from the border.

Mr. President, I am not wedded to the idea of the construction of this plant by the Government, but I do believe that the Government ought not to stand in the way of developing such a plant; on the contrary, it ought to take action which will insure it.

No private company could build a plant upon a navigable stream without Government concession. No private company could build a plant in the West upon Government land. Private companies will to-day find their hands tied in any effort to develop such an enterprise, unless the opportunity for use of a navigable stream or a stream located on Government lands is provided by congressional action.

I am sorry the Tennessee River does not flow through Georgia. I really think that the best of everything should go to my own State, and I wish this plant was to be built in Georgia. But,

unfortunately, the Tennessee River is not there. I do not care, it being outside of Georgia, whether it is in Ohio or Indiana or western Pennsylvania or West Virginia or Kentucky. It happens to be located nearly on the edge of southern Tennessee and northern Alabama.

The Senator from Iowa seems to be disturbed about the fact that the result of this bill would cause the development of Muscle Shoals, on the Tennessee River. In my own opinion, if anything intelligent on this line is done, if the wisest course is pursued, it will be built there. And why not, if it is to be east of the Mississippi River? The great bulk of our population is east of the Mississippi River, and without saying that there should not also be one built in the West, there certainly ought to be one in the East, and that Muscle Shoals is the place in the East I have no question. Engineers, or anyone else who studies the problem, guided simply by search of the truth, will in all probability determine that the one great interior point for water-power development east of the Mississippi River is on the Tennessee River, which happens to be located in northern Alabama. Why? Because this river at that point is a mile wide and the banks over 100 feet high, stretching back for miles and miles. A dam can be built across the stream a mile in length, 100 feet high, furnishing over 100,000 horsepower at lowest water.

If there is some other place east of the Mississippi River that is better, take it. I have not only no interest in Muscle Shoals, but I never heard of Mr. Washburn until he appeared before the Committee on Agriculture. Do not get the idea that Mr. Washburn has a company that will control if Muscle Shoals is developed. He has not. I believe that two dams should be built in the Tennessee River, if possible, to develop navigation, and that their construction would be a great contribution to navigation. If they can be built, making their construction for navigation and also to produce a water power that will more than pay interest on the cost of their construction, then we get the navigation free. If the Government builds the dam and develops the power and contributes to the navigation of the stream, then I think it would be stupid on the part of the Government if it did not dispose of the power, if it can be done, in such a way as to carry the cost of construction. If Washburn had a company that would take the power on proper terms from the Government and carry the cost of the development, I would not object to his having it. If the Du Pont Powder Co. are ready to take it and pay the cost of this great development under contracts that will guarantee that the Government will pay for the product from the manufactory which it needs at proper prices, at prices to be approved by the Secretary of War, I will not object to their having it.

This I say, although I believe, when practicable, the Government should manufacture those things it needs for purposes of war.

There is one feature of this amendment that I do not like. It excludes the Government from having anything to do with any private company. If we produce power for the construction of a dam and can dispose of the power to any company advantageously and take the burdens of the development entirely off the taxpayers of the country there is nothing in such a proposition that at all frightens me.

Mr. VARDAMAN. Mr. President——

The PRESIDING OFFICER. Does the Senator from Georgia yield to the Senator from Mississippi?

Mr. SMITH of Georgia. Yes, sir.

Mr. VARDAMAN. Would the Senator be opposed to the Government manufacturing these fertilizers?

Mr. SMITH of Georgia. I did not say I was.

Mr. VARDAMAN. I can not see the difference between the Government creating the power and selling it and creating the nitrate and selling that, and if the Government should do that, it could be——

Mr. SMITH of Georgia. I yielded to the Senator for a question only, which is all I can yield for under the rule.

Mr. President, I am in favor of the Government going no further into the business as a competitor of private enterprise than is essential to furnish to the public that which the public is entitled to have. The water power of the stream belongs to the Government. It can not be developed except by authority of the Government.

I should be willing, under proper arrangement, to permit the dam and locks to be built by private enterprise, if the arrangement could be made in a perfectly satisfactory manner. I regard it as a business problem.

What I rose for, Mr. President, was to say that I think it unfortunate to inject anything into this debate that would create prejudice against a private corporation building a nitrate plant or a fertilizer plant—against the Government permitting it to use a water power for such a purpose. I think it unfortunate in any way to create a prejudice against what seems to be the greatest water-power opportunity for development that we have east of the Mississippi River. Unless somebody can point me to a better water power, it would not frighten me at all to put Muscle Shoals into the amendment. If that is the best water-power site, there it ought to be.

Mr. President, without being wedded to any particular plant, and without being hostile to any plan, I do insist that it is our duty either to take steps in behalf of the Government to develop the necessary water power without delay or to take steps on the part of the Government to permit some private corporation to develop the water power without delay. The chief cause of delay in time of war, if we needed nitric acid, would be the construction of the dams and the creation of the water power. It would take much less time to complete the industrial end of the enterprise in the shape of assembling the necessary machinery.

I hope the Senate will consider the subject without prejudice on account of the fact that a number of Senators once went down to see Muscle Shoals. I was not in the party; I did not know until the Senator from Iowa [Mr. KENYON] told us about it that there had been a party of Senators and Members of the other House who went down to see Muscle Shoals; but if what I am informed is true, they saw a wonderful opportunity for water-power development. I have no preference as to locality, provided the best suited to the purpose is selected; but, so far as my information goes, if we are to have a plant east of the Mississippi River, and are to take the best place, we shall put the plant east of the Mississippi River, on the Tennessee River, at Muscle Shoals.

Mr. LEWIS and Mr. MARTINE of New Jersey addressed the Chair.

The PRESIDING OFFICER. The Senator from Illinois.

Mr. SMITH of South Carolina. Mr. President, will the Senator from Illinois yield to me?

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from South Carolina?

Mr. LEWIS. I yield to the Senator from South Carolina.

The PRESIDING OFFICER. Does the Senator from Illinois yield the floor?

Mr. LEWIS. I wish first to ascertain what is the request of the Senator from South Carolina.

Mr. SMITH of South Carolina. At this particular juncture, so as to sustain the continuity of what has been said, I want merely to read—and it would not take more than five minutes, if so long as that—into the RECORD an explanation of certain facts, which I think are pertinent. I prefer to do that now rather than to have the continuity of what has been said broken. Of course I could do so at some other time, but this being the proper time if, without prejudice to the rights of the Senator from Illinois, he can yield to me for a sufficient length of time and then be recognized, I wish he would do so. Of course I should very much dislike to have him lose his place because of doing so.

The PRESIDING OFFICER. Does the Senator from Illinois yield the floor?

Mr. LEWIS. Mr. President, I have yielded the floor once or twice previously to accommodate a Senator. I do not like to interrupt my speech; but while my remarks, such as I expect to submit, are not wholly upon this subject, I will yield a few minutes, if the Senator from South Carolina so desires, and trust that I may be recognized immediately following him.

Mr. SMITH of South Carolina. I thank the Senator from Illinois.

The PRESIDING OFFICER. The Chair will remind Senators that this is a recess, and that the rule of the Senate that Senators may not speak more than twice in one day on the same subject would apply. The present occupant of the chair, however, has no disposition to insist upon the observance of the rule, unless occasion makes it necessary for him to do so. The Senator from South Carolina.

Mr. SMITH of South Carolina. Mr. President, do I understand that the rule in regard to speaking twice on the same subject would apply to me?

The PRESIDING OFFICER. It certainly would, if insisted on.

Mr. SMITH of South Carolina. What I mean to say is that I have not spoken on this subject this morning at all.

The PRESIDING OFFICER. Yes; but this is the same legislative day as yesterday; it is one legislative day.

Mr. SMITH of Georgia. Mr. President, I rise to a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from Georgia will state his parliamentary inquiry.

Mr. SMITH of Georgia. I understand the Chair to hold—and I do not dissent from the view of the Chair at all—that this day starts with the first legislative day; that it is a continuation of that day, and that the rule limits a Senator to two speeches on one subject throughout the entire legislative day.

The PRESIDING OFFICER. The Chair is of the opinion that the present legislative day started on the 30th day of March.

Mr. SHAFROTH. Mr. President, I rise to a point of order.

The PRESIDING OFFICER. The Senator will state his point of order.

Mr. SHAFROTH. The President pro tempore of the Senate, who made the ruling, stated that, in his judgment, the appeal which was made to the Senate, and on which the ruling of the Chair was not sustained, did away with the rule to which the Chair now refers, and that the rule hereafter would be that interruptions would be permitted.

The PRESIDING OFFICER. The present occupant of the chair will take occasion to say to the Senator from Colorado that that was an entirely different question from the one now involved. There being no objection, the Senator from South Carolina is recognized.

Mr. SMITH of South Carolina. Mr. President, several of the speakers this morning took occasion to say that the processes for the production of nitrogen were in an imperfect and nebulous condition; that nothing in relation thereto was settled. There are two gentlemen upon whom we should rely by virtue of the position which they occupy in relation to this question; one is Dr. Norton, who is employed by this Government, who was sent to Germany, and who returned just previous to the outbreak of the war; the other is the chemist of the consulting board of the Navy. I am going to put into the RECORD what these gentlemen say about these processes. I will also include what Mr. Washburn said with reference to whether or not this process is practicable. Mr. Washburn said:

So the point I wish to make is this, that the nitrogen industry is no longer in the experimental stage.

* * * * * * *

It has taken the greatest scientists in the world, men understanding such things, 16 years to bring it to where it is a great, successful, reliable, extraordinarily cheap method of producing the most valuable single substance known to mankind.

Dr. Baekeland says:

The whole situation is a shame to the human race. We know how to get nitrogen from the air; we know how to increase the yields of our acres. We do not do it, although those chemical processes are no longer secrets, and we know all about them. The key to the whole situation is better utilization of our natural resources of cheap power. If you make your nitrogen compounds or your nitric acid at too high prices, you may be able to use it in war time—in war time nothing is too expensive when it comes to murdering each other.

* * * * * * *

Dr. Baekeland, the consulting chemist for the Naval Board, makes that statement. He further says:

This nitric acid is made by a chemical process, which, I am glad to say, the chemists of the United States can duplicate at any time. There is no particular secret about it, and if the chemists of the United States were confronted with this problem I have no hesitation in saying that, if properly supported and given the necessary time, they would make as good a showing for themselves as did the German chemists.

* * * * * * *

The question of the fixation of nitrogen from the air from the chemical standpoint is clear and easy, and is a problem no more difficult than any other chemical problem.

Dr. Norton, on the same subject, states:

The nitrogen derived from the air in that way easily meets in competition Chilean saltpeter. It holds its own; the works are being enlarged. That demonstrates to us, with perfect clearness, that we can take the nitrogen out of the air; we can put it into such a form that it is susceptible of utilization for our agriculture, and on even terms with the supplies from Chile.

Furthermore, gentlemen, you must remember that the supplies of Chilean saltpeter are limited.

So I want to set at rest right at this juncture the idea that we are feeling our way and were about to make an appropriation for something as to the practicability of which nobody had decided. Germany is an evidence that it can be accomplished; the process at Niagara is testimony as to that, and if the word of scientists can be taken at all, we need not hesitate.

I wanted to present this evidence just at this juncture, because I did not desire Senators, who will consider this question seriously, to be misled as to their being any doubt in the minds of anybody who really wants this ingredient that we are prepared to obtain it.

Mr. LEWIS. Mr. President, I arise to submit some remarks suggested by the early part of the speech of the Senator from Iowa [Mr. KENYON], and the expressions of other Senators along similar lines. The Senator from Iowa expressed some doubt as to the wisdom of introducing this measure touching nitrates at this particular time. He questioned the wisdom of having it annexed in any form upon a general bill of legislation designated for the increase of the Army, and asks that it later be treated as separate legislation.

My reflections, Mr. President, bring me to a viewpoint, which I here express, doubtless meeting the unfavorable observations of some of my fellow Senators. I do not feel that we in the Senate are properly appreciating the aspect in which we are being held by the country, whose servants we are. These measures which are now being suggested, which necessarily occupy time for debate upon their merits, and which to the country at large seem foreign to the real bill at issue, are impressing the country with one thought: either that as to this war measure we have not statesmanship enough to sustain it and to pass it quickly, with the spirit that should attend it, or, if opposed to it, we lack courage to say so. That there is a disposition manifested by our conduct to avoid responsibility at both sides of the issue.

Mr. President, the Senator from Iowa alluded to a letter from one of his constituents demanding that the public buildings hereafter authorized by Congress be constructed in a shape that is round, the constituent intimating his opposition to any public building that should be constructed square. The general opinion of the country is that there is no public building emanating from Congress that is "square." [Laughter.] The Senator from Iowa by his letter recalls the general attitude of mind that Iowa has to this body. I recall that a distinguished Member from Iowa, now departed, Maj. Lacey, formerly chairman of the Committee on Public Lands—I had the pleasure and the honor to serve on his committee and under him—received a letter from one of his constituents which read something as follows:

DEAR MR. LACY: I have been gettin' them books called obituaries and have been readin' them speeches about them dead Congressmen. I wish you would please have more of them obituaries sent out to our people in Iowa, for nothin' we please so much as to read about dead Congressmen.

[Laughter.]

The public mind is likely to apply that expression in a political way; and unless we move about something in a spirit that shows our desire for action, either for or against, we will meet a sentiment on the part of our countrymen that politically will visit decease, if not upon the Senator politically, upon the respect in which the office is held.

These amendments on collateral subjects presented by Senators from different States have no doubt great merit; and the fact that a prolonged debate is indulged upon them indicates that they have a merit that can be advanced for them and that there are objections which have merit that may be presented against them; but it all demonstrates that we are having now presented collateral subjects which are taking the time of the Senate at a time when, I respectfully insist, we should move absolutely to the end that we are about to accomplish. We should either surround our Government at this time with force sufficient to meet its exigencies as we see them, or announcing to the country that we do not agree that such exigencies exist, cease parleying with this question of preparation, and turn our attention wholly to these other subjects which refer to the civil welfare of the citizen.

SITUATION OF COUNTRY.

Mr. President, I view the situation of my country at this particular time as rather precarious in the matter of her diplomatic surroundings. I behold the distinguished chairman of the Foreign Relations Committee [Mr. STONE] sitting here, doing me the honor to pay heed to these observations. Missouri can well lay "unction to her soul" at the compliment afforded the State in having her distinguished citizen preside over that equally distinguished committee. The attention he has been giving to these public questions, the patience which has characterized his investigations, and the ability disclosed in his discussions are guaranties that these great considerations will be attended to with patience, discretion, and statesmanship. Mr. President, I fear for the impression we are leaving upon the country at large. It is either that we do not regard the conditions of our country calling for the immediateness of action on our part and have not the courage to say so, or that we do so regard them, but have not the statesmanship to act with the immediateness that the situation calls for. We must gather much of our information from the public press. We take some of it from that which is confided to us in our official capacity; but it is no exaggeration to say that we all recognize that this is the hour when there is necessity for action.

Mr. President, there is Mexico. Deplorable as is the situation in Mexico, the incontrovertible fact is there is Mexico with the deplorable situation. Some sources have been affording the enemy

of the United States in Mexico munitions of warfare. Whether smuggled in by those who are guilty of the meretricious trade without regard to nationality, or whether tendered these forces by those in the United States inimical to the welfare of the United States, is unsettled and may be debated; but the fact remains that there is some form of aid being given Villa and his followers by those whose particular identity we may not at this time assign, but aid of quality sufficient to make the task of the United States more difficult than it at first appeared, and will continue to make it more difficult as time goes on and the opportunities for those who act against us be increased.

MEXICO.

Mr. President, there has come the information through the public press—and from the foreign press particularly—that the United States is upon the eve of withdrawing from Mexico because of these new and multiplied embarrassments. It might as well now be understood, speaking wholly for myself and only for myself, that, so far as I am concerned, the United States will not withdraw from the undertaking it has so commendably entered upon in this punitive expedition to properly chastise those who have violated the honor of the country, and to punish those who have taken the lives of citizens of the United States. We have undertaken this task because of the justice in it, because of the right of the United States, and because of the necessity for it. We are going to maintain the dignity of our country and the freedom of an American. Therefore, in the language of the Scriptures, "Having laid our hand to the plow, we will not look back"; or, if I may apply an expression in the Merchant of Venice—

> An oath, an oath, I have an oath in heaven:
> Shall I lay perjury upon my soul?
> No; not for Venice.

Therefore, Mr. President, it becomes important, as I view it, that speedy action on the part of this body touching these measures of preparation be had. That speedy action be had in order that those who assume that this body is indifferent to supporting the President in these undertakings may obtain—from the evidence we give proof to the contrary—that all may see that what we are doing has for its object the putting behind the President at a very early moment—and at the most early moment feasible—all the power that the wisdom and statesmanship of this body can justify. That rather than that we should, through measures that are only incidental, delay the matter, that we give the other evidence—that we move to it with that rapidity which recognizes that in rapid action in supporting the President and the measures of preparation we justify before the country the movement undertaken, and by it announce to all those who may be concerned in the question as to whether we will withdraw or lessen our zeal, that, to the contrary, far from lessening it by virtue of the increased difficulties, we increase our perserverance and multiply our own activities. That we will meet these difficulties as fast as they shall arise, conscious, as we are, of our strength and of the rectitude of our conduct, and we assert that we are absolutely convinced that shortly that which we seek to do—execute justice—will be done by the United States in Mexico.

Now, Mr. President, not only will our delay add to these embarrassments to which I am alluding, but our course will be misconstrued abroad. It will be charged that we are hesitating to support these measures of necessary defense for the lack of support of our countrymen on the outside of this Chamber. It will be said that we do not feel that our countrymen at large are behind their public representatives, and for that reason we are dismayed. That we are discouraged, or that we hesitate for fear of the political punishment that may be visited upon us by a constituency that may be opposed to the constructive policy here undertaken.

Mr. President, one of the very last places to obtain the political sentiment of America is here at the Capital, at Washington. The most deplorable fact that has been established before this country seems to be this, that whenever a Senator has become unpopular in this body, he has by the things that makes him unliked here become the most liked and the most popular among the people; and the Senator who oftentimes receives at the hands of a certain form of constituency in this country approval and praise has the least standing in this body, as a man either of constructive measures or of patriotism. This I merely mention to indicate how poor a judge is this forum and how much poorer a judge is this locality in Washington of the public sentiment that surrounds our country.

Mr. President, I am not one who would yield to public sentiment merely because it is such, unless I could feel that that sentiment is one that spoke the needs of my country. I prefer, sir, to dispute with the king whose theory was that we should not rule according to the weal of the people but to the will of the king. I would rather take the other rule, that so soon as we could justly ascertain what is the weal of our countrymen, we turn to serve these needs, and not be moved from them, because here and there there may be evidences on the part of those who have not had opportunity to reflect of opposition suddenly exploding against the policies which, thought, calmness, and consideration on the part of the public agents of the country have undertaken.

It is believed by many that the vote in the State of Michigan, whereby one of the distinguished Members of this body and one of the eminent presidential candidates from the vast numbers which the Senate produces, received something of a hip-and-thigh blow from his brother—was an indication that the country at large had reversed its sentiments touching the need of a national defensive policy as against dangers that all men who look with clear vision must behold.

Mr. President, that there will arise from time to time expressions such as we have seen in Michigan we all will admit; but, sir, we can not assume from these that our countrymen have reversed their orders—that its Representatives shall do that which they know is necessary for the welfare of the country at large. We should not only not be moved by these whiffs, but we will earn the contempt of our countrymen if we let them behold that, with every wind that blows slightly against our cheek, we turn from our task and fly from that direction where we think ultimately the storm may come.

Mr. President, not only, therefore, do the conditions in Mexico call for our supporting whatever may be the policy of the President, and supporting it with such movement here as will indicate to the country at large the immediateness of action on the part of this body—putting arms, force, discipline, and patriotism behind him—but they also call for action in order that the outside world shall not assume that we have lagged in our sense of appreciation of these situations, and that the opponents of the policy of the United States may not draw further license from this delay to assume that we are unprepared to back up quickly and sufficiently the movement we have undertaken in Mexico.

Mr. VARDAMAN. Mr. President, may I interrupt the Senator to ask him a question?

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Mississippi?

Mr. LEWIS. I yield to the Senator from Mississippi.

Mr. VARDAMAN. I want to ask the Senator if the President has not announced, through the War Department, that he had all the power he wanted in Mexico?

Mr. LEWIS. Has the Senator concluded?

Mr. VARDAMAN. Yes. I understood that the War Department has stated that they needed no further troops for Mexico. They might need a good pack of dogs; but I do not see any need of more troops.

Mr. LEWIS. Mr. President, it may be the Senator is right that the President has made a statement that no more troops now are needed in Mexico. I do not know concerning that. I am not referring to an immediate use of troops; I am referring to some action of Congress in preparing the country in whatever way it shall decide to prepare, so that, whatever may be needed now or hereafter may be at hand. This is wiser than to allow this delay that I see will be considered as an evidence on the part of this honorable body that it does not appreciate the gravity of a situation which at any time may make necessary further aid to the President.

GERMANY AND THE UNITED STATES.

Mr. President, I come to a second feature, to which I feel I can well invite the attention of the body as a justification for our not further intruding immaterial and collateral matters upon the pending bill.

The diplomatic relations between this country and Germany, gathered from the public press and from other information, indicate very clearly that the United States is nearer to the necessity of having to choose some decisive course than it ever has been since the beginning of the disputation over the *Lusitania* or since the arising of complications over the submarine warfare. It is sufficient to say that both sides of this Chamber will be found supporting the administration in whatever course it shall take as the final act of America; but it is perfectly clear, Mr. President, that the United States has now reached the point when it must apply to itself the Scriptural injunction:

> Choose you this day whom ye will serve.

If the policy of the United States is to be that which the distinguished President has uttered in public places—that the United States asks for itself only that which it asks for humanity—then, sir, we must be prepared to obtain for all humanity that which we are assuming to ask for ourselves. It must be very plain, Mr. President, that if such shall be the course we

are to embark upon, then, for the protection of humanity at large, the whole theory of the Republic must be changed, if not wholly transformed, and a course of offensive attitude on the part of America must be entered upon that shall be sufficient in its strength to obtain for humanity that which we will demand in behalf of America.

We can not utter the doctrine as a text on the one hand and ignore it in execution on the other. This would make us ridiculous in the eyes of the wise and make us contemptible before the face of the brave.

Therefore, sir, if such is to be the policy, all the more is it necessary now that we should proceed with such measures of power as will enact them into legislation. This is essential, that the country may know how far we have gone; that from that knowledge they may derive the fact of how far afterwards we are able to go. Without the President of the United States having the information from Congress as to what support is to be put behind him, he is left uncertain as to what course to take. Not only is he left uncertain, but he is forced necessarily to present himself before the country as changing his viewpoint from time to time to meet the exigencies put upon him by Congress. Then he is to be charged, as he has been, with the "change of opinion," apparently without justification, when his real justification is that he is forced to change his attitude by the attitude of his superiors—the people, speaking through their official representatives.

Conditions change, Mr. President. It was Emerson, I believe, who remarked that consistency was the virtue of fools, while an eminent Greek left behind him the statement for us that they who could not change their minds could not hope to know when their life had changed. Things may occur to-day and, by existing, may call for one set of observations on the part of a wise ruler or a wise governor who is prudent and cautious and anxious to avoid the assertion of extremes that may invite opposition, create antagonism, and awaken enmity; and yet, sir, after having made every effort to appease an aroused multitude and quell the mutiny in the body politic by assuring them that the hour upon us is one of security, should subsequent events develop, not of his making but at the instance of others, that render insecure that which previously looked firm and secure, he may find his duty—as duty of the President would be—to admonish his countrymen of these changed affairs, and to invite their attention to them. Then, if he felt the policy should change from that which it was in the past to the new present, it is courage on his part to assert such and demand the change. It would have been a lack of statesmanship to adhere to the yesterdays when they have been changed by the to-morrows.

So, Mr. President, if the future policy of this country, with regard to foreign nations is to be different from that of the past, and we are to be forced unhappily to deal with them in the manner that they are dealing with each other, and in the only manner which it appears they accept, by force, it would be foolhardiness for us to blind our eyes to surrounding situations and to refuse to prepare for those conditions by this one form of preparation—legitimate force.

Sir, the real question is, To what extent shall our country go for preparation? There are two extremes of thought. They seem so far apart that the man seeking to be just has difficulty to reconcile them.

WHAT IS THE JUST MIDDLE GROUND?

And, sir, the question remains, What is the just intermediate ground made necessary by the conditions of the country? If, Mr. President, the distinguished head of our Government shall adhere for the future to the lesser policy we have seen announced as his second proposition—the protection of an American citizen in the enjoyment of an American right wherever he is—then, sir, we have the second proposition to prepare for. If we shall not embark upon the first, of giving the guarantee to humanity, wherever they are, of the full extent of protection that we give to our own citizens, we will essentially be driven, soon or late, to that other of assuring to the American, wherever he is, the full enjoyment of an American's rights when asserted in peace and within the law. To do this, Mr. President, even though we should qualify the previous doctrine and not assume the guardianship of humanity at large, we will nevertheless, sir, have to prepare ourselves for such course of action as will present to the world our ability to enforce the just rights of the American, exercising an American's privilege, wherever that American is. This latter expression is the text I offer as our practicable duty.

But, sir, it is foolishness, and the office of a braggart, that we should announce to the world the right of an American within an American's rights, and our announcement of his privilege to enjoy them, and yet present before the world our utter inability to secure him in this enjoyment. That, sir, makes us ridiculous; such presents us before the world as subject to the criticism of being vain boasters; and while we may tickle the ears of the groundling by boastful halloas, we make the judicious grieve when they behold the true situation in which our country may be—boastful but useless; hopeful but helpless.

Mr. President, I desire to have it understood that I do not agree with the distinguished Senators in the idea expressed that this country is unprepared to back up any demands. Some things have been wholly lost sight of. That in addition to the Army and the National Guard there are a million men in this country who have had some form of service through the Guard, through the Volunteer service, through the national Army, through the last generation, and who have from time to time passed out into other occupations, and who at this time possess the training they have had during these last 20 years. These are accessible for some uses, and in their valor and patriotism can be relied upon to the full extent of their complete capacity.

Nor can I concur in the suggestion, made here and there, that our country is unprepared to defend itself. To the contrary, if left alone as against any single opponent that might arise, our country is as amply prepared to meet any advance against it this day as it ever has been at any time since the Civil War, and it is better prepared now than it ever has been at any time since the Spanish-American War.

Let it be remembered that no mind could have conceived that there would have been a combination of the world in war in this civilized era. We shall hereafter be forced to characterize the present pending war as the "War of the Twentieth Century." The war of the world, combining nations together in a crash and combination of power through events which no philosophy could have reasoned out, no statesmanship anticipated, and to which no form of military preparation could have been adequate.

If there shall arise in this body a Senator, however sincere, who would assume that the United States shall embark upon a course of preparation that shall be equal in power to all forms of contingencies that might arise through the combined assaults of the world, our answer is, our countrymen would not accept the program. You never can make our fellow citizens at large believe that such a holocaust could befall America. First, they behold no affront given on our part against the world, as they see it. They behold no offense on the part of America to mankind at large. They behold no reason why there should be such preparation to meet such imagined combined foe. But, alas! our countrymen do not realize that there is more to be considered than that. This country is not preparing to make assault upon any other country. True, sir, this Nation of ours is not contemplating assailing others. Our countrymen, however, fail to realize that the countries at large throughout the world have arisen with grievances, real or imaginary, against their neighbors in Europe. Their hearts are filled with old and long-contested disputes; their minds inflamed with revenges that have been surging in their lives; and their souls afflame with retaliation and resentments that have been multiplying through a century. Our countrymen fail to recognize that this very spirit when aroused, this very flame when lighted, heeds not the course it will take, and at any hour in its fury will mistake the course of America asserting her just rights as an assault upon another country. This they will charge to be a wrong against them.

POSSIBILITIES OF FUTURE COMPLICATION.

Let us dwell, sir, for a moment on the possibilities of such antagonism by only suggesting a phase or two of our threatening surroundings. We recall that respecting our trade we have demanded of England: First, that she cease opening the private letters of our fellow citizens; second, that she cease obstructing the commerce of our countrymen; third, that she end interfering with neutrals in the direct enjoyment of their legitimate commerce within international law and international practice. Britain feels that in these demands we are doing her injustice, and are putting an impediment in her way to accomplish that which she feels is essential to her future life if she shall exist as a nation upon the face of the earth.

Germany beholds us selling supplies and ammunition to the allies. She reckons this as a direct assault upon her opportunities, and a violation of what she feels should be the humane doctrine of neutrality. Then beholds us ever as an ally of Britain in our war upon her use of submarines in sea warfare. She sits as one brooding in deep grievance, and because of this, together with other offenses which she claims we have visited upon her, joins Austria in the resentment she has against us. We sent Von Papen and the military attachés to their homes, and likewise sent back the Austrian ambassador in dishonor. Austria and Germany feel the sting of this indignity put upon

them. They suffer under the insult that they seem compelled to endure before the world. We justify our actions on the ground of Americanism, and can not retreat.

Mr. President, Russia still feels that the United States committed a grave affront to her when we severed the commercial treaties because of her treatment of certain of our citizens, and because of her inability at that time to come harmoniously to an understanding with us which we hope in the future will be soon entered on. Russia likewise feels that the United States lent its aid to Japan in the Japan-Russian War, and through that aid enabled Japan to humiliate Russia in the hour of that conflict.

Japan to-day is opposing the Asiatic bill touching the question of immigration. She beholds in it the item prohibiting her people from coming into our country while our people assume to go into hers. Likewise, in her new and renewed strength, she beholds the policy of America that excludes her countrymen from the domain of the United States.

China revolts at the humiliation which we have put upon her by holding her people out to the world as unworthy to be of the fellow humankind of America.

Think you, Mr. President, that all of these nations to which I allude, having these grievances, will not bide their time legitimately, from their point of view, to express these grievances in such manner as is natural to humankind? Shall America pass into an agreeable stupor merely because it is isolated by the seas, and feel itself secure from all assault, and be unconscious of these wrongs which other countries feel we have visited upon them? And shall we be indifferent to the already awakened mind on the part of these countries, and to the executions we now see in Europe by nations on the nations against which they were aggrieved?

Sir, it is because of these things I recount, these instances I recite, that our countrymen should be awakened to the fact that America should awake. Sir, America is not preparing to assail any people. America is not presenting a war measure here for attack on anyone, or a measure looking to maintaining a war upon the theory of enmity against any people. But it is because of the knowledge that, being compelled, soon or late, to assert American rights, she is conscious that these rights will be opposed individually, perhaps jointly, combinedly, by those countries having the power when they come out of this war, to meet us in such manner that, if we are not at least prepared to oppose, we shall suffer the humiliation which no American can endure without feeling the death of honor within him.

Mr. President, it is because of these surroundings that our countrymen must mark well the real situation in which now stands America. We well might paraphrase Malcolm to Macduff:

> Stands Scotland where it did?

And ask, "Does America stand where she was?" Where is the philosophy of those fathers who spoke about the safety of the United States in the great isolation of America? Sirs, America is in greater danger to-day through these isolations than she ever had protection. Every hour in this country has given civilization the opportunity to increase its methods by which it has put the United States between the two great forces that may be the foes of this Nation—Europe on the west, Asia to the east—and, sir, far from the seas being a source of our protection, they will on either side of us be occupied by the forces of antagonism, by navy and aerial machines, and we destined to find ourselves between them all. All with a common interest at that particular time to defeat the objects which America has declared shall be her policy for the future.

Let me advert to one. My eminent friend, the distinguished chairman of the committee, referred a moment past to the Monroe doctrine. I view the operation of that doctrine differently from the eminent chairman. If I may be permitted, sir, I press to your consideration where I feel our future difficulty lies; and I use the word "difficulty" conscious that a stronger word may be very appropriately adopted.

COURSE OF MONROE DOCTRINE.

There south of us is South America. In Brazil, Germany has large possessions. We are speaking to-day of Chilean nitrates. In Chile, England has large control. In Argentina, Italy has large possessions. Throughout different parts of South America Europe has moved. When this war is over in Europe, Mr. President, as I see it, these countries will demand to enter into South America in such form of colonziation as the South American countries themselves will accept. South America, needing capital and feeling that these advances of aid from Europe would be to her interest, will be found accepting those proffers in many instances. Already South America resents what she feels to be the assumption on the part of America of guardianship over her, as if she were of the tutelage of children. She does not approve the Monroe doctrine further than this—that if the hour shall come when she shall need our aid she may be permitted to invoke it with the assurance that we will respond. But, sir, she resents that we should enter with our authority into her country at any time to say to any people, "Thus far and no farther," when she herself has made no protest. Consequently, sir, from South America and Central America, in view of what has transpired touching the Panama Canal and Nicaragua and through American administrations in Haiti and San Domingo and portions of the Central American countries around us, the United States will receive little sympathy indeed, as I view it, for the enforcement of our present day Monroe doctrine. As we have announced it as a policy of protection and guardianship of these countries, it will be resented. It will not be accepted. Therefore, sir, these southern nations will be found giving such aid to these European countries as will attempt to colonize there as that aid may indicate to the South American country to be profitable to it. All this opposing our effort to maintain the Monroe doctrine against European or Asiatic royal governments.

Then the hour will clearly come upon this my country, as I see it, when, confronted by these European foes, unless we shall compose our difference—as I pray heaven we shall—in treaties of peace and peaceful arrangements—we shall be surrounded with these awakened European enmities, these aroused animosities, these multiplied oppositions, with their long-increased grievances, all centered—as their announced point of expression in the opposition before the world to our assuming to interfere in lands which are no part of our country and by power without right. That we are doing such against the desire of these lands themselves. Then under that theme and under that theory of grievance they will vent grudges they have long espoused against us. The Orient, feeling the indignity that we have by our past course visited, and by present purpose threatens to visit, upon it, burns to join our foes to the end of forcing our abandonment of our exclusion policies. It may be that these Asiatic nations have long since endured their exclusion, but keep this in mind: I do prophesy here this day that Japan will shortly be found making such arrangements with China as will put China under her legislative and official protection. Then Japan will announce to America and to the world a Japanese Monroe doctrine. This shall have for its purpose the retaliation upon America for the Monroe doctrine enforced in Mexico against Japan and in South America against the European countries. Then Japan's policy will be: "Asia for the Asiatics"; American people and American trade will be forced out of Asia. China will likewise be glad of the hour when she can resent the affront that she feels has been visited upon her by America, and if not through herself, then by cooperation with Japan, arise to an independent nation capable of establishing her people in any land they choose to adopt. It may be true, sir, as the Senator from Delaware [Mr. SAULSBURY] now remarks, that they have long endured our policy of exclusion. It may be true, sir, that they have yielded to it, and in well-known instances obeyed it; but that they have felt it as a wrong, and are still conscious that we will not yield up the policy. But that does not lessen the buried feeling that they have, and the hour then waits. They stand muttering through Byron:

> If we do but watch the hour,
> There never yet was human power
> Which could evade, if unforgiven,
> The patient search and vigil long
> Of him who treasures up a wrong.

Then, Mr. President, with these surrounding conditions that must submit themselves to our thoughtful consideration shall we falter here and continue with this debate, on subjects however commendable yet quite apart and foreign to the main measure in hand? Shall we continue such and by such notify the country at large that we have not courage to pass these measures; shall we by our hesitancy indicate that we have been frightened by our own people? I pray we shall consider the aspect we are tendering to the Nation and contemplate the conclusions which may be drawn from it.

Mr. President, the future before us is filled with all uncertainty and to mankind much mystery. If the decree of our administration would be to secure to humanity that which we ask for ourselves, then, sir, toward that object let us prepare. If the policy shall be to enforce for America wherever an American is the rights of an American, let us in haste move toward that purpose. But, sir, whatever the course, let us now have the country see that we are rapidly legislating to enforce these rights, and that we are prepared to do so.

Mr. President, there may be many provisions in this bill that certain Senators might not agree to, but let us move to the consideration of the bill. Let us move to amend, let us move, if

you please, to correction, but let us move to the measure that our country may not be prejudiced by our course, and that our course may not mislead those whose deductions from our present situation may license them then to further assaults upon our rights, seriously complicating our situation and making it more difficult for us to work it out in peace and in security.

Therefore, may I take the liberty to urge what I really rose to present to my distinguished fellow Senators, the doctrine that as to this passage of measures of preparation, let our text be, "If it were done when 'tis done, t'were well t'were done quickly"?

I thank the Senate.

Mr. CHAMBERLAIN obtained the floor.

Mr. STONE. Mr. President——

Mr. CHAMBERLAIN. I yield to the Senator from Missouri.

Mr. STONE. Mr. President, I have no intention whatever to reply to or comment upon the speech of the Senator from Illinois [Mr. LEWIS] as a whole. It stands for itself and, of course, voices his opinions, very eloquently stated, on the subjects that he discussed. But having in mind what he said in the earlier part of his address about Mexico, I wish to make one observation only, and I am done.

I wish to say that the proposal to increase the Army or Navy of the United States, or both, has no special reference whatever to the troubles in Mexico. I would have the people of Mexico understand that much. The movement to increase the military and naval power of the United States would have been just as it is even though happily Mexico was one wide field of peace and prosperity. The President and the Government of the United States desire only peace with Mexico and to promote the welfare of that Republic.

Mr. CHAMBERLAIN. Mr. President, I am in accord with the views of the Senator from Missouri in that respect. The question of reorganizing and increasing the Army began to be discussed over a year ago, shortly after the European war commenced, not with a view of engaging in war with any power but simply for the purpose of placing our country in a position of absolute defense.

Mr. President, I am in thorough accord with the distinguished Senator from Illinois in his desire to have us move toward the consideration of this bill. We have been at it now for more than a week. There has been no attempt made to limit debate or the offering of suggestions or amendments, but it seems to me, as has been well said by the Senator from Illinois, we ought now to endeavor to take steps that will bring this measure to a hasty conclusion.

Carrying out the thought of the Senator, I send to the desk the following proposed unanimous-consent agreement and ask that it be entered into.

The PRESIDING OFFICER. It will be read.

The SECRETARY. The Senator from Oregon asks for the adoption of the following unanimous-consent agreement:

That at not later than 4 o'clock p. m. on Saturday, April, 15, 1916, the Senate will proceed to vote upon any amendment that may be pending, any amendment that may be offered, and upon the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States through the regular parliamentary stages to its final disposition; and that after the hour of 12 o'clock m. on Monday, the 10th day of April, 1916, no Senator shall speak more than once or longer than 10 minutes upon the bill, or more than once or longer than 10 minutes upon any amendment offered thereto.

The PRESIDING OFFICER. Under the rule the roll will be called.

The Secretary called the roll, and the following Senators answered to their names:

Borah	Hardwick	Norris	Stone
Brady	Hughes	Overman	Sutherland
Brandegee	Johnson, Me.	Page	Taggart
Burleigh	Johnson, S. Dak.	Phelan	Thomas
Chamberlain	Kenyon	Poindexter	Thompson
Chilton	Kern	Reed	Tillman
Clapp	Lane	Robinson	Vardaman
Clark, Wyo.	Lee, Md.	Saulsbury	Walsh
Cummins	Lewis	Shafroth	Warren
Curtis	Lodge	Sheppard	Weeks
Dillingham	McCumber	Simmons	Williams
du Pont	Martin, Va.	Smith, Ga.	
Gallinger	Martine, N. J.	Smith, Mich.	
Gore	Myers	Smith, S. C.	

Mr. WALSH. I wish to announce that the Senator from Wisconsin [Mr. HUSTING] is absent on account of official business.

Mr. LEWIS. I announce the absence of the Senator from New York [Mr. O'GORMAN]. He has been called on official business to the State of New York.

The PRESIDING OFFICER. Fifty-three Senators have answered to their names. A quorum is present. The Secretary will again read the proposed unanimous-consent agreement.

The SECRETARY. The Senator from Oregon asks unanimous consent—

That at not later than 4 o'clock p. m. on Saturday, April 15, 1916, the Senate will proceed to vote upon any amendment that may be pending, any amendment that may be offered, and upon the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, through the regular parliamentary stages to its final disposition; and that after the hour of 12 o'clock meridian on Monday, the 10th day of April, 1916, no Senator shall speak more than once or longer than 10 minutes upon the bill or more than once or longer than 10 minutes upon any amendment offered thereto.

Mr. SIMMONS. Mr. President, I am as anxious as any Senator in this Chamber to bring this bill to a speedy vote. It is not my desire to offer any objection to the proposition to vote upon the bill next Saturday, but the exigencies of the situation with reference to the so-called sugar bill are of such a character that I feel that measure would be jeopardized if its consideration were postponed longer than the coming week. It is my purpose, and I so notified the Senator from Oregon, to move on Monday that the Senate proceed to the consideration of that measure.

The necessity for speedy action on the bill grows out of the fact that on the 1st day of May, unless there shall be congressional action in the meantime, sugar will go upon the free list. It is easy to see if sugar should go upon the free list what would be the result both as affecting the revenues of the country and as affecting importations to this country of foreign sugar.

Ordinarily there would be sufficient time to pass the measure even after next week, because I do not suppose it will provoke any great debate in the Senate; but, Mr. President, the House has passed the bill upon one theory with reference to the extension of the duty, and the Finance Committee of the Senate has reported the bill providing for a different method looking toward the taxation of sugar. It is, therefore, evident that when the bill has been passed in this body, if the proposition of the Senate committee is adopted, there will be a sharp conflict between the House and the Senate conferees which may be somewhat prolonged; and when the matter comes back to the Senate, if the proposition of the Senate should not be sustained by the conferees—and of course we can not tell about that—a situation might be developed here which would lead to prolonged debate. The temptation might be created to make that debate so prolonged as ultimately to defeat any legislation looking to the extension of the duties upon sugar.

Under those circumstances, without at least casting upon the Finance Committee responsibility and blame in case there should be a failure, I do not feel that I can with safety consent to this proposition unless it is made clear that the agreement shall not interfere with the success of my efforts to secure action upon the sugar bill next week.

I wish to ask the Chair whether, if this unanimous-consent proposition is agreed to, it would preclude me from offering a motion on Monday or some subsequent day during the week to proceed to the consideration of the sugar bill?

The PRESIDING OFFICER. In the opinion of the present occupant of the chair it would not preclude the suggested action. The only matter that binds the Senate in connection with the unanimous-consent agreement is that it shall vote on a certain hour of a certain day.

Mr. SIMMONS. I think the Chair is clearly right. I simply wanted the ruling of the Chair upon that point.

The only other matter which might possibly affect the purpose I have in view, by reason of the very short time that will be left for debate upon this bill, is the difficulty to carve out of the time allotted in this proposition one or two days next week, and it might interfere with the success of my motion to displace this measure with the sugar bill. I felt I ought to notify the Senate that if there is any feeling or purpose on the part of Senators to defeat the proposition to take up the sugar bill because of the short time fixed in the unanimous-consent agreement, I have had it in mind to suggest to the Senator from Oregon that he make the time a little longer.

Mr. STONE. Mr. President, would it not meet the situation if an agreement could be entered into that if any number of days, one or more, should be occupied next week in the consideration of the bill referred to by the Senator from North Carolina that much additional time should be added to the consideration of the Army bill and the day fixed for voting postponed accordingly?

Mr. BORAH. Mr. President, I wish to suggest that if the Senator from Oregon would ask for that portion of the unanimous-consent agreement which limits debate to 10 minutes and postpone the question of a day certain to vote until the sugar measure is disposed of we would likely make time by following that course. If the debate is limited to 10 minutes we will dispose of a vast part of the measure between now and the time

when the sugar bill will come up, at 2 o'clock some day next week.

Mr. LODGE. Mr. President, no one can be more anxious than I am for the speedy disposition of the Army bill, and I am entirely ready to consent to any agreement that will facilitate the disposition of that measure. But, Mr. President, we ought to take immediate action on the sugar bill. There we are confronted by a date. If on the 1st of May the bill has not passed the Houses and been signed by the President sugar will come in free and the Government will lose the revenue. There are many hundreds of tons of sugar, I am told, now in storage in New York awaiting the chance of the proposed law failing.

Mr. SMOOT. Thousands of tons.

Mr. LODGE. I have no doubt there is as much as that. All that revenue would be lost to the country at a time when it is admitted by the very friends of the bill here that revenue is greatly needed. It seems to me that it is the duty of us all to see that the sugar bill is disposed of and disposed of so that there can be no possibility of its failing before the 1st of May.

Therefore I am very glad the Senator from North Carolina has given the notice he has given. I sincerely hope that it will not interfere with the request of the Senator from Oregon.

Mr. CHAMBERLAIN. Mr. President, let me say to the Senator I have no disposition in the world to delay the consideration of that revenue measure. I realize, with other Senators, its importance. It is a matter that ought to be acted on promptly, and I have not intended to interfere with its consideration within the limits required. What I am particularly anxious about, Mr. President, is to try to have a limitation upon debate and to have a time set when this measure shall be acted on. I am not particular about whether it is next Saturday or a week from next Saturday, so far as that is concerned. If we can agree on a time when it shall be disposed of, if the Senate is willing to make a unanimous-consent agreement at all, and it is postponed even a week longer, I will be perfectly satisfied.

Mr. LODGE. The Senator understands, of course, that I am not objecting to the unanimous-consent agreement.

Mr. CHAMBERLAIN. I realize that.

Mr. LODGE. I entirely assent to it, but I wanted to call attention to the fact that I think the Senator from North Carolina is bound to call up that bill. I think it is his duty to do so, and I think the Senate ought to take it up and dispose of it next week.

Mr. HARDWICK. I wish to inquire of the Senator from Oregon, because I am not familiar with the terms of the proposed agreement, whether his proposal to limit debate to 10 minutes is to take effect after Monday?

Mr. CHAMBERLAIN. The proposition is to make it take effect beginning on Monday.

Mr. HARDWICK. I just want to say that I hope he will modify that. I have one amendment, to which I have given a great deal of time, and it will take me more than 10 minutes to present it.

Mr. CHAMBERLAIN. Let me make——

Mr. HARDWICK. It will not take me very much more than 10 minutes. I am not a lengthy speaker.

Mr. CHAMBERLAIN. The suggestion of the Senator from Idaho [Mr. BORAH] I think is a good one, that for the present we limit debate, beginning Tuesday at 12 o'clock instead of Monday at 12 o'clock, and cut out the time as to voting.

Mr. HARDWICK. Of course, if the Senator will pardon me, there would be this trouble about that suggestion: If the sugar bill comes in on Monday, then we would have no opportunity to have more than 10 minutes on any one amendment upon the Army bill. I wish to say this to the Senator and the Senate: I have not served a very great length of time in this body, as the Senator knows. As a rule, I do not make lengthy speeches. I do not imagine it would take me more than 20 minutes, but I can not present the proposition in 10 minutes, and I do not intend to try to do so. If the agreement were modified so as to allow me 20 or 30 minutes, I would be content.

Mr. ROBINSON. Mr. President, will the Senator from Georgia yield to me?

Mr. HARDWICK. I yield.

Mr. ROBINSON. I think it is important that the agreement to vote on the so-called military bill at a fixed time be entered. I think the agreement asked by the Senator from Oregon ought to be made now in order that Senators may have notice in advance of the time when the vote will be taken. The only difficulty may be easily obviated, so far as the Senator from Georgia is concerned, by agreeing that the agreement shall take effect at 2 o'clock next Monday.

Mr. HARDWICK. Unless the sugar bill, if the Senator will pardon me, took up the time. Then the agreement would hold me down to 10 minutes.

Mr. ROBINSON. That difficulty can also be obviated by agreeing that at noon Monday the Senate shall proceed with the consideration of this bill, if that is necessary, and that no other business should be in order, and that at 2 o'clock the limitation as to the length of speeches shall take effect.

The bill suggested by the Senator from North Carolina undoubtedly ought to be disposed of very promptly, and I had not understood that it would require any great length of time to determine that matter in the Senate. I think it is important that the Senate should proceed with these measures as speedily as possible. We have had a great many interesting speeches here touching a variety of subjects during the time this military bill has been under consideration, and we have digressed from it to consider other questions which are of themselves of great importance. It is an abuse that exists in the Senate, as all of us realize. Our debate ought to be shortened in some way, and there ought not to be an objection to entering into this agreement.

Mr. HARDWICK. I am very sorry that the Senator from Arkansas imputes such conduct to me as that. I for one shall have to be the judge as to whether there ought to be an objection made, and I simply can not agree to a proposition like this that confines me to a 10-minute presentation——

Mr. ROBINSON. Mr. President——

Mr. HARDWICK. I am not yielding.

Mr. ROBINSON. Will not the Senator yield?

Mr. HARDWICK. Not for the present. I want to make a statement myself.

The PRESIDING OFFICER. The Senator from Georgia declines to yield.

Mr. HARDWICK. I will not agree to any proposition after we have taken up other amendments and devoted days and weeks almost to some of them, under which I can not get for what I regard the most important amendment that will be offered to the bill more than 10 minutes in which to present it.

Mr. ROBINSON. The Senator entirely misunderstood me. My suggestion was that an agreement be entered into which would give the Senator two hours.

Mr. HARDWICK. I do not want that. I have already suggested——

Mr. ROBINSON. That was the agreement I suggested, and the Senator from Oregon indicated his assent to it. I am utterly at a loss to understand the process of the Senator's mind by which he has reached the conclusion that I was in any way antagonizing him.

Mr. HARDWICK. I am not responsible for the Senator's difficulty in understanding.

Mr. ROBINSON. Perhaps not.

Mr. HARDWICK. The effect of the agreement proposed by the Senator from Oregon is that if the pending amendment offered by the Senator from South Carolina takes until 2 o'clock on Monday, I could not have more than 10 minutes to present my amendment. I do not think I shall need more than 20 minutes, but I can not agree to any proposal that will deny me that.

Mr. CHAMBERLAIN. I will say to the Senator he can speak 20 minutes, 10 minutes on the bill and 10 minutes on the amendment.

The PRESIDING OFFICER. The Chair will inquire of the Senator from Oregon whether he has modified his request? If so, it ought to be stated in its present form.

Mr. HARDWICK. I should like to have it stated exactly as it is proposed.

Mr. CHAMBERLAIN. The Secretary will read the proposed agreement as modified.

Mr. SIMMONS. Mr. President, I wish to make a suggestion to the Senator from Oregon. Evidently in preparing this agreement the Senator had in view to allow a week for discussion upon this bill. I am sure the sugar bill will not take over two days. I believe we can get through with it in one day. My idea would be, if there was any prospect of getting the bill through on Monday, to hold a night session Monday and finish it up; but I am sure we can get through with it in a couple of days. Let me suggest to the Senator from Oregon that he change the time stated in the proposed agreement so as to allow a week after Tuesday for discussion on the Army bill.

Mr. CHAMBERLAIN. I am perfectly willing to do that.

Mr. SIMMONS. Let me finish, if the Senator please. And to accommodate the views of the Senator from Georgia [Mr. HARDWICK] I suggest that we begin the application of the 10-minute rule on Thursday instead of Wednesday, which would be the next day after the sugar bill was disposed of, if it should take two days.

Mr. SMOOT. Mr. President, of course if that is satisfactory to the Senator having the bill in charge I shall not object, but I

was going to suggest that there are two or three Senators who desire to make speeches of 20 or 30 minutes, or perhaps one of three-quarters of an hour, and why would it not be better for the Senator from North Carolina to give notice now that he will call up the sugar bill on Tuesday?

Mr. SIMMONS. No; I do not want to lose another day.

Mr. SMOOT. The Senator is not any more anxious to pass that bill than I am, and I do not believe that the postponement would make a particle of difference as to the bill. Then we could use all day Monday in the delivery of speeches on the Army bill that it would take some time to deliver and agree upon a 10-minute limit to apply after Monday.

Mr. SIMMONS. The Senator must see that the very same purpose he has in view will be accomplished by the suggestion I made a little while ago. Instead of limiting debate to 10 minutes, beginning on Monday, fix the time for limiting debate to 10 minutes on Thursday. That would give all day Wednesday, if it takes us two days to pass the sugar bill, to general unlimited debate. If we can pass it in one day, it would give two days for unlimited debate.

Mr. SMOOT. If it takes two days, then there will not be any time at all left. That is what I was trying to avoid.

Mr. SIMMONS. I said not Wednesday, but Thursday, to begin the operation of the 10-minute rule.

Mr. SMOOT. I have no objection to that. I was only trying to get a time fixed, so that Senators could speak on the bill now.

Mr. THOMAS. Mr. President, this difficulty suggests itself to me with regard to the proposition of the Senator from North Carolina [Mr. SIMMONS]. His supposition is a very probable one—that the sugar bill will be disposed of within two days; but there is always in this body, in any event, the possibility that a longer amount of time will be consumed, and properly consumed, in the consideration of a bill. I have this suggestion to make: That we take up the sugar bill and devote the evenings of next week to its consideration, so that our day sessions can be devoted, just as they have been, to the consideration of the Army bill. There is no reason in the world why we should not come here at 8 o'clock every evening and consider and dispose of the sugar bill. That proceeding would have the double effect, perhaps, Mr. President, of not interfering with the present pending business and, at the same time, of shortening the debates upon the sugar bill on the part of those who may object to such a strenuous procedure.

Mr. SHAFROTH. Mr. President——

Mr. SIMMONS. Just one word. I would not have any objection to the plan proposed by the Senator from Colorado [Mr. THOMAS] except for the fact that, if we only devote night sessions to the discussion of the sugar bill, it might take us a week to pass it, because we might be troubled about questions of quorums and all that sort of thing, at the will of any Senator who might oppose the proposed legislation.

Mr. SHAFROTH. I should like to ask the Senator, Why would it not be well now to ask unanimous consent to close debate on the sugar bill at a certain time?

Mr. SIMMONS. I was just about to ask the Chair, as a parliamentary inquiry, whether it would be in order for me at this time to ask unanimous consent that the Senate proceed on Monday next with the consideration of the sugar bill, and that by unanimous consent a vote be taken thereon at 5 o'clock on Tuesday?

Mr. STONE. At not later than 5 o'clock.

Mr. SIMMONS. At not later than 5 o'clock on Tuesday.

The PRESIDING OFFICER. In answer to the inquiry of the Senator from North Carolina, the present occupant of the chair will say that he is of opinion that it is competent to have a unanimous-consent agreement to that effect, to vote at a certain hour of the day.

Mr. CHAMBERLAIN. I have no objection, I will say to the Senator from North Carolina, to his asking for any agreement that the Senate may reach as a part of this unanimous-consent agreement; but I am not going to give up the right of way here, unless the Senate takes it away from me, unless I can have some understanding about the disposition of the bill now before the Senate.

The PRESIDING OFFICER. The Chair will inquire of the Senator from Oregon whether he proposes to modify the proposed unanimous-consent agreement?

Mr. SIMMONS. I will offer this as an amendment to the unanimous-consent agreement——

Mr. CHAMBERLAIN. The Senator from North Carolina first rises and objects here to a proposal that I offered to the Senate, and I think it comes with rather poor grace from him to now come and undertake to sidetrack an attempt to get a unanimous-consent agreement as to the other. I have expressed the desire, Mr. President, to help the Senator from North Carolina get consideration of the sugar bill, but I do not feel very patient about having him undertake to sidetrack the proposition which I have submitted to the Senate in favor of the proposition which he makes.

Mr. SIMMONS. I want to assure the Senator from Oregon that I had no such thought in my mind, and I did not make this request to interfere with him in the slightest degree. I am glad he made the request, and I am willing to offer my request for unanimous consent as an amendment to his request.

The PRESIDING OFFICER. Will the Senator from North Carolina permit the amended request for a unanimous-consent agreement to be now read?

Mr. SIMMONS. Certainly.

The PRESIDING OFFICER. It will now be read by the Secretary.

The SECRETARY. It is agreed by unanimous consent that, at not later than 4 o'clock p. m. on Tuesday, April 18, 1916, the Senate will proceed to vote upon any amendment that may be pending, any amendment that may be offered, and upon the House bill 12766, to increase the efficiency of the Military Establishment of the United States through the regular parliamentary stages to its final disposition; and that after the hour of 12 o'clock meridian on Thursday, April 13, 1916, no Senator shall speak more than once or longer than 10 minutes upon the bill or more than once or longer than 10 minutes upon any amendment offered thereto.

Mr. CUMMINS. Mr. President, I desire to make an inquiry of the Senator from North Carolina. Suppose that under that arrangement the sugar bill is taken up on Monday or Tuesday and continues for two weeks, what would happen to amendments that are to be proposed to the military bill?

Mr. SIMMONS. The Senator from Iowa probably did not hear all of my proposition. It was that we should take up the sugar bill on Monday and proceed to its consideration on Monday at 12 o'clock, and that a final vote should be taken on the bill and on all amendments thereto not later than 5 o'clock on Tuesday.

Mr. CUMMINS. If that element is put into the unanimous-censent agreement, I have no objection whatever to it; but that is not now in the agreement.

Mr. SIMMONS. I offer that as an amendment to the unanimous-consent agreement.

Mr. BRANDEGEE. Mr. President, I desire to make a parliamentary inquiry. Is a proposed unanimous-consent agreement subject to be amended?

The PRESIDING OFFICER. There is a precedent where five unanimous-consent agreements were agreed upon at the same time.

Mr. BRANDEGEE. I can understand that the Senator from Oregon [Mr. CHAMBERLAIN] can modify his own proposed unanimous-consent agreement to suit himself; but that the Senate by a majority vote can amend a unanimous-consent agreement is something of which I had not heard.

Mr. SIMMONS. I understood the Senator from Oregon to say that he would accept the amendment, that it might be incorporated in his proposed unanimous-consent agreement, and that we vote at one time upon the proposition as amended.

Mr. BRANDEGEE. Then it would become a part of the Senator's own proposition and, of course, that would be perfectly proper.

The PRESIDING OFFICER. The Chair will take the liberty of calling attention to the fact that, while the precedents do not bind, yet when the Canadian reciprocity agreement was under consideration a unanimous-consent agreement was made to vote on that bill, a unanimous-consent agreement was made to vote on the wool bill, a unanimous-consent agreement was made to vote on the farmers' free-list bill, a unanimous-consent agreement was made to vote on the apportionment of representation bill, and a unanimous-consent agreement was made to vote upon the question of the admission of New Mexico and Arizona; but they were to take effect on different days and at different hours, of course. So the Chair has suggested that it would now be competent to reach a unanimous-consent agreement to vote upon the sugar bill as well as upon the bill now under consideration.

Mr. JONES. Mr. President, if the Senator from Oregon [Mr. CHAMBERLAIN] will make the 10-minute rule begin on Friday, instead of on Thursday, I shall have no objection to the agreement.

Mr. CHAMBERLAIN. I am perfectly willing to do that.

Mr. THOMAS. If the Senate will consent to a recess until 11 o'clock on Monday morning and on Tuesday morning of next week, I shall have no objection to the agreement.

Mr. CHAMBERLAIN. I have no objection to that.

The PRESIDING OFFICER. Will the Senator from North Carolina state his request?

Mr. SIMMONS. It is that at noon on Monday next the Senate proceed to the consideration of the sugar bill and the amendments thereto, and that not later than 4 o'clock on Tuesday there shall be a vote upon——

Mr. THOMAS. Say 5 o'clock.

Mr. SIMMONS. I have no objection to 5 o'clock. I would, however, rather have it 4 o'clock; but if the Senator insists upon it being 5 o'clock——

Mr. THOMAS. Mr. President, I want to dispose of the bill and am just as anxious to do so as is the chairman of the committee; but I think there should be some time for discussion.

SEVERAL SENATORS. Make it 5 o'clock.

Mr. SIMMONS. Well, make it 5 o'clock. I ask that the Secretary place the remainder of the agreement in the usual form.

Mr. LODGE. And that the Senate recess on Monday to 11 o'clock on Tuesday.

Mr. SIMMONS. Yes. If the Senator from Oregon agrees to that, it is perfectly satisfactory to me.

The PRESIDING OFFICER. The Secretary will now state the request as amended.

The Secretary read as follows:

It is agreed by unanimous consent that at not later than 4 o'clock p. m. on Tuesday, April 18, 1916, the Senate will proceed to vote upon any amendment that may be pending, any amendment that may be offered, and upon the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, through the regular parliamentary stages to its final disposition; and that after the hour of 12 o'clock meridian on Friday, April 14, 1916, no Senator shall speak more than once or longer than 10 minutes upon the bill or more than once or longer than 10 minutes upon any amendment offered thereto.

And it is further agreed by unanimous consent that, at not later than 12 o'clock meridian on Monday, April 10, 1916, the Senate will proceed to the consideration of the bill H. R. 11471, an act to amend an act entitled "An act to reduce the tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913, and that at not later than 5 o'clock p. m. on Tuesday, April 11, 1916, the Senate will proceed to vote upon any amendment that may then be pending, any amendment that may be offered, and upon the bill, through the regular parliamentary stages to its final disposition.

The PRESIDING OFFICER. Is there objection?

Mr. SIMMONS. I think the words "without further debate" should be included.

Mr. UNDERWOOD. Mr. President, I desire to ask the Senator from North Carolina a question. I do not exactly understand the proposal. I desire to inquire how much time will intervene between the close of the consideration and vote on the sugar bill and the time when debate and consideration of the military bill shall close?

Mr. CHAMBERLAIN. A week.

Mr. SIMMONS. Just one week.

Mr. UNDERWOOD. Very well.

The PRESIDING OFFICER. Is there objection?

Mr. POINDEXTER. Mr. President——

Mr. SIMMONS. Mr. President, I ask that the proposed agreement be modified so that debate shall close on the sugar bill at 5 o'clock on Tuesday, April 11.

The PRESIDING OFFICER. The request for unanimous consent will be modified in that respect.

Mr. SMITH of Georgia. The words "without further debate" should be added.

The SECRETARY. So as to read:

Shall vote without further debate.

Mr. POINDEXTER. Mr. President, I ask for a division of this question, so that there may be a separate presentation of each part of it.

The PRESIDING OFFICER. That is the Senator's privilege. The question will first be put upon the request for unanimous consent proposed by the Senator from Oregon. Is there objection?

Mr. POINDEXTER. Mr. President, I should like to submit a parliamentary inquiry to the Chair. I inquire whether or not under the proposition contained in this request all debate would be precluded upon amendments offered to the bill after the hour of 4 o'clock on April 14th?

The PRESIDING OFFICER. No; the Chair will reply that debate will be in order on amendments offered.

Mr. POINDEXTER. A further inquiry. The language of the request is that at that hour we shall proceed to vote upon the bill and amendments. I understand the Chair holds that debate will be in order.

The PRESIDING OFFICER. Under the 10-minute rule.

Mr. POINDEXTER. Under the 10-minute rule.

Mr. JONES. I understand debate will not be in order after the time set for voting; but after Friday, April 14, until April 18, debate under the 10-minute rule will be in order. After 4 o'clock on the 18th, however, we can not, under the proposed agreement, debate any amendment that may be pending.

Mr. POINDEXTER. After 4 o'clock on the 18th?

Mr. JONES. After 4 o'clock on the 18th, when we begin to vote, debate shall not be in order.

The PRESIDING OFFICER. The Senator from Washington is right in that respect, that on the 18th after 4 o'clock debate shall not be in order.

Mr. POINDEXTER. Mr. President, I think that I will have to object to the request in that form. It seems to me that the five-minute rule at least ought to be in order upon amendments that may be offered to the bill. It would be rather unsatisfactory if amendments which may occur to Senators shall not even be subject to explanation or to any debate whatever. So, I ask the Senator from Oregon to modify his request by providing that Senators shall not speak more than once or longer than five minutes upon the bill or any amendment after the hour of 4 o'clock on the 18th of April.

Mr. CHAMBERLAIN. I have no objection to that, Mr. President. It is desired to get a date fixed when we may dispose of this measure.

The PRESIDING OFFICER. Without objection, that change will be made in the proposed unanimous-consent agreement. Is there objection? The Chair hears none, and it is so ordered.

The unanimous-consent agreement covering House bill 12766 as finally entered into is as follows:

It is agreed by unanimous consent that at not later than 4 o'clock p. m. on Tuesday, April 18, 1916, the Senate will proceed to vote upon any amendment that may be pending, any amendment that may be offered, and upon the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, through the regular parliamentary stages, to its final disposition; and that after the hour of 12 o'clock meridian on Friday, April 14, 1916, no Senator shall speak more than once or longer than 10 minutes upon the bill, or more than once or longer than 10 minutes upon any amendment offered thereto; and, further, that after the hour of 4 o'clock p. m. on Tuesday, April 18, 1916, no Senator shall speak more than once or longer than 5 minutes upon any amendment pending or offered to the said bill.

The PRESIDING OFFICER. Now, is there objection to the unanimous-consent agreement offered by the Senator from North Carolina [Mr. SIMMONS]?

Mr. POINDEXTER. Mr. President, I make the same observation with reference to that request.

Mr. SIMMONS. I thought that the agreement was all one.

Mr. LODGE. It is all one agreement, Mr. President.

The PRESIDING OFFICER. The Senator from Washington has asked for a division.

Mr. LODGE. How is it possible to divide a proposed unanimous-consent agreement?

The PRESIDING OFFICER. The Chair thinks the Senator from Massachusetts is wrong about that.

Mr. LODGE. But the second agreement, if it may be called so, came to us as a part of the first agreement, having been accepted by the Senator from Oregon as a modification of his own request.

The PRESIDING OFFICER. The Chair will still hold that it is a divisible question.

Mr. SIMMONS. Mr. President, if the Senator from Washington insists, I will consent to a modification, so as to provide for the same arrangement concerning debate under the five-minute rule on the sugar bill as was made regarding the military bill.

The PRESIDING OFFICER. Is there objection to the request for unanimous consent as modified? The Chair hears none, and it is so ordered.

The unanimous-consent agreement as to House bill 11471 as finally entered into is as follows:

And it is further agreed by unanimous consent that at not later than 12 o'clock meridian on Monday, April 10, 1916, the Senate will proceed to the consideration of the bill H. R. 11471, an act to amend an act entitled "An act to reduce the tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913; and that at not later than 5 o'clock p. m. on Tuesday, April 11, 1916, the Senate will vote upon any amendment that may be pending, any amendment that may be offered, and upon the bill through the regular parliamentary stages to its final disposition; and that after the hour of 5 o'clock p. m. on said day, Tuesday, April 11, 1916, no Senator shall speak more than once or longer than five minutes upon any amendment pending or that may be offered to the said bill.

Mr. LEE of Maryland. Mr. President, in view of what has been said with reference to the National Guard being represented in Washington by a lobby, and also what has been said in reference to the position of Gen. O'Ryan on the subject of a Volunteer Army, I ask leave to have incorporated in the RECORD a communication in behalf of the executive committee of the National Guard Association of the United States, Gen. Foster, and also an article from the New York Times of to-day, showing Gen. O'Ryan's position on the subject of the Volunteer Army.

The PRESIDING OFFICER. Is there objection to the request made by the Senator from Maryland? The Chair hears none, and it will be so ordered.

The matter referred to is as follows:

THE NATIONAL GUARD ASSOCIATION OF THE UNITED STATES,
Ebbitt Hotel, Washington, April 8, 1916.

Hon. BLAIR LEE,
United States Senate, Washington, D. C.

MY DEAR SENATOR LEE: The charge that the National Guard is represented in Washington by a lobby, and that it is seeking by improper means to influence the action of Congress, with regard to pending military legislation, would not call for comment if it had emanated from a less important source. As that charge has been made, it seems proper and necessary that this committee make a statement with regard to that matter.

The National Guard Association of the United States is a representative organization which meets annually in convention made up of delegates selected upon a basis of 1 for each 500 or fraction thereof of organized troops. Its object is to promote this branch of the National Military Establishment, and practically all of the Federal legislation dealing with the militia which has been enacted in recent years has been initiated by this organization. During the interim between its conventions the affairs of the association are conducted by an executive committee, and it may be stated in passing that guardsmen do not seek positions upon this committee; they are selected for that duty, and if they serve they do so at some personal expense and sacrifice.

The members of this executive committee appeared before the Military Committees of Congress at the hearings which were held prior to the formulation of the bills which have since been introduced in the House and Senate. Some of the members of this committee have been here since, during the progress of the pending military legislation. If excuse for their presence witnin the precincts of this sacred city is required, it may be said that they are here at the suggestion and request of Members of both the Senate and House who are not only interested in the National Guard, but who are earnestly trying to preserve that institution against the assaults of those who would destroy it.

When the House military bill had been introduced the members of the National Guard executive committee met here and spent a week in careful consideration of those of its features dealing with their branch of the service and they submitted to Mr. HAY and to the members of his committee certain suggested amendments which they felt would improve the National Guard sections of the bill. The chairman of the House committee graciously gave the National Guard representatives a hearing, and while he did not accept all of the suggestions which were made, every opportunity was afforded them for consultation and discussion. A similar course was followed with the Senate bill when it was finally introduced. On March 18 certain amendments proposed by this committee were submitted to Senator CHAMBERLAIN with request that they be considered and that opportunity be given to present to him the reasons which prompted their suggestion. This communication was not acknowledged nor replied to. I think it must be admitted that our committee was not unduly insistent in pressing its recommendations upon the notice of the Senate committee.

These recommendations have, however, been brought to the attention of Senators through National Guardsmen of their own States, and, for the most part, have now been offered in the Senate as amendments to the Senate bill.

Inquiry suggests itself as to what constitutes a "bald" or "insidious" lobby.

We may without disadvantage, I think, compare the activities of the National Guard committee with those of other organizations and interests and "movements" concerned with the same legislation. What the "bald lobby" of the National Guard has done has already been stated. Here are some of the things it has not done:

Those composing it have not sought to interview or called upon any Senator or Representative except when specially invited to do so. The writer has not written or spoken to either Senator or the Representatives from his own State upon the subject of military legislation, a privilege that probably would not have been denied him.

No printed matter has been gotten out or circulated.

No headquarters is maintained; no publicity agent is employed or other medium for extending propaganda.

The Members of Congress have not been circularized and their mail has not been burdened with letters from this committee.

The above humiliating confession as to the further defects in the National Guard system, indicating lack of efficiency in the methods of influencing legislation which are recognized and practiced by the experts, is unwillingly wrung from us.

On the other hand, practically every other branch of the military service has its "league" for promotion, with established offices and paid publicity agents actively at work in extending its propaganda. The president of one of the patriotic preparedness leagues recently employed a whole page in a Washington paper to warn the House of Representatives against legislating for the development of the National Guard and sent each Member one or more letters.

Presumably that newspaper space was not donated for the purpose. The organization referred to and the many others of similar character rendered kin by a system of interlocking directorates which would put the Standard Oil system to blush is expending thousands of dollars in extending its propaganda against the long-established volunteer military system of the country in favor of conscription and compulsory military service.

Hundreds of telegrams have been received within the last few days in the Senate from various sources and complacently placed in the RECORD as evidence of the patriotic purpose of the senders, but telegrams from National Guardsmen were made the basis for scathing denunciation. If it is an offense against the peace of the Nation and the dignity of the Senate for the Members of that body to be made acquainted by telegram with the views of their constituents who are guardsmen, upon matters of pending legislation, let the excuse offered by the executive committee of the Military Training Camp Association for similar action, as quoted in the New York Times of Thursday, be accepted also for the offending guardsmen. The "Plattsburg" representatives said: "It has been our consistent policy to keep out of politics and legislative activities, but when it becomes a matter of self-preservation, such as is this, it is not only proper but absolutely necessary that we take measures to protect the future of the movement."

The relationship between the military training camp project and the continental army scheme is thus for the first time officially disclosed. If a policy alleged to attach to a mere "movement" can gain consistency in a year, something may be said for the record of an institution which for more than a hundred years has practiced similar rectitude and repression, and, with small encouragement, has worked to keep alive the military spirit of our people "during the many years of our national indifference on the subject of preparedness," as the Senate Military Committee has very fairly expressed it.

If Congress be desirous of identifying the military influences to which it is willingly and unwillingly subjected, we suggest the simple expedient of a statute requiring all who receive pay or emoluments in the military service of the Government to wear the uniform while in Washington. If this were done, my dear Senator, it may be safely predicted that the much-dreaded National Guard "lobby" would be lost sight of in the crowd.

For more than two years the National Guard representatives stood on the steps at the War Department and urged the Secretary of War to recommend to Congress those measures for the improvement of their service, which they and all of the agencies of the War Department had agreed were consistent and necessary. During that time they were repeatedly told by the former Secretary of War that they might go direct to Congress with their proposals; but, believing that the National Guard is sustained for its Federal uses and that its needs should be presented by the head of the War Department, the same as is done for the Army, the suggestion was not acted upon until all other doors stood closed. The National Guard has now come to Congress. Openly and not without confidence, because sure of the justice and wisdom of what it proposes. With due regard to our respective official relationships we have been scrupulously careful to observe the amenities of the situation, as we understand them and as they have been revealed to us. Conscious of no inconsistent action and being actuated by motives which we know to be proper and which we believe to be patriotic, we protest against misrepresentation and unjust denunciation by those who, as the representatives of the Government we seek to serve, we have the right to look for fair treatment and reasonable consideration.

Due to the fact that the National Guard has not advertised its virtues and has left its enemies free to proclaim its deficiencies, there is no institution of the American Government which at this time is more generally misunderstood, more incorrectly estimated, and more persistently and maliciously misrepresented. Knowing this, we can the better appreciate the attitude of yourself and others in Congress who are supporting our branch of the service and speaking in its defense.

Very sincerely, yours,

EXECUTIVE COMMITTEE OF THE NATIONAL GUARD ASSOCIATION OF THE UNITED STATES,
J. CLIFFORD R. FOSTER, *Chairman.*

[From the New York Times of Apr. 8, 1916.]

GEN. O'RYAN ASSAILS VOLUNTEER ARMY PLAN—DENIES HIS LETTER INDORSED IT—NATIONAL GUARD AT WAR WITH TRAINING CAMP LEADERS.

The breach that separates the two groups most interested in the Army legislation now pending in Congress, one group being composed of the officers of the National Guard and those in sympathy with them and the other group comprising the men who attended the training camps held last year and numerous officers of the Regular Army, is widening to the point where the two groups are almost openly at war. Section 56 of the Chamberlain bill, which creates a "volunteer army" separate and distinct from the National Guard organization as provided for in section 58, is the cause of the division.

The National Guardsmen almost to a man maintain that the existence of the two forces at the same time is impossible, because, as an officer of the New York Guard expressed it yesterday, it requires "two bodies with identical functions to occupy the same space at the same time." Among the officers none is more outspoken in his opposition to the "volunteer army" than Maj. Gen. John F. O'Ryan, commanding the National Guard of this State. He said yesterday that he believed that section 56 of the Chamberlain bill was backed by "a strong ultra-military group, who can see nothing good in the way of preparedness except a huge Regular Army, supported by conscription."

The letter written to Senator O'GORMAN by Col. Henry S. Sternburger, chief quartermaster on the staff of Gen. O'Ryan, which Senator O'GORMAN interpreted as a command to vote for the elimination of the "volunteer army" provision of the Chamberlain bill, is approved by the great majority of guard officers in New York. In the opinion of brother officers, Col. Sternburger was within his rights when he wrote that letter, in which, among other things, he said:

"I shall use my influence, not only with the National Guardsmen but with all citizens with whom I come into contact, toward pointing out to them that the so-called continental army scheme is impracticable and will have a bad effect if passed."

Gen. O'Ryan did not say so, but it is believed that he indorsed every word that Col. Sternburger wrote.

Senator O'GORMAN, in expressing in the Senate Thursday his disapproval of Col. Sternburger's utterances, stated that Gen. O'Ryan had written on January 17 a letter stating that the volunteer army provision would not impair the efficiency of the National Guard. Gen. O'Ryan said yesterday that he was at a loss to understand how such an interpretation could be placed upon the letter referred to, which relates to training camps, and not to any volunteer army such as is proposed in the Chamberlain bill.

GEN. O'RYAN'S VIEWS.

"The letter referred to as having been written by me," said Gen. O'Ryan, "was doubtless a letter written to Gen. Wood or Capt. Johnson of his staff, commanding the Plattsburg training camp, and suggesting the cooperation of the National Guard regimental commanders. The letter had no reference to the Federal Army proposition.

"The officers of the National Guard generally throughout the country do not believe in the wisdom of the volunteer army provision of the Chamberlain bill, and I am of the opinion that this sentiment is not based on selfish grounds, for if there is any unselfish aggregation of men in this country it is the army made up of the officers and men composing the National Guard. Their practical spirit of self-sacrifice over a long period of years has demonstrated this. They believe the provision referred to unwise, because they think there is a strong ultra-military group who can see nothing good in the way of preparedness except a huge Regular Army, supported by conscription, and that the opposition to the reorganization of the National Guard as a Federal force is fostered by this element.

"They further believe that the volunteer army provision, while resulting in nothing practical in the way of creating an efficient fighting force, will nevertheless create a new organization to assist in fighting the National Guard—a force to be later discarded as evidence of an honest but fruitless attempt to develop a force other than by conscrip-

tion. They believe that the wealthy men and the professional and business men who constitute the personnel of the training camp associations would not enlist in a volunteer army any more than they would enlist in the National Guard; or, if they did, it would be for the sole purpose of attempting to give the organization a start, after which they would drop out. They believe that the members of these training camp associations do not realize the probability of this outcome.

"The sentiment of the National Guard is that while the widely advertised shortcomings of the National Guard have been greatly exaggerated, there are faults of organization and insufficient Federal control, all of which will be corrected after the passage of the legislation now pending in Congress, which will give to the National Guard a Federal status.

"I say this is the sentiment of the National Guard as I understand it from correspondence and conversation with officers from all over the country. They feel that they have not had sympathetic support, and some go so far as to state that the recent remarkable increase in efficiency has resulted in increased antagonism on the part of the group referred to. It is to be regretted that this sentiment exists, but that it does exist is not to be denied.

"Some officers who make these criticisms give voluntary acknowledgment of their confidence in the large number of regular officers working with the National Guard, and who believe in the possibilities of its future development under Federal control.

"Personally, I do not believe in the volunteer army provision of the Chamberlain bill, for the reason that it creates an additional category of troops of the same class as the National Guard of the United States under the new bill, and because it will constitute a force that will be worthless without the expenditure of millions of dollars to provide it with facilities, which the National Guard already possesses. An additional objection is the fact that the new force will necessarily be in conflict with the reorganized Federal National Guard in the matters of recruiting and obtaining appropriations for field training and armament. The results could not but be contrary to the best interests of the country.

"Much misinformation exists concerning the effect of the new legislation on the National Guard. If anyone will take the trouble to read the provisions of the bill it will be found that they provide for uniformity in every detail of military organization, discipline, training, armament, and equipment throughout the country."

Other officers at National Guard headquarters in the municipal building stated that Gen. O'Ryan had expressed their views. One of these officers referred to a letter sent to members of the Military Training Camps Association of the United States this week, in which the men who attended the military training camps were asked to telegraph their Senators immediately to support the volunteer army section of the Chamberlain bill, under which section the President would have the power, in discretion, to organize camps similar to the Plattsburg camp in all parts of the country.

"If a Guard officer writes his Senator it is dictation, but if a member of the Training Camps Association telegraphs him, it is a perfectly proper thing to do," was one officer's comment.

LEGISLATIVE, EXECUTIVE, AND JUDICIAL APPROPRIATIONS.

Mr. MARTIN of Virginia. Mr. President, the Senator from Oregon consents that the military bill may be temporarily laid aside so that I may ask the Senate to proceed to the consideration of the legislative, executive, and judicial appropriation bill.

The PRESIDING OFFICER. The Senator from Virginia asks unanimous consent for the present consideration of House bill 12207, the title of which will be stated.

The SECRETARY. A bill (H. R. 12207) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1917, and for other purposes.

Mr. CHAMBERLAIN. Mr. President, I want it understood that that will not displace the regular order.

The PRESIDING OFFICER. Not at all. The regular order will be laid aside temporarily. Is there objection to the request of the Senator from Virginia?

There being no objection, the Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 12207) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1917, and for other purposes, which had been reported from the Committee on Appropriations with amendments.

Mr. MARTIN of Virginia. Mr. President, I ask unanimous consent that the formal reading of the bill be dispensed with, that it be read for amendment, the amendments of the committee to be first considered.

The PRESIDING OFFICER. The Senator from Virginia asks unanimous consent that the formal reading of the bill be dispensed with, that the bill be read for amendment, the amendments of the committee to be first considered. Is there objection? The Chair hears none, and it is so ordered.

The Secretary proceeded to read the bill.

The first amendment of the Committee on Appropriations was, under the head of "Legislative," subhead "Senate," on page 2, line 13, after "$6,500," to strike out "hire of horse and wagon for the Secretary's office, $420"; in line 15, after "$5,000," to insert "reading clerk, $3,600"; in line 17, after the words "principal clerk," to strike out "reading clerk," and on page 3, line 4, after the words "in all" to strike out "$94,230" and insert "$94,410," so as to make the clause read:

Office of Secretary: Secretary of the Senate, including compensation as disbursing officer of salaries of Senators and of the contingent fund of the Senate, $6,500; assistant secretary, Henry M. Rose, $5,000; reading clerk, $3,600; chief clerk, $3,250; financial clerk, $3,000; minute and journal clerk, principal clerk and enrolling clerk, at $3,000 each; executive clerk, and assistant financial clerk, at $2,750 each; librarian, file clerk, chief bookkeeper, assistant journal clerk, and printing clerk, at $2,500 each; first assistant librarian, and keeper of stationery, at $2,400 each; assistant librarian, $1,800; skilled laborer, $1,200; clerks—3 at $2,500 each, 4 at $2,220 each, 2 at $2,100 each, 1 $1,800, 2 at $1,600 each, 1 $1,440; assistant keeper of stationery, $2,000; assistant in stationery room, $1,200; messenger, $1,440; assistant messenger, $1,200; laborers—3 at $840 each, 3 at $720 each, 1 in stationery room, $720; in all, $94,410.

The amendment was agreed to.

The next amendment was in the item of appropriation for "Clerks and messengers to the committees of the Senate," on page 7, line 15, after the words "Rules—clerk," to strike out "$2,220" and insert: "$2,720, to include full compensation for the preparation biennially of the Senate Manual, under the direction of the Committee on Rules," and, on page 8, line 3, after the words "in all," to strike out "$427,880" and insert "$428,380," so as to read:

Rules—clerk $2,720, to include full compensation for the preparation biennially of the Senate Manual, under the direction of the Committee on Rules, assistant clerk $1,800, messenger $1,440; Standards, Weights, and Measures—clerk $2,220, assistant clerk $1,440, messenger $1,200; Territories—clerk $2,220, assistant clerk $1,440, messenger $1,440; Transportation and Sale of Meat Products—clerk $2,220, assistant clerk $1,440, messenger $1,200; Transportation Routes to the Seaboard—clerk $2,220, assistant clerk $1,440, messenger $1,200; University of the United States—clerk $2,220, assistant clerk $1,440, messenger $1,200; Woman Suffrage—clerk $2,220, assistant clerk $1,440, messenger $1,200; in all, $428,380.

The amendment was agreed to.

The next amendment was, on page 8, line 10, after "$3,000," to insert "two floor assistants, at $2,000 each," and, in line 12, after "$1,000," to strike out "two on the floor of the Senate, at $2,000 each," so as to read:

Office of Sergeant at Arms and Doorkeeper: Sergeant at Arms and Doorkeeper, $6,500; Assistant Sergeant at Arms, $2,500; Assistant Doorkeeper, $3,000; Acting Assistant Doorkeeper, $3,000; two floor assistants, at $2,000 each; messengers—4 (acting as assistant doorkeepers) at $1,800 each, 32 at $1,440 each, 1 $1,050, 1 $1,000, 1 at card door $1,600.

The amendment was agreed to.

The next amendment was, on page 9, line 13, after the word "Foreman," to strike out "$1,400" and insert "$1,600," and, in line 15, after the words "in all," to strike out "$17,720" and insert "$17,920," so as to make the clause read:

Folding room: Foreman, $1,600; assistant, $1,400; clerk, $1,200; folders—7 at $1,000 each, 8 at $840 each; in all $17,920.

The amendment was agreed to.

The next amendment was, on page 10, line 4, after the word "each," to insert "24 assistant clerks, at $1,200 each," and, in line 6, after the words "in all," to strike out "$76,800" and insert "$105,600," so as to make the clause read:

For assistance to Senators who are not chairmen of committees, as follows: Twenty-four clerks, at $2,000 each; 24 assistant clerks, at $1,200 each; 24 messengers, at $1,200 each; in all, $105,600.

The amendment was agreed to.

The next amendment was, on page 10, after line 11, to strike out:

For maintaining and equipping motor vehicles for carrying the mails $6,000, or so much thereof as may be necessary.

And to insert:

For maintaining, exchanging, and equipping motor vehicles for carrying the mails and for official use of the offices of the Secretary and Sergeant at Arms, $6,000, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, on page 10, line 22, after the word "thousand," to strike out "$5,000" and insert "$10,000," so as to make the clause read:

For folding speeches and pamphlets, at a rate not exceeding $1 per thousand, $10,000.

The amendment was agreed to.

The next amendment was, on page 11, after line 5, to insert:

For rent of warehuose for storage of public documents, $1,800.

The amendment was agreed to.

The next amendment was, under the head of "Library of Congress," on page 22, line 21, after the word "each," where it occurs the second time, to strike out "two" and insert "four," and on page 23, line 4, after the words "in all," to strike out "$58,020" and insert "$59,220," so as to make the clause read:

Reading rooms (including evening service) and special collections: Superintendent, $3,000; assistants—2 at $1,800 each, 5 at $1,200 each (including 1 in room for the blind), 2 at charging desk at $1,080 each, 3 at $960 each, 10 at $840 each, 4 at $600 each; stenographer and typewriter, $960; attendants—Senate reading room, $960; Representatives' reading room—1 $960, 1 $840, 2 in cloakroom at $780 each, 1 in Toner Library $960, 1 in Washington Library $960, 2 for gallery and alcoves at $540 each; telephone operator, $660; 4 junior messengers, at $420 each; 2 watchmen, at $780 each; evening service, assistants—5 at $960 each, 15 at $840 each, 2 at $600 each; in all, $59,220.

The amendment was agreed to.

The next amendment was, on page 24, line 8, after "$1,500," to insert "assistant, $900," and in line 9, after the words "in all," to strike out "$4,920" and insert "$5,820," so as to make the clause read:

Semitic and Oriental Literature: Chief of division, $3,000; assistant, $1,500; assistant, $900; junior messenger, $420; in all, $5,820.

The amendment was agreed to.

The next amendment was, on page 25, line 3, after the word "each," where it occurs the second time, to strike out "two" and insert "three"; in line 4, after the word "each," where it occurs the first time, to strike out "three" and insert "four," and in line 10, after the word "Librarian," to strike out "$40,900" and insert "$43,000," so as to make the clause read:

Distribution of card indexes: For service in connection with distribution of card indexes and other publications of the Library: Chief of division, $3,000; chief assistant, $1,800; assistants—1 $1,600, 3 at $1,500 each, 3 at $1,400 each, 3 at $1,200 each, 3 at $1,100 each, 4 at $1,000 each; for services of assistants at salaries less than $1,000 per annum and for piecework and work by the hour, $17,000, including not exceeding $500 for freight charges, expressage, traveling expenses connected with such distribution, and expenses of attendance at meetings when incurred on the written authority and direction of the Librarian, $43,000.

The amendment was agreed to.

The next amendment was, on page 27, line 6, before the word "watchmen," to strike out "sixteen" and insert "eighteen"; in line 7, before the word "painter," to strike out "carpenter" and insert "two carpenters"; in line 8, before the word "laborers," to strike out "fourteen" and insert "sixteen"; and in line 15, after the words "in all," to strike out "$77,745" and insert "$81,525," so as to make the clause read:

Library building and grounds: Superintendent, $3,000; clerks—1 $2,000, 1 $1,600, 1 $1,400, 1 $1,000; property clerk, $900; messenger; assistant messenger; telephone switchboard operator; assistant telephone switchboard operator; captain of watch, $1,400; lieutenant of watch, $1,000; 18 watchmen, at $900 each; 2 carpenters, painter, and foreman of laborers, at $900 each; 16 laborers, at $540 each; 2 attendants in ladies' room, at $480 each; 4 check boys, at $360 each; mistress of charwomen, $425; assistant mistress of charwomen, $300; 58 charwomen; chief engineer, $1,500; assistant engineers—1 $1,200, 3 at $900 each; electrician, $1,500; machinists—1 $1,000, 1 $900; 2 wiremen, at $900 each; plumber, $900; 3 elevator conductors, and 10 skilled laborers, at $720 each; in all, $81,525.

The amendment was agreed to.

The next amendment was, on page 28, after line 2, to insert:

For resurfacing west driveway and repairs to stone curb in Library grounds, $4,000.

The amendment was agreed to.

The next amendment was, on page 28, after line 4, to insert:

For refitting of boiler room and coal vaults, $2,500.

The amendment was agreed to.

The next amendment was, under the head of "Botanic Garden," on page 28, line 11, after the words "Joint Committee on the Library," to strike out "$17,000" and insert "$19,500," so as to make the clause read:

For assistants and laborers, under the direction of the Joint Committee on the Library, $19,500.

The amendment was agreed to.

The next amendment was, on page 28, line 14, after the word "supplies," to insert "traveling expenses and per diem in lieu of subsistence of the superintendent and his assistants"; in line 17, after the words "Botanic Gardens," to insert "purchase and maintenance of motor-propelled delivery vehicle"; and in line 19, after the words "Joint Library Committee of Congress," to strike out "$9,000" and insert "$11,903," so as to make the clause read:

For procuring manure, soil, tools, fuel, purchasing trees, shrubs, plants, and seeds; services, materials, and miscellaneous supplies, traveling expenses and per diem in lieu of subsistence of the superintendent and his assistants, street car tickets not exceeding $25, and contingent expenses in connection with repairs and improvements to Botanic Gardens, purchase and maintenance of motor-propelled delivery vehicle, under direction of the Joint Library Committee of Congress, $11,903.

The amendment was agreed to.

The next amendment was, under the head of "Executive," on page 29, line 5, after the word "clerks," to insert "two at $2,500 each"; in line 6, before the words "of class four," to strike out "six" and insert "five"; in the same line, before the words "of class three," to strike out "three" and insert "two"; in line 8, before the word "at," where it occurs the first time, to strike out "two" and insert "three"; in the same line, before the word "at," where it occurs the second time, to strike out "two" and insert "three"; and in line 9, after the words "in all," to strike out "$73,440" and insert "$76,780," so as to make the clause read:

Office of the President: Secretary, $7,500; executive clerk, $5,000; chief clerk, $4,000; appointment clerk, $3,500; record clerk, $2,500; 2 expert stenographers, at $2,500 each; accountant and disbursing clerk, $2,500; 2 correspondents, at $2,500 each; clerks—2 at $2,500 each, 4 at $2,000 each, 5 of class 4, 2 of class 3, 4 of class 2, 3 of class 1; messengers—3 at $900 each, 3 at $840 each; 3 laborers at $720 each; in all, $76,780: *Provided*, That employees of the executive departments and other establishments of the executive branch of the Government may be detailed from time to time to the office of the President of the United States for such temporary assistance as may be necessary.

The amendment was agreed to.

The next amendment was, under the head of "Civil Service Commission," on page 30, line 19, before the words "of class four," to strike out "six" and insert "seven"; in the same line, before the words "of class three," to strike out "twenty-six" and insert "thirty"; in line 20, before the words "of class two," to strike out "thirty-six" and insert "forty-two"; and on page 31, line 1, after the words "in all," to strike out "$278,330" and insert "$294,930," so as to make the clause read:

For commissioner, acting as president of the commission, $4,500; 2 commissioners, at $4,000 each; chief examiner, $3,500; secretary, $2,500; assistant chief examiner, $2,250; chiefs of division—3 at $2,000 each; examiners—1 $2,400, 3 at $2,000 each, 6 at $1,800 each; clerks—7 of class 4, 30 of class 3, 42 of class 2, 52 of class 1, 34 at $1,000 each, 22 at $900 each; messenger; assistant messenger; skilled laborer, $720; 4 messenger boys, at $360 each. Custodian force: Engineer, $840; general mechanic, $840; telephone-switchboard operator; 2 firemen; 2 watchmen; 2 elevator conductors, at $720 each; 3 laborers; 4 charwomen; in all, $294,930.

The amendment was agreed to.

The next amendment was, on page 32, line 2, after the word "commission," to strike out "$18,000" and insert "$20,000," so as to make the clause read:

For necessary traveling expenses, including those of examiners acting under the direction of the commission, and for expenses of examinations and investigations held elsewhere than at Washington, and including not exceeding $1,000 for expenses of attendance at meetings of public officials when specifically directed by the commission, $20,000.

The amendment was agreed to.

The next amendment was, on page 32, line 6, after the word "commission," to strike out "$5,700" and insert "$7,500," so as to make the clause read:

For field examiners at the rate of $1,500 per annum each, for work in connection with members of local boards and other necessary work as directed by the commission, $7,500.

The next amendment was, under the head of "Department of State," on page 32, line 9, after "$12,000," to insert "Undersecretary of State, to be appointed by the President, by and with the advice and consent of the Senate, $7,500"; in line 13, after "4,500," to strike out "Counselor for the department, to be appointed by the President, by and with the advice and consent of the Senate, $7,500"; in line 16, after the word "work," to strike out "four" and insert "five," so as to read:

DEPARTMENT OF STATE.

For Secretary of State, $12,000; Undersecretary of State, to be appointed by the President, by and with the advice and consent of the Senate, $7,500; Assistant Secretary, $5,000; Second and Third Assistant Secretaries, at $4,500 each; Director of the Consular Service, $4,500; officers to aid in important drafting work, five at $4,500 each.

The amendment was agreed to.

Mr. POINDEXTER. Mr. President, I notice, so far as the bill has been read, on almost every page the creation apparently of additional clerkships and additional positions of watchmen and messengers. There seems to be, to quite an extent, a multiplication of positions in this bill. I should like to inquire of the Senator from Virginia if he has made any computation as to how many new positions are provided for by the bill?

Mr. MARTIN of Virginia. Mr. President, I can not give the number, but in the aggregate it is small. All the Senate amendments only involve an increase of about half a million dollars. Increases have only been made where they are very necessary, and they are much fewer than were estimated and asked for by the departments. Some increases in the service in some places were absolutely necessary to accomplish efficient work.

Mr. POINDEXTER. Of course, Mr. President, under the situation which every Senator is familiar with, it is absolutely impossible for Senators, with the other duties which they have, to be informed about these matters, and we have to rely—and I do rely—on the committee in charge of them, particularly on the chairman of the committee; but my observation, in going into the various departments here, is that there is no lack of messengers and watchmen. It seems to me, if anything, there is a superfluity of them. The impression that one gets is that, so far as those positions are concerned, those who hold them are suffering for lack of something to do. They seem to spend the day sitting in the corridors; and so it is somewhat surprising to see, on every page in this bill, additional positions of this kind, and other kinds, created.

Mr. MARTIN of Virginia. I will say to the Senator, Mr. President, that I am sure the committee all feel that if we have erred at all, it was in denying things that were asked, rather than in giving what we have given. The increases are

very often apparent and not real. They are struck off in one place and added in another.

You may take particularly the State Department. There they were paying 93 clerks out of a lump sum, and we discontinued that. We repealed the sections that allowed lump sums for clerks, and made them statutory appointments.

I am sure that if we have erred at all it has been in denying things rather than in allowing too much.

Mr. POINDEXTER. I sincerely hope that is true, Mr. President. Of course, that matter will have to stand upon its merits, and the Senator, no doubt, is assured of the need for these new positions; but it is very surprising.

I should like to ask the Senator further if this entire increase of $500,000, or the greater part of it, is for these new positions?

Mr. MARTIN of Virginia. Oh, no—a very small part of it, Mr. President. The largest increase is for an increased force for the collection of the income tax.

Mr. POINDEXTER. Can the Senator inform the Senate as to the total amount of the appropriations contained in this bill for the salaries of new positions that are provided for in the bill?

Mr. MARTIN of Virginia. I have not a list made up giving that aggregate, but I can assure the Senator that it is not large, and we have pruned it wherever we possibly could. The committee has made a conscientious effort to prevent duplication of service or too liberal a supply of assistants in the departments.

Mr. POINDEXTER. I notice on page 33 of the bill, just turning to it at random, in line 8, that the bill as it came from the House provided for 17 clerks of class 4. The Senate bill provides for 25 of these clerks. In line 9 the House bill provided for 19 clerks of class 3. The Senate bill provides for 26 clerks of class 3. In the same line and in line 10, 25 clerks of class 2 are increased to 35 clerks of class 2. In line 10, 43 clerks of class 1 are increased to 53 clerks of class 1. That seems to be, so far as I have been able to follow the reading of the bill, characteristic of the entire legislation.

Mr. MARTIN of Virginia. If the Senator will permit me. I am sure I can set his mind at rest about that. If he will turn over to page 34, he will find stricken out of the bill the $30,000 lump sum which had been provided for clerks. I will say to him, furthermore, that we found that the State Department was employing 93 clerks and paying them out of the appropriation of $2,750,000 made to meet war conditions in Europe. We have made these places statutory positions so far as they were preserved. The number is reduced, and they are made statutory positions. That makes it appear that we are making a large increase in the State Department, whereas, as a matter of fact, we are reducing the clerical force in the State Department.

Mr. POINDEXTER. The Senator stated a moment ago, as I understood him, that the appropriation for the clerical force was increased.

Mr. MARTIN of Virginia. No; I said I did not know about the aggregate. I said the clerks are increased in some places and diminished in others. I have not made up a statement of the entire amount paid for clerical help; but I know that in the State Department we have reduced the clerical force, and the reason why they appear as increases on the face of the bill is that we have taken the payment from a lump sum and made them statutory provisions, but in a reduced number.

Mr. POINDEXTER. I am only asking for information. I am not speaking in any contentious spirit or on acount of any fractious disposition in regard to it.

Mr. MARTIN of Virginia. I understand the Senator, and we are glad to give him the information.

Mr. POINDEXTER. I call attention to the fact that this item of $30,000, which the Senator from Virginia says is stricken out of the House bill, was merely a provision for emergency clerical services. It seems that the Senate committee has substituted permanent employment for what was only a contingency, provided against an emergency, in the House bill.

Mr. SMOOT. Mr. President, I wish to say to the Senator that the appropriation of $2,750,000 was for emergency clerks and assistants in foreign lands, the necessity for which was brought about by reason of the war. So far, of that $2,750,000 the State Department has spent $2,021,000, leaving a balance of $729,000 in the fund. The Committee on Appropriations thought that was a very loose way, indeed, of handling the money. We have no report as to what it was expended for. We can not tell how much of that money is to be returned after peace is established by these foreign countries. But the abuse that has existed in the past, where lump sums have been appropriated, every Senator knows should be obviated in the future; and I will say to the Senator that it was for that reason that the number of clerks provided in the bill was given to the State Department. It is not the full number of 92 clerks that they have now, called emergency clerks, but there are some forty-odd that are put in here that will be permanent, because of the fact that the State Department claim that with the immense amount of work that is piled upon them on account of the war conditions they are compelled to have these forty-odd clerks. Those we gave them as statutory positions, but we struck out the $30,000 that the House had put in there for emergency clerical services.

Mr. POINDEXTER. I should just like to remark, if the Senator will allow me, at this time that, judging from general conditions, the need for additional clerks seems to arise in many of the departments from the fact that many of the clerks are superannuated. I have long been of the opinion, and am of the opinion now, that as a matter of economy—placing it, if you choose, solely upon the proposition of economy and efficiency, to say nothing of justice—the country could well afford to establish a civil-service pension list, so as to retire clerks at a certain age, and not have the rolls filled with those whom we do not like to discharge and yet who are not capable of performing their duties.

Mr. SMOOT. That is true, Mr. President, in some of the departments; and I hope to see reported to the Senate at this session a bill for the very purpose of granting age pensions to all of the employees of our Government.

Mr. President, I simply can not resist at this time congratulating my Democratic friends upon acknowledging their error some years ago when we Republicans, led by Senator Root, tried to put into this bill the wording that we find now on page 32, as follows:

Undersecretary of State, to be appointed by the President, by and with the advice and consent of the Senate.

Mr. MARTIN of Virginia. I will say to the Senator that that amendment has been agreed to.

Mr. ROBINSON. Mr. President——

Mr. SMOOT. I know it has been agreed to.

Mr. MARTIN of Virginia. I thought the Senator wanted to discuss it.

Mr. SMOOT. I simply wanted to congratulate my Democratic friends, because when we had that proposal before the Senate heretofore there were hours and hours of time taken up to show that such a thing was unreasonable and that we were aping foreign nations.

The reading of the bill was resumed.

The next amendment was, in line 17, after the word "each," where it occurs the second time, to insert "one at $2,500"; in line 23, after the word "each," to insert "one at $2,500"; in line 25, after "$2,500," to insert "two law clerks, at $2,250 each; law clerk, $2,000"; on page 33, line 8, before the words "of class four," to strike out "seventeen" and insert "twenty-five"; in line 9, before the words "of class three," to strike out "nineteen" and insert "twenty-six"; in line 10, before the words "of class two," to strike out "twenty-five" and insert "thirty-five"; in the same line, before the words "of class one," to strike out "forty-three" and insert "fifty-three"; in line 13, before the word "messengers," to strike out "six" and insert "seven"; in the same line, before the words "assistant messengers," to strike out "twenty-three" and insert "twenty-five"; in line 15, before the word "laborers," to strike out "four" and insert "seven"; in line 16, after the word "operator," to insert "five female laborers, at $240 each"; and in line 17, after the words "in all," to strike out "$321,020" and insert "$393,900," so as to read:

One at $2,500, to be appointed by the Secretary, any one of whom may be employed as chief of division of far eastern, Latin American, near eastern, or European affairs, or upon other work in connection with foreign relations; assistant solicitors of the department, to be appointed by the Secretary—3 at $3,000 each, 1 at $2,500; chief clerk, who shall sign such official papers and documents as the Secretary may direct, $3,000; law clerk, $2,500; 2 law clerks, at $2,250 each; law clerk, $2,000; law clerk and assistant, to be selected and appointed by the Secretary, to edit the laws of Congress and perform such other duties as may be required of them, at $2,500 and $1,500, respectively; chiefs of bureaus—2 at $2,250 each, 5 at $2,100 each; 2 translators, at $2,100 each; additional to Chief of Bureau of Accounts as disbursing clerk, $200; private secretary to the Secretary, $2,500; clerk to the Secretary, $1,800; clerks—25 of class 4, 26 of class 3, 35 of class 2, 53 of class 1 (3 of whom shall be telegraph operators), 18 at $1,000 each, 18 at $900 each; chief messenger, $1,000; 7 messengers; 25 assistant messengers; messenger boy, $420; packer, $720; 7 laborers, at $600 each; telephone switchboard operator; assistant telephone switchboard operator; 5 female laborers, at $240 each; driver, $840; holster, $720; in all, $393,900.

The amendment was agreed to.

Mr. MARTIN of Virginia. Mr. President, I note an error in spelling on line 17. It ought to be "hostler." It is "holster." It is just an error in spelling.

The PRESIDING OFFICER. Without objection, the correction will be made by the clerks.

The reading of the bill was resumed.

The next amendment was, at the top of page 34, to strike out:

For emergency clerical services, to be expended by the Secretary of State in his discretion, $30,000, or so much thereof as may be necessary.

The amendment was agreed to.

The next amendment was, on page 34, line 6, after the word "repairs," to strike out "$10,500" and insert "$12,500," so as to make the clause read:

Contingent expenses: For stationery, furniture, fixtures, typewriters, including exchange of the same, repairs, and material for repairs, $12,500.

The amendment was agreed to.

The next amendment was, on page 34, line 16, after the word "foregoing," to strike out "$7,280" and insert "$10,000," so as to make the clause read:

For miscellaneous expenses, including purchase, care, and subsistence of horses, to be used only for official purposes, repair and maintenance of horse-drawn passenger-carrying vehicles; automobile mail wagon, including exchange of same, harness, equipment for drivers, street-car tickets not exceeding $100, and other items not included in the foregoing, $10,000.

The amendment was agreed to.

The next amendment was, on page 34, line 18, after the words "District of Columbia," to strike out "$11,200" and insert "$19,080," so as to make the clause read:

For rent of buildings in the District of Columbia, $19,080.

The amendment was agreed to.

The next amendment was, under the head of "Treasury Department," on page 37, line 6, after the words "Chief of division," to strike out "$4,000" and insert "$4,800," and, in line 17, after the words "in all," to strike out "$70,750" and insert "$71,550," so as to make the clause read:

Division of Customs: Chief of division, $4,800; assistant chiefs of division—1, $3,000 (in lieu of supervising agent at $4,500 paid from appropriation "Expenses of collecting revenue from customs"), 1, $3,000; supervising tea examiner, $2,750; law clerks—4 at $2,500 each, 3 at $2,000 each; clerks—5 of class 4, 4 of class 3 (1 transferred from Division of Special Agents), 6 of class 2 (1 transferred from Division of Special Agents), 9 of class 1 (1 transferred from Division of Special Agents), 5 at $1,000 each; 2 messengers (1 transferred from Division of Special Agents); assistant messenger; in all, $71,550.

The amendment was agreed to.

The next amendment was, on page 39, line 23, after the words "lock shop," to strike out "$1,100" and insert "$1,200"; in line 25, before the word "at," where it occurs the first time, to strike out "three" and insert "one at $600, two"; and, on page 40, line 2, after the words "in all," to strike out "$220,800" and insert "$221,020," so as to make the clause read:

Office of Supervising Architect: Supervising Architect, $5,000; executive officer, $3,250; technical officer, $3,000; drafting division—superintendent $3,000, assistant superintendent $2,750; mechanical engineering division—superintendent $2,750, assistant superintendent $2,400; structural division—superintendent $2,750, assistant superintendent $2,400; superintendents—computing division $2,750, repairs division $2,400, accounts division $2,500, maintenance division $2,500; files and records division—chief $2,500, assistant chief $2,250; head draftsman, $2,500; administrative clerks—8 at $2,000 each; technical clerks—4 at $1,800 each; clerks—9 of class 4, additional to one of class 4 as bookkeeper $100, 4 at $1,700 each, 14 of class 3, 6 at $1,500 each, 13 of class 2, 8 at $1,300 each, 21 of class 1, 4 at $1,100 each, 7 at $1,000 each, 3 at $900 each, 2 at $840 each; photographer, $2,000; foreman, duplicating galley, $1,800; 2 duplicating paper chemists at $1,200 each; foreman vault, safe, and lock shop, $1,200; 5 messengers; 2 assistant messengers; messenger boys—1 at $600, 2 at $480 each, 2 at $360 each; skilled laborers—4 at $1,000 each, 7 at $960 each, 1 $900, 1 $840; laborers—1 $660, 1 $600; in all, $221,020.

The amendment was agreed to.

The next amendment was, on page 40, after line 12, to insert:

For law books, including their exchange, to be expended under the direction of the Comptroller of the Treasury, $250.

The amendment was agreed to.

The next amendment was, on page 41, line 5, before the words "at $1,000 each," to strike out "eight" and insert "nine," and, in line 7, after the words "in all," to strike out "$290,010" and insert "$291,010," so as to make the clause read:

Office of Auditor for War Department: Auditor, $4,000; assistant and chief clerk, $2,250; law clerk, $2,000; chief of division of accounts, $2,500; chief of claims and records division, $2,000; 2 assistant chiefs of division, at $1,900 each; chief transportation clerk, $2,000; clerks—22 of class 4, 49 of class 3, 55 of class 2, 45 of class 1, 9 at $1,000 each; 8 at $900 each; skilled laborer, $900; messenger; 5 assistant messengers; 9 laborers; messenger boy, $480; in all, $291,010.

The amendment was agreed to

The next amendment was, on page 41, line 13, after the word "each," where it occurs the second time, to insert "helper, $900 (transferred from the Bureau of Eugraving and Printing)," and, in line 15, after the words "in all," to strike out "$141,390" and insert "$142,290," so as to make the clause read:

Office of Auditor for Navy Department: Auditor, $4,000; chief clerk and chief of division, $2,250; law clerk, $2,000; chief of division, $2,000; assistant chief of division, $2,000; clerks—13 of class 4, 22 of class 3, 20 of class 2, 23 of class 1, 6 at $1,000 each, 6 at $900 each; helper, $900 (transferred from the Bureau of Engraving and Printing); messenger; assistant messenger; three laborers; in all, $142,290.

The amendment was agreed to.

The next amendment was, on page 41, line 20, before the words "of class 4," to strike out "13" and insert "16"; in the same line, before the words "of class 3," to strike out "15" and insert "18"; and, in line 24, after the words "in all," to strike out "$134,430" and insert "$144,630," so as to make the clause read:

Office of Auditor for Interior Department: Auditor, $4,000; chief clerk and chief of division, $2,250; law clerk, $2,000; chief of division, $2,000; clerks—16 of class 4, 18 of class 3, 17 of class 2, 22 of class 1, 12 at $1,000 each, 12 at $900 each (7 transferred from lump-sum appropriation); 2 messengers; 2 assistant messengers; laborer; in all, $144,630.

The amendment was agreed to.

The next amendment was, on page 47, after line 18, to insert:

For the employment of clerical help in the office of the Commissioner of Internal Revenue at rates to be fixed by the commissioner, with the approval of the Secretary, $20,000.

The amendment was agreed to.

The next amendment was, on page 49, line 4, after the words "captain of," to strike out "watch" and insert "guards"; in line 5, after the words "lieutenants of," to strike out "watch" and insert "guards"; and, in line 6, after the word "sixty," to strike out "watchmen" and insert "guards," so as to read:

Bureau of Engraving and Printing: Director, $6,000; assistant director, $3,500; chief of division of assignments and reviews, $3,000; chief clerk, $2,500; disbursing agent, $2,400; medical and sanitary officer, $2,000; stenographer, $1,800; storekeeper, $1,600; assistant storekeeper, $1,000; clerk in charge of purchases and supplies, $2,000; clerks—1 of class 4, 6 of class 3, 9 of class 2, 9 of class 1, 8 at $1,000 each, 12 at $900 each, 15 at $840 each, 3 at $780 each; 9 attendants, at $600 each; helpers—1 at $900, 2 at $720 each, 2 at $600 each; 3 messengers; 7 assistant messengers; captain of guards, $1,400; 2 lieutenants of guards, at $900 each; 60 guards, at $720 each.

The amendment was agreed to.

The next amendment was, on page 52, line 14, after the words "District of Columbia," to strike out "$10,000" and insert "$15,000," so as to make the clause read:

For investigation and experimentation and to secure better methods of administration, with a view to increased efficiency or to greater economy in the expenditure of public money, including necessary traveling expenses, in connection with special work, or obtaining of better administrative methods in any branch of the service within or under the Treasury Department, including the temporary employment of agents, stenographers, accountants, or other expert services, either within or without the District of Columbia, $15,000.

The amendment was agreed to.

The next amendment was on page 53, after line 5, to strike out:

Hereafter no moneys appropriated by this or any other act shall be used for the payment of gas furnished for use in any of the public buildings of the United States in the District of Columbia at a rate in excess of 70 cents per 1,000 cubic feet.

The amendment was agreed to.

The next amendment was under the subhead "Collecting internal revenue," on page 57, after line 4, to insert:

All internal-revenue agents, inspectors, and the cotton-futures attorney may be granted leave of absence with pay, which shall not be cumulative, not to exceed 30 days in any calendar year, under such regulations as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may prescribe.

The amendment was agreed to.

The next amendment was on page 57, line 21, after the date "1914," to strike out "$1,600,000" and insert: "$1,750,000, and authority is hereby given to use $90,000 of said sum for the employment in the District of Columbia of necessary clerical and other personal services and the purchase of such supplies, equipment, mechanical devices, and other articles as may be necessary for use in the District of Columbia," so as to make the clause read:

Collecting the income tax: For expenses of assessing and collecting the income tax as provided in paragraph N, section 2, of an act entitled "An act to reduce tariff duties, and to provide revenue for the Government, and for other purposes," approved October 3, 1913, including the purchase of such supplies, equipment, mechanical devices, and other articles as may be necessary for use in the several collection districts, including not to exceed $4 per diem, in lieu of subsistence, pursuant to section 13 of the sundry-civil act approved August 1, 1914, $1,750,000, and authority is hereby given to use $90,000 of said sum for the employment in the District of Columbia of necessary clerical and other personal services and the purchase of such supplies, equipment, mechanical devices, and other articles as may be necessary for use in the District of Columbia.

The amendment was agreed to.

The next amendment was on page 59, after line 21, to insert:

When absent on duty from their customary residence, all internal-revenue agents appointed under section 3152, Revised Statutes, as amended, and cotton-futures attorneys may be granted per diem in lieu of subsistence not exceeding $4, and, when absent on duty from their customary residence, income-tax agents and inspectors, special gaugers, and special employees may be granted a per diem in lieu

of subsistence not exceeding $3, the per diem in lieu of subsistence to be fixed by the Commissioner of Internal Revenue, subject to the approval of the Secretary of the Treasury.

The PRESIDING OFFICER. The Chair will call the attention of Senators to the fact that on page 57, line 6, the bill says "the cotton-futures attorney," while on the page just read it is in the plural.

Mr. OVERMAN. There is only one, but I suppose we had better leave it that way.

Mr. SMOOT. No, Mr. President; there is only one in one case, but there is more than one in the other case.

The PRESIDING OFFICER. Very well; that explains it.

Mr. SMOOT. But, Mr. President, there is a question in my mind as to the advisability of this amendment. I do not want to go into the discussion of it to-day, however. I will content myself by allowing it to go into conference, and having it thoroughly discussed in conference.

The PRESIDING OFFICER. The question is on agreeing to the amendment.

The amendment was agreed to.

The next amendment was, under the head of "Mints and assay offices," on page 64, line 16, after the word "employees," to strike out "$90,000" and insert "$92,000," so as to make the clause read:

For wages of workmen and other employees, $92,000.

The amendment was agreed to.

The next amendment was, under the subhead "Assay office at Deadwood, S. Dak.," on page 66, line 20, after the word "expenses," to strike out "$500" and insert "$1,500," so as to make the clause read:

For incidental and contingent expenses, $1,500.

The amendment was agreed to.

The next amendment was, under the head of "War Department," on page 68, line 13, before the words "of class 2," to strike out "14" and insert "15"; in line 14, after the word "each," to insert "one at $900"; in line 17, after the word "messengers," to insert "two assistant messengers, at $600 each"; and in line 22, after the words "in all," to strike out "$143,540" and insert "$147,040," so as to make the clause read:

Office of the Secretary: Secretary of War, $12,000; Assistant Secretary, $5,000; assistant and chief clerk, who shall sign such official papers and documents as the Secretary may direct, $4,000; private secretary to the Secretary, $2,500; clerk to the Secretary, $2,000; stenographer to the Secretary, $2,000; clerk to the Assistant Secretary, $2,400; assistant chief clerk, $2,400; disbursing clerk, $2,750; appointment clerk, $2,250; four chiefs of divisions, at $2,000 each; superintendent of buildings outside of State, War, and Navy Department Building, in addition to compensation as chief of division, $500; chief telegrapher, $1,800; clerks—5 of class 4, 5 of class 3, 15 of class 2, 19 of class 1, 5 at $1,000 each, 1 at $900; foreman, $1,200; carpenters—one $1,200, one $1,080; chief messenger, $1,000; skilled laborer, $1,080; six messengers; seven assistant messengers; two assistant messengers, at $600 each; telephone switchboard operator; assistant telephone switchboard operator; engineer, $900; assistant engineer, $720; fireman; four watchmen; three watchmen, at $660 each; eight laborers; hostlers—one $600, one $540; four charwomen; in all, $147,040.

The amendment was agreed to.

The next amendment was, on page 69, line 17, after the words "chief clerk," to strike out "$2,000" and insert "$2,200," and in line 20, after the words "in all," to strike out "$24,800" and insert "$25,000," so as to make the clause read:

Signal Office: Chief clerk, $2,200; clerks—2 of class 4, 1 of class 3, 1 of class 2, 4 of class 1, 9 at $1,000 each; two messengers; assistant messenger; in all, $25,000.

The amendment was agreed to.

The next amendment was, on page 70, line 20, after the word "each," to insert "3 at $2,000 each"; in line 21, after the word "clerks," to strike out "15" and insert "12"; and on page 71, line 5, after the words "in all," to strike out "$372,320" and insert "$372,920," so as to make the clause read:

Office of Quartermaster General: Chief clerk, $2,750; principal clerks—5 at $2,250 each, 3 at $2,000 each; clerks—12 of class 4, 25 of class 3, 44 of class 2, 85 of class 1, 50 at $1,000 each, 10 at $900 each; advisory architect, $4,000; draftsmen—three at $1,800 each, seven at $1,600 each, five at $1,400 each; supervising engineer, $2,750; hydraulic and sanitary engineer, $2,000; civil engineer, $1,800; electrical engineer, $2,000; electrical and mechanical engineer, $2,250; marine engineer, $3,500; sanitary and heating engineer, $1,800; blue-print operator, $900; 6 messengers; 14 assistant messengers; 12 laborers; laborers—one $600, one $480; in all, $372,920.

The amendment was agreed to.

The next amendment was, on page 71, after line 23, to insert:

Section 7 of the general deficiency appropriation act approved August 26, 1912, as amended by section 4 of the act making appropriations for legislative, executive, and judicial expenses of the Government, approved March 4, 1913, restricting changes in salaries of certain employees paid from lump-sum appropriations, is further amended to provide that it shall not apply to draftsmen whose services are necessary in carrying on the various manufacturing or constructing operations of the Government.

The amendment was agreed to.

The next amendment was, on page 74, line 4, after the word "messenger," to strike out "assistant messenger" and insert "two assistant messengers," and in line 5, after the words "in all," to strike out "$38,480" and insert "$39,200," so as to make the clause read:

Division of Militia Affairs, Office of Chief of Staff: For the following authorized by section 20 of the act approved January 21, 1903, as amended by the act approved May 27, 1908, and as restricted by the legislative, executive, and judicial act approved March 4, 1915: Chief clerk, $2,000; clerks—2 of class 4, 2 of class 3, 4 of class 2, 11 of class 1, 8 at $1,000 each; messenger; 2 assistant messengers; 2 laborers; in all, $39,200.

The amendment was agreed to.

The next amendment was, on page 75, line 11, after the word "offices," to strike out "$20,000" and insert "$25,000," so as to make the clause read:

For stationery for the department and its bureaus and offices, $25,000.

The amendment was agreed to.

The next amendment was, under the head of "Public buildings and grounds," on page 75, line 23, after the words "landscape architect," to insert "and the purchase of park designs," so as to make the clause read:

Office of public buildings and grounds: Superintendent, $3,000; assistant and chief clerk, $2,400; clerks—1 of class 4, 1 of class 3, 1 of class 2 and stenographer, 1 of class 1; messenger; landscape architect and the purchase of park designs, $2,400; surveyor and draftsman, $1,500; in all, $16,140.

The amendment was agreed to.

The next amendment was, on page 76, line 3, after the word "park," to strike out "watchmen" and insert "police," so as to make the clause read:

For sergeant of park police, $950.

The amendment was agreed to.

The next amendment was, on page 76, after line 3, to strike out "For second sergeant of park watchmen, $900" and insert "For two second sergeants of park police, at $900 each, $1,800," so as to make the clause read:

For two second sergeants of park police, at $900 each, $1,800.

The amendment was agreed to.

The next amendment was, on page 76, line 6, after the word "day," to strike out "watchmen" and insert "police"; in line 21, before the words "in Potomac Park," to strike out "three" and insert "four"; in line 22, before the words "in all," to strike out "twenty-two" and insert "twenty-three"; and in the same line, after the word "each," to strike out "$18,480" and insert "$19,320," so as to make the clause read:

For day police, as follows: One in Franklin Park and adjacent reservations on New York Avenue; 1 in Lafayette Park; 2 in Smithsonian Grounds and neighboring reservations; 1 in Judiciary Park; 1 in Lincoln Park and adjacent reservations; 1 in Iowa Circle and reservations to the northeast; 1 in Thomas and Scott Circles and neighboring reservations; 1 in Washington Circle and neighboring reservations; 1 in Dupont Circle and neighboring reservations; 1 in McPherson Park and Farragut Square; 1 in Stanton Park and neighboring reservations; 2 in Henry and Seaton Parks and neighboring reservations; 1 in Mount Vernon Park and reservations to the northeast; 1 in grounds south of the Executive Mansion; 1 in Garfield and Marion Parks and reservations to the east; 1 in Monument Park; 4 in Potomac Park; 1 in Montrose Park; 23 in all, at $840 each, $19,320.

The amendment was agreed to.

The next amendment was, on page 76, line 23, after the word "night," to strike out "watchmen" and insert "police"; in the same line, before the word "in," to strike out "Two" and insert "Three"; on page 77, line 5, before the words "in Lafayette," to strike out "one" and insert "two"; in line 10, before the words "in all," to strike out "nineteen" and insert "twenty-one"; and in the same line, after the word "each," to strike out "$15,960" and insert "$17,640," so as to make the clause read:

For night police, as follows: Three in Smithsonian Grounds and neighboring reservations; 1 in Judiciary Park; 2 in Henry and Seaton Parks and adjacent reservations; 1 in grounds south of the Executive Mansion; 1 in Monument Park; 1 in Garfield Park and neighboring reservations; 1 in Iowa, Scott, and Thomas Circles and neighboring reservations; 1 in Stanton and Lincoln Parks and neighboring reservations; 2 in Lafayette, McPherson, Franklin, and Farragut Parks; 1 in Washington and Dupont Circles and neighboring reservations; 1 in Mount Vernon Park and neighboring reservations; 2 for greenhouses and nursery; 4 in Potomac Park; 21 in all, at $840 each, $17,640.

The amendment was agreed to.

Bureau of Steam Engineering: Chief clerk, $2,250; bookkeeper and accountant, $1,800; clerks—1 of class 4, 4 of class 3, 4 of class 2, 2 at $1,300 each, 6 of class 1, 1 $1,100, 4 at $1,000 each, 1 $900; copyist; 2 expert radio aids, at $3,130 each; expert in wireless telegraphy, $3,000; draftsmen—1 (who shall be an expert in marine construction) $2,000, 1 $1,400, assistant $1,200; blue printer, $720; 2 assistant messengers; laborers—1 at $720, 2 at $660 each; 2 at $600 each; messenger boy, $600; in all, $54,410.

The amendment was agreed to.

The next amendment was, on page 86, line 21, before the words "of class 1," to strike out "three" and insert "four"; in line 22, after the words "at $1,100 each," to strike out "nine" and insert "ten"; and in line 24, after the words "in all," to strike out "$60,950" and insert "$63,250," so as to make the clause read:

Bureau of Construction and Repair: Chief clerk, $2,250; clerks—2 of class 4, 3 of class 3, 3 of class 2, 4 at $1,300 each, 4 of class 1, 10 at $1,100 each, 15 at $1,000 each; 5 copyists; two assistant messengers; laborer; messenger boys—9 at $600 each; 1 $400; in all, $63,250.

The amendment was agreed to.

The next amendment was, on page 87, line 15, after the word "clerks," to strike out "1 of class 4" and insert "2 of class 4," and in line 19, after the words "in all," to strike out "$30,210" and insert "$32,010," so as to make the clause read:

Bureau of Ordnance: Chief clerk, $2,250; draftsman, $1,400; clerks—2 of class 4, 2 of class 3, 2 of class 2, 1 $1,300, 3 of class 1, 1 $1,100, 5 at $1,000 each; 3 copyists; 2 copyists, at $840 each; assistant messenger; messenger boys—2 at $600 each, 2 at $400 each; laborer; in all, $32,010.

The amendment was agreed to.

The next amendment was, on page 88, line 12, after the word "clerks," to strike out "four" and insert "five"; in line 13, before the words "of class 2," to strike out "seven" and insert "eight"; in line 14, before "at $1,100," to strike out "ten" and insert "twelve"; in line 16, after the word "boys," to strike out "three" and insert "four"; in line 17, before the words "at $400," to strike out "three" and insert "two"; and in the same line, after the words "in all," to strike out "$118,890" and insert "$124,490," so as to make the clause read:

Bureau of Supplies and Accounts: Civilian assistant, $2,500; chief accountant, $2,250; 2 chief bookkeepers, at $2,000 each; statistician, $1,800; clerks—5 of class 4, 8 of class 3, 8 of class 2, 15 of class 1, 12 at $1,100 each, 28 at $1,000 each, 14 at $900 each; 2 copyists, at $840 each; 5 assistant messengers; messenger boys—4 at $600 each; 2 at $400 each; laborer; in all, $124,490.

The amendment was agreed to.

The next amendment was, on page 89, line 22, before the words "at $1,000," to strike out "three" and insert "four," and in line 23, after the words "in all," to strike out "$10,100" and insert "$11,100," so as to make the clause read:

Division of Naval Militia Affairs: For the following, authorized by section 17 of the Naval Militia act approved February 16, 1914: Chief clerk, $1,600; clerks—1 of class 2, 2 of class 1, 1 $1,100, 4 at $1,000 each; messenger boys—1 $600; in all, $11,100.

The amendment was agreed to.

The next amendment was, on page 90, line 1, after the word "binding," to strike out "$3,000" and insert "$3,600," so as to make the clause read:

For miscellaneous expenses, including stationery, furniture, office equipment, postage, typewriters and exchange of same, and necessary printing and binding $3,600, which sum, together with the foregoing amount for salaries, shall be paid from the appropriation for "Arming and equipping Naval Militia" for the fiscal year 1917, and no other or

further sums shall be expended from said appropriation for or on account of said Division of Naval Militia Affairs during the fiscal year 1917.

The amendment was agreed to.

The next amendment was, on page 90, line 17, after the word "vehicles," to insert "automobile mail wagon, including exchange of same," and, in line 21, after the word "offices," to strike out "$42,000" and insert "$45,000," so as to make the clause read:

For stationery, furniture, newspapers, plans, drawings, drawing materials, horses and wagons to be used only for official purposes, including rental of stable; purchase, maintenance, repair, or operation of horse-drawn passenger-carrying vehicles, automobile mail wagon, including exchange of same, street car tickets not exceeding $250, freight, expressage, postage, typewriters and computing machines and exchange of same, and other absolutely necessary expenses of the Navy Department and its various bureaus and offices, $45,000; it shall not be lawful to expend, for any of the offices or bureaus of the Navy Department at Washington, any sum out of appropriations made for the Naval Establishment for any of the purposes mentioned or authorized in this paragraph.

The amendment was agreed to.

The next amendment was, under the head of "Department of the Interior," on page 91, line 20, after "$2,500," to strike out: "Two special inspectors, whose employment shall be limited to the inspection of offices and the work in the several offices under the control of the department, at $2,500 each," so as to read:

Office of the Secretary: Secretary of the Interior, $12,000; First Assistant Secretary, $5,000; Assistant Secretary, $4,500; chief clerk, including $500 as superintendent of buildings, who shall be chief executive officer of the department and who may be designated by the Secretary to sign official papers and documents during the temporary absence of the Secretary and the Assistant Secretaries, $4,000; assistant to the Secretary, $2,750; assistant attorney, $2,500.

Mr. SMOOT. Mr. President, from information I have received, I think the committee acted on that amendment and struck it out upon misinformation.

Mr. MARTIN of Virginia. I think myself, Mr. President, that it would be well if the committee amendment were rejected in that case.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the committee.

The amendment was rejected.

The reading of the bill was resumed.

The next amendment was, in the item for the maintenance of the office of the Secretary of the Interior, on page 92, line 21, after the words "in all," to strike out "$275,820" and insert "$270,820," so as to read:

Engineer, $1,200; assistant engineer, $1,000; 7 firemen; clerk to sign, under the direction of the Secretary, in his name and for him; his approval of all tribal deeds to allottees and deeds for town lots made and executed according to law for any of the Five Civilized Tribes of Indians in the Indian Territory, $1,200; in all, $270,820.

Mr. MARTIN of Virginia. That amendment is a mere matter of total, but the amendment just rejected necessitates the rejection of this also. I ask unanimous consent that the clerks may readjust the totals if any mistake is made.

The PRESIDING OFFICER. Without objection, that order will be made. The question is on agreeing to the amendment.

The amendment was rejected.

The reading of the bill was resumed.

The next amendment was, on page 94, line 13, after the word "clerks," to strike out "twenty-seven" and insert "twenty-nine"; in line 14, before the words "of class 3," to strike out "fifty-one" and insert "fifty-two"; in line 15, before the words "of class 2," to strike out "seventy-four" and insert "seventy-seven"; in line 16, before the words "of class 1," to strike out "seventy-seven" and insert "eighty-two"; in the same line, before the words "at $1,000," to strike out "sixty-five" and insert "sixty-six"; in line 17, before the word "copyists," where it occurs the first time, to strike out "sixty-five" and insert "seventy-one"; in the same line, before the word "copyists," where it occurs the second time, to strike "twenty-six" and insert "twenty-nine"; and, on page 95, line 2, after the words "in all," to strike out "$631,250" and insert "$655,210," so as to make the clause read:

General Land Office: Commissioner, $5,000; assistant commissioner, $3,500; chief clerk, $3,000; chief law clerk, $2,500; 2 law clerks, at $2,200 each; 3 law examiners of surveyors general and district land offices, at $2,000 each; recorder, $2,000; chiefs of divisions—one of surveys $2,750, one $2,400, ten at $2,000 each; assistant chief of division, $2,000; law examiners—13 at $2,000 each, 10 at $1,800 each, 18 at $1,600 each; clerks 29 of class 4, 52 of class 3, 77 of class 2, 82 of class 1, 66 at $1,000 each; 71 copyists; 29 copyists, at $720 each; 2 messengers; 10 assistant messengers; messenger boys—10 at $600 each, 6 at $480 each; 6 skilled laborers, who may act as assistant messengers when required, at $660 each; 16 laborers; laborer, $480; packer, $720; depositary acting for the commissioner as receiver of public moneys, $2,000, who may, with the approval of the commissioner, designate a clerk of the General Land Office to act as such depositary in his absence; clerk and librarian, $1,000; in all, $655,210.

The amendment was agreed to.

The next amendment was, on page 95, line 14, after the words "General Land Office," to strike out "$6,000" and insert "$8,000," so as to make the clause read:

For per diem in lieu of subsistence, at not exceeding $4, pursuant to section 13 of the sundry civil act approved August 1, 1914, of examiners and of clerks detailed to inspect offices of United States surveyors general and other offices in public-land service, to investigate fraudulent land entries, trespasses on the public lands, and cases of official misconduct, actual necessary expenses of transportation, including necessary sleeping-car fares, and for employment of stenographers and other assistants when necessary to the efficient conduct of examinations, and when authorized by the Commissioner of the General Land Office, $8,000.

The amendment was agreed to.

The next amendment was, on page 96, after line 2, to strike out:

For separate State and Territorial maps of public-land States, including maps showing areas designated by the Secretary of the Interior under the enlarged homestead acts prepared in the General Land Office, $3,000.

And to insert:

For maps showing areas designated by the Secretary of the Interior under the enlarged homestead acts, prepared in the General Land Office, $1,500.

The amendment was agreed to.

The next amendment was, on page 97, after line 20, to strike out:

Appointments shall not be made to any of the positions herein appropriated for in the classified service of the Bureau of Pensions not actually filled June 30, 1916, nor shall more than 25 per cent of other vacancies actually occurring in any grade in the classified service of that bureau during the fiscal year 1917 be filled by original appointment or promotion. The salaries or compensation of all places which may not be filled as hereinabove provided for shall not be available for expenditure, but shall lapse and shall be covered into the Treasury.

The amendment was agreed to.

The next amendment was, on page 98, line 22, after the word "each," to strike out "examiner of interferences, $2,700" and insert "two examiners of interferences, at $2,700 each"; in line 25, after "$2,400," to insert "two second assistants, at $2,100 each"; and on page 99, line 19, after the words "in all," to strike out "$1,375,040" and insert "$1,381,940," so as to make the clause read:

Patent Office: Commissioner, $5,000; first assistant commissioner, $4,500; assistant commissioner, $3,500; chief clerk (who shall be qualified to act as principal examiner), $3,000; 5 law examiners, at $2,750 each; examiner of classification, $3,600; 5 examiners in chief, at $3,500 each; 2 examiners of interferences, at $2,700 each; examiners of trade-marks and designs—1 $2,700, first assistant $2,400, 2 second assistants at $2,100 each, 6 assistants at $1,500 each; examiners—43 principals at $2,700 each, 86 first assistants at $2,400 each, 86 second assistants at $2,100 each, 86 third assistants at $1,800 each, 86 fourth assistants at $1,500 each; financial clerk, who shall give bonds in such amount as the Secretary of the Interior may determine, $2,250; librarian, who shall be qualified to act as an assistant examiner, $2,000; 6 chiefs of divisions, at $2,000 each; 3 assistant chiefs of divisions, at $1,800 each; private secretary, to be selected and appointed by the commissioner, $1,800; translator of languages, $1,800; clerks—9 of class 4, 9 of class 3, 17 of class 2, 130 of class 1, 91 at $1,000 each; 3 skilled draftsmen, at $1,200 each; 4 draftsmen, at $1,000 each; 90 copyists; 50 copyists, at $720 each; 4 messengers; 25 assistant messengers; laborers—14 at $600 each, 42 at $540 each; 40 messenger boys, at $420 each; in all, $1,381,940.

The amendment was agreed to.

The next amendment was, on page 99, after line 19, to insert:

For special and temporary services of typewriters certified by the Civil Service Commission, who may be employed in such numbers at $2.50 per diem as may, in the judgment of the Commissioner of Patents, be necessary to keep current the work of furnishing manuscript copies of records, $10,000.

The amendment was agreed to.

The next amendment was, on page 100, line 6, after the word "papers," to strike out "$125,000" and insert "$140,000," so as to make the clause read:

For producing copies of weekly issue of patents, designs, and trade-marks; production of copies of drawings and specifications of exhausted patents and other papers, $140,000.

The amendment was agreed to.

The next amendment was, under the head of "Offices of Surveyors General," on page 106, line 5, after the word "Clerks," to strike out "$16,000" and insert "$17,240," so as to make the clause read:

Clerks, $17,240.

The amendment was agreed to.

The next amendment was, on page 106, line 6, after the words "in all," to strike out "$20,000" and insert "$21,240," so as to make the clause read:

Contingent expenses, $1,000; in all, $21,240.

The amendment was agreed to.

The next amendment was, on page 107, after line 2, to strike out:

The use of the fund created by the act of July 2, 1864 (13 Stat., p. 365), and the act of March 2, 1895 (28 Stat., p. 937), for office work in the surveyor generals' office and in the General Land Office is ex-

tended for one year from June 30, 1916: *Provided*, That not to exceed $25,000 of this fund shall be used for the purposes above indicated.

The amendment was agreed to.

The next amendment was, under the head of "Post Office Department," in the item of appropriation for the maintenance of the Office of the Postmaster General, on page 110, line 2, before the word "dynamo," to strike out "three" and insert "two"; in the same line, after the word "each," to insert "(one omitted)"; and in line 11, after the words "in all," to strike out "$191,450" and insert "$190,550," so as to read:

Electrician, $1,400; 2 assistant electricians, at $1,200 each; 2 dynamo tenders, at $900 each (1 omitted); fireman, who shall be a blacksmith, and fireman, who shall be a steam fitter, at $900 each; 10 elevator conductors, at $720 each; 15 firemen; carpenters—one $1,200, one $1,000, two at $900 each; captain of the watch, $1,000; additional to 2 watchmen acting as lieutenant of watchmen, at $120 each; 22 watchmen; foreman of laborers, $800; 43 laborers; plumber, $900; awning maker, $900; female laborers—one $540, 3 at $500 each, 5 at $480 each; 43 charwomen; in all $190,550.

The amendment was agreed to.

The next amendment was, on page 111, line 12, after the word "building," to strike out "Three assistant engineers, at $900 each," and insert "Two assistant engineers, at $1,000 each"; in line 17, after the words "assistant plumber," to strike out "$720" and insert "$840"; and in line 19, after the words "in all," to strike out "$38,700" and insert "$38,120," so as to make the clause read:

Washington, D. C., post-office building: Two assistant engineers, at $1,000 each; 3 assistant electricians, at $900 each; 10 elevator conductors, at $720 each; 3 oilers, at $720 each; 12 watchmen; additional to 1 watchman acting as lieutenant of watch, $120; 15 laborers; assistant plumber, $840; 2 female laborers, at $480 each; 15 charwomen; in all, $38,120.

The amendment was agreed to.

The next amendment was, on page 112, line 10, after the word "clerks," to strike out "17 of class 4 (2 transferred from Second Assistant's office, 2 transferred from Fourth Assistant's office), 23 of class 3 (3 transferred from Second Assistant's office, 1 transferred from Fourth Assistant's office, and 1 submitted at $1,400), 37 of class 2 (1 in lieu of 1 at $1,600, 2 transferred from Postmaster General's office, 4 from Second Assistant's office, 9 from Fourth Assistant's office, and 1 submitted at $1,200), 50 of class 1 (1 in lieu of 1 at $1,400, 5 transferred from Second Assistant's office, 26 transferred from Fourth Assistant's office, 3 submitted at $1,000 each, and 1 at $900), 34 at $1,000 each (3 in lieu of 3 at $1,200 each, 3 transferred from Second Assistant's office, 16 transferred from Fourth Assistant's office, and 3 submitted at $900 each), 20 at $900 each (3 in lieu of 3 at $1,000 each, 1 in lieu of 1 at $1,200, 1 transferred from Second Assistant's office, 6 transferred from Fourth Assistant's office, 2 submitted at $840 each, and 3 at $720 each); 4 messengers (2 in lieu of 2 at $900 each and 1 submitted at $660); 8 assistant messengers (3 in lieu of 3 at $900 each, 1 transferred from Second Assistant's office, 2 transferred from Fourth Assistant's office); 7 laborers (1 in lieu of 1 at $840, 6 transferred from Fourth Assistant's office); 3 female laborers at $480 each (formerly pages in Fourth Assistant's office); in all, $278,630," and to insert "16 of class 4 (1 transferred from Second Assistant's office, 2 transferred from Fourth Assistant's office), 24 of class 3 (4 transferred from Second Assistant's office, 1 transferred from Fourth Assistant's office, 1 submitted at $1,400, and 1 submitted at $1,200), 36 of class 2 (1 in lieu of 1 at $1,600, 2 transferred from Postmaster General's office, 3 from Second Assistant's office, 9 from Fourth Assistant's office, 1 submitted at $1,200, and 1 transferred to Postmaster General's office), 50 of class 1 (1 in lieu of 1 at $1,600, 1 in lieu of 1 at $1,400, 5 transferred from Second Assistant's office, 26 transferred from Fourth Assistant's office, 4 submitted at $1,000 each, and 1 at $900), 36 at $1,000 each (4 in lieu of 4 at $1,200 each, 5 transferred from Second Assistant's office, 16 transferred from Fourth Assistant's office, and 3 submitted at $900 each), 19 at $900 each (3 in lieu of 3 at $1,000 each, 1 in lieu of 1 at $1,200, 1 transferred from Division of Postal Savings, 6 transferred from Fourth Assistant's office, 2 submitted at $840 each, and 4 at $720 each); 4 messengers (2 in lieu of 2 at $900 each and 1 submitted at $660); 7 assistant messengers (4 in lieu of 3 at $900 each, 2 transferred from Fourth Assistant's office); 7 laborers (1 in lieu of 1 at $840, 6 transferred from Fourth Assistant's office); 3 female laborers at $480 each (transferred from Fourth Assistant's office); in all, $277,410," so as to make the clause read:

Office First Assistant Postmaster General: First Assistant Postmaster General, $5,000; chief clerk, $2,500; Division of Post Office Service—superintendent $4,000 (formerly Superintendent of Division of Salaries and Allowances), assistant superintendent $3,000 (formerly Superintendent Division of City Delivery), assistant superintendent $2,250 (formerly Assistant Superintendent Division of Salaries and Allowances), 2 assistant superintendents $2,000 each (1 formerly Assistant Superintendent Division of City Delivery, 1 formerly Superintendent Division of Miscellaneous Transportation, Second Assistant's office); Division of Postmasters' Appointments—superintendent $3,000, 2 assistant superintendents at $2,000 each, Superintendent Division of Dead Letters $2,500 (transferred from Fourth Assistant's office), Chief Division of Correspondence $2,000; clerks—16 of class 4 (1 transferred from Second Assistant's office, 2 transferred from Fourth Assistant's office), 24 of class 3 (4 transferred from Second Assistant's office, 1 transferred from Fourth Assistant's office, 1 submitted at $1,400, and 1 submitted at $1,200), 36 of class 2 (1 in lieu of 1 at $1,600, 2 transferred from Postmaster General's office, 3 from Second Assistant's office, 9 from Fourth Assistant's office, 1 submitted at $1,200, and 1 transferred to Postmaster General's office), 50 of class 1 (1 in lieu of 1 at $1,600, 1 in lieu of 1 at $1,400, 5 transferred from Second Assistant's office, 26 transferred from Fourth Assistant's office, 4 submitted at $1,000 each, and 1 at $900), 36 at $1,000 each (4 in lieu of 4 at $1,200 each, 5 transferred from Second Assistant's office, 16 transferred from Fourth Assistant's office, and 3 submitted at $900 each), 19 at $900 each (3 in lieu of 3 at $1,000 each, 1 in lieu of 1 at $1,200, 1 transferred from Division of Postal Savings, 6 transferred from Fourth Assistant's office, 2 submitted at $840 each, and 4 at $720 each); 4 messengers (2 in lieu of 2 at $900 each and 1 submitted at $660); 7 assistant messengers (4 in lieu of 3 at $900 each, 2 transferred from Fourth Assistant's office); 7 laborers (1 in lieu of 1 at $840, 6 transferred from Fourth Assistant's office); 3 female laborers at $480 each (transferred from Fourth Assistant's office); in all, $277,410.

The amendment was agreed to.

The next amendment was, on page 114, line 17, after the word "clerks," to strike out "11 of class 4 (2 transferred to First Assistant's office), 19 of class 3 (3 transferred to First Assistant's office and 1 submitted at $1,200), 10 of class 2 (1 transferred to Postmaster General's office, 4 transferred to First Assistant's office, and 3 submitted at $1,200), 10 of class 1 (1 in lieu of 1 at $1,600, 3 in lieu of 3 at $1,400, 1 transferred to Postmaster General's office, 5 transferred to First Assistant's office, 2 submitted at $1,000 each, and 1 at $900), 10 at $1,000 each (2 in lieu of 2 at $1,200, 3 transferred to First Assistant's office, and 1 submitted at $900), 8 at $900 each (1 in lieu of 1 at $1,200, 1 in lieu of 1 at $1,000, 1 transferred to First Assistant's office); messenger in charge of mails, $900; 4 assistant messengers (1 in lieu of clerk, $900, transferred from Division of Railway Mail Service, 1 transferred to First Assistant's offices); page, $360; in all, $115,390"; and to insert "11 of class 4 (1 transferred to First Assistant's office, and 1 omitted), 18 of class 3 (4 transferred to First Assistant's office and 1 submitted at $1,200), 12 of class 2 (1 transferred to Postmaster General's office, 3 transferred to First Assistant's office, and 2 submitted at $1,200), 8 of class 1 (1 in lieu of 1 at $1,600, 2 in lieu of 2 at $1,400, 1 transferred to Postmaster General's office, 5 transferred to First Assistant's office, 1 submitted at $1,000, and 3 omitted), 8 at $1,000 each (1 in lieu of 1 at $1,200, 5 transferred to First Assistant's office), 7 at $900 each; messenger in charge of mails, $900; 4 assistant messengers (1 in lieu of clerk, $900, transferred from Division of Railway Mail Service, 1 omitted); page, $360; in all, $111,190"; so as to make the clause read:

Office Second Assistant Postmaster General: Second Assistant Postmaster General, $5,000; chief clerk, $2,500; Division of Railway Adjustments—superintendent $3,000, assistant superintendent $2,250; Division of Foreign Mails—superintendent $3,000, assistant superintendent, $2,000; clerks—11 of class 4 (1 transferred to first assistant's office and 1 omitted), 18 of class 3 (4 transferred to first assistant's office and 1 submitted at $1,200), 12 of class 2 (1 transferred to Postmaster General's office, 3 transferred to first assistant's office, and 2 submitted at $1,200), 8 of class 1 (1 in lieu of 1 at $1,600, 2 in lieu of 2 at $1,400, 1 transferred to Postmaster General's office, 5 transferred to first assistant's office, 1 submitted at $1,000, and 3 omitted), 8 at $1,000 each (1 in lieu of 1 at $1,200, 5 transferred to first assistant's office), 7 at $900 each; messenger in charge of mails, $900; 4 assistant messengers (1 in lieu of clerk, $900, transferred from Division of Railway Mail Service, 1 omitted); page, $360; in all, $111,190.

The amendment was agreed to.

The next amendment was, in the item of appropriation for the maintenance of the office of the Fourth Assistant Postmaster General, on page 119, line 8, before the word "laborers," to strike out "21" and insert "19"; in line 10, before the word "omitted," to strike out "2" and insert "4," and, in the same line, after the words "in all," to strike out "$311,070" and insert "$309,750," so as to read:

Eight assistant messengers (1 submitted at $660, 2 transferred to first assistant's office); 19 laborers (1 in lieu of assistant messenger, 6 transferred to first assistant's office, and 4 omitted); in all, $309,750.

The amendment was agreed to.

The next amendment was, on page 120, line 10, after the word "cabinets," to strike out "$7,000" and insert "$12,000," so as to make the clause read:

For furniture and filing cabinets, $12,000.

The amendment was agreed to.

The next amendment was, under the head of "Department of Justice," on page 123, after line 19, to insert:

The Attorney General is authorized to enter into a contract for the lease of a modern fireproof office building for the use of the Department of Justice, for a period not to exceed five years, renewable, at the

option of the Government, for an additional period not exceeding five years, at an annual rental not exceeding $36,000, and at a rate per annum per square foot of available floor space not to exceed 36.3 cents.

The amendment was agreed to.

The Secretary read the next paragraph of the bill, as follows:

Office of Solicitor of the Treasury: Solicitor, $5,000; assistant solicitor, $3,000; chief clerk, $2,000; 1 law clerk, $2,000; 2 docket clerks, at $2,000 each; clerks—2 of class 4, 2 of class 3, 2 of class 2; assistant messenger; laborer; in all, $26,980.

Mr. KERN. I desire to offer an amendment at that point, and I will present it now if it is in order to do so.

Mr. MARTIN of Virginia. I suggest to the Senator from Indiana to wait until we get through with the committee amendments.

The PRESIDING OFFICER. The agreement was that the committee amendments should be first considered, unless the Senator has an amendment to the committee amendment.

The reading of the bill was continued.

The next amendment was, under the head of "Department of Commerce," on page 124, line 25, after the word "clerks," to strike out "nine" and insert "ten"; on page 125, line 7, after the words "assistant engineer," to strike out "$800" and insert "$1,000"; and in line 14, after the words "in all," to strike out "$179,140" and insert "$181,140," so as to make the clause read:

Office of the Secretary: Secretary of Commerce, $12,000; Assistant Secretary, $5,000; private secretary to the Secretary, $2,500; confidential clerk to the Secretary, $1,800; private secretary to Assistant Secretary, $2,100; chief clerk and superintendent, $3,000; disbursing clerk, $3,000; chiefs of divisions—appointments $2,500, publications, $2,500, supplies $2,100; assistant chief, division of publications, $2,000; clerks—10 of class 4, 9 of class 3, 9 of class 2, 19 of class 1 (4 transferred from Census Office), 11 at $1,000 each, 11 at $900 each (1 transferred from Census Office); 2 telephone operators, at $720 each; messenger to the Secretary, $1,000; 5 messengers; 7 assistant messengers; 8 messenger boys, at $480 each (1 transferred from Census Office); engineer, $1,100; assistant engineer, $1,000; skilled laborers—1 at $1,000, 1 at $900 (transferred from Census Office), 2 at $840 each, 5 at $720 each (1 in lieu of 1 watchman at $720); 3 elevator conductors, at $720 each; 3 firemen; 13 laborers; 2 laborers, at $480 each; cabinetmaker, $1,000; carpenter, $900; chief watchman, $900; 9 watchmen; 25 charwomen; in all, $181,140.

The amendment was agreed to.

The next amendment was, on page 125, line 22, after the word "draftsmen," to strike out "one $1,800" and insert "two at $1,800 each," and in line 24, after the words "in all," to strike out "$64,030" and insert "$65,830," so as to make the clause read:

Bureau of Lighthouses: Commissioner, $5,000; deputy commissioner, $4,000; chief constructing engineer, $4,000; superintendent of naval construction, $3,000; chief clerk, $2,400; clerks—1 $2,000, 2 of class 4, 2 of class 3, 2 of class 2, 5 of class 1, 7 at $1,000 each, 2 at $900 each, 1 $840; messenger; assistant messenger; messenger boy, $480; assistant engineers—1 $3,000, 1 $2,400, 1 $2,250; draftsmen—2 at $1,800 each, 1 $1,560, 1 $1,500, 1 $1,440, 2 at $1,200 each; in all, $65,830.

The amendment was agreed to.

The next amendment was, on page 126, line 5, before the words "of class one," to strike out "two hundred and forty-three" and insert "two hundred and eighty-three"; in line 8, before the words "at $1,000," to strike out "one hundred and thirteen" and insert "eighty-three"; in the same line, before the words "at $900," to strike out "ninety-one" and insert "eighty-one"; in line 11, before the words "three messengers," to strike out "two at $720 each" and insert "one $720"; in line 12, before the word "unskilled," to strike out "three" and insert "four"; and in line 14, after the words "in all," to strike out "$664,460" and insert "$673,460," so as to make the clause read:

Census Office: Director, $6,000; four chief statisticians, at $3,000 each; chief clerk, $2,500; geographer, $2,000; stenographer, $1,500; nine expert chiefs of divisions, at $2,000 each; clerks—15 of class 4, 25 of class 3, 40 of class 2, 283 of class 1 (4 transferred to Secretary's office), 83 at $1,000 each, 81 at $900 each (1 transferred to Secretary's office); skilled laborers—two at $900 each (one transferred to Secretary's office), one $720; three messengers; five assistant messengers; four unskilled laborers, at $720 each; three messenger boys, at $480 each (one transferred to Secretary's office); in all, $673,460.

The amendment was agreed to.

The next amendment was, on page 127, line 6, after the word "Statistics," to insert "*Provided further*, That hereafter the Director of the Census may procure the information for the tobacco reports required by this act and the act approved April 30, 1912, by mail or by special agents or by other employees of the Bureau of the Census," so as to make the clause read:

For securing information for census reports, provided for by law, semimonthly reports of cotton production, periodical reports of stocks of baled cotton in the United States and of the domestic and foreign consumption of cotton; quarterly reports of tobacco; per diem compensation of special agents and expenses of same and of detailed employees, whether employed in Washington, D. C., or elsewhere; the cost of transcribing State, municipal, and other records, temporary rental of quarters outside of the District of Columbia, for supervising special agents, and employment by them of such temporary service as may be necessary in collecting the statistics required by law, including $15,000 for collecting tobacco statistics authorized by law in addition to any other fund available therefor: *Provided*, That hereafter there shall be in the official organization of the bureau a separate, distinct, and independent division called the division of cotton and tobacco statistics: *Provided further*, That hereafter the Director of the Census may procure the information for the tobacco reports required by this act and the act approved April 30, 1912, by mail or by special agents or by other employees of the Bureau of the Census: *Provided further*, That the compensation of not to exceed five special agents provided for in this paragraph may be fixed at a rate not to exceed $8 per day, $512,000.

The amendment was agreed to.

The next amendment was, on page 128, line 8, after the words "United States," to insert "including exchange on official checks," and in line 9, after the word "checks," to strike out "$125,000" and insert "$150,000," so as to make the clause read:

To further promote and develop the foreign and domestic commerce of the United States, including exchange on official checks, $150,000, to be expended under the direction of the Secretary of Commerce: *Provided*, That not exceeding $3,000 of this sum may be expended for the purchase of documents, manuscripts, plans, specifications, and other publications necessary for the promotion of our commercial interests: *Provided further*, That out of this sum there may be expended $2,000 for the employment of an editorial assistant, and $1,600 for an editorial clerk, in Washington, D. C., to edit the reports of the field agents employed under this appropriation.

The amendment was agreed to.

The next amendment was, on page 130, line 11, after the words "United States," to insert "exchange on official checks," so as to make the clause read:

Commercial attachés: For commercial attachés, to be appointed by the Secretary of Commerce, after examination to be held under his direction to determine their competency, and to be accredited through the State Department, whose duties shall be to investigate and report upon such conditions in the manufacturing industries and trade of foreign countries as may be of interest to the United States; and for one clerk to each of said commercial attachés to be paid a salary not to exceed $1,500 each; and for necessary traveling and subsistence expenses, rent, purchase of reports, books of reference and periodicals, travel to and from the United States, exchange on official checks, and all other necessary expenses not included in the foregoing; such commercial attachés shall serve directly under the Secretary of Commerce and shall report directly to him, $100,000.

The amendment was agreed to.

The next amendment was, on page 132, line 3, after the date "1911," to strike out "$84,000" and insert "$93,000," so as to make the clause read:

Clerk hire, service at large: For compensation, not exceeding $1,500 a year to each person, of clerks to boards of steamboat inspectors, to be appointed by the Secretary of Commerce in accordance with the provisions of section 4414, Revised Statutes, and the acts of April 9, 1906, and March 4, 1911, $93,000.

The amendment was agreed to.

The next amendment was, on page 132, line 18, after the word "Commissioner," to strike out "$4,000" and insert "$4,500"; in line 21, before the words "at $1,000," to strike out "two" and insert "four"; and in line 24, after the words "in all," to strike out "$35,780" and insert "$38,280," so as to make the clause read:

Bureau of Navigation: Commissioner, $4,500; deputy commissioner, $2,400; chief clerk, $2,000; clerk to commissioner, $1,600; clerks—2 of class 4, 2 of class 3, 3 of class 2, 4 of class 1, 4 at $1,000 each, 6 at $900 each; 2 stenographers and typewriters to be employed not to exceed six months at the rate of $75 per month each; 2 messengers; in all, $38,280.

The amendment was agreed to.

The next amendment was, on page 124, line 3, after the word "boats," to strike out "$22,000" and insert "$33,500," so as to make the clause read:

Enforcement of navigation laws: To enable the Secretary of Commerce to provide and operate such motor boats and employ thereon such persons as may be necessary for the enforcement, under his direction by customs officers, of laws relating to navigation and inspection of vessels, boarding of vessels, and counting of passengers on excursion boats, $33,500.

The amendment was agreed to.

The next amendment was, on page 134, line 11, after the word "therewith," to strike out "$15,000" and insert "$18,000," so as to make the clause read:

To enable the Secretary of Commerce to employ temporarily, in addition to those now provided for by law, such other persons as may be necessary, of whom not more than two at any one time may be employed in the District of Columbia, to enforce the laws to prevent overcrowding of passenger and excursion vessels, and all necessary expenses in connection therewith, $18,000.

The amendment was agreed to.

The next amendment was, on page 134, line 22, after the word "foregoing," to strike out "$45,000" and insert "$49,200," so as to make the clause read:

Wireless-communication laws: To enable the Secretary of Commerce to enforce the acts of Congress "to require apparatus and operators for radio communication on certain ocean steamers" and "to regulate radio communication" and carry out the international radio telegraphic convention, and to employ such persons and means as may be necessary, this employment to include salaries of employees in Washington not

exceeding $7,150, traveling and subsistence expenses, purchase and exchange of instruments, technical books, rent, and all other miscellaneous items and necessary expenses not included in the foregoing, $49,200.

The amendment was agreed to.

The next amendment was, in the item of appropriation for the maintenance of the Bureau of Standards, on page 135, line 12, before the words "of class 4," to strike out "one" and insert "two," and in the same line, before the words "of class 3," to strike out "one" and insert "two," so as to read:

Clerks—2 of class 4, 2 of class 3, 2 of class 2, 6 of class 1, 5 at $1,000 each, 5 at $900 each, 2 at $720 each.

The amendment was agreed to.

The next amendment was, in the item of appropriation for the maintenance of the Bureau of Standards, on page 136, line 4, after the words "in all," to strike out "$310,120" and insert "$313,520," so as to read:

Ten laborers; janitors—three at $660 each, one $600; two female laborers, at $360 each; in all, $313,520.

The amendment was agreed to.

The next amendment was, on page 138, line 1, after the word "field," to strike out "$100,000" and insert "$125,000," so as to make the clause read:

For continuation of the investigation of structural materials, such as stone, clays, cement, and so forth, including personal services in the District of Columbia and in the field, $125,000.

The amendment was agreed to.

The next amendment was, on page 138, line 12, after the word "field," to strike out "$25,000" and insert "$40,000," so as to make the clause read:

For investigation of fire-resisting properties of building materials and conditions under which they may be most efficiently used, and for the standardization of types of appliances for fire prevention, including personal services in the District of Columbia and in the field, $40,000.

The amendment was agreed to.

The next amendment was, on page 138, line 18, after the word "field," to strike out "$25,000" and insert "$40,000," so as to make the clause read:

For investigation of the standards and methods of measurements of public utilities, such as gas, electric light, electric power, water, telephone, and electric railway service, and the solution of the problems which arise in connection with standards in such service, including personal services in the District of Columbia and in the field, $40,000.

The amendment was agreed to.

The next amendment was, on page 139, line 12, before the word "paint," to strike out "including cottonseed oil," and in line 14, after the word "field," to strike out "$10,000" and insert "$5,000," so as to make the clause read:

To develop color standards and methods of manufacture and of color measurement, with special reference to their industrial use in standardization and specification of colorants such as dyestuffs, inks, and pigments, and other products, paint, paper, and textiles, in which color is a pertinent property, including personal services in the District of Columbia and in the field, $5,000.

The amendment was agreed to.

The next amendment was, on page 139, after line 14, to insert:

To study methods of measurement and technical processes used in the manufacture of pottery, brick, tile, terra cotta, and other clay products, and the study of the properties of the materials used in that industry, including personal services in the District of Columbia and in the field, $5,000.

Mr. SMOOT. I ask the chairman of the committee if he will not accept an amendment making the sum $10,000, and let it go into conference?

Mr. MARTIN of Virginia. I have no objection.

Mr. SMOOT. I have some letters here that I wish to present to the conferees.

Mr. MARTIN of Virginia. Let it go to conference.

The PRESIDING OFFICER. The amendment to the amendment will be stated.

The SECRETARY. Change the amount from $5,000 to $10,000 in line 19.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

The reading of the bill was continued.

The next amendment was, on page 140, line 18, after the word "field," to strike out "$10,000" and insert "$15,000," so as to make the clause read:

To develop methods of testing and standardizing machines, motors, tools, measuring instruments, and other apparatus and devices used in mechanical, hydraulic, and aeronautic engineering; for the comparative study of types of apparatus and methods of operation, and for the establishment of standards of performance; for the accurate determination of fundamental physical constants involved in the proper execution of this work; and for the scientific experiments and investigations needed in solving the problems which may arise in conection therewith, especially in response to the requirements of aeronautics and aviation for information of a purely scientific nature, including personal services in the District of Columbia and in the field, $15,000.

The amendment was agreed to.

The next amendment was under the head of "Department of Labor," on page 147, line 20, after the words "in all," to strike out "$36,100" and insert "$38,100, of which sum not exceeding $2,000, or so much thereof as may be necessary, which is made immediately available, shall be used for the repairs to the Mills Building which the Government is required to make under the terms of the lease," so as to make the clause read:

Contingent expenses, Department of Labor: For contingent and miscellaneous expenses of the offices and bureaus of the department, for which appropriations for contingent and miscellaneous expenses are not specifically made, including the purchase of stationery, furniture, and repairs to the same, carpets, matting, oilcloth, file cases, towels, ice, brooms, soap, sponges, laundry, street car tickets, not exceeding $125, lighting and heating; maintenance and repair of a motor truck; purchase, exchange, maintenance, and repair of passenger-carrying vehicle for use of the Secretary and such other officials as exigency may require for official purposes; freight and express charges, postage to foreign countries, telegraph and telephone service, typewriters, adding machines and other labor-saving devices, including their exchange; repairs to the building occupied by the office of the Secretary of Labor; purchase of law books, books of reference, and periodicals not exceeding $300; in all, $38,100, of which sum not exceeding $2,000, or so much thereof as may be necessary, which is made immediately available, shall be used for the repairs to the Mills Building which the Government is required to make under the terms of the lease; and in addition thereto such sum as may be necessary, not in excess of $13,500, to facilitate the purchase, through the central purchasing office, as provided in the act of June 17, 1910 (36 Stat. L., p. 531), of certain supplies for the Immigration Service, shall be deducted from the appropriation "Expenses of regulating immigration" made for the fiscal year 1917 and added to the appropriation "Contingent expenses, Department of Labor," for that year; and the total sum thereof shall be and constitute the appropriation for contingent expenses for the Department of Labor, to be expended through the central purchasing office (Division of Publications and Supplies), Department of Labor.

The amendment was agreed to.

The next amendment was, on page 148, after line 17, to insert:

The Secretary of Labor is authorized to enter into a contract for the lease of a modern fireproof building for the use of the Department of Labor for a period not to exceed five years, renewable, at the option of the Government, for an additional period not exceeding five years, at an annual rental not exceeding $24,000 and at a rate per annum per square foot of available floor space not to exceed 36.3 cents.

The amendment was agreed to.

The next amendment was, under the head of "Judicial," on page 149, line 3, after "$4,500," to insert "9 law clerks, 1 for the Chief Justice and 1 for each Associate Justice, at not exceeding $3,600 each per annum," and in line 7, after the words "in all," to strike out "$153,500" and insert "$185,900," so as to make the clause read:

Supreme Court: Chief Justice, $15,000; 8 Associate Justices, at $14,500 each; marshal, $4,500; 9 law clerks, 1 for the Chief Justice and 1 for each Associate Justice, at not exceeding $3,600 each per annum; 9 stenographic clerks, 1 for the Chief Justice and 1 for each Associate Justice, at not exceeding $2,000 each; in all, $185,900.

The amendment was agreed to.

The next amendment was, in section 4, on page 153, line 13, after the word "That," to strike out "appropriations in this act shall not" and insert "no part of any money appropriated by this or any other act shall," and in line 26, after the word "schools," to insert "*Provided*, That in construing this section the Commissioner of Patents shall advise the Comptroller of the Treasury as to whether the changes in any typewriter are of such structural character as to constitute a new machine not within the limitations of this section," so as to make the section read:

SEC. 4. That no part of any money appropriated by this or any other act shall be used during the fiscal year 1917 for the purchase of any typewriting machine at a price in excess of the lowest price paid by the Government of the United States for the same make and substantially the same model of machine during the fiscal year 1915; such price shall include the value of any typewriting machine or machines given in exchange, but shall not apply to special prices granted on typewriting machines used in schools of the District of Columbia or of the Indian Service, the lowest of which special prices paid for typewriting machines shall not be exceeded in future purchases for such schools: *Provided*, That in construing this section the Commissioner of Patents shall advise the Comptroller of the Treasury as to whether the changes in any typewriter are of such structural character as to constitute a new machine not within the limitations of this section.

The amendment was agreed to.

The next amendment was, in section 5, page 154, line 11, after the word "made," to insert "*Provided*, That nothing in this section shall be deemed to apply to the investigation of any matter or the preparation, prosecution, or defense of any suit by the Department of Justice," so as to make the section read:

SEC. 5. That in expending appropriations made in this act persons in the classified service at Washington, D. C., shall not be detailed for service outside of the District of Columbia except for or in connection with work pertaining directly to the service at the seat of government of the department or other Government establishment from which the detail is made: *Provided*, That nothing in this section shall be deemed to apply to the investigation of any matter or the preparation, prosecution, or defense of any suit by the Department of Justice.

The amendment was agreed to.

The next amendment was, on page 154, after line 14, to insert as a new section the following:

SEC. 6. That no money appropriated by this or any other act shall be available for payment to any person receiving more than one salary when the combined amount of said salaries exceeds the sum of $2,000

per annum, but this shall not apply to retired officers of the Army or Navy whenever they may be elected to public office or whenever the President shall appoint them to office by and with the advice and consent of the Senate.

Mr. LODGE, Mr. SWANSON, and Mr. KERN addressed the Chair.

Mr. LODGE. I merely wish to offer an amendment to the amendment. I dare say the Senator from Virginia rose to offer the same amendment I was going to propose.

Mr. SWANSON. About the Marine Corps?

Mr. LODGE. To insert, after the word "Navy," the words "Marine Corps."

Mr. SWANSON. And, in line 20, "appointed or."

Mr. LODGE. "Appointed or" before "elected."

Mr. OVERMAN. What is the amendment?

Mr. LODGE. The amendment is to insert, after "retired officers of the Army or Navy," the words "or Marine Corps," and, of course, it ought also to read "whenever they may be appointed or elected to public office."

The PRESIDING OFFICER. The proposed amendment will be read.

The SECRETARY. On page 154, in section 6, after the word "Army," insert a comma and strike out the word "or"; after the word "Navy" insert the words "or Marine Corps"; and, in line 20, before the word "elected," insert "appointed or"; so as to make the section read:

SEC. 6. That no money appropriated by this or any other act shall be available for payment to any person receiving more than one salary when the combined amount of said salaries exceeds the sum of $2,000 per annum, but this shall not apply to retired officers of the Army, Navy, or Marine Corps whenever they may be appointed or elected to public office or whenever the President shall appoint them to office by and with the advice and consent of the Senate.

Mr. MARTIN of Virginia. I think that is a proper amendment.

The amendment to the amendment was agreed to.

The amendment as amended was agreed to.

Mr. KERN. Mr. President——

The PRESIDING OFFICER. The Chair will ask the Senator from Virginia if he has any further amendment from the committee?

Mr. MARTIN of Virginia. There is no further amendment to submit on the part of the committee.

Mr. KERN. On line 5, page 124, I move to strike out the words "1 law clerk, $2,000," and to insert the words "2 law clerks, at $2,000 each."

Mr. SMOOT. Where is the amendment proposed to be inserted?

The SECRETARY. At page 124, line 5.

Mr. KERN. That is the exact number of law clerks the Solicitor of the Treasury now has, and the House struck out the provision for one of them. The Solicitor of the Treasury has a chief clerk and two law clerks, and they are absolutely necessary. I myself have personal knowledge to that effect.

Mr. MARTIN of Virginia. I think the amendment ought to be adopted. When we get into conference, if we find any reason to doubt the wisdom of that action, it will be attended to, but I think the amendment is all right.

The amendment was agreed to.

Mr. WEEKS. Mr. President, I submit an amendment, which I send to the Secretary's desk.

The PRESIDING OFFICER. The amendment proposed by the Senator from Massachusetts will be stated.

The SECRETARY. On page 8, line 12, it is proposed to strike out the word "thirty-two," and to insert "thirty-four," so as to read:

Thirty-four at $1,440 each.

The amendment was agreed to.

Mr. BRANDEGEE. Mr. President, I offer the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment proposed by the Senator from Connecticut will be stated.

The SECRETARY. On page 71, line 10, it is proposed to strike out "seventeen hundred dollars," and to insert in lieu thereof "eighteen hundred dollars."

The PRESIDING OFFICER. If there be no objection, the amendment will be agreed to.

Mr. SMOOT. Mr. President, I do not know whether or not the chairman of the committee desires to say anything on that amendment, but it proposes an increase of the two translators' salaries from $1,700 to $1,800 each. That question was discussed before the committee; it was considered not only by the subcommittee but by the whole committee, and was rejected. Does the Senator desire to accept that amendment?

Mr. MARTIN of Virginia. I do not think the amendment ought to be accepted. The committee gave as careful consideration to it as it could. I shall not, however, object at this late hour in the afternoon to the amendment, as I am anxious to finish the bill. We can investigate it in conference. I do not think, however, it is right.

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. BRANDEGEE. Mr. President, I wish to say, in connection with the Senator's statement, that that increase has been estimated for.

Mr. MARTIN of Virginia. I am fully aware of that fact. It was estimated for at $1,800. That is correct.

Mr. BRANDEGEE. And it is recommended by the chief of the bureau.

Mr. MARTIN of Virginia. That is right.

Mr. SHEPPARD. Mr. President, I wish, for information, to make an inquiry regarding section 6. As I understand it, the combined amount of salaries that one person may draw has heretofore been limited to $2,500. Am I correct in that?

Mr. MARTIN of Virginia. No. The former law was that no clerk who was receiving as much as $2,500 per annum should have any second appointment at all.

Mr. SHEPPARD. Why was that amount reduced to $2,000?

Mr. MARTIN of Virginia. Because we were informed of abuses in some of the departments; that when they could not raise a clerk's salary—when Congress refused to make the allowance—they would just give him some other place in addition to that which he held.

Mr. SHEPPARD. That is entirely satisfactory to me, Mr. President.

The PRESIDING OFFICER. The bill is still before the Senate as in Committee of the Whole and open to amendment.

Mr. SHEPPARD. A parliamentary inquiry, Mr. President.

The PRESIDING OFFICER. The Senator will state his parliamentary inquiry.

Mr. SHEPPARD. Are any of these items of the bill now subject to points of order as in Committee of the Whole?

The PRESIDING OFFICER. A point of order might have been made when they were presented.

Mr. MARTIN of Virginia. I did not hear the inquiry of the Senator from Texas.

Mr. SHEPPARD. I was asking if any of the items of the bill are now subject to a point of order.

Mr. MARTIN of Virginia. Which items?

Mr. SHEPPARD. Any items of the bill as considered in Committee of the Whole.

Mr. MARTIN of Virginia. I am not aware of any being subject to a point of order. If they are subject to a point of order, I hope the Senator from Texas is not going to make any such point. It is too late to do so, in fact.

Mr. ROBINSON. The amendments made as in Committee of the Whole have all been agreed to.

The PRESIDING OFFICER. The amendments have been agreed to.

Mr. ROBINSON. Then they are not now subject to a point of order.

The PRESIDING OFFICER. The amendments have been agreed to as in Committee of the Whole; but, if it is a committee amendment, the point of order might be made when the bill comes into the Senate.

Mr. SHEPPARD. Is it too late to make the point of order to any paragraph of the bill as adopted by the Senate as in Committee of the Whole?

The PRESIDING OFFICER. To amendments of the committee?

Mr. SHEPPARD. Of the bill itself.

The PRESIDING OFFICER. The Senator can not make a point of order against any provision in the House bill in roman type.

Mr. SHEPPARD. That is the information I desired, Mr. President. I wish to ask a further question: May a point of order be submitted when the bill reaches the Senate?

The PRESIDING OFFICER. It can be.

Mr. SHEPPARD. To any item of the bill?

The PRESIDING OFFICER. It can be.

Mr. SHEPPARD. I merely desire to reserve the right to make a point of order against any item in the bill when it reaches the Senate.

The PRESIDING OFFICER. That is the Senator's right.

Mr. PHELAN. Mr. President, I offer the amendment which I send to the desk.

The PRESIDING OFFICER. The amendment proposed by the Senator from California will be stated.

The SECRETARY. On page 63, line 13, it is proposed to strike out "$2,800," and to insert in lieu thereof "$3,000," so that if amended it will read:

San Francisco, Office of Assistant Treasurer: * * * Cashier, who also acts as vault clerk, $3,000.

Mr. MARTIN of Virginia. Mr. President, I make the point of order that this is an increase of appropriation without an estimate from the department.

The PRESIDING OFFICER. Does the Senator from California wish to be heard on the point of order?

Mr. PHELAN. Mr. President, I am not familiar with the procedure of the Senate in reference to such matters, but I know that the other House arbitrarily reduced this cashier's salary from $3,000 to $2,800. It seems to me at a time when the work has grown to enormous proportions, when hundreds of millions of dollars are in the vaults, and this cashier is also the custodian of the vaults, it is manifestly unfair to reduce his salary. A recognition of this kind is a direct incentive to bad service among the public employees.

The PRESIDING OFFICER. If the proposed increase has not been estimated for, the Chair will sustain the point of order.

Mr. MARTIN of Virginia. It has not been estimated for.

Mr. WEEKS. Mr. President, I offer an amendment, which I send to the Secretary's desk.

The PRESIDING OFFICER. The amendment proposed by the Senator from Massachusetts will be stated.

The SECRETARY. On page 9, line 3, it is proposed to strike out "one, $840"; and, in line 14, to strike one "seven" and to insert "six."

Mr. MARTIN of Virginia. As I understand, the Senator from Massachusetts offers those amendments to follow what was inserted a little while ago.

Mr. WEEKS. Exactly.

Mr. MARTIN of Virginia. I think the amendments are proper.

The PRESIDING OFFICER. In the absence of objection, the amendments proposed by the Senator from Massachusetts are agreed to.

Mr. KENYON. Mr. President, I should like to ask the chairman of the committee, if it does not disturb the harmony of the proceedings, about clerks and messengers to committees. That proposition has been adopted, I know, but I have understood that where a chairman of a committee, an inactive committee, such, for instance, as the Committee on Revolutionary Claims or the Committee on the Disposition of Useless Papers in the Executive Departments——

Mr. JONES. Mr. President, I object to any reference to the latter committee in that way. I have found, to my surprise, that that is a very active committee. It works nearly every day.

Mr. KENYON. Which one of the committees?

Mr. JONES. The Committee on the Disposition of Useless Papers in the Executive Departments.

Mr. KENYON. Then I exclude that committee from my remarks and apologize to the Senator from Washington. I wish to ask where a Senator has been the chairman of such a committee and goes out of office on the 4th of March, are the clerks of that committee and the secretary and the messenger to that committee each paid until the time that the new Senator comes in, or does the service of those employees terminate when the service of the Senator terminates?

Mr. MARTIN of Virginia. I believe such employees continue to draw their salaries until the new Senator comes in.

Mr. WARREN. That is usually provided for toward the close of a Congress by a provision that they shall remain.

Mr. MARTIN of Virginia. That is correct; but it is not a hardship, when people are turned loose in that way for two or three months, and until they can establish themselves in some other business, for the Government to pay them during that time. I have never felt that it was an economy that commended itself to a great Government that where employees were unexpectedly deprived of their places they should not be permitted to draw their salaries for two or three months until they could get into some other business. I do not think it is a vital matter to the United States Government.

Mr. KENYON. Of course, it is not vital to the United States Government to try to save any money anywhere; I realize that; but I wondered how long those salaries run and how much they amount to in such cases.

Mr. MARTIN of Virginia. It may be nothing; we can not tell; but it is a bagatelle.

Mr. KENYON. Would it amount to $22,000 or $23,000?

Mr. MARTIN of Virginia. I do not think it would amount to so much as that. I have not the slightest idea that it would. I think it does not amount to half of that sum.

Mr. JONES. Mr. President, I wish to take just a moment. I hold in my hand a praised, but a much fractured and forgotten document, that was used a few years ago very generally, from which I desire to read a paragraph. The document to which I refer reads as follows:

> We denounce the profligate waste of the money wrung from the people by oppressive taxation through the lavish appropriations of recent Republican Congresses, which have kept taxes high and reduced the purchasing power of the people's toil. We demand a return to that simplicity and economy which benefits a democratic government, and a reduction in the number of useless offices, the salaries of which drain the substance of the people.

Mr. PHELAN. The cashier in the office of the assistant treasurer at San Francisco is a victim of that doctrine.

Mr. JONES. I find in the last Republican legislative, executive, and judicial appropriation bill that for the fiscal year ending June 30, 1914, the appropriations were $35,172,434.50. This bill, brought in by our Democratic friends, carries $38,196,762.25. The estimate for the legislative bill submitted by the Republican administration for the year ending June 30, 1914, was $36,514,955.50; the estimate submitted for the year ending June 30, 1917, by the present administration, was $39,749,377.25. I am glad, Mr. President, that this administration is not adhering to that paragraph of the Democratic platform, but is making the necessary appropriations for the proper conduct of the business of the Government.

Mr. HUGHES. Mr. President, of course the Senator understands the reason for that, does he not, and realizes how that was brought about? The Republicans failed to appropriate sufficient money just before they went out of power, so that we have been compelled to provide more money to conduct properly the affairs of the Government.

Mr. JONES. Mr. President, I simply wanted to put the facts in the RECORD, and our Democratic friends can explain them as they see fit.

Mr. THOMAS. Mr. President, I am very glad the Senator from Washington [Mr. JONES] has again directed the attention of the Senate to that plank in the Democratic platform to which I have sometimes adverted. I do not perceive on either side of the Chamber any great tendency toward it; and although the question of economy should not be a partisan one, thus far I have noticed during my short experience in the Senate no exhibition of a desire to economize on either side of the Chamber. With the exception of the senior Senator from Utah [Mr. SMOOT], the junior Senator from Iowa [Mr. KENYON], and the Senator from Washington, I have observed no symptoms of economy either with regard to general appropriations or to bills carrying specific appropriations. And on this side of the Chamber conditions are about the same. And I have a lively recollection that during the summer of 1913 the Senator from Washington obstructed the business of the Senate of the United States day after day—and I am told that it costs the country about a thousand dollars an hour to enjoy that luxury known as the Senate of the United States—in order to get an extra clerk at $1,200 or $1,300. He finally wore us out and carried his point. We found it was more economical to let him have the extra clerk, with the expense involved, than to put the country to the continued additional expense consequent upon his persistent efforts. I still hope—although the hope is not a very strong one—that the people, who are really and primarily responsible for the extravagances of Congress, will ultimately realize the necessity of beginning at home with economy and demand of their Senators and Representatives that they decrease appropriations, many of which are entirely unnecessary.

Mr. JONES. Mr. President, of course, in what I read I did not intend to make any personal reference to the Senator from Colorado; but I trust that the Senator will see to it that in the next Democratic platform there are no such apparently meaningless charges as that contained in the platform from which I have quoted.

The Senator, I think, if his recollection will go back, will remember that several times I have joined with him in attempting to eliminate appropriations or, in other words, to economize. Possibly the Senator was not very earnest in what he was desiring, and, as he and I were about the only ones who were working together, I confess that I got a little bit discouraged, as he seems to be. Of course, I have not learned of any Senator on the other side of the Chamber who seems to be willing to give up any of his clerical help for the useless committees which I myself have been trying for some time to get rid of. I do not, however, seem to be able to get very much assistance from the other side of the Chamber, and I have not heard the clarion voice of my friend from Colorado coming to my relief in this respect at all.

The bill was reported to the Senate as amended, and the amendments made as in Committee of the Whole were concurred in.

The PRESIDING OFFICER. The bill is now in the Senate and open to amendment.

Mr. SHEPPARD. Mr. President, I wish to inquire if a point of order against the item, on line 4, page 2, is in order?

The PRESIDING OFFICER. Does the Senator make a point of order?

Mr. SHEPPARD. I desire to make a point of order, if it is permissible, against that item.

The PRESIDING OFFICER. If it is in the text of the House bill, it is not in order.

Mr. MARTIN of Virginia. It is in the House text.

Mr. SHEPPARD. Then I will state that I intended to make the point of order that that provision which reads "for mileage of Senators, $51,000," is contrary to law and not authorized by law; but, of course, inasmuch as the Presiding Officer states that it is not subject to a point of order, having come over from the House, I shall not make the point of order.

The amendments were ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

NATIONAL DEFENSE.

Mr. WORKS. Mr. President, I desire to give notice that on next Wednesday morning I will submit some remarks on the Army reorganization bill.

PETITIONS AND MEMORIALS.

Mr. LODGE presented a petition of sundry citizens of Pittsfield, Mass., praying for the enactment of legislation to further restrict immigration, which was referred to the Committee on Immigration.

He also presented memorials of sundry citizens of Boston, Somerville, Brookline, Everett, Malden, Melrose, Cambridge, and Worcester, all in the State of Massachusetts, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

Mr. JOHNSON of South Dakota presented petitions of Rev. Naphtale Lucock, of Helena; of William Henry Talmage, of Flandreau; and of sundry citizens of Sioux Falls, all in the State of South Dakota, praying for the establishment of Government economic experiment stations, which were referred to the Committee on Agriculture and Forestry.

Mr. JONES presented memorials of sundry citizens of the State of Washington, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented memorials of sundry citizens of Everett, Wash., remonstrating against the enactment of legislation to fix standard prices for patented and trade-marked articles, which were referred to the Committee on Education and Labor.

Mr. POINDEXTER presented petitions of Local Grange No. 209, Patrons of Husbandry, of Ellensburg; of Buena Vista Grange, No. 415, Patrons of Husbandry, of Prosser; and of sundry citizens of Colville, all in the State of Washington, praying for Government ownership of telephone and telegraph systems, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of Local Grange No. 209, Patrons of Husbandry, of Ellensburg; of Mount Corgin Grange, No. 409, Patrons of Husbandry, of Rice; and of sundry citizens of Colville, all in the State of Washington, remonstrating against an increase in armaments, which were ordered to lie on the table.

He also presented memorials of sundry citizens of Spokane and Richland, in the State of Washington, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. PHELAN presented petitions of Bennington Camp, No. 20, United Spanish War Veterans, of San Diego, and of Local Branch, Veterans of Foreign Wars of the United States, of San Francisco, in the State of California, praying for the enactment of legislation to grant pensions to widows and orphans of veterans of the Spanish-American War, which were ordered to lie on the table.

He also presented petitions of Local Union No. 26, Laundry Workers' Union, of San Francisco, and of the Federated Trades Council, of Sacramento, in the State of California, praying for an investigation into the conditions surrounding the marketing of dairy products, which were referred to the Committee on Agriculture and Forestry.

He also presented a petition of sundry citizens of Los Gatos, Cal., praying for national prohibition, which was referred to the Committee on the Judiciary.

Mr. DU PONT presented petitions of sundry citizens of Wilmington and Newport, in the State of Delaware, praying for the adoption of an amendment to the Constitution granting the right of suffrage to women, which were ordered to lie on the table.

He also presented a petition of the City Council of Wilmington, Del., praying for the enactment of legislation to grant pensions to employees of the Postal Service, which was referred to the Committee on Post Offices and Post Roads.

He also presented petitions of sundry citizens of Delaware, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. ROBINSON presented a petition of sundry citizens of Stuttgart, Ark., praying for national prohibition, which was referred to the Committee on the Judiciary.

He also presented memorials of sundry citizens of North Carolina, remonstrating against the enactment of legislation to prohibit interstate commerce in the products of child labor, which were referred to the Committee on Interstate Commerce.

Mr. SHEPPARD presented memorials of sundry citizens of Fort Worth and Waco, in the State of Texas, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented petitions of sundry citizens of Paint Rock, Water Valley, San Angelo, Sterling City, Crosby, Thrall Circuit, Dallas, Washita, and Oakwood, all in the State of Texas, and of sundry citizens of Washington, D. C., praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. CHAMBERLAIN presented a memorial of sundry citizens of Montavilla, Oreg., remonstrating against appropriations being made for sectarian purposes, etc., which was referred to the Committee on Appropriations.

He also presented memorials of sundry citizens of Oregon, remonstrating against the enactment of legislation to limit the freedom of the press, which were referred to the Committee on Post Offices and Post Roads.

He also presented memorials of sundry citizens of Oregon, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

Mr. BURLEIGH presented petitions of sundry citizens of Maine, praying for national prohibition, which were referred to the Committee on the Judiciary.

REPORTS OF COMMITTEES.

Mr. WALSH, from the Committee on Indian Affairs, to which was referred the bill (S. 2458) authorizing the Cowlitz Tribe of Indians residing in the State of Washington to submit claims to the Court of Claims, reported it with amendments and submitted a report (No. 333) thereon.

Mr. LANE, from the Committee on Public Buildings and Grounds, to which was referred the bill (S. 4974) to provide for the purchase of a site and the erection of a building thereon at Corvallis, in the State of Oregon, reported it with amendments and submitted a report (No. 332) thereon.

BILLS INTRODUCED.

Bills were introduced, read the first time and, by unanimous consent, the second time, and referred as follows:

By Mr. TAGGART:

A bill (S. 5416) to place on the retired list of the Army the names of the surviving officers who were mustered out under the provisions of the act of Congress approved July 15, 1870, in reduction of the Army; to the Committee on Military Affairs.

A bill (S. 5417) granting an increase of pension to Loami E. Scherer;

A bill (S. 5418) granting an increase of pension to Andrew Meredith;

A bill (S. 5419) granting a pension to Marilla Barnes (with accompanying papers);

A bill (S. 5420) granting an increase of pension to John R. Kingman (with accompanying papers); and

A bill (S. 5421) granting an increase of pension to William D. Thompson; to the Committee on Pensions.

By Mr. LANE:

A bill (S. 5422) granting a pension to George Hillis (with accompanying papers); and

A bill (S. 5423) granting an increase of pension to Sarah M. Monroe (with accompanying papers); to the Committee on Pensions.

By Mr. CATRON:

A bill (S. 5424) to construct a bridge in San Juan County, State of New Mexico; to the Committee on Commerce.

By Mr. CLAPP:

A bill (S. 5425) to standardize lime barrels; to the Committee on Standards, Weights, and Measures.

By Mr. OWEN:
A bill (S. 5426) granting a pension to Mary A. Barber; to the Committee on Pensions.

FOX RIVER BRIDGE, ILLINOIS.

Mr. LEWIS. Mr. President, may I ask consent, without violating the rule, that I may tender a bill for private relief where a bridge has been condemned over a river caused by some flood or something in the community? The public-utilities commission has requested the Chicago & North Western to promptly put in a new bridge across a little river called the Fox River. I am told that there is not any navigation except for fishing, and it is necessary to get permission of the War Department. I ask the privilege that I may tender the bill preliminary to asking the Secretary of War to investigate the subject.

The PRESIDENT pro tempore. Is there objection? The Chair hears none.

By Mr. LEWIS:
A bill (S. 5415) to authorize the construction of a bridge across the Fox River at Geneva, Ill.; to the Committee on Commerce.

AMENDMENT TO POST OFFICE APPROPRIATION BILL.

Mr. HUGHES submitted an amendment proposing to appropriate $62,000 to adjust the compensation of printers employed in certain post offices, intended to be proposed by him to the Post Office appropriation bill (H. R. 10484), which was referred to the Committee on Post Offices and Post Roads and ordered to be printed.

HOMESTEAD ENTRIES.

Mr. WALSH submitted an amendment intended to be proposed by him to the bill (S. 780) validating certain homestead entries, which was referred to the Committee on Public Lands and ordered to be printed.

NATIONAL DEFENSE.

Mr. JONES submitted two amendments intended to be proposed by him to the amendment submitted by Mr. SMITH of South Carolina to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which were ordered to lie on the table and be printed.

Mr. SIMMONS submitted an amendment intended to be proposed by him to the amendment submitted by Mr. SMITH of South Carolina to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

Mr. OWEN submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

HEARINGS BEFORE THE COMMITTEE ON MANUFACTURES.

Mr. REED submitted the following resolution (S. Res. 159), which was referred to the Committee to Audit and Control the Contingent Expenses of the Senate:

Resolved, That the Committee on Manufactures, or any subcommittee thereof, be, and hereby is, authorized, during the Sixty-fourth Congress, to send for persons, books, and papers, to administer oaths, and to employ a stenographer, at a cost not exceeding $1 per printed page, to report such hearings as may be had in connection with any subject which may be pending before said committee, the expenses thereof to be paid out of the contingent fund of the Senate, and that the committee, or any subcommittee thereof, may sit during the sessions or recesses of the Senate.

RESOURCES OF ARID-LAND STATES (S. DOC. NO. 391).

Mr. SHAFROTH. Mr. President, I ask to have printed as a public document an article by Mr. I. S. Barlett, of Cheyenne, Wyo., on the marvelous resources of the arid-land States.

The PRESIDING OFFICER. Is there objection?

Mr. BRANDEGEE. I should like to know what the title of the article is or what it is about?

Mr. SHAFROTH. It embraces a lot of statistics concerning water power.

Mr. BRANDEGEE. Very well; I have no objection.

The PRESIDING OFFICER. Without objection, the matter submitted by the Senator from Colorado will be printed as a public document.

RECESS.

Mr. KERN. I move that the Senate take a recess until Monday morning next at 11 o'clock.

The motion was agreed to; and (at 4 o'clock and 40 minutes p. m., Saturday, April 8, 1916) the Senate took a recess until Monday, April 10, 1916, at 11 o'clock a. m.

HOUSE OF REPRESENTATIVES.

SATURDAY, *April 8, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

We thank Thee, our Father in heaven, that amid the roar and din of battle, the suffering, intense pain, and sorrows incident thereto, the angel of the Red Cross is pouring out Thy love in the oil of tenderness and mercy in its healing touch and comforting message.

We thank Thee for the great organization whose altruistic efforts lend a touch of human kindness to the awful picture. In it the Son of Man lives, and we pray that His blessed presence may dissipate the demons of hate and revenge, and through His spirit grant that the eyes of the blind may be opened, the ears of the deaf unstopped, and cold hearts be warmed again into love, peace, and good will for all mankind; that the prayer of prayers may be answered, Thy kingdom come, Thy will be done on earth as it is in heaven. Amen.

The Journal of the proceedings of yesterday was read and approved.

EXTENSION OF REMARKS.

Mr. DILL. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of woman suffrage by printing a letter and resolution from the Congressional Union of the State of Washington and my reply thereto.

The SPEAKER. The gentleman from Washington asks unanimous consent to extend his remarks in the RECORD on the subject of woman suffrage. Is there objection?

There was no objection.

MINORITY VIEWS—ARMOR-PLATE BILL.

Mr. KELLEY. Mr. Speaker, I ask unanimous consent that the minority may have three days in which to present the minority views on the armor-plate bill, S. 1417.

The SPEAKER. The gentleman from Michigan [Mr. KELLEY] asks unanimous consent that the minority of the Committee on Naval Affairs shall have three legislative days in which to file its views as to the armor-plate factory. Is there objection? [After a pause.] The Chair hears none.

Mr. DOUGHTON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a letter which I addressed to Dr. Melvin, Chief of the Bureau of Animal Industry, and the reply to the same by Secretary Houston, in regard to the dairy and creamery industries of the country.

The SPEAKER. The gentleman from North Carolina [Mr. DOUGHTON] asks unanimous consent to extend his remarks in the RECORD by printing a letter which he wrote to the Chief of the Bureau of Animal Industry and the answer to the same, written by Secretary Houston. Is there objection? [After a pause.] The Chair hears none.

Mr. TAGGART. Mr. Speaker——

The SPEAKER. For what purpose does the gentleman rise?

Mr. TAGGART. I rise to ask unanimous consent to extend my remarks in the RECORD on the subject of a movement toward adopting a universal alphabet. By request I introduced resolution No. 99 for that purpose——

The SPEAKER. The gentleman has a right to ask unanimous consent, but not to argue. Is there objection to the request of the gentleman from Kansas to extend his remarks in the RECORD on the subject of a universal alphabet?

Mr. MANN. Reserving the right to object, what is it? It is evidently not a speech.

Mr. TAGGART. It is not a speech; and I wish to say to the House that I have not, by any means, prepared all of it, and there is not very much of it. But I have been repeatedly asked and questioned for the last several weeks, while I was very busy, to get these remarks in the RECORD.

Mr. MANN. If there is not much of it, I shall not object.

Mr. FOSTER. Mr. Speaker, these matters of extension go in the back of the RECORD?

The SPEAKER. Of course they do. Is there objection?

Mr. BARNHART. Mr. Speaker, reserving the right to object, I would like to inquire who it is or what agency it is that is urging this?

Mr. TAGGART. There is no agency that I know of, no organization that I know of, with a president, secretary, or treasurer, but a number of scholars in this country and teachers, particularly represented by a gentleman by the name of Mr. Robert Stein, an employee of the Government here, interested in the question of a movement to have a universal alphabet, so that people will study each other's languages.

Mr. MANN. Is not the purpose of this to have it printed as a public document and have it franked out by the thousands?

The SPEAKER. How many letters has your alphabet?

Mr. TAGGART. I beg leave to state that the object of this resolution is not to create a new alphabet, but to print an alphabet that everybody can read.

Mr. MANN. That is what I wanted to inquire, whether the intention was, having inserted it in the RECORD, to spread it the world over, at Government expense, so far as the Postal Service is concerned.

Mr. TAGGART. It could not go the world over at Government expense.

Mr. MANN. It could go to the United States and Canada and Mexico and Cuba, and that is a good share of the world.

Mr. TAGGART. I do not believe that under the present circumstances we are not in favor of sending this to Mexico. [Laughter.]

The SPEAKER. Is there objection?

Mr. MANN. Mr. Speaker, I would like to have the gentleman state whether that is the purpose.

Mr. GARRETT. Mr. Speaker, I object.

The SPEAKER. Objection is heard.

JOURNAL NATIONAL ENCAMPMENT GRAND ARMY OF THE REPUBLIC.

Mr. BARNHART. Mr. Speaker, I submit the following privileged resolution and ask for its present consideration.

The SPEAKER. The gentleman from Indiana submits a privileged resolution, which the Clerk will report.

The Clerk read as follows:

House concurrent resolution 26 (H. Rept. 508).

Concurrent resolution authorizing the printing of the journal of the national encampment of the Grand Army of the Republic.

Resolved by the House of Representatives (the Senate concurring), That there shall be printed as a House document 1,500 copies of the journal of the fiftieth national encampment of the Grand Army of the Republic, for the year 1916, not to exceed $1,700 in cost, with illustrations, 1,000 copies of which shall be for the use of the House and 500 for the use of the Senate.

Mr. MANN. Mr. Speaker, I would like to ask the gentleman a question. This fixes a limit of cost. Is that the limit of cost for the 1,500 copies?

Mr. BARNHART. Yes, sir. It is the same resolution, I will say to the gentleman, that has been put through in two or three of the last Congresses.

Mr. MANN. Did we always have that limit of cost in it?

Mr. BARNHART. Yes; it is the same.

Mr. GARNER. What is the object of this?

Mr. BARNHART. We first passed that resolution without the limit of cost, and it went to the Senate, and the Senate added the $1,700, and it has been running at that amount ever since.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

REPORT OF UNVEILING OF STATUE OF HENRY MOWER RICE.

Mr. BARNHART. Mr. Speaker, I submit another privileged resolution and ask for its present consideration.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

Senate concurrent resolution 16 (H. Rept. 510).

Concurrent resolution to authorize the printing of the proceedings in Congress and in Statuary Hall relative to unveiling of the statue of Henry Mower Rice, etc.

Resolved by the Senate (the House of Representatives concurring), That there be printed and bound, under the direction of the Joint Committee on Printing, the proceedings in Congress, together with the proceedings at the unveiling in Statuary Hall, upon the acceptance of the statue of Henry Mower Rice presented by the State of Minnesota, 16,500 copies, with suitable illustration, of which 5,000 shall be for the use of the Senate and 10,000 for the use of the House of Representatives, and the remaining 1,500 copies shall be for the use and distribution of the Senators and Representatives in Congress from the State of Minnesota.

The SPEAKER. The question is on agreeing to the resolution.

Mr. CRISP. Mr. Speaker, I would like to ask the gentleman, has he any objection to the distribution of these documents through the folding room?

Mr. BARNHART. No.

Mr. MANN. It is made through the folding room.

Mr. BARNHART. When it is printed as a House document it always goes to the folding room unless otherwise provided for.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

REVISED EDITION OF BANKRUPTCY LAWS.

Mr. BARNHART. Mr. Speaker, I submit another privileged resolution and ask for its present consideration.

The SPEAKER. The Clerk will report it.

The Clerk read as follows:

House concurrent resolution 27 (H. Rept. 509).

Concurrent resolution authorizing the printing of a revised edition of the bankruptcy laws, as prepared by the Committee on Revision of the Laws of the House of Representatives.

Resolved by the House of Representatives (the Senate concurring), That there be printed 20,000 copies of the revised edition of United States bankruptcy laws, as prepared by the Committee on Revision of the Laws of the House of Representatives, the said 20,000 copies to be distributed as follows: Three thousand copies to the Senate folding room, 3,000 copies for the Senate document room, 7,000 copies for the House folding room, and 7,000 copies for the House document room.

The SPEAKER. Is there objection?

Mr. STAFFORD. Reserving the right to object, Mr. Speaker, I wish to inquire of the purpose of the committee in allotting such a large number of these very much requested bankruptcy laws to the document room. I know in my own individual case that I often have requests for copies of the bankruptcy laws, and I assume that every other Member of the House has requests from attorneys in his district. You are not allotting as many as usual in proportion to the House as to the document room. Why not allot a larger proportion to the Members of the House than is herein provided?

Mr. BARNHART. The committee always inquires of the document rooms of the House and Senate as to whether or not they have any considerable demand for these documents, and the committee then inquires of Members of the House, and if there is not a large demand for the publication, we undertake to divide between the folding rooms and the document rooms, so that the document will probably be distributed. I ascertained from the document room of the House, for instance, that they have something like 400 applications for these pamphlets, and that is out of proportion to the applications that I have for them. I will say to the gentleman that it is the purpose of the committee to try to furnish these documents to such distributing agencies as will send them out to people who want them.

Mr. STAFFORD. The gentleman will realize that one of the many documents that can be distributed with advantage by Members of Congress is this document containing the bankruptcy laws. I suppose that I am in no exceptional condition when I say that I have frequent requests from attorneys of my city, and I assume that other Members have, that can not be filled. I will ask the gentleman when we last had at our disposal these bankruptcy laws?

Mr. BARNHART. I think two years ago.

Mr. STAFFORD. I think it must have been longer than that, because I do not recall having any at my disposal for many years.

Mr. BARNHART. It might have been a reprint of the former edition.

Mr. STAFFORD. I think it would be better to allot a larger number to the folding room, so that Members could distribute them as called for by the attorneys of their respective districts, rather than have them go out all at once from the document room. What is the proposal in the gentleman's resolution?

Mr. MANN. Fifty-fifty.

Mr. STAFFORD. I think it ought to be 75 and 25—75 per cent to the folding room and 25 per cent to the document room. I do not question that the document room has requests for them, but I say they could be more evenly distributed throughout the country by placing a larger number at the disposal of Members through the folding room.

Mr. BARNHART. Mr. Speaker, the difficulty about that is the demand for documents of this sort comes from lawyers, and they write to the Clerk of the House asking for the document. They do that more frequently than they write to Members of Congress. The Committee on Printing ascertained that the demands upon the document room for this particular document are so large that they thought it best to give the document room a liberal allowance, because it is a document that is needed only by lawyers, and the document room has such a large accumulation of requests that they will take up most of what are hereby allotted.

Mr. STAFFORD. You say they have 400 requests, and you are providing 7,000 copies for them?

Mr. BARNHART. Let me finish my statement. On the other hand, if they are sent exclusively to the folding room, the probability is that half the Members of this House will permit this document to lie there, if they do not happen to have requests for them, while requests from their own district are lying in the document room unanswered and unfilled, because the document room has not enough documents to fill orders.

Mr. STAFFORD. How many of the last allotment are now lodged in the folding room to the credit of Members of the House?

Mr. BARNHART. I do not know that there are any.

Mr. STAFFORD. The gentleman will find that the supply is virtually exhausted because of the demands upon the respective Members. Will the gentleman increase the quota to be at the disposal of Members through the folding room? I think we ought to have a larger quota.

Mr. MANN. We can get more when we need them.

Mr. BARNHART. I will agree to this, and the committee will agree to it, I think, that if this allotment is not found to be sufficient for the Members of the House, we will introduce another resolution and put it through later if we find there is a demand for it.

Mr. STAFFORD. I shall be after the gentleman very shortly to pass such a resolution.

Mr. MANN. Mr. Speaker, will the gentleman yield for a question?

Mr. BARNHART. Certainly.

Mr. MANN. I notice that this is to print the bankruptcy law as presented or furnished in some way by the Committee on the Revision of the Laws. What is there new about the document?

Mr. BARNHART. I can not say to the gentleman from Illinois, except that the author of the bill says that the Committee on Revision of the Laws have revised it and brought it up to date, and that it contains everything in the way of bankruptcy laws up to the present time.

Mr. MANN. I do not recall many changes, if any, in the bankruptcy law now for a very long time.

Mr. SHERLEY. The last revision of the bankruptcy law was made as a result of a bill introduced by myself, and passed some six years ago. There may have been one or two bills affecting the law in a very slight way that have been passed since then, but there has been no general revision made since that one.

Mr. MANN. I wondered whether the purpose of it was to have an edition that had been recently annotated by the committee.

Mr. SHERLEY. It may be that there is something of that kind. For my own part I can not see why we should now supply this law free to the legal profession any more than any other law.

Mr. MANN. I agree with the gentleman.

Mr. SHERLEY. When it was first passed there was a reason; but now any lawyer can obtain a copy of the bankruptcy law in the same way that he obtains a copy of any other law.

Mr. BARNHART. Well, the committee called before it the author of the bill.

Mr. SHERLEY. What bill?

Mr. BARNHART. This resolution.

Mr. MANN. The author of the resolution.

Mr. BARNHART. The committee called before it the author of the resolution, and we also had the superintendent of the document room before us, and got the information from the author of the bill that it had been revised and brought up to date in the matter of citations, and so forth, which the former publication did not carry, and that it had been done by the Committee on Revision of the Laws. We had no reason to dispute his word.

Mr. SHERLEY. I have no doubt there may have been some annotations made to the law, but the point I am calling to the attention of the gentleman is simply the policy of Congress, as to how far Congress is going to issue reprints of laws with annotations for the benefit of the profession. There is no more reason for doing that with this law than any other.

Mr. MANN. They can buy this document from the superintendent of documents now.

Mr. SHERLEY. Not only that, but there are any number of law books printed, and the Statutes at Large, that deal with the subject. The profession is not without means of getting copies.

Mr. BARNHART. I agree with what the gentleman says as to that.

Mr. MANN. I suppose it gives an excuse for the clerk of the Committee on Revision of the Laws.

Mr. BARNHART. If the gentleman will permit, I can explain the excuse. It is pressure from the membership of the House. I think the gentleman from Illinois will agree with me that the present Committee on Printing is bringing in a very limited number of bills; but the pressure for more is very great, and especially so in this particular instance.

Mr. MANN. I have not heard of the pressure before as to the bankruptcy law. I thought the pressure was to repeal it.

Mr. COOPER of Wisconsin. I desire to ask the gentleman from Indiana [Mr. BARNHART] a question.

Mr. BARNHART. I yield to the gentleman from Wisconsin.

Mr. COOPER of Wisconsin. I do not know whether the gentleman has any resolution relating to the report of the Industrial Commission. I have received a number of requests for copies of that report, and also quite a number of requests for copies of the testimony. When is it expected to print either the report or the testimony?

Mr. BARNHART. The situation as to the report of the Commission on Industrial Relations is this: Some time early in January this House passed a resolution providing for the printing and distribution through the folding rooms of 100,000 copies of the report. The Committee on Printing asked the officials of the late Industrial Commission to give us some information and data as to what parts of the hearings they wanted printed and what parts they thought ought to be eliminated, because the testimony taken at the hearings is of great bulk. We have not had any reply from them. In the meantime our resolution went to the Senate.

Mr. COOPER of Wisconsin. That resolution is in relation to the report, but not the testimony.

Mr. BARNHART. The resolution which we sent to the Senate relates to the report.

Mr. COOPER of Wisconsin. And what the gentleman has said about writing to the chairman of the commission relates to the testimony and not the report?

Mr. BARNHART. Yes and no. We passed a resolution providing for the printing of the report and sent it to the Senate. The Senate committee amended our resolution by providing that instead of binding the report in cloth it should be bound in paper, and it also provided for the printing of 10,000 copies of the hearings, at a cost, I think, of $87,500. And the matter has been hung up, I hear, by the economists over there because of the excessive cost of printing the hearings. Our bill for the publication of the report is attached to it, and has not gone through on that account.

Mr. MANN. Has there not been a question over there as to what part of the testimony shall be printed?

Mr. BARNHART. Yes. The industrial relations committee has dissolved, and I understand that three members of the commission have refused to sign the report, and if the report is published they want the right to submit their views, and so it is in that tangled condition. Until it is straightened out over there we can do nothing. I have asked the committee to put our resolution through and give us the report and settle the question of printing the hearings afterwards, but so far we have been unable to get such action approved.

Mr. COOPER of Wisconsin. It is certainly a remarkable situation that a commission of this importance should take the testimony of capitalists, the greatest in the world, because they are the greatest in the United States, the testimony of Mr. Rockefeller, Mr. Carnegie, and Mr. Morgan, and of others engaged in various kinds of business, the testimony of farmers, of tenant farmers in Texas, of the wives of those farmers, of the great landowners and mine owners and miners, of laboring men in every business, of working girls and working women, of the owners of great stores, thus going into the great industrial questions which relate most closely to the lives and welfare of all the people in the country, should do this at such great expense, with every opportunity for examination and cross-examination of each witness, and that then the Congress of the United States should be unable to get either the report or the testimony printed.

When the bill to appoint the commission was up—I think it was July, 1912—in some remarks which I had the privilege of making during the debate I insisted that the bill ought to contain a mandatory provision for printing the testimony and the report. I prophesied at that time that because the commission was to consist of nine members divided ito three distinct groups, if the law did not contain such mandatory provision and thus afford Congress some opportunity to get acquainted with the testimony we would not know what to believe about the report. The then chairman of the committee having the bill in charge, now the Secretary of Labor, said that he thought that the report would be printed anyway. But it now appears that the printing is completely hung up.

Mr. BARNHART. Mr. Speaker, I do not like a statement like that to go abroad without explanation, because I have some information that I think the House and those interested ought to have. The House will recall that at the time the commission was created there was an appropriation of $350,000 to supply it with the means of prosecuting the work. Afterwards they came back to Congress, so I am informed, and asked for an additional $100,000 to finish the work and print the report. They printed an edition of only 10,000 copies of the report, and kindly allowed to each Member of Congress one copy, and the members of the commission distributed the balance.

They did not have the report printed at the Government Printing Office where the plates might be available for the use of Congress, but by some private concern. They did not

print the hearings and put so much in the hearings consisting, as I understand, of such bulky volumes as the life of John D. Rockefeller, and so forth, that the committee of the House asked the commission to edit out all of this extraneous matter and give the plain evidence with references to publications mentioned.

Mr. COOPER of Wisconsin. Is there any reason why the two Houses could not print what they want to print?

Mr. BARNHART. The committee does not like to assume the responsibility of editing the report of a commission of investigation.

Mr. COOPER of Wisconsin. It would not be editing, but simply excluding from publication volumes of biography, and nobody would impute any wrong motive should those be excluded.

Mr. BARNHART. The members of the committee of the House do not like to undertake to edit a report of any commission or department of the Government. They prefer that the commission should edit it, otherwise the committee might be subjected to criticism for leaving out important matter or leaving in irrelevant matter.

Mr. COOPER of Wisconsin. These volumes the gentleman speaks of are not in the report?

Mr. BARNHART. No; they are in the hearings. But the question of editing the hearings so as to leave out the books, and so forth, admitted as reference and the dispute over the correctness of the report did not come up until after the House passed the resolution. Now it is said three members of the commission refuse to approve the report and say it is not a report of the commission.

Mr. COOPER of Wisconsin. There were nine on the commission?

Mr. BARNHART. Yes.

Mr. COOPER of Wisconsin. Three is a very decided minority.

Mr. BARNHART. The names of only four of the members are attached to the report itself.

Mr. COOPER of Wisconsin. I thought there was more than one report.

Mr. BARNHART. There is one general report and two or three on special investigations, such as the Colorado strike.

Mr. COOPER of Wisconsin. There are two reports?

Mr. BARNHART. No; the general is one volume, one report.

Mr. COOPER of Wisconsin. They did not agree on the report. Prof. Commons filed a separate report, did he not?

Mr. BARNHART. Yes; but some members of the commission do not agree to some parts of the report, while others do not agree to other parts.

Mr. COOPER of Wisconsin. That is not an uncommon thing in the House of Representatives.

Mr. BARNHART. What we are anxious to do is to get the commission to edit a report that will not be disputed by its members when it is issued.

Mr. COOPER of Wisconsin. Mr. Speaker, I have had handed to me what is entitled the final report of the Commission on Industrial Relations. Here is another report by the same commission dealing with the Colorado strike.

Mr. BARNHART. The Colorado report is a separate report.

Mr. COOPER of Wisconsin. Here is one report, signed John R. Commons, Florence J. Harriman, Horace Weinstock, S. Thurston Ballard, and Richard H. Aishton. That is one report. Then here is a separate report signed by three of those five, being the report of Commissioners Weinstock, Ballard, and Aishton. As a matter of fact, all of these commissioners signed something, and five of the nine sign one report. Here we have another report signed by the other four. Here is a separate report of Commissioner John B. Lennon on industrial education. Here is another report signed by John B. Lennon, James O'Connell, Mr. Garretson, S. Thurston Ballard, and Frank P. Walsh. S. Thurston Ballard, it appears—and I had not noticed that before—is one of the five who signed this report, and is also one of the five who signed the other report which I mentioned. So, as a matter of fact, instead of three of the commissioners not signing a report, every one has signed a report.

Mr. BARNHART. That is, signed some part of it.

Mr. COOPER of Wisconsin. Five is the majority of nine, and there are two reports here each of which is signed by five members of the commission; so, instead of there being any report signed by only four, there are two reports each signed by five, a majority of the commission.

Mr. BARNHART. Mr. Speaker, this is all foreign to the matter. The House has already passed this resolution authorizing the publication of this report, and my remarks refer to the condition that exists in another body of the Congress. We did all that we could two or three months ago by promptly passing a resolution to print the report for distribution; but if it is within the power of any gentleman of this House to hurry it through in another branch of this Congress, I would be very glad to be advised how it can be done.

Mr. JOHNSON of Washington. Mr. Speaker, does not the gentleman from Wisconsin think, in view of this report and partial reports signed this way and that way, that it would be a good plan to have Congress provide a commission on commissions so that we can straighten up some of these things?

Mr. BARNHART. Mr. Speaker, I ask for a vote on the pending resolution.

The SPEAKER. The question is on agreeing to the resolution.

The resolution was agreed to.

IMMIGRATION.

Mr. SPARKMAN rose.

Mr. BURNETT. Mr. Speaker, if I may be permitted, if the gentleman from Florida [Mr. SPARKMAN] will withhold for a moment his motion to go into the Committee of the Whole House on the state of the Union on the river and harbor appropriation bill, I think we can dispose of the matter we had up yesterday evening respecting the immigration bill. In response to the request of the resolution which we passed last evening requesting the Senate to return to the House the bill H. R. 10384, the immigration bill, the Senate has sent it back, and I think the trouble will be cured by striking out the Humphrey amendment, which would then leave the Siegel substitute. Is that the opinion of the gentleman from Illinois [Mr. MANN]?

Mr. MANN. Yes; and I suggest to the gentleman that he ask unanimous consent, all in one request, to reconsider the vote by which the bill was passed; that it be reengrossed, striking out that amendment, and be considered as passed again.

Mr. BURNETT. Mr. Speaker, I thank the gentleman for the suggestion, and I make that request. I think that is a solution of the entire matter.

The SPEAKER. The gentleman from Alabama asks unanimous consent that the proceedings by which the immigration bill, H. R. 10384, was passed be vacated, that the bill be amended by striking out the matter referred to, which the Clerk will report, and as so amended that the bill be considered as reengrossed and passed. The Clerk will report the matter to be stricken out.

The Clerk read as follows:

Page 10, line 24, after the word "zone," strike out the following: "*Provided further*, That whenever any foreign country shall by statute, executive order, or otherwise, exclude from its territory any class or classes of citizens from the United States upon grounds different from the grounds for excluding aliens from the United States herein specified, the same class or classes of aliens residing in such country shall be excluded from the United States so long as such exclusion of United States citizens continues."

The SPEAKER. Is there objection to the request of the gentleman from Alabama? [After a pause.] The Chair hears none, and it is so ordered.

RIVER AND HARBOR APPROPRIATION BILL.

Mr. SPARKMAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193, the river and harbor appropriation bill.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the river and harbor appropriation bill, with Mr. SHERLEY in the chair.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

White River, Ark.: For maintenance, $30,500.

Mr. MANN. Mr. Chairman, I ask unanimous consent that the gentleman from Massachusetts [Mr. TREADWAY] may proceed for 10 minutes.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the gentleman from Massachusetts [Mr. TREADWAY] may proceed for 10 minutes. Is there objection?

Mr. SPARKMAN. Mr. Chairman, reserving the right to object, I ask to amend that request by providing for five additional minutes, to be controlled by myself, and that at the end of that time all debate on the paragraph and all amendments thereto shall close.

The SPEAKER. The gentleman from Florida adds to the request that he may have five minutes, at the end of which time all debate on the paragraph and all amendments thereto shall close. Is there objection?

There was no objection.

Mr. TREADWAY. Mr. Chairman, in the course of the debate yesterday on the item relative to the Galveston Channel, con-

tinuing improvements by the construction of a sea wall, the question was asked the chairman of the committee respecting whether or not this might be a new or an old project. The gentleman from Florida [Mr. SPARKMAN] replied to the inquiry:

It is not a new project in any sense. It was an old project, a project that we adopted in the bill of 1913. It was a project adopted then, but with this item deferred until the first part of it should have been completed.

Since that statement was made I have been making a little search in the RECORD to determine whether or not that is an old project. I have in my hand the statutes, volume 37, No. 1, public laws, Sixty-second Congress, and I find on page 812 two items relative to Galveston Harbor. One reads:

Galveston Harbor Channel, Tex.: Continuing improvement and for maintenance under the existing project.

And that contemplates the building up of some streets, from Fifty-first Street to Fifty-sixth Street, as reported in House document 1328.

The next item reads as follows:

Improving the channel, Galveston Harbor to Texas City, Tex., for improvement and maintenance in accordance with the report submitted in House Document No. 1390, Sixty-second Congress, third session, subject to the conditions therein specified, $550,000.

With a continuing appropriation of $900,000 more, making a total of $1,400,000 for improving the channel from Galveston Harbor to Texas City.

Now, Mr. Chairman, by reference to the map herein, House Document No. 1390, which is the document referred to, which I am holding, we find that the sea wall extends from Galveston city in a direction probably north. I do not see the compass on here, but I presume it is north along the shore, and that Texas City is some distance up the channel, directly at right angles to the sea wall.

And mark the phraseology of the item in the bill, which is:

Improving channel from Galveston Harbor to Texas City.

It has absolutely nothing to do in any way, shape, or manner with the sea wall. It is an entirely different item in the project, and that is all there is on the statute books—the act of March 4, 1913. Since then no river and harbor bill as it has passed this House containing this very item, but has had the phrase "for construction of a sea wall." That is the phraseology that has appeared since, and the law as it was passed was for the improvement of the channel to Texas City.

Now, further than that, we find four different items recommended by that special board. One of them is Texas City Dike and Channel, $1,400,000, which is the item carried in the bill. Another item we find is the sea-wall extension, $1,185,000; no connection whatsoever with the channel to Texas City. Further than that, in the report of the chairman, with the appendix we have before us here to-day, on the present river and harbor bill, absolutely not one word is said about the sea wall.

I hold in my hand the engineers' report, and here is what they say about the present project, on top of page 868:

Adopted by the river and harbor bill of March 4, 1913, providing for the widening of the channel to 300 feet on the bottom, 30 feet deep at mean low tide, and the construction of a pile dike on the north side 28,200 feet in length, provided "that a gap 100 feet in width shall be left between the western end of this dike and the Texas City Harbor lines to permit the passage of small boats." The estimated cost of the project was $1,400,000, with $50,000 annually for maintenance. (See H. Doc. No. 1390, 62d Cong., 3d sess.) The tidal variation is about 1¼ feet.

That is the present project, gentlemen, as adopted in the river and harbor bill of March 4, 1913, and that is every part of it that has been adopted. It is every bit that has ever been estimated on; it is every bit that the engineers have ever reported on; it is all that appears. There is no reference to it whatsoever in the chairman's report to this House in the present session.

Therefore it seems to me absolutely proven that by the inclusion in the present bill of this item for the construction of a sea wall, absolutely separate, understand, from the item that is adopted, you are adopting a new project. If it is the wish of the House to adopt a new project, I have nothing more to say. We have taken votes here time and again that the only new project that we will adopt is the one in connection with New York Harbor. If the House wishes to adopt additional projects, well and good, but let us do it with our eyes wide open and with a knowledge of the fact that this particular project has never been adopted; that the engineers have never estimated for it; that they do not in their estimates and in the report that I have here, and just referred to, in any way, shape, or manner refer to the sea wall. If we put it into this bill at this time, we are not showing good faith by the House as we are adopting a new project in every sense of the word. In addition to that, we are taking on an item that even the chairman of the committee in his report to the House has never so much as referred to.

I submit these facts in connection with the statement that the chairman made yesterday that this project had been adopted in 1913. It never was adopted except in one item, that of going up to Texas City. And in order to make ourselves square we must adopt that project now if it is going into the bill at this time. I would like some explanation in what manner this can be considered an adopted project, when the engineers, the special board, with four items in their report, have never taken up but one of them, and now we come back to another and adopt it as a new project.

I have already said that if it is going into the bill, all right, but it is going in with the information before the House that you are breaking faith in the sense that the committee said that there should be but one new project. This will be a second new project if it stays in the present river and harbor bill. The gentleman from Texas [Mr. BURGESS] can shake his head. I would like him to substantiate that I am making a wrong statement on the floor when I finish. He can not offer any explanation. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. SPARKMAN. Mr. Chairman, the gentleman from Massachusetts no doubt thinks he is correct, but I wish to say to him that he is absolutely mistaken. That project was adopted in the bill of 1913, and in one of the paragraphs which I believe he read a moment ago. I did make a slight mistake yesterday in the reasons I assigned for deferring that particular part of the project to a later date. I stated that it was intended to be deferred until the balance of the project was completed. In that I was in error. I saw that afterwards, and I intended to correct it, but we became involved in other discussions and I overlooked it. The reason, as I recall, for the deferring of that project was that we wanted to postpone it until the city of Galveston should have complied with certain conditions imposed by it. The city has since complied with those conditions, or is ready to comply with them. Those conditions were referred to in the discussion yesterday and the item amended so as to meet certain objections. The document to which the gentleman refers, namely, House Document 1390, Sixty-second Congress, third session, on page 4 says:

With reference to the extension of the Galveston sea wall, it is recommended that appropriation be made for this work when the city of Galveston and other local interests shall have donated the required lands to the Government, shall have quieted all claims to the present San Jacinto Reservation, and shall have given assurance satisfactory to the Secretary of War that it will construct 3,300 feet of similar sea-wall extension.

That is the correction I wished to make yesterday, but I overlooked it at the end of the discussion.

Mr. TREADWAY. Would the gentleman kindly quote the statute as it appears, under which this project is construed to be law—the sea-wall-extension section of the project?

Mr. SPARKMAN. The statute itself did not mention the sea wall specifically, but embraced it by adopting the project without any reservation.

Mr. TREADWAY. May I not ask, Mr. Chairman, if the part of the project adopted referred directly to the channel to Texas City, and whether or not the gentleman construes that reference to the channel to Texas City to also adopt the reference to the sea wall?

Mr. SPARKMAN. As I recall it, it embraced two channels. One of them being the channel up to Texas City. This part of the statute that the gentleman read awhile ago, is, "Continuing improvement and maintenance, in accordance with the report submitted in House Document 1390, Sixty-second Congress, third session, and the conditions therein specified." These were some of the conditions I have just read.

Now, there are two other projects in this bill on all fours with this one. One is the Lake Union and Washington Canal, in the State of Washington. Part of that project was deferred and we have provided for it in this bill. Another is the project at Racine, Wis. A portion of that project was deferred—indeed, only a part was adopted—and we are taking care of the remainder in this bill in precisely the same way that we are taking care of the Galveston sea wall.

The CHAIRMAN. The time of the gentleman has expired. All time has expired. The Clerk will read.

The Clerk read as follows:

Cache River, Ark.: For maintenance, $3,000.

Mr. LENROOT. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin is recognized for five minutes.

Mr. LENROOT. Mr. Chairman, with all due deference to the gentleman from Florida [Mr. SPARKMAN], the chairman of the Committee on Rivers and Harbors, he has not met this question raised by the gentleman from Massachusetts [Mr. TREADWAY].

This project never has been adopted. It was not adopted in the act of 1913. The Board of Engineers has recognized that it was not adopted, and the report of the gentleman's own committee recognizes that the project that was adopted in 1913 does not include this sea wall. Referring to this, I hold in my hand the report of the committee referring to the project that was adopted in 1913, and which the gentleman says includes this sea wall. The report says:

The estimated cost of the project adopted was $1,400,000.

Then $1,400,000 does not include the sea wall. That is an additional $1,100,000.

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. LENROOT. Yes.

Mr. SPARKMAN. Nobody has ever said, my friend, that it included the sea wall, because that money was not appropriated or authorized for the purpose of building the sea wall.

Mr. LENROOT. No; but the gentleman does not get my point. I am speaking of what the project was.

Mr. SPARKMAN. I think I do; but I do not think the gentleman understands what the adoption of a project is.

Mr. LENROOT. Let us see. Here are three items recommended by the special board, including three entirely distinct things. One is the sea wall, one is the improvement of this channel, and the other is certain dredging outside of these two other propositions; and the law of 1913 adopted but one of those three items. In confirmation of that, I refer to the report of the board itself, where it clearly shows that what the board had in mind as adopted by the act of 1913, because the members of that board say that the total cost of the project adopted was $1,400,000, and therefore it could not include this sea wall.

Now, I will be glad to yield to the gentleman.

Mr. SPARKMAN. We adopted a project in that bill, as the gentleman will admit?

Mr. LENROOT. Yes. We adopted one of the three projects included in this special report.

Mr. SPARKMAN. Does the act so state that it is one of three?

Mr. LENROOT. It identifies specifically one of the three.

Mr. TREADWAY. The channel to Texas City.

Mr. LENROOT. Yes; the channel to Texas City. And let me call the gentleman's attention to the fact that the item following this is the item for the channel to Texas City, the maintenance of this very work that was adopted.

Mr. SPARKMAN. It is for continuing the improvement and for maintenance of the project submitted in House Document 1390, Sixty-second Congress, third session.

Mr. LENROOT. Will not the gentleman read the description of the project?

Mr. SPARKMAN. Subject to the conditions therein.

Mr. LENROOT. What was it for? The item in the act of 1913 is "improving the channel from Galveston Harbor to Texas City." That is one of the three projects reported upon by the special board, and that is the project that you are referring to in this act of 1913, and not the sea wall at all.

Mr. SPARKMAN. I want to say to the gentleman that the War Department and the Board of Engineers have differed with him, because they have expended money on the very channel that this sea wall is designed to protect.

Mr. LENROOT. I say that the War Department has not differed with me, and I again call attention to the report of the Army engineers themselves, made this year, where they say specifically that the project adopted in 1913 involved a cost of $1,400,000, which was exactly the amount, in exactly the same figures, that the board estimated for, outside of the sea wall.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. LENROOT. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to proceed for five minutes more.

Mr. SPARKMAN. I ask unanimous consent, Mr. Chairman, that all debate on this paragraph and amendments thereto close in seven minutes, two minutes to be used by myself.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that the debate may be continued for seven minutes on this paragraph and all amendments thereto. Is there objection?

Mr. MANN. May I ask the gentleman from Wisconsin a question?

Mr. LENROOT. Certainly.

Mr. MANN. Is not the position of the gentleman from Florida apparently that if in a report there are a dozen different projects included, and we adopt one, we thereby adopt the other 11?

Mr. LENROOT. That is exactly the position of the gentleman from Florida; and I want to call the gentleman's attention to this: That so far as that sea wall was concerned that report was recommended upon a condition, and if it was the intention to adopt the sea-wall part of that report the condition would have been stated just as it is stated in this bill. This proposition in the bill is complete in itself in accordance with the report of the board, and it is the first time that it has appeared in any bill that has become a law.

Now, I want to call attention to one other thing. In the report of the gentleman's committee, which I hold in my hand, not one single word is found concerning this matter, and the gentleman owes an explanation to the House as to why an item of this kind has been reported, which he now says was an adopted project, when the committee report is absolutely silent upon that subject. I yield to the gentleman to answer.

Mr. SPARKMAN. I will answer in my own time.

Mr. LENROOT. Very well.

Mr. COOPER of Wisconsin. Will the gentleman yield for one question?

Mr. LENROOT. Yes.

Mr. COOPER of Wisconsin. What was the date when that was adopted?

Mr. LENROOT. March 4, 1913, and the report was made——

Mr. TREADWAY. February 11.

Mr. LENROOT. February 11.

Mr. GOOD. If it is not a new project, why the new language?

Mr. SPARKMAN. What was the gentleman's question?

Mr. LENROOT. He wants to know, if it is not a new project, why the new language. And I will ask further, why did not your committee comply with the recommendations of the board if, as you say, it was adopted in the act of 1913?

Mr. SPARKMAN. If we are to provide for the sea wall at all, we have got to use new language. The language in the bill of 1913 would not care for it.

Mr. LENROOT. Of course not, because you did not adopt it. That is the reason, and it was not the intention to adopt it.

Now, Mr. Chairman, this committee and this House seem to be in a position that, irrespective of the facts, they will sustain this Committee on Rivers and Harbors. They started out upon the proposition that no new project would be permitted in this bill except New York Harbor. Now, it is absolutely proven that there is a new project, and not only that it is a new project but that the committee in making their report have not said one single word about this project in the report itself. The committee owe it to themselves, and I want to say to the gentleman from Florida and the gentleman from Texas, in view of this late discovery they ought to be willing to permit unanimous consent to return to consider this matter and have a vote upon its merits. [Applause.]

Mr. SPARKMAN. Mr. Chairman, I can not say any more than I have already said. This is a part of an old project that was adopted, as anyone will see who reads the report carefully, and, as I said a short time ago, it is in the same class with two other projects to which I called attention—that at Racine, Wis., and that of Puget Sound-Lake Washington waterway. There is practically no difference between them in so far as the question of new projects is concerned.

Now, the Committee on Rivers and Harbors adopted that rule regarding new projects, and under its definition of new projects determined those three projects to be old projects. That classification was acquiesced in so far as the committee was concerned when those items were placed in the bill, and we have not departed from that rule in any particular. This is not a new project within the definition fixed by the majority of the members of the Rivers and Harbors Committee. I think that is all I care to say.

Mr. COOPER of Wisconsin. Mr. Chairman——

The CHAIRMAN. All debate is exhausted. The Clerk will read.

Mr. COOPER of Wisconsin. I ask unanimous consent to proceed for five minutes.

Mr. SPARKMAN. Oh, let us read some of the bill. There will be more opportunity.

Mr. COOPER of Wisconsin. All right.

Mr. MANN. Mr. Chairman, I ask unanimous consent that we may now return to the item, page 18, line 21, entitled "Galveston Channel, Tex.," for the purpose of offering an amendment.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] asks unanimous consent to return to page 18, line 21, for the purpose of offering an amendment to the Galveston Channel item. Is there objection?

Mr. SPARKMAN. Mr. Chairman, I shall have to object to that, because we had that up yesterday and discussed it fully.

The CHAIRMAN. The gentleman objects. The Clerk will read.

The Clerk read as follows:

St. Francis River and tributaries, Ark.: For maintenance of improvement of St. Francis and L'Anguille Rivers and Blackfish Bayou, $9,500.

Mr. DOWELL. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Iowa offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amendment offered by Mr. DOWELL: Page 22, strike out lines 1, 2, and 3.

Mr. DOWELL. Mr. Chairman, this appropriation, like numerous others in this bill, during the time this project has been in existence, has resulted in practically no benefit to the public. I want to call attention to the report of the engineers upon this item. This covers three items—the St. Francis and L'Anguille Rivers and Blackfish Bayou. I quote from the report of the Engineer of the United States Army, page 2729:

All operations on these streams during the fiscal year 1915 were by hired labor with Government plant. The snag boat *A. B. Johnson* (hand propelled), which was in ordinary at Madison, Ark., 60 miles above the mouth, resumed operations October 26, 1914. The boat worked down to Blackfish Bayou, 38 miles above mouth, and then upstream to Burr Place, 120 miles above mouth, after which it worked down to Madison, going in ordinary there January 28, 1915. By those operations 684 snags were removed, 7 drifts broken, 289 trees cut and 220 others girdled between Burr Place, 120 miles above mouth, and the mouth of Blackfish Bayou. There were no operations on L'Anguille or Blackfish Bayou during the year.

Further, from the same page, I read the following:

Neither of the tributary streams are navigable during low water, and the main stream—the St. Francis—is navigable by only very light-draft boats at that time. During the calendar year 1914 the St. Francis River in the vicinity of Madison was too low for navigation purposes from June 17 to December 29, and in the vicinity of Marked Tree from June 14 to December 31. Blackfish Bayou, up to the mouth of the Fifteenmile Bayou, was too low from January 1 to 30, June 4 to 25, and June 29 to December 31. On the L'Anguille the periods were January 1 to February 7, July 22 to September 5, October 1 to 18, October 31 to December 17, December 21 to 30.

This project was inaugurated in 1871. One hundred and sixty-nine thousand dollars has been appropriated by the Government for this project.

Mr. SPARKMAN. I want to correct the gentleman there, if he will pardon me just a moment. It may be immaterial, but——

Mr. DOWELL. I yield to the gentleman.

Mr. SPARKMAN. The project was adopted in 1902.

Mr. DOWELL. In 1871, according to the engineer's report.

Mr. SPARKMAN. Oh, well, the gentleman has not read the right report.

Mr. DOWELL. I have also read the report of the committee. I have read from page 2729 of the engineer's report.

Mr. SPARKMAN. If he will look at page 1007——

Mr. DOWELL. I do not desire to have the gentleman take up all of my time.

Mr. SPARKMAN. He will find it was adopted in 1902.

Mr. DOWELL. Mr. Chairman, I shall have to ask for more time.

The CHAIRMAN. The gentleman's time has not yet expired. The gentleman will proceed.

Mr. DOWELL. This report further states:

The improvement has had no material effect upon freight rates, except on freights moving between Marianna and Mississippi River points. On such the river rate is slightly less than the rail rate.

Now, gentlemen, if $169,000, appropriated by the Government since 1871, has produced absolutely no good results, it occurs to me that it is a waste of public money to make further contribution.

Mr. Chairman, this is not all that is in this proposition. Behind this is another proposition which proposes to dig a canal along this river for 81 miles, where there is absolutely no stream at all. I want to call attention to the report of the hearings before this committee, with reference to a part of this River St. Francis. I read from the hearings before the Committee on Rivers and Harbors, dated January 20, 1916, in statement of Hon. THADDEUS H. CARAWAY, a Representative from the State of Arkansas:

St. Francis River for 81 miles has no defined channel or banks. It varies in width—that is, the sunk lands—from a quarter of a mile to about 7 miles. I notice that in the report the engineer states that it is from one fourth to 2½ miles, but having lived for quite a while in the so-called lake or sunk-land section, I am entirely familiar with it, and know that he is in error somewhat. The channel of the river, or what used to be the channel, has almost entirely disappeared. When I first knew the river, as far up as Lake City, through the sunk lands, steamboats of considerable size ran. That was only 15 years ago. Where the wagon and railway bridges cross the lake at Lake City, and which have draws, and were built within the last six or seven years, under these draws there are now islands and willow trees growing, which are tall enough to reach from this floor to the ceiling. The channel is choked with a growth which we locally call smartweed.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. DOWELL. I ask for five minutes more, Mr. Chairman.

Mr. SPARKMAN. Mr. Chairman, I ask that all debate on this paragraph and amendments thereto close in 10 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. DOWELL. I want to call attention briefly to a part of this investigation to show what the purpose, or rather to show the idea that the one had who is behind the project when it was presented.

I quote from the chairman of the committee at the hearing:

The CHAIRMAN. I want to call your attention to the fact that the committee does not deal with public lands in any way and really does not deal with the matter of drainage unless it happens to be one of the incidents of the improvement of a navigable waterway.

Mr. CARAWAY. I understand that, and, with all due deference to the chairman, I understand that a great deal of the river and harbor improvement work has commerce only as a secondary incident, though it is the alleged reason for the improvement.

That is what is the matter with this bill. The alleged reason for improvement is different from the actual reason for improvement. When this project is completed it is estimated that it will cost the Government something over $600,000. It is merely for the purpose of draining 52,000 acres of swamp lands in the States of Arkansas and Missouri, and these gentlemen have practically conceded before the committee that the main purpose was for the improvement of waste lands in these two States. It seems to me the time has come when we should stop drawing on the Treasury of the United States for the purpose of draining the districts in these various States. I hope the amendment will be adopted.

Mr. CARAWAY. Mr. Chairman, the gentleman from Iowa who has just concluded quoted one sentence from a statement I made before the Committee on Rivers and Harbors, and from that, drawing a conclusion, said that the only object I had in view was the drainage of lands. There is not anything in the language that would warrant the inference and nothing that expresses the idea.

The St. Francis River rises in the State of Missouri. It flows down and forms the boundary line for a short distance between the States of Arkansas and Missouri. It then passes through the State of Arkansas and empties into the Mississippi River at Helena. It is navigable for 235 miles. It carries over 200,000 tons of freight yearly. That portion of the river upon which an expenditure is here asked is known as the "sunken lands." In 1811 an earthquake destroyed the bed of this river for 81 miles. The channel above that is well defined with banks 18 feet above low-water mark, and just below that it has a well-defined channel with banks 23 feet above low water. In this 81-mile stretch destroyed by the earthquake the river is spread out over the sunken land varying in width from one-quarter of a mile to 7 miles.

Even within the last 15 or 20 years there has been considerable commerce through that portion of the river, but it has been greatly impeded by vegetation and other obstructions. The river is broken up into three segments; the lower part, 135 miles in length, has been kept open by snagging and the removal of obstructions. Considerable commerce floats on that part of the stream. Above this, extending from the head of the sunken lands to the mouth of the Varner River in Missouri, there is a depth of about 3 feet at low water, and there is considerable commerce on that section. The middle part is the "sunk lands." The river is broken up in that way into three parts. The project to which the gentleman refers seeks to have the river canalized through the sunken lands. Now, the gentleman ought to have gone a little further in his statement and told the House of the proposition made to the Rivers and Harbors Committee, and that the one adopted by that committee is not ultimately to cost the Federal Government a nickel. He learned that when he read the report.

The proposition is this: That the Government is to improve the river along the lines it one time adopted, for in June, 1880 a bill passed the House providing for the canalization of the St. Francis River through the sunken land. This was to be done entirely at the expense of the Government and in the interest of navigation. While the present project looks to the canalization of the river in the same way, it is not to cost the Federal Government one cent. According to the estimate made by Mr. Whittemore, a civil engineer in the employment of the Government, working under the War Department, there are 52,000 acres of Government land as rich as was ever seen now practically destroyed by this condition. Mr. Whittemore went over this portion of the river last summer. These lands are now worthless. You can not go upon them for any purpose at

all, but he says that for an expenditure of $610,000 the river could be canalized and these lands reclaimed.

The CHAIRMAN. The time of the gentleman from Arkansas has expired.

Mr. CARAWAY. Mr. Chairman, I ask unanimous consent that I may continue for five minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Arkansas to continue for five minutes?

There was no objection.

Mr. DOWELL. Mr. Chairman, will the gentleman yield?

Mr. CARAWAY. Yes.

Mr. DOWELL. The gentleman's position is that the Government is to advance the $610,000 for the purpose of digging a ditch or canal through the 52,000 acres of land for the purpose of drainage, is it not?

Mr. CARAWAY. No.

Mr. DOWELL. Is not that what the gentleman said before the committee?

Mr. CARAWAY. No.

Mr. DOWELL. Is it that in effect?

Mr. CARAWAY. No; I did not say that in either those words or in effect. I said this: Congress has adopted this project to improve this broad stretch of river in the interest of commerce. I said that if the Government would carry out that project, advance the money, dig the canal through that part of the St. Francis River, permitting these lands that the engineer says would be reclaimed by that canal to be then sold to actual homesteaders at a price and under such terms and conditions as the Secretary of the Interior might direct—if this did not return to the Government every dollar that the Government expended in making the improvement, that the State of Arkansas and the State of Missouri by acts of their respective legislatures would empower the Secretary of the Interior to assess benefits upon the adjacent lands and collect enough to repay to the Government any deficit. That is what I said.

Mr. DOWELL. But it is true, is it not, that the Government was to advance the $610,000?

Mr. CARAWAY. Why, that is true.

Mr. DOWELL. That is what I was asking.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. CARAWAY. Yes.

Mr. MOORE of Pennsylvania. I would like to have the gentleman state whether the St. Francis River and its tributaries are subject to flood.

Mr. CARAWAY. They are. I hope I may have time to explain this condition. The St. Francis Valley is in this shape: There is a high ridge of land extending from Cape Girardeau, in Missouri, running nearly south and touching the Mississippi River again at Helena, Ark. This ridge is known as Crowleys Ridge. The Mississippi River lies east of that ridge, and the valley of the St. Francis River is almost in the center, between this ridge and the Mississippi River. The ridge rises two or three hundred feet in height several miles west of the St. Francis River, the Mississippi banks being 9 or 10 feet higher than the valley and several miles east of it. The valley of the St. Francis is a trough. All of the waters coming down from the ridge flowing east, all of the waters coming out of the Mississippi flowing west, must pass down this valley of the St. Francis. As it now is it is being destroyed. The people in that section have taxed themselves for the purpose of drainage. West of the St. Francis River and between the ridge and the river they have expended of their own money more than $2,700,000 for local drainage purposes. Those drainage canals are useless, or nearly so, unless this river is made to perform the service for which it was originally intended, namely, to carry these waters from this ridge through its channel. Through this stretch of 81 miles it can not do it. While the present flood waters passing through the St. Francis at the head of the sunk lands is 9,000 flood feet per second, there are drainage projects that empty into this river that will, when completed, increase this amount to 30,000 feet per second. This will put two and a half times as much water in that valley as it now has.

Mr. COOPER of Wisconsin. How many acres of submerged land does the Government own?

Mr. CARAWAY. Fifty-two thousand acres.

Mr. DOWELL. Mr. Chairman, will the gentleman yield?

Mr. CARAWAY. Yes.

Mr. DOWELL. Does the gentleman mean that the Government owns this land?

Mr. CARAWAY. Yes.

Mr. DOWELL. Is it not a fact that under the grant of 1850 all of this land was granted to the States of Arkansas and Missouri?

Mr. CARAWAY. No.

Mr. DOWELL. And that it was granted for school purposes?

Mr. CARAWAY. I know what the gentleman means. Let me answer, because my time is limited. Under the swamp-land grant of 1850 all lands not fit for cultivation, not suitable then for agricultural purposes owing to flood conditions, were granted to the States of Arkansas, Missouri, and other States for the purpose of reclamation.

The CHAIRMAN. The time of the gentleman from Arkansas has again expired.

Mr. DOWELL. Mr. Chairman, I ask unanimous consent that the gentleman be permitted to proceed for two minutes, as I desire to ask him a question.

Mr. CARAWAY. Make it five minutes, and let me finish.

Mr. DOWELL. I ask unanimous consent that the gentleman may proceed for five minutes.

The CHAIRMAN. The gentleman from Iowa asks unanimous consent that the gentleman from Arkansas may continue for five minutes. Is there objection?

There was no objection.

Mr. CARAWAY. Now, let me answer the question. Going back, a grant from the Government to the State or to an individual is never a completed transaction until the lands are surveyed and platted, and the Secretary of the Interior——

Mr. DOWELL. So the Supreme Court of the United States has held.

Mr. CARAWAY. It must be platted, and the governor must have signified his selection of this land, and this selection must have been approved by the Secretary of the Interior before title passes. No unsurveyed lands ever passed from the Government to anyone.

Mr. DOWELL. That is, the complete title.

Mr. CARAWAY. No. These 52,000 acres—estimated—were never surveyed. In 1898, under what is known as the compromise act, by which the State of Arkansas and the General Government entered into an agreement affecting these and other lands, the Government released the State from certain obligations and confirmed patents to certain lands that the State had undertaken to pass title to, and in consideration of this upon the part of the Government the State ceded to the General Government its right to any unpatented lands at that time affected by the swamp and overflow grant. The Supreme Court in the case of Little *v.* Williams (231 U. S., October term 1913, p. 335) and approved in Chapman & Dewey Lumber Co. against St. Francis Levee Board said that the title to unsurveyed lands remained in the Government, and the State had no right to them even though reclaimed.

Mr. DOWELL. May I just read two lines from the decision of the Supreme Court upon that question of the transfer by the grant?

Mr. CARAWAY. Two lines will not tell us what the court says. Read the entire opinion.

Mr. DOWELL. It will take but two lines to tell you what it says on this question:

When he made such identification—

That is, the Secretary of the Interior, and that was by the survey and by granting a patent—

then, and not before, the State was entitled to a patent.

Mr. CARAWAY. That is true.

Mr. DOWELL. And on such patent the fee-simple title vested in the State.

Now, is it not true that after the grant of this land was made to the State of Arkansas and the State of Missouri, and the survey completed, the State of Arkansas was entitled to receive the patent and the complete title?

Mr. CARAWAY. No, sir. The State of Arkansas relinquished all of its inchoate right that it might have had to unsurveyed lands by the legislature's accepting the act of Congress of 1898, and the Supreme Court passing upon that very question said that the State of Arkansas had no further interest in these lands.

Mr. DOWELL. The language I read——

Mr. CARAWAY. Pardon me. I am familiar with that litigation and I know what it is. You read it and get somebody to tell you what it means. [Laughter.] The gentleman skipped the project that he asked to strike out in order to make an argument against this one we are now discussing. Certainly if it is worth the Government's while to reclaim lands out West and to make homes for its people, it would be as well for it here to improve a navigable river that it has said is worth while to improve in the interest of commerce, when at the same time it will reclaim lands enough to furnish homes to 1,300 families with farms of 40 acres each, which, according to the statement of the engineer who went over it, is the richest land

he ever saw, and which will not cost the Government one cent to reclaim, and at the same time give on this river 235 miles of uninterrupted navigable water. In addition to that—and I am going to be frank with you—it will reclaim other hundreds of thousands of acres of as fine land as you ever saw, land now privately owned. It will also serve the purpose for which they dug drainage ditches that have cost the people $2,700,000 to construct, and that will remain practically useless if the gentleman's motion prevails. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. CARAWAY. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD by inserting the statement I made on Saturday, January 29, 1916, while before the Committee on Rivers and Harbors, and from which the gentleman from Iowa [Mr. DOWELL] quoted, and further to have appended thereto and printed as a part of it the letter received by me from Mr. George F. Whittemore, a civil engineer, who surveyed the river during the summer of 1915.

The statement and letter are as follows:

ST. FRANCIS RIVER, ARK. AND MO.

STATEMENT OF HON. THADDEUS H. CARAWAY, A REPRESNTATIVE IN CONGRESS FROM THE STATE OF ARKANSAS.

Mr. CARAWAY. Mr. Chairman and gentlemen of the committee, Mr. RUSSELL of Missouri and I are here interested in the same matter. You will pardon me if I seem tedious in my statement of our wishes. Our project is a little out of the ordinary in river and harbor legislation. We are trying to promote the improvement of the St. Francis River through what is known as the sunk lands, that part of the river which was destroyed, or practically so, by an earthquake in 1811. I have not the number of the bill I introduced. There are two bills, however, one being introduced by Mr. RUSSELL of Missouri and one by myself. They are identical and were introduced on the same day and seek the same relief.

Mr. RUSSELL. My bill is No. 6872. It is identical with Mr. CARAWAY'S bill, but not the same number. We introduced the same character of bill.

Mr. CARAWAY. I will state what the matter is we seek. The St. Francis River for 81 miles has no defined channel or banks. It varies in width—that is, the sunk lands—from a quarter of a mile to about 7 miles. I notice that in the report the engineer states that it is from one-fourth to 2½ miles, but having lived for quite a while in the so-called lake or sunk-land section I am entirely familiar with it, and know that he is in error somewhat. The channel of the river, or what used to be the channel, has almost entirely disappeared. When I first knew the river, as far up as Lake City, through the sunk lands, steamboats of considerable size ran. That was only 15 years ago. Where the wagon and railway bridges cross the lake at Lake City, and which have draws, and were built within the last six or seven years, under these draws there are now islands and willow trees growing, which are tall enough to reach from this floor to the ceiling. The channel is choked with a growth which we locally call smartweed. It grows to a height of 15 or 20 feet, and at places I have seen it so thick that it appeared to be land on which you might walk, but if you attempted to do so you would sink in 10 or 15 feet. I knew a very estimable gentleman to lose his life because he mistook that formation of weeds for land. He walked out on it and was drowned.

The river, as a consequence of this formation and other causes, has destroyed, or is destroying, the lands on both sides of it. The waters come down and pile up on this sunk land and do a great deal of damage to lands on either side of the stream, both in Arkansas and Missouri. The people in these localities have expended in the last few years for levees and drainage in attempting to relieve their situation, on my side of the river alone, a little over $2,500,000, and in many places the territory affected and from which the revenues must be drawn to effect these improvements is not over 5 miles in width. While the soil is fertile, the people are poor. They brought no wealth with them when they came to this section. What they have earned has since been devoted to an effort to protect their lands from this condition and improve their homes. Therefore, they are without resources other than this fertile soil.

The last Rivers and Harbors Committee was kind enough, at my request, to give us a survey of the river, extending from Madison, in St. Francis County, to St. Francis, in Clay County, which is nearer the point at which the river becomes the boundary line between Missouri and Arkansas. At that point the channel is well defined and its banks are sufficient to protect the adjacent country from overflows. Mr. Whittemore, whom I presume many of you know—George F. Whittemore—went over the river in conformity with the provisions of the last river and harbor bill. He was at that time under the direction of the engineer in charge at Little Rock, but is now at Humboldt Bay, in California. When he began to make this survey I asked him if he would, in addition to ascertaining what commerce might be developed on the river and the possible cost of improvement, tell us what, if any, lands might be reclaimed and what would be the probable cost of canalizing the river, so as to reclaim these lands. With that idea in view, he made the survey, and I want to read a part of the letter in which he sets forth his findings. Omitting the first paragraph, he says:

"With reference to your inquiry concerning my estimates of canalizing through the sunken lands, I have to report that the cost would be about $610,000 for a canal with a top width of channel of 130 feet, bottom width of 85 feet, and mean depth of 15 feet below low water. A specially rigged dredge could place the excavated material 100 feet to one side to form good levees about 200 feet apart to retain the higher waters. The length of the river through the sunken lands is now 81 miles, and when improved, as you suggest, by canalization, would have a length of 75 miles, or 6 miles shorter than it now is. This would reclaim approximately 52,000 acres of the richest land I have ever seen, at a cost not to exceed $12 per acre. This might be modified to bring the cost of reclamation down to $8 per acre by reducing the width at bottom of proposed canal to 50 feet and top width of 95 feet."

We are not coming here asking the Government to give us anything, or ultimately to be out a dollar. We are asking that a survey be made to ascertain what the exact cost will be and what will be necessary to reclaim these lands and render them fit for homes. The depressed bed of the lake, which is anywhere, according to this report, from a quarter of a mile to 2½ miles in width, but in reality from a quarter of a mile to 7 miles in width, is part of the year covered with water and part of the year is as dry as this floor on which I stand. The lands belong to the Government; they have never been surveyed. The idea that we entertain is that if this river is canalized through this section it will reclaim these lands, and Mr. Whittemore says they are the richest he ever saw. We are asking that the Government furnish money to reclaim these lands and then permit the lands to be sold, somewhat according to the plan of the reclamation of the arid lands in the West under irrigation, and we are offering to do this: If you will aid us to reclaim these lands in this way, we will then sell them in tracts of not less than 40 acres and not in excess of 160 acres, the lands to be sold to bona fide homesteaders at prices they are able to pay and on terms to meet their necessities.

We then offer, if the receipts realized from these sales fail to repay to the Government every dollar invested in the project, together with interest, that by acts of the Legislatures of Missouri and Arkansas—and we do not ask you to expend this money except for the survey until we do our part—we will empower the Secretary of the Interior to assess and collect betterments on all lands affected on either side of the river in an amount sufficient to repay this deficit. We can not lift ourselves by our bootstraps; we can not reclaim this country without help. Here is a fertile country. Some of the land has been reclaimed; but, as I said in the beginning, the people on those lands are not wealthy. Most of the holdings are small, and it has required every cent our people could earn to build their homes. They are not asking the Government to give them a cent; they are asking only that it lend its credit to reclaim these lands that are now lying waste, amounting, according to the statement of Mr. Whittemore, to 52,000 acres.

Mr. RUSSELL. Are they Government lands?

Mr. CARAWAY. Yes; these lands belong to the Government. They are worthless now and will remain so until this improvement is made.

The CHAIRMAN. I want to call your attention to the fact that the committee does not deal with public lands in any way and really does not deal with the matter of drainage unless it happens to be one of the incidents of the improvement of a navigable waterway.

Mr. CARAWAY. I understand that, and, with all due deference to the chairman, I understand that a great deal of the river and harbor improvement work has commerce only as a secondary incident, though it is the alleged reason for the improvement.

The CHAIRMAN. I will say that I think the committee could hardly see its way clear to report a bill or carry an item in the rivers and harbors bill that dealt solely with land reclamation.

Mr. CARAWAY. This does not deal solely with that. I am trying to state the whole case, and in order to do so I probably should have stated it more in detail. The St. Francis River has been an adopted project for the improvement of navigation for nearly 50 years, and every river and harbor bill carries an item for its continued improvement.

Mr. SWITZER. For the improvement of the river at this point?

Mr. CARAWAY. Yes; this stretch of the river is included in the bills, but, as a matter of fact, in the last few years no work has been done on this part of the river.

Mr. BOOHER. The original project for the improvement of the St. Francis River was carried in the rivers and harbors act of March 3, 1871.

Mr. CARAWAY. Yes, sir; and the act of 1880 carried a provision for doing exactly what I am asking now, except under the theory that it was for the promotion of navigation, and was to be done without cooperation. Let me tell you something about the improvement of the St. Francis River. Congress started in above the sunk lands and improved the river for about 80 miles, but recently this was cut down to about 18 miles. It snagged out that part of the river and then skipped 81 miles and commenced again, so that the improvement is broken up into two fragments. There are about 75 boats of one kind or another, but most of them are small motor boats engaged in local navigation in the middle strip, or sunk-land portion of the river, with an average haul of 10 miles, but if this river were canalized through these sunk lands you would have 235 miles of continuous navigation.

Mr. KENNEDY. Does that contemplate any locks or dams?

Mr. CARAWAY. No, sir; not one.

Mr. KENNEDY. In other words, it is a ditch through there.

Mr. CARAWAY. Yes, sir; that is it. By the act of June 14, 1880, an appropriation was made for improving the river from Wittsburg to Lesters Landing, the project for the expenditure of this appropriation being to cut a channel through "the lake" and clear the river of obstructions by snagging operations. So it is not a new project, and you have carried an appropriation in every bill for the improvement of this particular section of the river, and we are coming to you now and asking you to do what you at one time said you were going to do in aid of navigation. We are offering in addition thereto a repayment to the Government of all it may expend. If you dig a canal through these sunk lands you will reclaim these 52,000 acres. That will furnish homes for 1,300 families, with 40 acres to each family, and it is as rich land as is to be found anywhere in the world. It would furnish homes for about 6,500 people, and this improvement can be made for $610,000, according to the estimate of Mr. Whittemore, which is $12 per acre.

I know you can sell every acre of that reclaimed land for $25 an acre to people who are actually seeking homes, and they would be delighted to buy it. In addition, there are nearly 200,000 acres of land in private ownership which will be rendered suitable for cultivation that is now unsuitable, and a great deal of the country will be greatly benefited, and more than $2,500,000 worth of private drainage enterprises, to pay for which the people have gone into their pockets and taxed themselves—and which are now in danger of being destroyed by reason of the choked condition of this river—will be rendered safe and usable, and will be made to accomplish the purposes for which they were constructed. For example, one drainage ditch which cost the people of Clay County $456,000, together with the levees that were erected to aid it, and which drained the country to an average width of 5 to 10 miles, was partly filled up last August when we had an unusually high water, and the people lost $200,000 of their investment, every dollar of which has to be paid by people who are poor. They have taxed their homes to pay this, and this loss would not have fallen upon them if this improvement had been made. We are not tax shirkers. We pay the regular State and county taxes; we pay a special tax for schools; we pay a special tax for roads, and in addition we pay a tax to build levees along the Mississippi River, which tax is now 20 cents per acre, and goes up about 5 cents per acre every year or two. In addition we also pay 25 to 50 cents per acre for local drainage. We

are but asking that you do your part toward reclaiming this land that belongs to the Government by continuing the project that you adopted by the act of 1880 in aid of navigation. I do not know to what extent the river is going to be used for navigation, but for that purpose it gives great promise, and we want it so improved that the lands also may be reclaimed and be of use to the people.

Mr. BOOHER. The St. Francis River, outside of the section called the sunk-land section, has a well-defined channel?

Mr. CARAWAY. Yes, sir.

Mr. BOOHER. The sunk lands begin in Dunklin County, Mo., below Shipley?

Mr. CARAWAY. Yes, sir.

Mr. BOOHER. Do you know what the width of that strip is; the strip called the sunk lands?

Mr. CARAWAY. Yes, sir; I do. The sunk lands vary in width from a quarter of a mile to 7 miles.

Mr. BOOHER. Do you know how much below the surface of the Mississippi River the sunk lands are?

Mr. CARAWAY. I did know that, but I do not recall it now. If you will pardon me, I will make a statement that will give you that information.

Mr. BOOHER. Where the river strikes these sunk lands it practically becomes a swamp?

Mr. CARAWAY. Absolutely.

Mr. BOOHER. For what distance?

Mr. CARAWAY. Eighty-one miles.

Mr. BOOHER. How much of that is in Missouri, in miles?

Mr. CARAWAY. I can tell you that approximately. There are about 36 miles in Missouri.

Mr. BOOHER. And the balance is in Arkansas?

Mr. CARAWAY. Yes, sir.

Mr. BOOHER. In what counties in Arkansas?

Mr. CARAWAY. In Clay, Greene, Craighead, and Poinsett Counties, principally, and just a little corner of Mississippi County is affected by it.

Mr. BOOHER. In Missouri it is in Dunklin County?

Mr. CARAWAY. Yes, sir. Sixteen miles above the head of the sunk lands the St. Francis River has a channel with banks 17 feet above the low-water state; 9 miles below the sunk lands, at Marked Tree, it has 18 feet; and a short distance below that, at Madison, in St. Francis County, it has 38-foot banks. Through the sunk lands, in some places, it has a well-defined bank on one side, but on the other the average above low water, I should think, was not over 18 inches, and it may be less than that. In fact, when you approach it at many places you will not know when you reach the river, and the channel winds around through logs and growth and this smartweed, as we call it, and you can actually cross the river and never know it. As I said, where they have built the railroad bridge and wagon bridge at Lake City, and where I have seen steamboats at least 30 or 40 feet in length, there are willows growing up, in some places coming through the flooring of the bridges. There is no sign of a river there, and for three-quarters of a mile up and down stream, where I used to see the river, there is nothing now to be seen but vegetation. However, there is water there, and if you should probe down through this growth you would be apt to find water anywhere from 18 inches to 10 feet deep. If you canalize this river, you make it a continuous navigable stream for whatever uses it may be put, and I think the reports will show that this river carries about as much commerce as the ordinary streams for which appropriations are made, and you will, in addition, reclaim these lands. As I said before, we are not asking that the Government shall ultimately be out a cent. We are willing to pay whatever interest the Government has to pay on this investment, and we will pay back every cent when these lands are reclaimed and sold. We do not seek nor want to open these lands for the exploitation of big corporations. We want to open them for homes for poor people. We want them for those who will live on them and rear families and help uplift and upbuild our State. If from the sale of these lands the Government does not get back all money required to make this improvement, we will, by acts of the Legislatures of Missouri and Arkansas, empower the Secretary of the Interior to assess benefits on all lands lying within the basin which have been reclaimed or which may be benefited by the improvement.

Mr. BOOHER. Do you know, from the information you have gathered about that situation, how that land was before the earthquake?

Mr. CARAWAY. No; I do not. The earthquake was in 1811. But you can tell by an examination of the country that the land originally was covered with oak, cottonwood, and black-walnut timber. At the time of this disturbance the land dropped anywhere from 8 to 10 feet, but a great deal of the timber is yet standing.

Mr. BOOHER. Did it not drop as much as 20 feet in some places?

Mr. CARAWAY. I did not understand so.

Mr. BOOHER. How about that, Mr. RUSSELL?

Mr. RUSSELL. About four years ago, which was just 100 years after the occurrence of this earthquake, I placed in the record a letter written by an old lady whose name, I believe, was Eliza Bryan, and she stated in that letter, or at least I got the idea from some one, that the land sunk from 8 to 20 feet in different places, and sometimes more.

Mr. BOOHER. I think I read somewhere that they sunk as much as 22 feet.

Mr RUSSELL. Probably that much in some places. It varied at different places.

Mr. CARAWAY. All of that sunk land is crisscrossed with fallen timber that has been submerged and yet not decayed. Vegetation has grown up in its bed since that time and has literally choked the river.

The CHAIRMAN. What kind of timber is that?

Mr. CARAWAY. Cypress, oak, cottonwood, and there is some black walnut.

Now, you can take this country just up to where the land was destroyed. The people have gone on it and made homes—most of them poor people, as I said before. They live in very cheap houses, but——

The CHAIRMAN. Is there any dead cypress anywhere indicating that there was a cypress growth before that land sunk?

Mr. CARAWAY. Yes; millions of feet of it. There are cypress trees still standing in it that I am sure must be hundreds of years old. Some of them are not exactly perpendicular but are set at angles, showing that when the land sank they were standing timber and not of later growth.

The CHAIRMAN. There is a section of Florida to the west of the Apalachicola River that is supposed to have sunk during the same disturbance, and there are large cypress trees there. Of course, they are dead, but they are there, nevertheless. Cypress as a rule does not decay rapidly and after the long years that have gone by since that section of the country sank, they are still there in that condition.

Mr. CARAWAY. In stretches of this lake where there is considerable water, at ordinary water stages you will not see any signs of trees or stumps, but when the river gets very low its bed looks like a forest has been cut off, leaving the stumps standing where the trees were thrown down at the time of the earthquake.

Mr. HUMPHREYS. Reelfoot Lake sank very much more than 20 feet.

Mr. CARAWAY. Oh, yes. I think in some places it was 40 or 50 feet in depth. Now, in Missouri, in New Madrid County, there was a greater drop than that in Arkansas. I have seen there near New Madrid a gulch about 20 or 25 feet in depth.

Mr. RUSSELL. Some of the land is planted in corn.

Mr. CARAWAY. I know. If the river is not improved, however, it is going to render the remainder of the land worthless. It is going to destroy it. We have at this time there on the St. Francis River an overflow caused by this situation that will average in width 15 miles. The only railroad in that immediate section has been out of commission for a week. Last August when the crops were standing there came an unusual rainy season, and the whole country was submerged and crops ruined. A great ridge is building across the river. The water now piles up against this and spills out over the country and threatens the homes of all of our people living in that section.

The CHAIRMAN. There is a modification of the present project for the improvement of that river recently reported in House Document No. 60.

Mr. CARAWAY. I have it here before me.

The CHAIRMAN. You are now requesting a survey?

Mr. CARAWAY. That is it.

The CHAIRMAN. And would you be willing to have a survey, merely requesting the engineers to reinvestigate the matter with a view of seeing whether cooperation can be furnished by the people there with a view to coordinating the improvement of the river with the drainage of the contiguous lands?

Mr. CARAWAY. Let me be certain that I understand you. You want to know whether we would be willing to accept a survey and at the time of the survey to ascertain how much, if at all, the people are willing to cooperate in making the improvement?

The CHAIRMAN. Well, in any way. Of course, your idea is one of cooperation?

Mr. CARAWAY. Yes, sir.

The CHAIRMAN. You present a proposition that you say eventually will not cost the Government anything?

Mr. CARAWAY. I am going to guarantee it will not. We will put millions of dollars' worth of property back of it.

The CHAIRMAN. I was going to ask you whether you would be willing to have such a survey as I suggest?

Mr. CARAWAY. Yes, sir; I presume so. Here is what I want. Let me state it briefly and you will possible know better whether your suggestion and mine agree: The bill asks for $10,000, but the bill was drawn before House Document No. 60 reached me. I notice that Mr. Wittemore says it will take for a physical survey, in order to determine the very thing I am asking for now, $25,000; that it will require 1,500 miles of surveying. If you adopt our bill, or any modification the committee sees fit, because we have no pride of authorship in the bill, you would give us this survey, and Mr. RUSSELL could go to the Legislature of Missouri, and I could go to the Legislature of Arkansas, which meets next January, and we could get an act empowering the Secretary of the Interior, after these lands have been disposed of, if necessary then, to assess and collect betterments. I have in my office now a petition signed by 10,000 people interested in this matter. I believe that practically the entire population of that part of Arkansas affected by it are asking this. I know more than 500 from Mr. RUSSELL'S district in Missouri have sent requests to me. Of course, you would have to authorize and make the survey, but before you do more, the bill provides that the Legislatures of Missouri and Arkansas shall empower the Secretary of the Interior, after he has disposed of these reclaimed lands, to assess whatever benefit may be necessary to repay the Government every cent that has been expended.

Mr. BOOHER. Has this land ever been disposed of by the Government?

Mr. CARAWAY. No, sir; it has never been surveyed.

Mr. BOOHER. None of it?

Mr. CARAWAY. Not an acre of this 52,000 acres has had a surveyor's chain on it. In the original survey of this river the meander line of this lake left quite a large section of country that is now under cultivation within the meander line, but within the last six or seven years the Government has reclaimed that land, claiming that there was a mistake in the original survey, and then that part of it was opened for homesteads. We do not want to repossess that; we do not want to oust the homesteader of one cent's worth of his property; we do not seek those lands. These 52,000 acres are practically covered with water nine months in the year, and they are useless to anybody. No one has ever had the hardihood to go on them and try to live on them. There are no vested rights at all. The riparian owners have no claims on them, and no homesteader has sought to settle there.

Mr. HUMPHREYS. Now, Arkansas has a law under which the State of Arkansas owns to the center of the lake.

Mr. CARAWAY. The Arkansas law provides that on navigable streams the riparian owner shall own to the low-water mark. The State owns the bed of the stream, but the State of Arkansas claims none of these unsurveyed lands which lie in this marshy swamp.

Mr. BOOHER. In Missouri the swamp and overflow lands belong to the school fund.

Mr. RUSSELL. They were conveyed for that purpose, but that does not include unsurveyed lands.

Mr. HUMPHREYS. I do not know about that.

Mr. CARAWAY. That question has been settled by several cases in the Supreme Court of the United States, one of them being the case of Williams *v.* Little, and another the Chapman & Dewey Lumber Co. *v.* The St. Francis Levee District. The decisions in these cases were handed down only two or three years ago. I think they set at rest the question of the title to these lands. The lands are lying waste, and Mr. Whittemore, who went over them, said they are the richest lands he ever saw. I am not asking that any corporation shall be permitted to exploit them for profit, but that the man who buys any of them shall do so subject to any condition that the Secretary of the Interior may impose, just as it is done in the Reclamation Service.

The CHAIRMAN. Whatever we do ourselves will be done through the Secretary of War. If there should be reclamation work afterwards as a result of that work, it is quite probable that the land would still remain under the control of the Secretary of the Interior, but so far as we are concerned the Secretary of War will have charge of whatever work we might authorize.

Mr. CARAWAY. I understand the Secretary of War will do the reclamation work, but the levying of taxes and the disposition of the land would be under the Secretary of the Interior. Therefore I drew the bill in the form in which it now is. I tried as nearly as possible to adapt the laws for the reclamation of arid lands of the West to the improvement of this particular situation. You gentlemen realize there are thousands of people who are able to pay a small assessment and thereby eventually pay back to the Government the money it may expend, and in that way acquire and pay for a home. We want to help them by this legislation.

I would like to place in the record a letter and a statement of the cost of private drainage and levee work that we are undertaking.

Mr. BOOHER. You think that the riparian owners in the State of Arkansas have no rights in the matter?

Mr. CARAWAY. I know that under the decision of the Supreme Court they have none. We tested that question out in a case that arose in Arkansas, and the Arkansas Supreme Court held that they had those rights, but on appeal to the Supreme Court of the United States that court reversed our court.

Mr. BOOHER. They held that the riparian owners have no rights at all?

Mr. CARAWAY. Absolutely none.

I wish here to insert extracts from the opinion of the Supreme Court of the United States bearing on this question.

With reference to the legal ownership of the lands sought to be reclaimed by the improvement of the St. Francis River, the question is asked whether the lands reclaimed would become the property of the Government of the United States or the State in which the lands may be located. Those in Arkansas, which are possibly three-fourths of the lands herein sought to be reclaimed, are controlled by the decision of Little v. Williams (231 U. S., October term, 1913, p. 335). Under what is known as the compromise act, in which the State of Arkansas undertook to surrender its inchoate rights in all lands not then patented, and do other things, the Government accepted these lands and surrendered certain bonds. All the right and title of the State of Arkansas to any unsurveyed public lands was surrendered to the United States. However, the decision of the court without question, while settling the compromise act, lays down the doctrine that swamp and overflowed lands granted to the State by the acts of Congress of 1850 only pass by survey and plats. And the court, in speaking of this, says:

"In view of the finding that the land in controversy was never patented to the State, it will be perceived that a pivotal question in the case is, whether the swamp-land act of 1850 in itself operated to invest the State with the title in any such sense as to be of present avail to the plaintiff. The State court answered the question in the negative, and the correctness of that ruling is now to be passed upon.

"Although the terms of the first section of the act denote a present grant to the State of the 'swamp and overflowed lands made unfit thereby for cultivation,' the second section lays upon the Secretary of the Interior the duty of identifying and listing the lands coming within the terms of the grant and of causing patents therefor to be issued to the State 'at the request of' its governor, and then declares: 'And on that patent the fee simple to said lands shall vest in the State,' subject to the disposal of its legislature. It became necessary in Rogers Locomotive Works v. Emigrant Co. (164 U. S., 559) to determine the meaning and effect of the act in the light of these provisions and of prior decisions, and it was there said (p. 570): 'While, therefore, as held in many cases, the act of 1850 was in præsenti, and gave an inchoate title, the lands needed to be identified as lands that passed under the act; which being done, and not before, the title became perfect as of the date of the granting act.' And again (p. 574): 'It belonged to him [the Secretary of the Interior], primarily, to identify all lands that were to go to the State under the act of 1850. When he made such identification, then, and not before, the State was entitled to a patent, and on such patent the fee-simple title vested in the State. The State's title was at the outset an inchoate one, and did not become perfect, as of the date of the act, until a patent was issued.' What was there said has since been regarded as the settled law upon the subject. (Michigan Land & Lumber Co. v. Rust, 168 U. S., 589, 592; Brown v. Hitchcock, 173 U. S., 473, 476; Niles v. Cedar Point Club, 175 U. S., 300, 308; Ogden v. Buckley, 116 Iowa, 352; Birch v. Gillis, 67 Mo., 102; Carr v. Moore, 119 Iowa, 152, 159.)

"As this land was never so identified, and, so far as appears, its identification was never even requested by the State, it follows that, even if at the date of the act the land was in fact swamp or overflowed, the State never acquired more than an inchoate title to it, a claim which was imperfect both at law and in equity."

Inasmuch as the State is declared there to have acquired no more than inchoate title, a claim which was imperfect both at law and in equity, it follows, as a matter of course, that if the Federal Government should make other disposition of the lands the State could have no claim therein.

The same opinion was affirmed in Chapman & Dewey Lumber Co. v. St. Francis Levee District (234 U. S., October term, 1913, p. 667).

—

UNITED STATES ENGINEER OFFICE,
Eureka, Cal., January 12, 1916.

From: Geo. F. Whittemore, junior engineer, 210 Federal Building, Eureka, Cal.

To: Hon. T. H. Caraway, House of Representatives, Washington, D. C.

Subject: Canalization of St. Francis River, Ark., through the Sunken Lands.

(1) Your letter of 3d instant just at hand to-day. Last May I was transferred to the first California district under Lieut. Col. Rees and put in local charge of harbor works at Humboldt Bay. I was much shocked to hear of Maj. Putman's sudden death shortly after I left Little Rock.

(2) With reference to your inquiry concerning my estimate of canalizing through the Sunken Lands, I have to report that the cost would be about $610,000 for a canal with a top width of channel of 130 feet, bottom width of 85 feet, and mean depth of 15 feet below low water. A specially rigged dredge could place the excavated material 100 feet to one side to form good levees about 200 feet apart to retain the higher waters.

(3) The length of river through the Sunken Lands is now 81 miles, and when improved, as you suggest, by canalization, would have a length of 75 miles, or 6 miles shorter than it now is. This would reclaim approximately 52,000 acres of the richest land that I have ever seen at a cost not to exceed $12 per acre. This might be modified to bring the cost of reclamation down to $8 per acre by reducing the width at bottom of proposed canal to 50 feet and top width of 95 feet.

(4) In this connection, I beg to state that Mr. C. B. Bailey, civil engineer, of Wynne, is very well posted and interested in that section. It is to be hoped that you may be able to accomplish something with the area in question, as it seems worthy of improvement.

(5) With best regards to Chairman SPARKMAN; Mr. EDWARDS, of my old district; and yourself, I am, sir,

Yours, sincerely, GEO. F. WHITTEMORE.

Mr. RUSSELL of Missouri. Mr. Chairman, I understood the gentleman from Florida had some time to yield to me.

The CHAIRMAN. The gentleman has not.

Mr. RUSSELL of Missouri. Then I move to strike out the last two words.

The CHAIRMAN. The gentleman from Missouri is recognized.

Mr. RUSSELL of Missouri. Mr. Chairman, I have a constituency that is very deeply interested in this proposition. That is my apology for adding anything to the able and full argument that has been made by the gentleman from Arkansas [Mr. CARAWAY].

I am very sorry to find that the gentleman from Iowa [Mr. DOWELL] is so anxious to jump upon this item in this bill that he has gone from page 22, where we are now reading, to this item, that does not appear until you reach page 39. I want to say in a general way that if there is a single item in this bill that is meritorious above all others it seems to me to be this, because of the fact that it is not to cost this Government ultimately one single dollar.

The St. Francis is a navigable river. Nobody, I think, questions that; but if so, let me call your attention to the fact that this House and this Congress at this session has passed three bills authorizing the construction of bridges across that river that could not be built without that authority. The Government owns this stream. It has heretofore expended hundreds of thousands of dollars for the improvement of this river. In the years 1811 and 1812 an earthquake that has become notorious as an historical event in this country obliterated that river for about 80 miles. It destroyed the channel, by reason of the lands along its banks sinking perhaps 8 or 10 feet. Since that time we have what is sometimes called the "sunken lands," but more generally known as the "spreads" of the St. Francis River. We have a navigable river at the north end of the St. Francis. We have a navigable river south of these sunken lands, the south end of the St. Francis River, but the channel for 75 or 80 miles has been destroyed by the earthquake. It formed an impenetrable lake by reason of the land sinking, as stated, creating a great body of water in that country that has been impassable since that time. It is to-day absolutely valueless, and will be until drained and reclaimed. It is waste land as it now is and not worth a dollar to any man or to the Government, but is a great menace to the health of that country. These lands, I am advised by engineers who have made some slight examination of the conditions, can be successfully drained if this river is straightened and canalized for 75 miles. The Government owns 52,000 acres of that land. The statement has been questioned by the gentleman from Iowa [Mr. DOWELL], but Arkansas has relinquished any claim upon them that are situated in that State, and nearly all of these waste lands are upon the Arkansas side of the river. These lands can be reclaimed, and will be worth more than $5,000,000 when improved and ready for cultivation. They will be capable of producing annual crops in cotton, corn, and wheat of the value of from $1,000,000 to $2,000,000, depending upon the seasons and the price of these staple farm products. And with a family of five upon every 40 acres, which would be easily possible, would furnish homes for 6,500 people.

We are advised by the engineers who have made some examination that this canal can be dug for $610,000, or about $12 per acre. All we ask in this bill is that a full and a perfect survey may be made, so that the money may be appropriated later to dig the proposed canal, and when it has been done the Government can sell the land reclaimed for or more than is required to do the work. We have promised and guaranteed in the bills that were introduced by the gentleman from Arkansas [Mr. CARAWAY] and myself that the Government ultimately shall not lose one single cent. We pledge our property to reimburse the Treasury if the Government's land when sold does not pay it. Our citizens who will be incidentally benefited will pay in taxes on their private property any deficit the Government may sustain by reason of the expenditure.

They tell us that this is a drainage proposition, and not a question of navigation. It is both. The river is navigable above, and it is navigable below, and when we dig the proposed canal through these spreads it will connect the two parts of the river and it will then be navigable from the north end to the

south end. This is a question of navigation as well as one of drainage and of flood control.

Mr. Chairman, if I have stated the case fairly and correctly, and I assure you I have tried to do so, it would seem to be almost a criminal neglect for the Government to refuse to promptly lend its encouragement, its aid, and its credit to an improvement so inexpensive, so meritorious, and so important to so many people.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, does the gentleman from Missouri want to go on?

Mr. RUSSELL of Missouri. No. I ask unanimous consent that I may extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the gentleman's request?

There was no objection.

The CHAIRMAN. All debate on this paragraph has closed.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to amend the paragraph at the end of line 3 by striking out "$9,500," and inserting "$9,600."

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Pennsylvania.

The Clerk read as follows:

Page 22, line 3, strike out "$9,500," and insert "$9,600."

Mr. MOORE of Pennsylvania. Mr. Chairman, there have been times when I have not agreed with the Democratic Party. [Laughter.]

Mr. SPARKMAN. Mr. Chairman, how much time does the gentleman intend to use?

Mr. MOORE of Pennsylvania. The usual time for my amendment—five minutes.

Mr. DOWELL. Mr. Chairman, I want some time for one matter.

Mr. MOORE of Pennsylvania. Mr. Chairman, one-half of my time is taken already. [Laughter.] I say there have been times when I have not agreed with the Democratic Party.

Mr. GOOD. On river and harbor appropriations? [Laughter.]

Mr. MOORE of Pennsylvania. There have been times, also, when I have disagreed with the President of the United States, but those differences have been on matters of policy relating particularly to political economy and the manner in which the Government should be carried on. But I like to be consistent sometimes [laughter], and therefore, as a party man, I am surprised that the gentleman from Iowa [Mr. DOWELL], who has been criticizing this item of the St. Francis River, should not be more in accord with the party platform that he undertakes, along with the rest of us on this side, to observe.

The Democratic Party in its platform of 1912 stood for the improvement of rivers and harbors, and so far as I have observed, it has stood for it consistently, although its consistency in this regard has been somewhat unique. [Laughter.] But it has stood for the improvement of rivers and harbors, not so much up in my section, perhaps, as in other sections, but I am not raising that question now.

The Democratic Party was elected to power on its platform of 1912, and it is entitled to make the most of it. As a Republican I have been ready to take my medicine, because in 1912 Republicans generally were not sufficiently interested to prevent it. Hence I have not objected in this day and generation of Democratic supremacy, incidental and accidental though it may be, to their building a few post offices, to improving a few rivers and harbors in their own territory, or to providing here and there for the reclamation of land or the redemption of a few swamps. [Laughter.]

I believe it would be a splendid thing all over the South, particularly in the State of Arkansas, if many of the sluggish rivers that prevail there could be made to run free of the snags and overhanging boughs and branches and all those things that impede navigation and impair the growth and health of the people. But I am not going very far into that now. I am too consistent a river and harbor man. [Laughter.]

Now, before the Democratic Party came into power——

Mr. PLATT. Mr. Chairman, will the gentleman yield there?

Mr. MOORE of Pennsylvania. No; I can not yield. I can not discuss railroads with the gentleman from New York in five minutes. The gentleman can not interject railroads into my waterway speech at this particular time.

Mr. PLATT. Just for a question.

Mr. MOORE of Pennsylvania. No; I can not yield to the gentleman; the gentleman wants to prove that railway transportation is cheaper than water transportation. He could not do that to my satisfaction in 100 years.

Mr. PLATT. I want to prove that the gentleman's proposition would be like feeding money to the birds.

Mr. MOORE of Pennsylvania. No; the gentleman can not prove that, either. The gentleman has not been consistent on any proposition in this bill. He is as inconsistent as the Democratic Party has been on its platform at Baltimore.

Mr. MADDEN. I thought the gentleman was trying to be consistent with the Democratic platform.

Mr. MOORE of Pennsylvania. Oh, no. I know what the gentleman from Illinois wants. He wants $4,500,000 for a post-office site out there in Chicago, and he thinks that if this river and harbor bill goes through there will not be money enough left in the Treasury to provide for the building; therefore he does not agree with the Democratic Party's ideas on navigation. [Laughter.]

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask for three minutes more.

The CHAIRMAN. The gentleman from Pennsylvania asks unanimous consent to proceed for three minutes more.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that the debate on this paragraph and amendments thereto close in five minutes.

Mr. DOWELL. Mr. Chairman, I want five minutes after the gentleman closes.

Mr. SPARKMAN. The gentleman from Iowa stated before that he wanted only two minutes.

Mr. DOWELL. I want five minutes, now.

Mr. MOORE of Pennsylvania. Mr. Chairman, I think they are speaking in my time.

The CHAIRMAN. The time of the gentleman has expired. The gentleman from Florida will state his motion.

Mr. SPARKMAN. I ask unanimous consent, Mr. Chairman, that all debate on this paragraph end in eight minutes. The gentleman from Pennsylvania wanted three minutes. I want five.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and amendments thereto close in eight minutes. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Pennsylvania is recognized for three minutes.

Mr. MOORE of Pennsylvania. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. MOORE of Pennsylvania. Do my three minutes begin now?

The CHAIRMAN. They do.

Mr. MOORE of Pennsylvania. I thank the Chair. The gentleman from Iowa [Mr. DOWELL], who belongs to a newly developed band of Republican reformers following the lead of the gallant gentleman from Wisconsin [Mr. FREAR] in opposition to river and harbor improvements in this country, indicated by his question to the gentleman from Arkansas [Mr. CARAWAY] that the St. Francis River and its tributaries are a sort of drainage ditch. I recall the exact words, "a drainage ditch." It seems to be all wrong to want to clear out a section of the country by a drainage ditch.

Well, the Democratic platform stood for rivers and harbors, and also for drainage ditches, and the clearing of swamps and things of that kind, and the Democrats have been consistent since 1912 on that proposition. But where does the Republican Party stand and where do the gentleman from Iowa [Mr. DOWELL] and his distinguished band of compatriots from that splendid farming State of theirs stand on the question of drainage ditches?

The Republican platform of 1912 had something to say on that subject. I do not know who wrote the ditches plank into that platform. I am sure I did not, because I had some views on that subject myself. But I find in the Republican platform, which the gentleman from Iowa [Mr. DOWELL] ought to recognize, this interesting paragraph with regard to rivers and harbors:

We favor a liberal and systematic policy for the improvement of our rivers and harbors. Such improvements should be made upon expert information and after a careful comparison of cost and prospective benefits.

Therefore we are in favor of a rivers and harbors bill.

But as to drainage ditches and as to flood protection, what does the platform of the Republican Party say?

The Mississippi River is the Nation's drainage ditch.

The gentleman has been quoting his own platform without knowing it, and he uses, as an opprobrious term, words which he takes from the platform of his own party. Now, I contend

that there is not very much politics in river and harbor matters, and I am not laying too much stress on what some one man wrote in a platform, for I suspect that both the Republican and the Democratic conventions were swayed by the same influences on this proposition. But there it is in the Republican platform just the same.

The Mississippi River—

Says the platform—I mean the Republican platform—

is the Nation's drainage ditch. Its flood waters, gathered from 31 States and the Dominion of Canada, constitute an overpowering force which breaks the levees and pours its torrents over many million acres of the richest land in the Union, stopping mails, impeding commerce, and causing great loss of life and property. These floods are national in scope, and the disasters they produce seriously affect the general welfare. The States, unaided, can not cope with this giant problem. Hence we believe the Federal Government should assume a fair proportion of the burden of its control so as to prevent the disasters from recurring floods.

We favor the continuance of the policy of the Government with regard to the reclamation of arid lands, and for the encouragement of the speedy settlement and improvement of such lands we favor an amendment to the law that will reasonably extend the time within which the cost of any reclamation project may be repaid by the landowners under it.

As the Democratic plank is not much different, it shows there is little or no politics in the bill.

The CHAIRMAN. If there be no objection, the pro forma amendment offered by the gentleman from Pennsylvania [Mr. MOORE] will be withdrawn.

There was no objection.

Mr. DOWELL. I want to say to the gentleman from Pennsylvania [Mr. MOORE] that he can vote for this amendment and not in any manner interfere with the platform of the Republican Party, which he has just read to me. In view of the fact that he has raised this question, I want to read to the House just the kind of a river, or a harbor, or whatever you want to call it, we are dealing with now. I am sure that if my friend from Pennsylvania had even known what he was talking about he would not have read that platform in your hearing, in view of the evidence I am about to read from the statement before the committee of the gentleman from Arkansas [Mr. CARAWAY], who, I assume, knows this river fairly well:

Through the sunk lands in some places it has a well-defined bank on one side—

Now listen to this—

but on the other the average above low water, I should think, was not over 18 inches, and it may be less than that. In fact, when you approach it at many places you will not know when you reach the river.

Does that look as though we were violating the sacred plank of the Republican platform that the gentleman from Pennsylvania [Mr. MOORE] is so afraid he is going to violate if he votes for this amendment?

I read further:

And the channel winds around through logs and growth and this smartweed, as we call it, and you can actually cross the river and never know it.

[Laughter.]

That is the language of the gentleman from Arkansas before the committee in the hearings on this identical proposition. I am ashamed of the gentleman from Pennsylvania [Mr. MOORE] that he did not know what he was talking about when he so eloquently pleaded for the sacredness of the platform of the Republican Party. But listen to this. I want to read some more from the gentleman from Arkansas.

Mr. TREADWAY. I want to ask the gentleman if the reason he would not know when he crossed the river was because there was no water in it.

Mr. DOWELL. I will let the gentleman from Arkansas [Mr. CARAWAY] answer that in his own words before the committee.

I read further from the statement before the committee:

As I said, where they have built the railroad bridge and wagon bridge at Lake City, and where I have seen steamboats at least 30 or 40 feet in length, there are willows growing up, in some places coming through the flooring of the bridges. There is no sign of a river there, and for three-quarters of a mile up and down stream, where I used to see the river, there is nothing now to be seen but vegetation.

Does that look like a river?

Mr. CARAWAY. Will the gentleman yield?

Mr. DOWELL. Just a moment. This statement of the gentleman at the hearing is just about as good as anything he will be able to tell us now, and I want to read this first:

However, there is water there—

Now listen to this. I call it to the attention of the gentleman from Pennsylvania [Mr. MOORE]—

and if you should probe down through this growth you would be apt to find water anywhere from 18 inches to 10 feet deep.

You would be apt to find water if you dug deep enough in this place, but it is conclusive from this evidence that there is no river there.

The gentleman from Pennsylvania has described this place as a great waterway, and has suggested the violation of the sacred plank of the Republican platform if we vote for my amendment. It is projects of this character that bring criticism to this bill.

The CHAIRMAN. The gentleman's time has expired. All time has expired. The question is on the amendment of the gentleman from Iowa [Mr. DOWELL].

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Cumberland River, Tenn. and Ky.: For maintenance above Nashville, $5,000; continuing improvement below Nashville, $705,000; in all, $710,000.

Mr. FREAR. Mr. Chairman, I move to strike out the figures in line 6, page 22, "$705,000," and to insert "$171,000"; and then I move to strike out the figures "$710,000" and insert the figures "$176,000."

The CHAIRMAN. The gentleman from Wisconsin offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, on page 22, in line 6, by striking out "$705,000" and inserting in lieu thereof "$171,000"; and strike out "$710,000" and insert in lieu thereof "$176,000."

Mr. FREAR. Mr. Chairman, the purpose of this amendment is to strike out as nearly as I can ascertain from the reports the money that is to be expended for new locks and dams, leaving in the amounts that are for ordinary maintenance. It is a little over half a million dollars. This is a project—and I will only discuss the amendment, because I will try not to take unnecessary time of the committee—that has been rejected three different times by the Army engineers. Finally it was approved by the Army engineers with a condition. That condition was that the people of the States should contribute one-half of the $4,500,000, and in view of the condition that was made, there appeared before the Board of Army Engineers 11 Congressmen and United States Senators in an effort to secure the removal of that contribution.

Mr. SPARKMAN. What portion of the river is the gentleman referring to? I thought his amendment applied to the lower portion.

Mr. FREAR. No; the Cumberland River above. I am going to read from Document No. 10, pages 3 and 9. As I said, after having been rejected three times by the Army engineers and Col. Black, who is the Chief of Engineers, who placed the condition of the contribution of one-half of the $4,500,000, these gentlemen that I refer to appeared before the board and secured the removal of this condition.

Col. Black says, and I am reading from page 9:

Of these $2,250,000—

And yet Col. Black changed his mind inside of a week, and withdrew the condition, so that the Government is engaged in preparing for this $4,500,000 project. Now, I read from page 16021 of the CONGRESSIONAL RECORD, of September 3, 1914, the words of a very distinguished man who knew more about the rivers and harbors than I do. In it he says:

If I could have the attention of the Senate while I present facts and figures, I am confident I could demonstrate that, as regards the higher grades of freight, it would be cheaper to carry every pound that can possibly be presented by autotruck rather than by a canal, and pay interest on the investment.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. FREAR. Mr. Chairman, I ask for five minutes more.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto close in 22 minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate close in 22 minutes. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, if this was the only river existing in this condition I might not challenge it at this time, but in view of the statement of Col. Townsend that all the rivers of the Mississippi Valley—in view of his proposal that we stop the further canalization of 58 streams until we can try out one or two of them, it occurs to me that we can save $500,000 by adopting the amendment that I am proposing on the Cumberland River. I realize that whenever this question is raised it naturally reaches those who are particularly interested in the project, and I think I ought to be entitled to a vote of thanks of the House for giving them an opportunity to speak on their favorite projects.

Now, I have no more objection to this than any other river for canalization. I am not going to speak any more of the Cumberland River, but I do ask one thing in justice to a paper that we were discussing yesterday, the Philadelphia Inquirer. I quoted from the Philadelphia Inquirer yesterday, and I ask

unanimous consent to incorporate in my remarks a short editorial from that paper.

The CHAIRMAN. Is there objection to the request of the gentleman from Wisconsin?

There was no objection.

Mr. FREAR. The editorial is interesting in one particular, in that it suggests a change in the present system. It acknowledges the present system is not satisfactory and it believes that certain improvements have been brought about. In all fairness I desire to say that in view of the editorial read yesterday, I desire to express my appreciation of the spirit of an editorial in yesterday's issue, which is illuminating and in which it speaks very hopefully of adopting some further and better system than the one we have to-day. I trust the change in system may soon be reached in order that we may get away from present conditions.

Now, I am not going to take any further time, because the House has been very generous to me, and I propose to leave it where it is.

The editorial is as follows:

[From the Philadelphia Inquirer, Friday, Apr. 7, 1916.]

WHAT IS A PORK BARREL?

The "pork barrel" known to Congress is an appropriation bill carrying immense sums in the aggregate, which sums are distributed among congressional districts on the principle of "you tickle me and I'll tickle you."

There are usually two barrels. One contains hunks of appropriation pork for rivers and harbors. The other contains pap for nice little Congressmen who have influence enough to demand and receive all sorts of money for all sorts of public buildings in all sorts of towns of their districts.

The abuses which have crept into these two barrels in the past have been extremely serious. Mud flats have been dug out for the benefit of catboats. Expensive buildings have been erected out of all proportion to practical requirements.

There are centers of population where the business of the Government is badly handicapped for lack of accommodations for handling the mails. Philadelphia is an important point. It returns to the Federal Treasury huge profits from the mails and from customs. A much larger post-office building is a necessity in Philadelphia; so is an enlarged customhouse. We mention Philadelphia as an instance only, for other large cities are likewise suffering. But because so many little places are awarded Federal buildings two and three or even half a dozen times too large, and at a cost as many times too great for the business done, the important centers are obliged to get along as best they can for years upon years.

That is what the public-building pork barrel does in the way of evil.

It is precisely so with rivers and harbors. Again, we take Philadelphia as an example. Here is a port second only to that of New York. For years it has been fighting for justice. Long ago it should have had a 35-foot channel. The necessity for it was conceded. Congress has been committed to it. But because of the enormous waste on places of no account whatever, the Delaware River has been coming into its own by piecemeal only. And this is not only so with the Delaware, but with other enterprises of general importance.

At last there is evidence that Congress is experiencing a change of heart. Whether it is true and permanent repentance, or whether it is temporary and occasioned by the necessity to economize, is a question for the future to answer. But the fact is that the Committee on Rivers and Harbors in drawing up the appropriation bill which has been under discussion throughout the week in the House apparently did its best to get rid of "pork." Enterprises of little account are still coddled, but their number is extremely few in comparison with past offenses. With the exception of a New York scheme, the House has refused to start new projects and has confined itself to enterprises under way. Because of this new policy the important Delaware River is treated decently. For the 35-foot channel the sum of $2,165,000 is awarded, with an additional $600,000 for continuing existing contracts. This action is satisfactory. It is also satisfactory that the disposition has been strong to disregard insignificant schemes.

To this Congress must eventually come as a definite policy. It should get down to a systematic plan for development, and it will be done when it becomes possible to blacklist all foolish projects which have been eating up millions upon millions for no other reason than that Members of Congress have been potent enough heretofore to secure "pork" for their districts.

Ports that do a substantial foreign business are worthy of attention. They will get it when the trout streams are given back to the trout.

Mr. BYRNS of Tennessee. Mr. Chairman, the remarks of my friend, the distinguished gentleman from Wisconsin, have simply served to amplify the fund of misinformation which he undertook to give to the House by way of a minority report, in so far as this particular appropriation for the lower Cumberland River is concerned. The gentleman has been a member of the Committee on Rivers and Harbors for several years. He professes to have given the subject general study, and I do not question the fact that he has given it close attention. He has assumed to come before the House and, by way of a minority report and by the remarks he has made, to give to the House accurate information in regard to many of these projects.

Now, I know nothing about the facts concerning other projects contained in the bill and referred to by the gentleman from Wisconsin, but I want to say, with all due deference but with every assurance, that if the statements made in his report with respect to other projects are no more correct and accurate than they are with reference to this particular project, then very little consideration can be given to any of them.

The gentleman, notwithstanding his extended study of this subject, does not seem to understand that there are two projects on the Cumberland River—one the upper Cumberland River project, extending from Nashville to the headwaters of navigation, and the other the lower Cumberland River project, extending from Nashville to the Ohio River, into which it empties. This appropriation is made to carry on the work now under way on the lower Cumberland River project, a project that was adopted by Congress in 1892, providing for seven locks and dams and the dredging of a portion of the river at its mouth, and which was modified in June, 1910, by eliminating one of those locks and dams.

The gentleman in his report says that this project has been rejected by the Board of Engineers. I want to say to the gentleman that that is an absolute mistake upon his part. This project has never been rejected by the Board of Engineers, and I may say in passing that the project on the upper Cumberland River has never been rejected by the Board of Engineers, although work was discontinued or suspended there several years ago. So far as the lower Cumberland River project is concerned, one lock was authorized in 1892 and then work was suspended, but there was no rejection on the part of the Board of Engineers. Congress, in 1910, again took up that work, and made an appropriation for that purpose. Three locks and dams are now under way, and if this appropriation is passed, as I hope it will be, it will mean that the other two locks and dams necessary to complete the improvements on the lower Cumberland from Nashville to the Ohio River will be put under way and soon completed.

The gentleman, by his motion to strike out this item, would have this work stop, and, notwithstanding the fact that the construction of only two more locks and dams is necessary to complete the whole scheme of improvements on the lower Cumberland River, he would deny to the people who are served by this river this improvement which is necessary to make the river navigable during the entire year. And he takes this position in the face of the fact that appropriations have already been made for four locks and dams on this project. In other words, he would, in effect, throw away the money and work already expended and leave a great still-water canal in the middle of the river, with no outlet, during a part of the year for the great amount of commerce, agricultural and timber products which will find their way to the markets of the world by way of this river, if certain navigation is afforded during every month of the year. Certainly the gentleman will not, upon reflection, insist upon that, nor will the House agree to any such proposition.

The gentleman, in his minority report, solemnly tells the House that, deducting the floatable timber and sand, a commerce of only 53,000 tons is reported for the river. Now, I have the highest respect for the gentleman, and I am quite sure he does not intentionally wish to misrepresent the facts. But he is entirely in error about that. As a matter of fact, deducting the great amount of commerce to which he alludes, the tonnage on the river amounted last year to more than a quarter of a million tons. But it is hardly a fair argument to refer to the tonnage and use that as a basis why an appropriation should not be made for the improvement of a river. It is not to be expected that the tonnage will reach anything like its maximum on a river where there can be certain navigation for a period of only eight or nine months in the year, on account of shoals and a low state of water. River transportation can never be developed under such circumstances. We must look to the possibilities and not to the conditions existing before the improvements are actually made.

If I had the time I could point out to you the great commercial possibilities of this river, not only because of the rich agricultural section traversed by it, than which there is none better in the United States, but also because of the timber, coal, and other valuable products which are to be found in reasonable market distance. But improvements of this kind should not be considered wholly from the standpoint of the actual amount of commerce which may be carried. Their potentiality in helping to control freight rates should not be overlooked. In speaking of this phase of the matter, with reference to the lower Cumberland River improvement, the report of engineers states:

The work on Locks B, C, and D will not facilitate navigation until the locks and dams are completed and placed in operation; nor can it be expected that the lower Cumberland River will be continuously navigable until the two remaining locks and dams have been completed. Nevertheless, even in its present condition the lower Cumberland River has a marked effect on railroad freight rates, and the navigable facilities offered by this stream are undoubtedly responsible for the favorable freight rates which Nashville has been granted, as compared with rates between towns not connected by a navigable waterway. The effect of the continuous navigation provided by the

canalization for the 41.4 miles below Nashville was noted from the immediate reduction by about 50 per cent in the rates charged by the Tennessee Central Railroad over that part of its line which parallels the pool of Dam A.

The gentleman has referred to a meeting before the Board of Engineers, and he has asked this committee to believe that that meeting was with reference to the lower Cumberland project, for which an appropriation is made in this bill, and which he is now seeking to strike out. The gentleman is again mistaken, for the meeting to which he refers was with reference to the upper Cumberland, and has nothing to do with this appropriation. I want to say to the gentleman that there has never been any meeting before the Board of Engineers, so far as I know, with reference to the lower Cumberland River project, nor do I know of any question being made about it on the part of the Board of Engineers. [Applause.]

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. BARKLEY. Mr. Chairman, the items contained in the paragraph sought to be eliminated by the gentleman from Wisconsin [Mr. FREAR] are composed of two parts, $5,000 for the upper Cumberland River and $705,000 for the lower Cumberland River. The gentleman from Wisconsin [Mr. FREAR] makes a motion to strike out the appropriation with reference to the lower Cumberland and then made a speech on the upper Cumberland. Is it possible that the gentleman undertook to deceive the House by talking about a proposition that is not even cared for in the bill except with a $5,000 appropriation for maintenance?

Mr. FREAR. Mr. Chairman, will the gentleman yield?

Mr. BARKLEY. Yes.

Mr. FREAR. My purpose in that is only secondary. The purpose is to stop all of the work of building these locks and dams pursuant to the report of Col. Townsend.

Mr. BARKLEY. This work on the Cumberland was begun in 1892. Originally it provided for seven locks between Nashville and the Ohio River, but by reason of the canalization of the Ohio, and the building of a lock and dam below Smithland, Ky., just below the mouth of the Cumberland, one of those locks and dams has been eliminated because the backwater caused by the damming of the Ohio will afford navigation for 30 or 40 miles up the Cumberland River from its mouth to a bend near Eddyville, Ky. Ever since 1892 the Government has been building these locks and dams, or has been promising to build them, and yet when we come to the completion of the project including an appropriation sufficient to build locks and dams at a point opposite Cadiz, in Trigg County, and at Eddyville, Ky., the gentleman from Wisconsin [Mr. FREAR] wants to stop all work and waste all of the money that has been expended upon them, when, by the completion of the three locks and dams that are unfinished and these three that have not been started, a 6-foot channel will be afforded for yearly navigation to the people along the banks of the Cumberland from Nashville to the mouth. The gentleman has repeatedly claimed that navigation has decreased on these rivers, and I want to point out that while it is true that the report shows there has been a slight falling off on the Cumberland River, from 1912 to 1914, this falling off is due to two causes. First, in 1913–14 we had along the banks of this river one of the most severe droughts that has ever befallen the people of that section of the country, and in addition to that, according to the Engineers' report, navigation is only possible for six months out of the year, and we can not expect men to invest their money in boats where they can operate them only six months out of the year.

There is scarcely a man of any business sense who would invest his money in any project or enterprise or any undertaking where he could only carry on his enterprise one-half of the year. I can assure the gentleman from Wisconsin that the navigation on the Cumberland River, which flows through a very fertile and thickly settled part of the States of Tennessee and Kentucky, if this project is completed and boats are permitted to run 12 months in the year instead of 6, in my opinion, will very greatly increase, not only double, but three and four fold, because of the possibility of being able to navigate it all the year round.

The gentleman undertakes to exclude commerce that he calls "floatable." I presume the gentleman would carry out the same notion in every other adventure of human life, and instead of riding on trains we would go back to the old-fashioned stagecoach to get from one part of the country to another. We have no way to float our commerce down the river except in boats, as it ought to be floated; and we can not float boats without a channel of at least 6 feet, which will be obtained when this improvement is completed. I hope this appropriation will not be stricken out or reduced. [Applause.]

Mr. HULL of Tennessee. Mr. Chairman, no Member of this House, I think, is in stronger sympathy with honest efforts to promote economy than I am. I commend in the strongest terms the efforts of the gentleman from Wisconsin [Mr. FREAR] and others to whatever extent they relate to a real purpose to practically economize, as I do all Members in both Houses. But I wish, Mr. Chairman, to take exception to what appears to be the studied effort of some gentlemen to misrepresent the plain facts as they relate to some of these river projects. I hope gentlemen who are or profess to be interested in the matter of economy will give attention to the facts upon which they base their utterances here if they have any remote disposition to be fair or honest in dealing with these items.

Now, my friend the gentleman from Wisconsin [Mr. FREAR] evidently did not know that the Cumberland River consisted of two separate and distinct projects. He offers an amendment here to one project and then proceeds to pour out some vituperation on the other project, a project which is not in this bill at all. I was content to remain silent, because it comes in the list of new projects, which are not to be embraced in this bill, but the gentleman from Wisconsin insists on lugging into this debate denunciation of a project that is not in the bill at all and as to this bill has no connection with the lower section of the river.

Mr. FREAR. I will say that I accept the gentleman's statement regarding this, because I do want to be correct. I simply based what I said upon the statement of Col. Townsend.

Mr. HULL of Tennessee. I am glad to hear the gentleman accept it, because I was very greatly surprised to see the gentleman bring up this matter at this time.

Now, the facts are, Mr. Chairman, that this project that is not in the bill and which has been attacked was approved by both Houses of Congress for 20 years, from 1886 to 1906. The gentleman from Ohio, Mr. Burton, was one of the supporters of this project. Finally the commerce apparently dropped down to less than half of what it was. The result was that the Department of Engineers not knowing the real facts as to the commerce recommended the temporary discontinuance of this improvement. Now, the gentleman from Wisconsin inaccurately said that this had been turned down three times by the department engineers. The fact is it never was turned down at all. It was only discontinued temporarily, until in 1912 the actual facts were developed with respect to the actual commerce of this river, and then the entire Department of Engineers recommended its restoration to the original plan of improvement. I recall that not only the Rivers and Harbors Committee in the House itself, but the Commerce Committee of the Senate unanimously approved this project in 1914. And I welcome the closest scrutiny of every fact pertaining to its worthiness as a proposition for improvement. I think the gentleman from Florida [Mr. SPARKMAN], chairman of the Rivers and Harbors Committee, will testify to the fact that his committee, at least in the main, are favorably impressed with the merits of the upper Cumberland River as a project worthy of improvement, as much perhaps as almost any project in the pending bill. I would like for the gentleman to say whether he and the committee still have that view of the matter or not.

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. SPARKMAN. Mr. Chairman, then I will answer the gentleman in my own time. I will say that project was inserted in the river and harbor bill in 1914. I thought it then a worthy project. In fact, I believed it was among the best projects that went into that bill, and I have had no occasion since to change my mind. I want to say further right there, wherever that river has been completely improved it has shown good results for the money that has been expended upon it. I believe it will continue to do so.

I think that is all I have to say.

Mr. SMALL. May I have the balance of your time?

Mr. SPARKMAN. How much time have I left?

The CHAIRMAN. The gentleman from Florida has one minute remaining.

Mr. SMALL. Mr. Chairman, I only wish to ask permission to extend my remarks in the RECORD by submitting some data and information which I think establishes conclusively the commercial importance of the Cumberland River.

The CHAIRMAN. The gentleman asks unanimous consent to extend his remarks in the RECORD as suggested by him. Is there objection? [After a pause.] The Chair hears none.

Mr. HULL of Tennessee. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. FREAR. Mr. Chairman, I ask unanimous consent to withdraw my amendment, and ask unanimous consent to insert a statement.

The CHAIRMAN. The gentleman asks unanimous consent to withdraw his amendment. Is there objection? [After a pause.] The Chair hears none.

The gentleman further asks unanimous consent to extend his remarks in the RECORD by inserting certain matter which he sends to the Clerk's desk. Is there objection?

There was no objection.

The following is the statement referred to:

CUMBERLAND RIVER, 1914.

[Taken from Engineer's Report, 1915, vol. 2, pp. 2847 and 2848.]

			Tons.
Above Nashville			314,028
Sand and gravel hauled 12 miles	tons	100,925	
Logs, ties, and timber	do	172,507	
			273,432
			40,596
Below Nashville			153,458
Sand and gravel	tons	38,976	
Logs, ties, and timber	do	102,024	
			141,000
			12,458
Total net			53,054

The Clerk read as follows:

Tennessee River, Tenn., Ala., and Ky.: For maintenance and continuing improvement by open-channel work above Chattanooga, Tenn., $300,000; for maintenance and continuing improvement by open-channel work between Florence and Riverton, Ala., $120,000; for continuing improvement by the construction of locks and dams between Chattanooga, Tenn., and Browns Island, Ala., in accordance with the report submitted in House Document No. 360, Sixty-second Congress, second session, as modified by the report of the Board of Engineers for Rivers and Harbors printed in Rivers and Harbors Committee Document No. 1, Sixty-fourth Congress, first session, $500,000: *Provided*, That no contract shall be entered into for the construction thereof until the local interests shall assume and pay all claims for flowage damage or arrange to do so in manner satisfactory to the Secretary of War: *Provided further*, That one high dam or two low dams may be constructed according as the local interests may contribute the cost of all claims for flowage damage arising from either type of dams, respectively: *And provided further*, That the Secretary of War shall ultimately determine the type of dams to be constructed; for continuing improvement and for maintenance below Riverton, Ala., $24,000; in all, $944,000.

Mr. SPARKMAN. Mr. Chairman, I wish to offer a committee amendment.

The CHAIRMAN. The gentleman from Florida offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 22, line 9, after the figures "$300,000," strike out the semicolon and insert "and of this amount not to exceed $5,000 may be expended, in the discretion of the Chief of Engineers and the Secretary of War, for the maintenance of the Clinch and Holston Rivers at or near the mouth of said rivers."

Mr. SPARKMAN. Mr. Chairman, I only wish to say that the necessity for that amendment has become apparent to the committee since the bill was reported. If we had had the same information before us at the time the bill was framed, we would have inserted some such provision as that in the body of the bill at the time.

The CHAIRMAN. The question is on agreeing to the amendment.

The question was taken, and the amendment was agreed to.

Mr. FREAR. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Wisconsin moves to strike out the last word.

Mr. FREAR. I am not going to refer to the Tennessee River or attempt to discuss that. I understand there is nothing here for the Muscle Shoals item, Mr. Chairman?

Mr. SPARKMAN. Nothing at all.

Mr. FREAR. Of course the Army Engineers, as I understand, expended $90,000 during the past summer under the general survey provision.

Mr. SPARKMAN. How much time does the gentleman desire?

Mr. FREAR. Five minutes.

Mr. SPARKMAN. I ask unanimous consent, Mr. Chairman, that the debate on this paragraph close in five minutes.

Mr. MANN. I hope the gentleman will wait. Not much time will be taken.

Mr. FREAR. I am not going to discuss the item, Mr. Chairman, because it is a large one. It carries $934,000. The last two allotments carried $724,000 more. I suggest, however, that this is a very proper place in which to apply the principle invoked by Col. Townsend, that if we are going to drop some of these projects here is a good place to do it; that is, to object to the continuation of these projects.

However, I just moved to strike out the last word because it is impossible to determine, so far as I can gather, just what is for maintenance and what is for improvement, so I shall not attempt it.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Yes.

Mr. MOORE of Pennsylvania. I would like to get the gentleman's viewpoint with regard to this item and others of the kind. Do I understand that the gentleman's proposition is that where certain locks and dams have been constructed and the commerce does not seem to justify further expenditure the gentleman would stop all work and abandon the project?

Mr. FREAR. The gentleman has asked me a question, and that involves quite an explanation. I am in favor of having some other system by which we can investigate these projects and not waste money, as we are doing to-day, on aimless "improvements," as they are called.

This Tennessee improvement is one of those that has been persistently pressed. The river is no larger than the river that flows in front of my own town, that fails to carry traffic. We have there an open stream a mile wide. The experience in Europe and here has been that that does not add to the traffic.

The gentleman from Kentucky [Mr. BARKLEY] stated a few moments ago that they hoped to have increased commerce on the Cumberland River, and I hope they will, and I hope they will have it on the Tennessee River. But the commerce there to-day is not of a character to give any encouragement as I view it.

The question was asked, Why do you take out floatable timber and sand from the statistics of commerce transported? The sand may be hauled half a mile, and the figures are put in to justify large appropriations. I leave out floatable timber also, because the timber can be floated ordinarily in a very low stage of water. Ordinarily it does not require a 5-foot stage or a 9-foot stage, as has been urged, on many of these streams. That is the reason why we have deducted sand and timber. The sand and floatable timber have been deducted by authorities, generally better authorities than I am on this question. They deduct such items and leave the remainder to serve as the basis of computing commerce. That is done here in other cases.

Mr. BARKLEY. Mr. Chairman, will the gentleman yield there?

Mr. FREAR. Yes.

Mr. BARKLEY. The gentleman stated that the Tennessee River was no larger than the river that flows by his own town.

Mr. FREAR. Yes; I stated that.

Mr. BARKLEY. Does the gentleman know that more water flows out of the Tennessee than flows down the Ohio River under normal conditions?

Mr. FREAR. Yes; but my river is a mile wide. We have excursion boats there, and, as I once said, we had a larger commerce there than they have in the city of Milwaukee or Philadelphia, but it was all logs and lumber, and now the mills have closed down operations and there is no commerce to speak of there.

Mr. Chairman, I ask unanimous consent to insert a report of commerce for the Tennessee, making the deductions that I have referred to, and I withdraw my pro forma amendment.

The CHAIRMAN. The gentleman from Wisconsin withdraws his pro forma amendment and asks unanimous consent to insert in the RECORD the figures he refers to. Is there objection?

There was no objection.

Following are the figures referred to:

Commerce on Tennessee River.			Tons.
Above Chattanooga			305,616
Logs, ties, and timber	tons	57,873	
Sand	do	145,832	
Chattanooga to Florence			124,872
Logs and ties	tons	30,477	
Sand	do	54,708	
Florence to Paducah			449,956
Logs, ties, and timber	tons	408,783	
Logs, ties, timber, and sand		697,673	880,444
			697,673
Actual net			182,771

My statement was about 200,000 tons. Of the 182,000 tons, 28,418 tons of marble was hauled 5 miles and 50,000 tons of iron ore, valued at a dollar a ton, was hauled 15 miles, or 78,000 tons of cheap freight with an insignificant haul. For that commerce so reported we have appropriated $11,000,000 in round numbers on the Tennessee and $944,000 more is carried in this bill.

Mr. MOON. Mr. Chairman, I am not surprised that my friend from Wisconsin makes no further objection to the item for the Tennessee River than he does. The National Waterways Com-

mission determined that the Tennessee River was practically the fourth river in importance in the United States, and stated that it had maintained its commerce wherever it was improved, and had increased it.

Now, the rivers that have been improved completely have been of great advantage to the people of the United States. Of course a river can not have a great commerce until it is prepared for that commerce. I realize that I can not undertake to enter into a discussion of the merits of this river in five minutes, because it would take an hour. But I want to make one suggestion that is applicable to the position of the gentleman from Wisconsin [Mr. FREAR]. He says we have not the commerce. Sir, there is more coal in the six States tributary to the Tennessee River than could be moved by it in a century, so the geologists of this country say, and more than would supply a population of 100,000,000 people for a thousand years. There is marble and timber and agricultural products and iron ore—commerce—everything there.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. MOON. Not just now. Now, between two of the pools that are navigated in that river there was a commerce valued at $2,000,000 last year, and the statistics here are utterly incomplete. That was commerce that floated during the times when the obstructions did not prevent it. What other commerce was there during that time that might have been carried but for the obstructions? Six million tons of coal on the upper end of the river, and a distance of 180 miles below 18,000,000 tons of coal might have been carried if that river had been prepared and fixed for carrying it the year around. What is the difference between the water freights and railway freights upon that article? It is the difference between 5 cents and 41 cents; 41 by the railroad and 5 by the river for a given distance.

There is an advantage. There are many millions that might have been saved to the people if this river had been opened.

Now, I want to make another suggestion. This section of the bill is not quite fair to the Tennessee River, in view of the $25,000,000 of commerce now being carried upon it. It is not fair to it inasmuch as it demands that we shall pay for the flowage rights and all damage done to private property where a public lock is located in the interest of commerce. Yet that provision is in this bill, and our people are going to accept it and pay for this part of the improvement of this river.

There was a section of 33 miles below the city of Chattanooga for which the Government of the United States made but small appropriations. Yet private enterprise, the people of that State and those of other States interested in water power, have improved that section of the river. How much would it have cost the Government of the United States to have improved it? The result of the improvement shows that it would have cost about $11,000,000; and yet the Government has placed only $243,000 in it, and the people of Tennessee and the corporations that have developed the water power there to 80,000 horsepower have expended in the interest of navigation primarily $11,000,000. We are helping to take care of the interests not only of the people there but of the United States. If any river in the world needs encouragement, it is that river, along whose banks the patriotic people look to the protection not only of their own interests but of the national interests. When this river is completely improved, there will be an open waterway from upper East Tennessee to New Orleans and St. Paul. There are more resources along this river and it is a greater river than the Ohio, yet we hear no objections to $60,000,000 of money being expended in the improvement of the Ohio. We have completed one project at private expense. We have completed two other great projects upon the river at Government expense. The present project is 63 per cent completed, and I do not wonder that the gentleman from Wisconsin [Mr. FREAR] could find no more objection than he did to this great waterway.

The CHAIRMAN. The gentleman's time has expired.

Mr. ALMON. Mr. Chairman, I am glad to know that there is no serious objection on the part of any Member of the House to the paragraph now under consideration making provision for the appropriation for the Tennessee River. This is evidence of the merit of this appropriation, as so many projects have been objected to in this bill. As has been stated by the gentleman from Wisconsin [Mr. FREAR], who has made so many objections to various paragraphs of this bill, the Tennessee is one of the big and important rivers of the Nation; and when this distinguished gentleman fails to object to the provisions made for the Tennessee River I am sure that each Member will agree that there is merit in each item appropriated for this river.

The Tennessee is indeed a great river. There are only two, I believe, larger in the United States. At Paducah, where the Tennessee and Ohio come together, there is a greater volume of water in the Tennessee than in the Ohio. The commerce upon this great river justifies sufficient appropriation by the National Government to open it up and make it navigable every month in the year. Every item in this bill, so far as this river is concerned, has been recommended by the engineers of the War Department, and is to be used at different points along the river from Knoxville, Tenn., to Paducah, Ky., a distance of 652 miles.

As there is no motion pending to strike out this paragraph, nor has any amendment been offered to reduce the appropriation, I deem it unnecessary to say anything further, and ask that the paragraph be passed.

Mr. SMALL. Mr. Chairman——

Mr. SPARKMAN. I should like to see if we can not arrange for some time on this paragraph. I ask unanimous consent that all debate on this paragraph and amendments thereto close in 10 minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate on this paragraph and all amendments thereto close in 10 minutes. Is there objection?

There was no objection.

Mr. SMALL. Mr. Chairman, I rise mainly for the purpose of calling the attention of the committee to the minority report of the gentleman from Wisconsin [Mr. FREAR] on the Tennessee River. On page 9 of this minority report he uses this language:

> Excluding floatable timber and sand, the Tennessee River has absorbed $11,000,000, in round numbers, in order to develop about 200,000 tons of actual commerce in 1914, of which 78,000 tons of coal was floated 16 miles.

Now, the reports of the engineers show that for the calendar year 1914 there was a total commerce on the Tennessee River of 1,343,709 tons, of a valuation of $19,723,951.

Mr. FREAR. Will the gentleman yield?

Mr. SMALL. In just a moment. Now, deducting from the total commerce timber and sand, which, I take it, is inclusive of the language used by the gentleman, "deducting floatable timber and sand," the commerce as reported on the three sections of the river is as follows:

> Above Chattanooga, 134,446 tons; between Chattanooga and Florence, 68,732 tons; between Florence and Chattanooga, 268,791 tons; making a total of 471,969.

Now, that calculation was made by Mr. J. H. McCann, one of the capable clerks of the River and Harbor Committee, and I take it to be absolutely correct. So that when the gentleman stated that there was only 200,000 tons after deducting the timber and sand, he was mistaken.

Mr. FREAR. I have submitted my report, and it is verified by the evidence, except that the coal hauled a short distance and the marble that was hauled a short distance was not taken into account.

Mr. SMALL. The engineer's report makes no mention of any coal having been carried.

Mr. FREAR. I so stated.

Mr. MOON. Will the gentleman yield?

Mr. SMALL. Certainly.

Mr. MOON. I want to say that there was an immense amount of coal moved, and about 18,000,000 tons that could have been moved on one section of the river, but which had to go by railroad. It could have gone by river, if it had been opened at the proper time.

Mr. SMALL. I am trying to show by report of the engineers that the minority report of the gentleman from Wisconsin can not be relied upon.

Now, I will read from the engineer's report, page 1101:

> In the Annual Report of the Chief of Engineers for 1915, page 1101, it is stated: "The prosecution of the work in various localities and the consequent lack of continuity of the improvement has resulted in no long reach of the river being made capable of uninterrupted navigation during low-water periods, except the stretch of about 200 miles from Big Bend Shoals to the mouth. Not so much benefit has followed, therefore, as would have been secured by advancing the work progressively upstream from the mouth. Nevertheless considerable improvement has resulted, and there is an important local traffic on various reaches of the river."

I will say in conclusion that the evidence goes to show that when the work of improvement shall be entirely completed it will demonstrate, as was well said by the gentleman from Tennessee [Mr. MOON], that this river will be one of the most important streams for commerce in all the country. [Applause.]

Mr. AUSTIN. Mr. Chairman, I wish to send an amendment to the desk to be read with the view of asking the chairman of the committee for some information.

The Clerk read as follows:

> Insert at the end of the last committee amendment the following:
> "For the construction of locks and dams at Caney Creek Shoals, between Knoxville and Chattanooga, Tenn., in accordance with the report submitted in House Document No. 360, Sixty-second Congress, second session, $500,000."

Mr. AUSTIN. Mr. Chairman, I wish to ask the chairman of the committee if it is the intention of the Committee on Rivers and Harbors to take up this proposition providing for a lock and dam at Caney Creek Shoals?

Mr. SPARKMAN. I will say to the gentleman that in some subsequent bill, as far as I am concerned, we propose to take up that matter and consider it.

Mr. AUSTIN. Mr. Chairman, with that understanding I will withdraw the amendment. I want to say, however, a few words about the Tennessee River. I was born on it, lived all my life on its banks, and traveled over it from end to end. On one of these trips I accompanied the River and Harbor Committee, of which at that time Mr. Burton was the chairman. On that occasion Mr. Burton expressed himself as being satisfied with the merits of the Tennessee River as one of the streams which deserved favorable consideration at the hands of Congress.

The national waterways commission referred to by my colleague, Judge MOON, which made a very careful and exhaustive study of the meritorious rivers in the United States, pronounced the Tennessee River the fourth largest in importance in the United States. That commission was created, as I recall, as the result of the efforts of Mr. Burton, who served as its chairman. There is not a river in the United States having a greater undeveloped wealth than the Tennessee River.

The gentleman from Wisconsin [Mr. FREAR] says something about the transportation of sand and timber on this river. If the Tennessee River was canalized, with slack water all the year, there is more wealth and business for future development than in any section of the United States in proportion to size and population.

Eastern Tennessee is the heart of the great southern coal fields. This field is 1,300 miles nearer New Orleans than the coal fields of Pennsylvania or West Virginia, and we are unable to sell a ton of coal in that market because of the lack of water navigation.

The most valuable and useful marble in this country is the Tennessee marble, quarried on the banks of this river. We have at present over 5,000 men engaged in that industry. If we had the river so we could utilize it, we would reduce the freight on marble to the interior cities at least $1.50 a ton.

There are three iron furnaces in the district I represent and a number in the district represented by my friend, Judge MOON. If this river was made useful 12 months in the year, as Congress has determined the Ohio River shall be made, we could deliver pig iron at Cincinnati, Louisville, New Orleans, and other points for $1.50 a ton less. In 1914 for the first time we were unable to compete with our foreign competitors in the sale of pig iron in New Orleans, because they could ship it across the ocean and lay it down for less than we could ship it by rail from the furnaces in eastern Tennessee to New Orleans.

We have the largest zinc mill in the United States in east Tennessee. The Aluminum Co. of America is constructing now the largest aluminum plant in the world in that section of the country. It is hauling its bauxite, its raw material, from the district in Arkansas, represented by Mr. JACOWAY, by rail, and are shipping out aluminum pig to Pittsburgh, St. Louis, and other points by rail. The utilization of this river year in and year out would mean a saving in the transportation of the raw material and finished article to the amount of millions of dollars. That is not all.

The East Tennessee Copper Co., located in eastern Tennessee, and an English company at the same point, are two of the most prosperous concerns of the kind in the United States, and they would be affected by deep-water transportation.

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

Mr. ALMON. Mr. Chairman, I ask unanimous consent that the time of the gentleman be extended for five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. AUSTIN. Mr. Chairman, the largest and most extensive territory of hardwood lumber in this country is in the Appalachian Mountains and can be reached by a development of this river and its tributaries. We are shipping out rough lumber, we are shipping out manufactured or sawed lumber, and we are shipping out furniture, and so forth, made in our factories, and that interest would be affected and benefited by a reduction of transportation rates. We have cotton mills and knitting mills, and we are hauling our raw materials from the cotton fields of the South and shipping out our finished products by rail, and these industries would all be gainers by all-the-year-round navigation, which would make a reduction in the transportation of the raw materials and the finished articles to the markets of the world. There are a million people in east Tennessee. There is a manufacturing city at Chattanooga, with a population of nearly 100,000, and at Knoxville, a city of equal population, and you may search the census returns and you will find no other cities or section of the country which have grown industrially as has the mountain district of Tennessee, filled with iron, coal, marble, copper, hardwood lumber, aluminum, zinc, and so forth.

Mr. MOON. Mr. Chairman, will the gentleman yield?

Mr. AUSTIN. Certainly.

Mr. MOON. I want to suggest to the gentleman that at Richard City, Marion County, there is a cement plant that cost more than a million dollars within a half mile of the river, and that plant has a right of way to the river, and by reason of the fact that it can not use the river for more than half of the year, during the other half of the year has to pay half again as much freight as it does during the six months when it can use the river.

Mr. AUSTIN. I thank the gentleman for the interruption. We have commenced and have virtually completed a $3,000,000 dye plant in east Tennessee to relieve a very serious situation in this country. Here is the best investment for practical, useful river improvement in the United States and where there is a future enormous in the way of industrial development and growth of population which means wealth and wages and prosperity for our country. [Applause.] And the Democratic majority in this House would be untrue and false to the interests of the South if it did not provide for the practical, useful improvement of this river when it has the opportunity. Southern Democrats would be derelict to their duty, and I hope no Republican colleague of mine will ever stand in the way of this practical, useful, and patriotic legislation to improve this great river. [Applause.]

Mr. SMITH of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. AUSTIN. Yes.

Mr. SMITH of Minnesota. Does not the gentleman think that the developments to which he has referred would also benefit the North quite as much as the South?

Mr. AUSTIN. Why, we are shipping our raw material and finished articles to the North, West, and East and other sections, which would get the benefit of the reduced rate and the reduced cost of these goods, both as to the raw material and the finished article.

The CHAIRMAN. The time of the gentleman from Tennessee has expired.

The Clerk read as follows:

Harbor at Toledo, Ohio: For maintenance, $20,000.

Mr. FREAR. Mr. Chairman, I move to strike out the last word for the purpose of discussing briefly this question of anticipated commerce. The suggestion has been made by two or three of the speakers, as of the last project, that if they are given opportunity to complete a certain project commerce will grow very rapidly. I hope it will, and the gentleman at my left, my colleague from Minnesota [Mr. SMITH], who represents the Mississippi River, speaks of the possibility of it; but I desire to call attention to the fact that the anticipated Mississippi commerce has usually been a disappointment. If you will examine the commerce of the Mississippi River from St. Paul clear down to New Orleans, you will find that it has been a disappointment on the streams all along that great waterway. I want to speak of some of the anticipated commerce on a number of streams which was never realized. Of course excuses may be offered one way and another, but these anticipations of people who are urging the appropriations. Take, for instance, the Arkansas River, which we have had up for discussion. I did not care to present it when the matter was up, but I refer now to page 20 of the report. It was there estimated that 800,000,000 tons of coal are tributary to the river, and yet, after spending $3,572,000 on the Arkansas River, the reports shows that 900,000 tons of coal were shipped by rail out of the territory adjacent to the river in 1914, and only 2,716 tons were floated 7 miles on the river last year.

Mr. HULBERT. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Just for a question.

Mr. HULBERT. Has this river been sufficiently improved to put it in active competition with the railroads at that point?

Mr. FREAR. I think, unquestionably, because $3,592,000 have been expended upon it, and it has been navigated for 20 or 30 years, or longer than that. On the Big Sandy River it was prophesied a dozen years ago that by canalizing the river a million tons of coal or more would be floated annually down that stream, whereas after expending $1,126,125 on the river only 12 tons were floated 20 miles in 1913.

Mr. SWITZER. Mr. Chairman, will the gentleman yield?

Mr. FREAR. Just one moment. I want to finish my statement. Here is a report published by the gentleman from Philadelphia which goes on to criticize me very severely because I

said 12 tons of coal were shipped on the Big Sandy in 1913, and he says he can not find it anywhere. He takes four pages to denounce me, when, as a matter of fact, he did not know where to go to look for it. I stated where it could be found.

On the Hennepin Canal, which has cost the Government $7,597,781 for 33 locks, freight savings on grain were promised Iowa growers a dozen years ago of $20,000,000 annually. For five years it has been used and only 5,868 tons of grain were floated in 1914 at a cost to the Government in interest and maintenance of over $36 per ton. An actual loss in the insignificant grain shipments occurred from 1913 to 1914.

After spending $21,700,000 on the Missouri River it is now predicted that $14,100,000 will invite large grain shipments from Kansas City to St. Louis. Yet after squandering a score of millions on the river to date, not one ton of grain was shipped by water from Kansas City to St. Louis in 1912, 1913, or 1914. A total of 5,290 tons of grain was barged 115 miles in 1914, or slightly over one-quarter of the distance between the cities was averaged. This project was recommended for abandonment by the local engineer, but he was overruled by the board.

The above is a statement which is in the report and based on the statistics. Surely none of these anticipations have been realized.

The CHAIRMAN. The time of the gentleman has expired.

Mr. FREAR. Mr. Chairman, I ask unanimous consent for two minutes more.

Mr. SPARKMAN. I object.

Mr. SWITZER. Mr. Chairman, I ask for two or three minutes myself.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and amendments thereto close in three minutes.

The CHAIRMAN. Is there objection?

Mr. HULBERT. Reserving the right to object, I would like to ask the gentleman if he will make it five minutes?

Mr. SPARKMAN. I will make it five minutes. Does the gentleman wish two minutes?

Mr. HULBERT. Yes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on the paragraph and amendments thereto close in five minutes. Is there objection?

There was no objection.

Mr. SWITZER. Mr. Chairman, while I personally doubt the wisdom of improving the Big Sandy, I do not know if I had been a member of the Rivers and Harbors Committee whether or not I would have supported it at the time. I do, though, want to protest against the gentleman from Wisconsin [Mr. FREAR] libeling and slandering the man who prophesied there would be an immense tonnage of coal shipped out over this stream if it should be canalized. The facts of the matter are that the Government, after building two or three dams on this river—I have forgotten the exact number—stopped improving the Big Sandy River.

By building one or two more dams they would have reached this great coal field, and I have no doubt but that the prophecy of the person who made this prediction at the time the project was adopted would be fulfilled if the Government had carried out the proposition adopted.

I do not know if that is the reason, though another fact is that the Chesapeake & Ohio Railroad has a line running from this coal field on the Kentucky side right down the Big Sandy River. I do not know what stopped the improvement of the Big Sandy. As to the gentleman reading a letter saying that the writer does not know where the Big Sandy River is, it seems like a slur on those two great States of Kentucky and Virginia, containing the two greatest coal fields in this country outside of Pennsylvania, and the Big Sandy separating the two States.

Mr. HULBERT. I would like to utilize the two minutes allotted to me for the purpose of propounding to the gentleman from Wisconsin a question which he did not have opportunity to answer while he had the floor. The gentleman has made a comparison of the shipment of coal by rail and water on the Arkansas River. The gentleman made the statement that the river had been sufficiently improved to put it in competition with the railroad.

Mr. FREAR. I did not say that.

Mr. HULBERT. That is the question I asked. I wanted to know if the river had been sufficiently improved to put it in actual competition with the railroad for the purpose of transporting coal from the coal fields at that point, and if the gentleman misunderstood my question I repeat the question now and ask if he will be good enough to answer.

Mr. FREAR. What is the inquiry?

Mr. HULBERT. Whether the river has been sufficiently improved to put it in active competition against the railroad at that point in the transportation of coal?

Mr. FREAR. I will say, judging from all history, that it will never be so. It is the history of every river in the country.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last two words.

The CHAIRMAN. All time has expired. The Clerk will read.

The Clerk read as follows:

Harbor at Port Clinton, Ohio: For maintenance, $1,000.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. A little while ago I put a question to the gentleman from Wisconsin [Mr. FREAR] as to his attitude, in order that we might more intelligently understand whether or not he favored the cessation of work on projects which had been started and on which much money had already been spent. I do not recall that he made a definite answer to that question. I want to know whether the Government, having spent a large amount of money building locks and dams on a river like the Ohio, should abandon the work and charge it up to profit and loss if, while in progress of construction, it did not come up to the expectations of some waterways expert in the matter of commerce and serviceability?

Now, if that is the gentleman's position, that we should abandon all these existing works, it is a very serious matter, and it affects largely every argument that he has made upon this floor. What the gentleman stated in that relation has been based, as he states, very largely upon his inquiries and studies as to foreign conditions. A while ago he said, with respect to the Tennessee River I think, that the lumber had all been cut off, indicating a falling tonnage.

Mr. FREAR. Oh, no; I was referring to our part of the country.

Mr. MOORE of Pennsylvania. I apply it, then, to any river that the gentleman might have referred to, where the lumber in the vicinity had been cut away——

Mr. FREAR. I do not know anything about that down there——

Mr. MOORE of Pennsylvania. And that the necessity of providing transportation by water no longer exists.

Now, if the gentleman is basing that kind of an argument upon foreign conditions, I just want to call his attention to the canals in Europe, particularly those of Germany and France, which are in constant use for the purpose of carrying bulky freight, and where, as to lumber, instead of having their forests utterly depleted and cut away, they are constantly recreating them, as, for instance, in the Sihlwald of Switzerland. I direct the gentleman's attention to that particular section of Europe or to the Black Forest in Germany, because it will help him in his studies of the waterway transportation question. Where they cut down a tree in Switzerland they see to it that another tree is planted to take its place.

That practice has been followed in Germany for years, and it is one of the secrets of Germany's ability to maintain herself to-day that instead of drawing upon her own forests she has been drawing on the forests of Norway and Sweden and Russia, buying her timber instead of using up her own. In Switzerland, where they remove a tree they see that it is restored. Not even an apple tree that is struck by lightning is permitted to go without another apple tree being planted to take its place.

So in those studies and investigations that the gentleman is making of waterways abroad, upon which he bases his proposition that we should abandon great works in the United States, I commend to him the close study of the lumber situation in Europe.

When it comes to rail-and-water transportation in the United States, I want to commend to the gentleman the action of the Interstate Commerce Commission in recent cases, showing that wherever water transportation has had a fair chance it has compelled the railroads to be reasonable in their freight rates. I would not have you understand that I am opposed to the railroads. I am as strong a railroad development man as there is in this House, and I want to see them reach out and penetrate every section of the country. But as in foreign countries the railway is not injured by the waterway, so it should be here; the two of them serving to their full capacity create new business, and each of them does more business under such conditions than it did before. If the railroad men are wise—and some of them in the East begin to realize it—rather than retard waterway development they will encourage it, because where they have been subjected to the congestion such as they have endured during the last few months, carrying the products of the West to the seaboard, they find that it is desirable to have relief, some auxiliary, such as Mr. James J. Hill back in 1907 indicated must be had if the railroads of this country are to give effective service.

The railroads have not been expanding as they should have been, and now that there is a great pressure upon them, they have been obliged in my section of the country to lay an em-

bargo on the transportation of heavy commodities, because they do not have sufficient facilities to carry them.

This has recently developed in the case of the Ohio River. I have in my hand a ruling of the Interstate Commerce Commission permitting the railroads there to lower their rates in order to compete with what, in that section, is superior transportation of products by waterways.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MOORE of Pennsylvania. Mr. Chairman, I ask unanimous consent to extend my remarks by inserting an extract from an Interstate Commerce Commission report.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. MOORE of Pennsylvania submitted the following:

FOURTH SECTION APPLICATIONS NOS. 2045, 3965, 1952, 1548, 1065, 2138, 4219, 790, AND 2072—CLASS AND COMMODITY RATES BETWEEN ST. LOUIS AND EAST ST. LOUIS AND OHIO RIVER POINTS AND BETWEEN THE OHIO RIVER POINTS THEMSELVES.

[Submitted Apr. 8, 1915. Decided Mar. 2, 1916.]

The class and commodity rates of carriers operating both north and south of the Ohio River in the territory lying between St. Louis, Mo., and East St. Louis, Ill., on the one hand, and Ohio River points on the other, and between the various Ohio River points themselves, are in many instances in contravention of the long-and-short-haul rule of the fourth section of the act. These carriers ask to be allowed to continue these rates between the river points, which are lower than rates at intermediate points. Upon the facts disclosed by the record; *Held*, That—

1. Water competition justifies departures from the long-and-short-haul rule of the fourth section in rates between points on the Ohio and Mississippi Rivers, and relief should be granted to the extent prescribed in the report.

2. Authority to continue to charge class and commodity rates between the same points via Chicago and Chicago junctions lower than rates contemporaneously applicable on like traffic to intermediate points denied.

3. Authority to continue class and commodity rates between the same points via the route of the Louisville & Nashville Railroad through Guthrie lower than rates contemporaneously applicable on like traffic to intermediate points denied.

Mr. FREAR. Mr. Chairman, I rise in opposition to the pending amendment, and wish to say, in response to the statement of the gentleman from Pennsylvania——

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph end in two minutes.

Mr. FREAR. Mr. Chairman, I move to strike out the last two words.

Mr. BORLAND. The gentleman from Wisconsin can take time under the next item.

Mr. FREAR. It is immaterial to me, but it will not take extra time.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that the debate on the pending paragraph may be closed in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that the debate on the pending paragraph be closed in five minutes. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Wisconsin is recognized for five minutes.

Mr. FREAR. Mr. Chairman, the gentleman from Pennsylvania [Mr. MOORE] propounds so many questions that it is very hard for me to answer them in five minutes.

Mr. SPARKMAN. Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman from Florida will state it.

Mr. SPARKMAN. Does not the rule require that a gentleman rising to address the committee shall confine his remarks to the subject under discussion?

The CHAIRMAN. Yes.

Mr. SPARKMAN. Then, I make the point of order that the gentleman from Wisconsin is not discussing the pending question.

Mr. FREAR. Oh, Mr. Chairman, I am discussing the very proposition that freights carried by boats are cheaper than freights carried by rail. The gentleman from Florida sat silent and did not object to the gentleman from Pennsylvania, while he was talking for five minutes.

Mr. SPARKMAN. Oh, the gentleman should not get worked up.

Mr. FREAR. I am not worked up in the slightest degree.

Mr. SPARKMAN. I notice, Mr. Chairman, that a great deal of this discussion ranges over a wide area.

Mr. FREAR. Mr. Chairman, I ask for order.

The CHAIRMAN. The Chair will insist that order be observed. The gentleman from Wisconsin is recognized for five minutes.

Mr. FREAR. Mr. Chairman, I call attention directly to this transportation question, but the chairman of the Committee on Rivers and Harbors objects to it. I am undertaking to discuss the question of canalization on the Ohio River and these other projects. The gentleman from Pennsylvania [Mr. MOORE] asked me, "Do you believe in canalization projects?" I believe that, as one of the best engineers says, we ought to stop work on most of these projects until we have made an experiment. We have had the Black Warrior River completed at a cost of $12,000,000. Let us try and see how far we can go with that, what return can be had, and keep the others in status quo, says Col. Townsend. That is the judgment of other waterway experts. I know nothing about it, except, I say, let us put this in the hands of people who will determine which is the right project to continue, and hold the others back until we ascertain whether or not any complete return will come to the people of this country on the investment we are making.

Now, the gentleman discusses—and it is right in line with this proposition—the question of carrying products in France and in Germany. I have stated those propositions as well as I could in the limited time given me, and I find that even on those canals in France and Germany the judgment of the men who write authoritatively about them is that they are not a profitable investment ordinarily to either France or Germany, although the concentrated populations in those countries make it possible to carry a greater amount of commerce on those canals than here. But the gentleman leaves out of the question the one important proposition that there the Government controls railway rates—in fact, owns the railways—and forces commerce by that means to use the water transportation which we do not do in this country. Now, the gentleman says, touching upon this very question of transportation, "Do you believe that the railroads ought to be allowed to cut down their rates to meet the water transportation?" I do not. Do you? Here is the result the moment you do. Did the gentleman from Pennsylvania favor the 5 per cent increase or any other increase to make it profitable for the railroads to do business? If so, for what reason? It is because they are not making a reasonable profit at the present time.

Now, the moment you cut them down below a reasonable profit at one point in order to get the business at some waterway point, do you not necessarily compel them to raise the rate inland? More than that, you compel those discriminated against to pay the expense of the improvement. You speak of a waterway point down here on the Ohio River where rates will be reduced. We ought to give to the waterway the right to carry the freight, because if we determine on the question of reasonable earnings to the railroads to which they are entitled, it is necessary that some one else must make up the deficiency, and it is the man who lives off the river, who has not the benefit of the waterway competition, who must make it up, and pay the excess rates to meet the deficiency at water-competition points.

I believe we ought to control the rates of the railroads to prevent them driving out the waterway transportation. The gentleman speaks of the growing of timber over in Europe. Of course, they do that there. They do many things better than we do, because we have been lavish with all our natural resources. We have not yet grown timber here. We have not yet controlled railroads, but we are proceeding on an elaborate process of canalization, without knowing where we are going or how far we are going into the Treasury. Until we do work as they are doing in foreign countries it is a useless waste of money at the present time.

The CHAIRMAN. The time of the gentleman has expired. The pro forma amendment will be withdrawn, and the Clerk will read.

The Clerk read as follows:

Harbor at Sandusky, Ohio: For maintenance, $10,000.

Mr. BORLAND. Mr. Speaker, I move to strike out the last word. I am very anxious to expedite the consideration of this bill, and I do not want to take up any time in unnecessary discussion of it; but I do not want the statement of the gentleman from Wisconsin to go out without any reply at all from those who are familiar with the facts.

The gentleman has stated in round numbers how much has been expended on the Arkansas River and certain other rivers, and then has pointed to the commerce on those rivers during the time in which that expenditure has been made. Now, if the gentleman would make a scientific study of the question of river transportation, he would find that a river, in order to carry freight in competition with a railroad—and that is the modern condition; it must carry in competition with the railroad—must be put into a certain usable condition before it even begins to be able to carry goods profitably. River navigation is greatly different, now that the boats must compete with the railroads, than it was before the day of railroads, when the rivers were the only available channels of commerce. He

would find that up to a certain point sand and timber could be floated down the river. Up to another point coal could be barged upon it. When he gets beyond that point and begins to carry goods—high-class freight that the railroads can compete for—he must have facilities comparable with the railroad facilities.

The mere improvement of the channel is not the only problem involved. The question of development of terminals is one problem involved. The question of the development of routes of trade and through rates and joint rates is another problem involved. The question of the articulation of railroads and the exchange of business is another problem involved. The question of the kind of craft that can be used on a particular stream is another problem, whether barges towed by a power boat or boats operating under their own power. The gentleman assumes that all these problems are going to solve themselves the very minute that the Government causes the expenditure of a sum of money on the channel. The fact of the matter is that if the inland rivers of this country are to be put in condition as arteries of commerce, there are a number of problems that must be solved by the local interests which are concerned, at considerable cost and expense to themselves.

I am not going to discuss the Missouri River, because we will come to that later; but I am going to point the gentleman to the very exhaustive report made by the Board of Engineers on the reexamination of the Missouri River projects, Document No. 463, in which the board say:

The company is making the most thorough attempt within the knowledge of the board to revive river traffic, which has disappeared under railway competition. It appears to be sparing no expense or effort that will contribute to the solution of the problem, and it claims as a result of its experience that success is obtainable if a permanent 6-foot channel is provided.

In that report they are speaking of the Shippers' Boat Line, of Kansas City, Mo. I want to call the attention of gentlemen to the chart which accompanies that report. Our German naval architect, Mr. Von Pagenhardt, worked out the question of how many hours each barge in the employ of that company was engaged in profitable traffic. He wanted to show what the condition of the river was and how much of the time that barge could run in competition with the railroad; and do you know that he found that a barge, provided at the expense of the company and operated by a full complement of men, could only run 30 per cent of the time on a partially improved river that a railroad car can run in the service of a railroad company. All of the black spots and all of the spotted lines in these charts indicate time when the barge is tied up. The black spots represent the nighttime. You can not run at night on an unimproved river, even if you have it lighted by guide lights. You can not afford to risk your goods at night on an unimproved channel. The spotted lines indicate navigation troubles caused by low water and sand bars, and only the clear white squares there represent hours of running time when the barge is actually making money for its owners.

If we could eliminate the black spots and the spotted squares and put the barge in a position of a railroad car by improving the channel so as to be able to carry the freight night and day, and make daily trips on a schedule time, there will be a vast difference in the commerce.

What did the board find? In the last three years commerce had grown between Kansas City and St. Louis in competition with the railroads in high-class freight, 146 per cent every season the boat operated. [Applause.]

The Clerk read as follows:

Harbor at Huron, Ohio: For maintenance, $2,500.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. Following out the same discussion of water transportation which the gentleman speaks of, this Government has paid some $400,000,000 on river improvements of this country for waterway transportation, and I challenge the gentleman to point to instances where the commerce has increased.

Mr. SWITZER. Will the gentleman yield?

Mr. FREAR. Yes.

Mr. SWITZER. How about the Monongahela River?

Mr. FREAR. Well, the Monongahela has held about even. The river has held about even with the same company owning the coal and owning the boat, as I am informed. But it is practically the only river, as I stated in my report, and because of the coal mines at the headwaters. It stands by itself.

Let us come to the Missouri River and the rivers like the Missouri. We have spent $20,000,000 on navigation. The report of Mr. Deakin says that for the purpose of saving $10,000 in freight charges in waterway transportation it will cost the Government $1,100,000 annually.

Mr. BORLAND. Oh, no; the gentleman is wrong about that.

Mr. FREAR. I can prove it by the report.

Mr. BORLAND. But it has been proved that Mr. Deakin was wrong.

Mr. FREAR. The chairman of the Mississippi River Commission, Col. Townsend, confirms him. I speak of that merely to show the enthusiasm and day dreams that my friends have and when they challenge me and ask for reasons for the position I take. Now, in reference to water transportation I am in favor of improvements where we can show any legitimate results, but not where you put the money into useless rivers by canalization. Half of the canals in the country have been abandoned, and we see no legitimate results from this investment. Take the $7,000,000 Hennepin Canal and the $12,000,000 Black Warrior River. In what way have you seen any reasonable return for the investment? And yet we are asked to appropriate a large sum of money for all these projects. Let us have a commission that will make an examination of this question and see that the money is wisely expended and not be wasted.

The Clerk read as follows:

Harbor at Cleveland, Ohio: For maintenance, $65,000.

Mr. SWITZER. Mr. Chairman, I move to strike out the last word. I asked the gentleman from Wisconsin about the Monongahela River and whether or not the annual tonnage had not increased by reason of the improvement of this stream. I hold in my hand a letter sent to the Committee on Commerce in the United States Senate by the Board of Army Engineers. It has no number, but they give the figures as to the Monongahela. The original commerce on the Monongahela River before it was improved was 4,407,000 tons. The commerce in 1911—that was after it was canalized—was 11,143,000 tons, and so in 1912, or two and three-quarters as much as it was before the stream was canalized, and the report says that the freight rates have been reduced 40 or 50 per cent. I have a letter showing that the coal coming down the Monongahela to a point on the Ohio, which used to cost 44 cents a ton to move, now is being moved for 4 cents a ton.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this item and amendments thereto be closed in two minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida? [After a pause.] The Chair hears none.

Mr. FREAR. Mr. Chairman, I have excepted the Monongahela and Ohio Rivers as showing an appreciable commerce in my report. I wish to say, in regard to the proposition that the gentleman has presented, that the Army engineers state commerce is sometimes duplicated and triplicated and quadrupled. This is because the same commerce is frequently counted several times. I have taken the Ohio River and shown by an analysis of the report of the Army engineers how the report does duplicate. With an open-channel project there was no difficulty in determining improvements, but the moment you get locks and dams there is no determination of the exact amount. In the case of the Ohio River, by investigation and analyzing, I do not see how it can be answered. We have no means of exact determination.

Now, as I have said, I have excepted the Monongahela River, because it is in a class by itself; but out of 100 rivers, does it not seem striking that only 2 rivers show anything toward an increase in commerce after the expenditure of several hundred million dollars in all on rivers?

The Clerk read as follows:

Ohio River: Continuing improvement by the construction of locks and dams with a view to securing a navigable depth of 9 feet, $5,000,000.

Mr. FREAR. Mr. Chairman, in order to give several gentlemen who are present an opportunity to discuss the Ohio River and show some of the good things about it—and I am not going to say much against it—I move to strike out the section; and if I were confident that amendment would pass I might hesitate to make the motion. I do it simply to show the situation in which we are placed. A large number of locks are being constructed to-day on the Ohio River. We have expended over $50,000,000 on the Ohio River. The project is going to take from $80,000,000 to $100,000,000, so far as the estimate of different engineers shows, before the project is completed. Col. Townsend says, "Let us take two streams," and he mentions the Ohio River as one, and also the project of a 14-foot channel from St. Louis to Chicago; and he suggests that they be put in as experimental projects, and that all the others wait in status quo. The difficulty with Col. Townsend's proposition is that he ignores the fact that we have completed certain projects, as, for instance, the Warrior, which has cost about $12,000,000; the Hennepin Canal, which has cost over $7,000,000; and some of the other rivers that have been completed—quite a large number of them—as we well know by the records. Let us take

those and see what the result is to-day, instead of going on and putting in forty or fifty million dollars more—that is, in this project, which I believe now is a 53-lock canalization project. Gentlemen have told me, who have run that river—pilots as well as captains—that the traffic to-day is not what it once was. You have a coal traffic there—and, by the way, I ask unanimous consent to incorporate in my remarks an analysis that I have made of the Ohio traffic.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to extend his remarks in the RECORD in the manner stated. Is there objection?

There was no objection.

The analysis referred to is as follows:

THE OHIO RIVER COMMERCE.

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, July 27, 1914.

Hon. S. M. SPARKMAN,
Chairman Committee on Rivers and Harbors,
United States House of Representatives.

SIR: 1. Referring to the statement of the commercial statistics of the Ohio River, telephoned to you some time since, I have the honor to inform you that a report just received from the district officer states that the commercial statistics which he reported by telegraph have been found upon careful check to have contained some duplication. A corrected tabular statement of the statistics is herewith.

2. As to the reason for reporting the statistics at only six locks, it may be stated that the particular locks were selected with a view to obtaining as complete statistics as possible, and at the same time to eliminate duplication as much as practicable. Boats with through tows are required to report only at the first lock through which they pass. The item for open-river commerce is the local commerce carried on between the various locks and dams.

Very respectfully,

DAN C. KINGMAN,
Chief of Engineers, United States Army.

Ohio River tonnage, calendar year 1913.

[Through lock and open river.]

	Tonnage.	Valuation.	Passengers.
Lock No. 1	1,982,257.5	$3,720,794.36	86,518
Lock No. 8	224,080.5	1,095,666.92	5,005
Lock No. 18	374,945.0	2,336,645.31	9,421
Lock No. 26	796,629.0	2,926,918.65	17,266
Lock No. 37	1,988,434.0	9,953,466.24	104,078
Lock No. 41	1,537,146.5	6,318,567.53	11,767
Open river	1,509,111.5	14,088,452.70	1,086,897
Ferries	1,401,519.5	36,086,390.07	2,949,834
Total	9,814,123.5	77,026,901.78	4,270,786

A corrected statement of average freight floated on the Ohio, based upon official lock reports, is now presented over Chief Kingman's signature, and invites scrutiny.

When a 63-lock system on the Ohio River has been completed as a monument to congressional waste and engineering complicity "commerce" can then be determined by using 63 as a multiple of lock tonnage This cumulative method of reckoning is as illuminating as to count the passengers in every car at every street corner in order to determine the total street car traffic. Astounding statistics may thus be produced. Chief Kingman says he has "avoided duplication as far as possible." What is the average haul or tonnage along the river when 1,400,000 tons were ferried across the river? Did the continuous commerce reach 100,000 tons or 50,000 tons, exclusive of soft coal, which has floated down the Ohio and Mississippi for a half century at a yearly decreasing rate?

In an effort to excuse a proposed wasteful expenditure of from $60,000,000 to $100,000,000 on the Ohio, according to the varying predictions of Army engineers, our present chief includes in his totals 1,500,000 tons of "open-river traffic" that passes along the river as it always has for 50 years and in much larger quantities before canalization was known and before a dollar was spent by the Government on the Ohio. Was that open-river traffic part of the open-river traffic at each lock? How much freight goes through locks, and how far?

CANALIZATION TO PROMOTE RIVER FERRIAGE.

The limit of imaginary mathematics is reached when to total lockages of freight at a half dozen dams, including open-river traffic, our Chief Engineer adds more "open-river traffic" and finally scores a positive triumph by adding ferriage across the river, which aggregates 2,949,834 passengers, nearly three-fourths of the total number, valued at $36,086,390.07. That odd 7 cents is developed through engineering accuracy. Ferriage valuation is practically one-half of the total value of all tonnage and passengers carried on the river. Assuming that passengers had no value and that freight alone was considered, no further analysis need be made to show the valueless character of valuation statistics submitted by the Chief Engineer to bolster up this $100,000,000 canalization project.

Approaching 2,000,000 tons at one or two different points, over 95 per cent of which is soft coal, sand, and gravel, a traffic rapidly diminishing in quantity and value, leaves the mouth of the Ohio River at less than a million tons of soft coal, so far as can be ascertained, and then drifts slowly down the Mississippi to be recounted at Cairo, Memphis, Vicksburg, and New Orleans. In other words, a few tons of soft coal that reach New Orleans are first counted at a dozen locks on the Monongahela, then at the locks on the Ohio, and then the same coal, used to swell senseless quadrupled statistics, is sent down and recounted at Cairo, Memphis, Vicksburg, and New Orleans, on the Father of Waters.

It is an interesting system—one that only an able engineer could gravely put across with a wealth of misleading statistics, and one that is frequently used for duplicating and quadruplicating commerce on other rivers and canals.

In order that a better understanding of Chief Kingman's letter may be had, let us take the tables from which he draws deductions.

OHIO RIVER TRAFFIC AT LOCK 1.

Lock 1 is given 1,982,257 tons. But page 2711 says that is commerce which passed through the lock—"and open river"—at that point. The table further shows that of the impressive tonnage reported, including duplications, 1,946,119 tons consisted of soft coal, sand, and gravel that was always floated down the "open river," leaving a commerce of 36,135 tons, including 11,240 tons of floatable logs and ties, or less than 25,000 tons that may or may not have required the services of this $100,000,000 lock system.

OHIO RIVER TRAFFIC AT LOCK 8.

Lock 8 and "open river" is given 224,080 tons by Chief Kingman, page 2712. Of that traffic, so reported, soft coal and railroad ties, that for a half century were floated down the open river, reached 207,429 tons, leaving 16,651 tons of cement and other reported freight at that point for which a $100,000,000 lock system is being built under the recommendation of Army engineers.

OHIO RIVER TRAFFIC AT LOCK 18.

Other lock statistics are of the same character. For fear this statement may not be accepted, as based on investigation, I will take the next lock. Chief Kingman's next lock, 18, and "open river" statistics are found on page 2713. He reports a total "commerce" of 374,945 tons, whereas out of an even 50 items reported, 2 items of soft coal and logs reached 342,836 tons. Just what method was taken for shipping some 7,000 tons of oil and 2,500 tons of lumber, found in the remaining 48 items, the report fails to disclose. One thing is certain amid all this attempt to impress Congress with inflated statistics of open-river and lock traffic, the Government is annually paying bills reaching, with the regular and sundry civil bills, from $5,000,000 to $8,000,000 for the Ohio River alone, for a comparatively insignificant commerce average along the river, apart from soft coal, sand, and gravel, of less than 50,000 tons at given points, as shown by the official reports.

Similar conclusions were reached in the record of April 10, 1914, when other lock statements were analyzed.

In the debate preceding the defeat of the 1915 bill a prominent Senator called the Ohio River project the "worst of all." It received $1,769,000 from the first allotment, $3,200,000 in the 1915 sundry civil bill, and $3,915,000 allotment from the Chief of Army Engineers April 1, 1915, or $7,115,000 for 1915, in addition to cash on hand—twenty times the amount that was allotted to New York's inner harbor, which handles fifty times the Ohio's actual commerce.

When a $100,000,000 Ohio canalization system has been fastened upon us with its annual interest burden of $3,000,000, and a reasonable maintenance and deterioration charge of $4,000,000 more annually for sixty-odd locks and dams, if the diminishing coal commerce is retained—a violent assumption—the Government will have little tangible traffic to show for its $100,000,000 investment and the annual $7,000,000 charge properly lodged against it.

Mr. FREAR. Mr. Chairman, I do not know whether this is all foolish work or not, to challenge all of these rainbow statements; but I do it on the judgment of the best experts in the country, and they base their judgment upon experience in Europe and in this country, so far as expenditures have been made. The Mississippi River to-day is as good as you can ever make it. Col. Townsend's proposition to go up to Chicago is impracticable, according to the judgment of the Army engineers, and they have so stated. They think that it is unwise, because not 5 per cent of the traffic that goes to Chicago comes in boats that are under 14 feet draft. Now, if we can stop the waste, let us try to do it, or if we can get any kind of a system that will determine where the money is being profitably expended, let us do that. I do not care where it may be, I have not any objection to any particular item. The Lord knows that, and so do gentlemen who have told me. I am simply trying to get light on this subject, and I suggest projects like this in order that gentlemen may make their statements about their own projects.

Mr. CLARK of Florida. Mr. Chairman, with considerable misgiving and a great deal of humility I rise for the purpose of attempting to correct the gentleman from Illinois [Mr. MANN] in respect to a statement which he made yesterday. When I was discussing with the other gentleman from Illinois [Mr. MADDEN] the subject of public buildings, and that gentleman was attempting to show that the upkeep of these small buildings was very expensive, I stated as one of the reasons for that the fact that the Treasury Department paid such extravagant prices for their upkeep, mentioning that they paid for janitors a thousand dollars to twelve hundred dollars a year. The gentleman from Illinois [Mr. MANN], for whom I have the highest respect, immediately arose and waved him arms and said:

Oh, a thousand and twelve hundred dollars a year, nonsense! The janitors get $45 a month in most of these places.

I hold in my hand a report made by the Treasury Department under date of March 27 of this year on a proposed public building at Alturas, Cal. The report shows that the census of 1910 gives a population of 916, and it further shows the cost of the upkeep of the building at that place, and as an item of such upkeep charges they have put the janitor service down at $1,260 per annum.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. CLARK of Florida. In just a moment. I have been accustomed to sit here for several years under the drippings of wisdom as they fell from the lips of my distinguished friend, and I have thought that the old idea that humanity was not infallible had been absolutely annihilated in the personality

of my good friend; but we are told that Homer sometimes nods, and I find now that the distinguished gentleman from Illinois sometimes makes a mistake. I now yield to the gentleman.

Mr. MANN. Mr. Chairman, does the gentleman think that "janitor service" at $1,200 a year means that a janitor gets $1,200 a year?

Mr. CLARK of Florida. It states for "janitor service," and if that is not for janitor service or for janitors I do not know what it means.

Mr. MANN. But the gentleman's statement was that the janitors received a thousand and twelve hundred dollars a year, and I corrected the gentleman, and I correct him now.

Mr. CLARK of Florida. They may have two janitors, or three; but this is for janitor service, and if that is not to pay janitors for service I do not know what it is for.

Mr. MANN. I will say to the gentleman that in Chicago the "janitor service" costs a great deal more than twelve hundred dollars a year, as it does in Washington, and that in New York it costs far more than a thousand or twelve hundred dollars a year.

Mr. CLARK of Florida. But it is not simply $45 a month in the little towns, when the Treasury Department says that it is $1,260 a year.

Mr. MANN. The gentleman and I are not far apart at all. Some of these buildings are controlled by the Post Office Department, and the janitors there receive $720 or $800 a year, and under the Treasury Department they get $50 a month.

Mr. CLARK of Florida. Yes; but the janitor service at one of these little buildings is $1,260. Whether they have one or two janitors, I do not know.

Mr. MANN. Not unless they employ two janitors.

Mr. CLARK of Florida. They may do that.

Mr. MANN. If they employ two janitors it goes a long ways toward sustaining the argument of my colleague from Illinois [Mr. MADDEN], in all of which I do not agree.

Mr. CLARK of Florida. Which they ought not to do.

Mr. MANN. To show how uselessly expensive these public buildings are.

Mr. ADAIR. Will the gentleman yield to me for just a minute?

The CHAIRMAN. The gentleman's time has expired. The question is on the motion of the gentleman from Pennsylvania.

[Mr. BARCHFELD addressed the committee. See Appendix.]

Mr. SPARKMAN. Mr. Chairman, I shall have to ask that all debate on this paragraph close in 25 minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on this paragraph and all amendments thereto close in 25 minutes. Is there objection?

Mr. BARKLEY. Reserving the right to object, Mr. Chairman, will the gentleman take care of me out of that time?

Mr. SPARKMAN. I do not think I can guarantee it. Make it 30 minutes, Mr. Chairman.

The CHAIRMAN. The gentleman from Florida modifies his request and asks that all debate close on this paragraph and amendments thereto in 30 minutes.

Mr. LONGWORTH. Mr. Chairman, will the gentleman state whom he expects to recognize in that time?

The CHAIRMAN. The Chair will state that the recognition would not rest with the gentleman from Florida. The Chair will recognize gentlemen for five minutes each.

Mr. MANN. We would like to have 20 minutes on this side.

Mr. SPARKMAN. Then, Mr. Chairman, I will not make any request at all.

The CHAIRMAN. The gentleman from Florida withdraws his request. The gentleman from Kentucky [Mr. BARKLEY] is recognized for five minutes.

Mr. BARKLEY. Mr. Chairman, the district which I have the honor to represent is at the lower end of this great river, so ably represented at its source by my handsome friend from Pennsylvania, Dr. BARCHFELD.

Mr. BARCHFELD. I thank the gentleman. [Laughter.]

Mr. BARKLEY. That stream consists of 968 miles from Pittsburgh to Cairo, and along it is a string of the most prosperous, wide-awake, and progressive cities that can be found along any similar stream in the United States. Beginning with Pittsburgh and coming on down through West Virginia, Ohio, Indiana, Kentucky, and Illinois, I do not believe there can be found anywhere in this country a stretch of 968 miles of a navigable river on the banks of which can be found a more fertile soil, a more prosperous people, and more progressive cities. [Applause.]

Now, the gentleman from Wisconsin [Mr. FREAR] has frequently stated, during his numerous addresses to the House since this bill has been under consideration, that in Col. Townsend's report—and he appraises Col. Townsend as the greatest expert on waterway improvement and navigation in the United States, unless he puts Senator Burton ahead of him—in Col. Townsend's report he says it is recommended that the Ohio River and the Mississippi River be the two streams that the Government shall first improve before it takes up those other 58 rivers that he recommends should be dropped from the list, at least for the time being.

Two years ago, in the discussion of this bill, I made the statement, which I repeat now, that if it is not an economical and wise expenditure of the money for the Government to improve the Ohio River, then we may well doubt whether funds can be successfully expended on the other rivers in the United States.

It is unfair also to judge of the efficiency of the navigation on a river or to judge of the wisdom of an expenditure upon it by undertaking to compare figures during the progress of the work of its canalization. You might as well undertake to judge of the value of a house by undertaking to live in it before the roof is put on it, or of a suit of clothes before you sew up the seams, because the engineers themselves who have charge of the Ohio River improvements in their reports state that the progress has not been sufficient yet to enable them to tell the extent of the improvement in commerce that may be made on the Ohio River after it has been completed.

Originally this project contemplated the building of 54 locks and dams between Pittsburgh and Cairo. The Ohio River can not be considered as a canalized project until the last lock and dam is completed between Mound City and Cairo, Ill. The report of the committee and the report of the engineers state that it takes something like four years to build a lock and dam on the Ohio River, and the figures show that as we go down the stream and the stream becomes wider and wider, until it empties into the Mississippi River, it takes more money to build those locks and dams, and it takes proportionately more time to construct them.

Inasmuch as it takes four or five years to complete one of these locks and dams on the Ohio River, it does not take much of a stretch of the imagination to conceive the idea that the Government ought to begin the construction of these locks and dams in the lower Ohio as soon as possible, in order that the river may be canalized from its source to its mouth.

When this project was inaugurated it was contemplated to have it completed by 1922, with the expenditure of something like $60,000,000. Unless the appropriation provided for in this paragraph of $5,000,000 be used for the continuation of the locks already under construction, and for beginning six additional locks nearer the mouth of the river, as contemplated in the Engineers' report, not only will it not be possible to complete this canalization by 1922 but it will be impossible to complete it by 1930 or 1932, because if we are to fall behind the promise of Congress made to the people of the Ohio Valley and the cities along the valley in 1910 what hope have we that future Congresses will not continue to decrease the appropriation so as to dwindle along and spread the canalization of this great stream out over a quarter of a century? Because, as I said in connection with the improvement of the Cumberland River, boats can not run between Cairo and Cincinnati now on an average more than four or five or, at the very outside, six months in the year. I can remember a time when steamships plied the Ohio River and the Mississippi River from Memphis to Cincinnati two, three, and four times a week, making round trips between those cities on the Mississippi and the Ohio River, loaded to the guards with freight every trip they made. Why is it that those boats have been taken off the river? Because they find more profitable navigation in other streams where they can run the year round; and it would be a fool who would invest hundreds of thousands of dollars in the construction of boats and in the equipment of vessels for navigation and be unable to carry on that work for more than six months in the year. Men want to invest their money in enterprises they can operate all the time instead of half the time. And in view of the fact that on this great river, which, after it has been completed, will furnish navigation to the depth of 9 feet for every month in the year, we may hope that there will be a renewal of traffic along the Ohio River not only for coal but for wheat, corn, lumber, and manufactured products coming from Pittsburgh, Cincinnati, and Louisville, at the falls of the great Ohio River, or down by Evansville, Paducah, and Cairo, out into the Mississippi River down to the port of New Orleans, and then by steamer through the Panama Canal, which will be one of the greatest boons to trade, and to the development of our country, when it has been completed and its navigation has been assured, that could possibly happen to that

great and fertile section. This is not a temporary improvement, but when this great river has been canalized it will be an improvement that will last for one hundred, two hundred, or an indefinite period of years, insuring, as population increases and as each acre of land is compelled to support more people than it did before, facilities for the transportation of all our commerce. [Applause.]

Mr. LONGWORTH. Mr. Chairman, of course I do not believe that this House will for a moment seriously consider the question of striking out this appropriation of $5,000,000 for the Ohio River, and I have grave doubts as to whether the gentleman from Wisconsin is really serious in advocating it. I have no quarrel with the gentleman from Wisconsin. I think he is performing a useful public service in calling the attention of the country to the river and harbor bill. Surely no one could object to the shedding of full light upon every project contained in this bill, whether he is personally interested in it or not; and if a serious flaw should be developed in any one of them, no man ought to oppose its being stricken out.

But in this proposition, whether urged seriously or not, the gentleman from Wisconsin is open to the charge of inconsistency. Only yesterday he strongly advocated—at least by implication—the completion of the Ohio River improvement. He eulogized Col. Townsend as the foremost authority on inland waterways in the country, and, after pronouncing his eulogy, declared that Col. Townsend advocated only two of the larger projects. In response to a question I asked him, he replied that one of these two was the Ohio River.

This project stands on a little different footing from any other. It is a complete canalization proposition, for the completion of which within 12 years the United States Government solemnly pledged its word 6 years ago. The question of the present commerce on the Ohio is not essentially determinative of whether the progress of the work so far is or is not a success. We often say that no chain is stronger than its weakest link. By analogy it would be fair to say that the effect upon commerce of the Ohio River improvement is not to be finally decided until the last lock and dam of the 53 is finished. Until then there will not be a 9-foot stage of water in the Ohio River.

But if, as the gentleman from Wisconsin says, the present commerce is a material question, I desire to refer here to a decision of the Interstate Commerce Commission, reported on the 2d of last March. This decision involved class and commodity rates between St. Louis, East St. Louis, and other Ohio River points, and between Ohio River points themselves, and among other things it held, as reported in the syllabus:

> Water competition justifies departures from the long-and-short haul rule of the fourth section in rates between points on the Ohio and Mississippi Rivers, and relief should be granted to the extent prescribed in the report.

During the course of the decision the following language appears:

> The record shows that boat lines are operating between St. Louis, East St. Louis, and Ohio River crossings, and that the traffic moving by water is important in amount. It is shown by the evidence that the waterways throughout the territory involved afford not only potential competition but actual competition.

And, further:

> There can be no doubt from the evidence that the water competition on both the Ohio and Mississippi Rivers is active in controlling and that the rail rates between the water points have been set at a lower level than they might reasonably be were it not for the effect of this water competition.

Admitting, for the sake of argument, that some doubt may exist as to the permanent and final value of Government investment in the canalization of internal waterways, that is only an additional argument for the speedy completion of the Ohio River improvement. If this shall prove a failure, then no such project can be a success. It is then the part of true economy to proceed as speedily as possible with this improvement, and we of the Ohio Valley are confident in the hope and expectation that it will stand the test.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph close in 30 minutes.

The CHAIRMAN. Is there objection to the request of the gentleman from Florida?

There was no objection.

Mr. COX. Mr. Chairman, the item carried in this bill is $5,000,000 for the further completion of the project adopted by Congress in 1910. I have no criticism to offer on the gentleman from Wisconsin. I think, in a measure, he is doing this country a splendid work. If there can be any better plan evolved for the improvement of internal waterways and the improvement of rivers and harbors, the people of the country can do it and can only do it by first getting the information and bringing that information to Congress. I do not believe that he considers for one moment that his motion will prevail to strike out the item. I am not here to criticize this great committee. It is not for me to say that any item carried in the bill is not worthy of consideration; but I do believe that of all the items carried in this bill that is worthy of consideration one of the most worthy is the canalization of the Ohio River.

Surrounded by all the natural resources that go to make up a great country and a great Nation, the people starting with the splendid and magnificent coal mines of western Pennsylvania, with the easy access and easy reach of iron ores mined in that section of the country, it flows on through the richest valley in the world, not outrivaled in riches and prosperity and happiness by even the valley of the ancient Nile.

Mr. Chairman, the question of transportation to-day, in my judgment, is the most serious question confronting the American people. It is of far more importance than the trusts, the tariff, or the financial questions combined. It is so important that the President of the United States, in his annual message early in December, called attention to it and advised Congress to create a commission to study the railroad-transportation problem. I rejoice to know that the great committee of this House which has jurisdiction of that has already reported a bill, now on the calendar awaiting its final passage, to study that identical question. Already our great harbors in New York, Boston, Philadelphia, and Chicago are crowded with commodities, consisting of produce of the farm, the commodities dug out of the mines, commodities manufactured by various manufacturing concerns of the country. And while the President did not recommend the study of internal improvements in rivers and harbors, yet it is so correlated with the question of railroad transportation and goes hand in hand with it that I hope when the committee is appointed to study the question of transportation it will widen and broaden its power so as to give it authority to study the question of inland transportation of commodities upon our rivers and harbors.

It is a well-known fact that with the improvement of the Ohio River we are in close touch with the Panama Canal. We can transport commodities down the Ohio, down the Mississippi into the Gulf of Mexico, far cheaper than they can be transported by rail to the eastern coast and taken by ships around to the Panama Canal.

I happen to know from personal experience that the Ohio River has had something to do with decreasing freight rates. The little city in which I live is quite a manufacturing center for furniture.

It manufactures office desks. It is 25 miles from the Ohio River and is situated upon the Southern Railway. The city of Tell City, having a population of 4,000, is a great manufacturing center chiefly engaged in manufacturing furniture, and a part of the furniture it manufactures is office desks. The manufacture of desks in the city of Tell City, only 25 miles from Jasper, can ship its desks to any point in the United States at a rate of 25 cents per desk cheaper than the Jasper manufacturer of desks can ship his desks to the same point in the United States. And the city of Tell City is situated upon the Southern Railway, the same as the city of Jasper. This gives to the Tell City manufacturer a decided advantage over the Jasper manufacturer, and the same condition is true on the Ohio River wherever they have water transportation. This is no fault of the manufacturers living upon the Ohio River. It is their fortune to be so situated as to have competition between water and railway transportation. What is true in these instances, and in these localities, is true all over the United States with but few if any exceptions. When the project is completed, as I hope it will be soon, there is no doubt but what river transportation will multiply quick and fast over what it is now or has been for many years in the past, because business will naturally go to points and places where transportation is cheapest and where it can get good terminal facilities.

Mr. BARCHFELD. Mr. Chairman, I ask leave to extend my remarks in the RECORD.

The CHAIRMAN. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

Mr. SWITZER. Mr. Chairman, I yield 10 minutes to the gentleman from Ohio [Mr. FESS].

Mr. FESS. Mr. Chairman, I believe in internal improvements at the expense of the Government. I always have believed that the Government was justified in that sort of an expenditure. The construction of railroads, of canals, and the improvement of rivers and harbors are legitimate if they increase the business of the people of the country. I do not speak now as representing any district that impinges on the Ohio River which this item

proposes to improve. I neither speak as one interested in this particular project, for I am no more interested in this than in other projects, therefore I am free to say that there are some items in this bill that I have not indorsed, and when the opportunity was offered to vote against them I have voted against them. Motions have been made to strike out objectionable items, or at least they so appeared to me. I voted to strike them out. I do not say that in criticism of the committee. I know something of the representations of the claims pressed upon the committee. I doubt not that the committee has done the best it could in presenting its bill here. But that is not of itself a justification of its adoption as a whole. It seems to me that some of the items ought to have been omitted by a vote of the Committee of the Whole, and if not by the committee, then by the House.

On this particular item of the Ohio River I can assure myself in my own way of thinking that while the commerce now is not very great, for indeed the commerce for the year 1914 is just a little more than the combined commerce that is mentioned here in these various projects on the lake that impinges on my own State, that fact would indicate that this wonderful river with the possibilities it seems to me it has—that the commerce is nothing at all now to what it would be under proper canalization. The Ohio River presents all the conditions which under proper improvement are necessary for a great route for transportation. What makes a great transportation line are the termini, not only river transportation but railroad as well. I happen to live on one of the trunk lines connecting New York and Chicago, and I have frequently called the attention of students to the growth of the towns along the railroad trunk lines as compared with the growth of the towns along the Ohio River.

The growth of the former is greater than that of the latter, taking the same number of years. I can understand in a way why that is. The rapid transit and greater convenience of delivery may have something to do with it, speaking now especially of a trunk line such as the great western lines. However, as compared with the Ohio River the Ohio River is not, and never has been, in a condition in which it could be utilized in such a way that it could compete with the railroad lines, and it will not be until this project is completed. That does not mean that it will not be able to compete when it is ready to do so. When you think of the territory through which this river runs, the number of States rich in natural resources upon which millions of people rely, the character of the soil in the territory through which it runs, the productive capacity of this region will suggest transportation possibilities of this river. When you measure the distance from Pittsburgh down to New Orleans—over 2,000 miles—you have not yet taken in all of the route, because when this canalization project is completed the utilization of the upper Mississippi will be a part of the route, just as it will be of the lower Mississippi. It will make possible a water transit yet unknown to this country. Vast areas of rich country, great populations widely separated make transportation facilities available. The 30,000,000 people who live in juxtaposition to this river line, located in widely separated centers, suggest the necessity of this route. Think of the center of a half million or more people in Pittsburgh, and the center of another half million 500 miles or a little less down the river at Cincinnati, and then another center a little over a hundred miles farther down at Louisville, and then still farther on down another center, while you do not touch St. Louis on the downward trip you will make her a part of this wonderful center of distribution along that water line, and then on down to the mouth of the river to what surely must become a great southern metropolis—New Orleans. When we think of all of these centers of possibilities, I think I am justified in quoting the language of the first great President of this Nation when he was urging the country to build a system of canals to connect the upper waters of the Potomac with the upper waters of the Monongahela. He said, in substance, you will start a stream of civilization by a great inland water route, the like of which the history of the world has not yet seen. Washington saw the value of the water routes, though, of course, he would see it then with a little different interest than what we do now, because they did not have the railroad facilities at that time; but I believe, my friends, that here is a project which when completed will have all of the conditions to make a wonderful thoroughfare for transportation beyond the dreams of our first great President.

Mr. PARKER of New York. Was not that true of the Erie Canal?

Mr. FESS. Yes; and that will be by way of correction. That was true of the Erie Canal. It was started really before the railroads were completed.

Mr. MOORE of Pennsylvania. And that connected the Great Lakes with the Atlantic Ocean.

Mr. FESS. Yes. Mr. Chairman, I would vote without any hesitation for an improvement like we are making at the Soo Canal. I have just been looking over the wonderful commerce that goes through that waterway. It is vastly beyond what we now have on the Ohio. I would vote without a moment's hesitation for an improvement such as we are making at New York, for I believe that that is not only justifiable from the standpoint of the coast, but from the standpoint of the inland States. The growth of any great center is of importance to my State, because it is important to the Nation, and what helps the one helps the other. Likewise I will vote for improvement of the Delaware, because of great trade that passes over it. I will vote for any project that has promise of great inland waterborne commerce, whether on the rivers which run to the sea or to the Lakes, whether for cities on the seacoast, Lakes, Gulf, or rivers, and I will do it in case I live upon either or in case I live upon neither, but beyond a State that is bordered by either, because I believe it is a good policy for this Government to pursue. The one thing needful in this legislation is to separate the worthy from the unworthy projects. Therefore, I rise simply to say that while there are some items in this bill that ought not to be in it, there are projects that call loudly for the support of this House, whether we have an inclination to criticize the general work or not.

If the opportunity is afforded to report this measure, either directly from the committee or by way of recommitment, omitting items clearly of questionable value and including those only of unquestioned worth, I shall give my support most willingly. It is most unfortunate to load down the bill with such items and compel their adoption at the cost of defeat of the valuable items. There must be some way to avoid this sort of legislation. It gives some color to the already too well pronounced suspicion of the country of the sincerity and character of the Congress—a suspicion that I do not believe is warranted.

Mr. SWITZER. Mr. Chairman, I am glad to note that the gentleman from Wisconsin [Mr. FREAR] concedes that the Ohio River proposition is a worthy one, and that he admits beyond question that the Monongahela has been a worthy one. I have no doubt that in a few years to come—the next 5 or 6 or 10 years—he will concede that many of the propositions that he has been criticizing in the last two or three days down in the Southland are equally as worthy as the Monongahela and the Ohio. Last May I had an opportunity to take advantage of the invitation to the committee to visit the wonderful region on the Tennessee from Knoxville down to Sheffield, Ala. While I do not profess to be much of a prophet, yet I came to the conclusion at that time—and I believe now—that that will be the second Pittsburgh region of this country. The Tennessee is 652 miles long. The Government, I think, up to this time has expended something like $11,000,000 upon it, and the people at Chattanooga and one man, who has since died in New York, put $10,000,000 in one dam across the Tennessee River. That dam is something like 48 feet high, and is called the Brady Dam; and I simply call attention to this in order to direct the attention of those who voted for the 25 per cent proposition of Representative GOOD, upon the estimated cost, to the fact that when they started in to build this dam it was thought it would cost two and a half millions of dollars or less; but before they got through with it it cost $10,000,000; and the larger part of that money—something like seven or eight million dollars—was put up by Mr. Brady, of New York City, showing that private interests had confidence in the Tennessee River. I believe that to be a worthy project.

I do not know that it is necessary to say much more about the commerce on the Ohio River, but I have in my hand here a home paper, the Gallipolis Tribune, of Gallipolis, Ohio, under date of April 4, and it states in that paper that at the Island Creek coal terminal, near Huntington, W. Va., to which I referred in my speech made here about six weeks or two months ago, the Pittsburgh Coal Co. has one contract, to load for delivery on the Mississippi, of 400,000 tons of coal. As to the benefit that this will be to those along the river, I will say that there is a chair factory in my town, about 250 miles from Pittsburgh, and when the packets are running chairs and furniture manufactured in my town can be sent by boat to Pittsburgh and put on the floor of the furniture stores in Pittsburgh in less time than you can send it there by rail. What is true in that instance will be true, of course, when we come to send the freight to Cincinnati. The gentleman has spoken on occasions of the fact that there are not many craft on the river. The Department of Commerce furnished me the following statement: Steam tugs, 202 in number, with a tonnage of 33,420 tons;

and there are also steamboats to the number of 129 and gas towing tugs to the number of 110 upon the Ohio River.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

Mr. LIEB. Mr. Chairman, in a minority report made by my friend from Wisconsin [Mr. FREAR], a member of this committee, he tries to make you believe that tonnage on the Ohio River is only about 2,000,000. I would like to read a quotation from his report:

Less than 100,000 tons of continuous commerce now remains, apart from soft coal, that has always floated downstream, reaching in 1914 between 1,000,000 and 2,000,000 tons of continuous traffic.

Now, in this report here he is trying to make this House believe that the entire commerce is only 2,000,000 tons. Why, the Kanawha River alone brought down 1,700,000 tons, which was towed into and down the Ohio River. I ask here to insert the commercial statistics which have been kept by the Government engineers and can be inspected at the department.

The CHAIRMAN. The gentleman asks unanimous consent to extend his remarks in the RECORD as indicated. Is there objection?

There was no objection.

Mr. LIEB. The following are the statistics referred to:

The nature of the commerce in recent years remains about the same, and no material change in lines of transportation has been made so far as known. About 45.5 per cent of the tonnage for the calendar year 1914 was coal and the remainder miscellaneous freight.

	Short tons.	Value.	Passengers.
Part calendar year 1912 (Apr. 1 to Dec. 31):			
Through locks and open river	6,998,747.3	$34,617,358.81	1,203,674
Ferries	1,619,621.7	36,446,870.87	2,628,615
Total	8,618,369.0	71,064,229.68	3,832,289
Calendar year 1913:			
Through locks and open river	8,412,603.8	40,940,511.71	1,320,952
Ferries	1,401,519.5	36,086,390.07	2,949,834
Total	9,814,123.3	77,026,901.78	4,270,786
Calendar year 1914:			
Through locks and open river	7,589,161.5	38,068,685.74	1,307,728
Ferries	1,941,148.0	55,225,794.14	2,648,183
Total	9,530,309.5	93,294,479.88	3,955,911

It has been charged on this floor that the construction of locks and dams on the Ohio has resulted in no reduction of freight rates. As assertions of this character might have a tendency to be misleading, I again wish to quote from the report of the Chief of Engineers of the United States Army, as follows:

Effect of improvement: The work of canalization of the Ohio River is not sufficiently advanced to have any appreciable effect on freight rates, but the probable results of the improvement are discussed at some length in House Document No. 492, Sixtieth Congress, first session. The great future benefit of the improvement will be felt only when the slack-water system has been extended far enough downstream to permit of continuous navigation at all times (except when interfered with by floods or ice) over a considerable section of the river. It should be noted, however, that a comparison of the cost of delivery of Monongahela River coal by rail and by river to points in the pools above Dam No. 6, where slack water has been available for a number of years, shows a saving of from 30 to 50 cents a ton in favor of water transportation.

Proposed operations: It is expected that the funds available July 1, 1915, will be exhausted June 30, 1916. It is proposed to apply the funds for which estimate is made in continuing the construction of Locks and Dams Nos. 12, 14, 15, 16, 17, 20, 21, 22, 24, 29, 31, 35, 39, 41, 43, and 48, for which $4,450,000 will be required, and commencing the construction of six additional locks and dams, which will cost $6,300,000. Since the construction of a lock and dam will require about four years, it is not necessary that more than $5,000,000 be made immediately available, but the remainder of the amount estimated, viz, $5,750,000, should, for economical work, be covered by a continuing-contract authorization.

Now, the total amount of tonnage on the Ohio River is 9,530,300 tons. You can see from Mr. FREAR's report, heretofore referred to, that he is trying to belittle the Ohio River. All this is a matter of record. Here is the report. Here are the statistics of the engineers, and I say that the gentleman has made a statement which is untrue.

Mr. FREAR. Will the gentleman yield?

Mr. LIEB. I will not yield. My time is limited. The records are here, and the gentleman can examine them for himself.

Mr. FREAR. I have them.

Mr. LIEB. Well, they are here.

The CHAIRMAN. The time of the gentleman has expired.

Mr. LIEB. I ask for one minute more.

Mr. SPARKMAN. I yield to the gentleman two minutes more.

The CHAIRMAN. The gentleman has no time to yield.

Mr. SPARKMAN. I thought I had 15 minutes.

The CHAIRMAN. The gentleman from Indiana [Mr. DIXON] has five minutes, the gentleman from Kentucky [Mr. BARKLEY] five minutes additional, and the gentleman now speaking has used five minutes.

Mr. SPARKMAN. The gentleman from Kentucky has spoken before this division.

The CHAIRMAN. The gentleman has spoken five minutes more.

Mr. BARKLEY. If the gentleman will permit me, my five minutes was not taken out of any arrangement for time.

The CHAIRMAN. The Chair is of the opinion that 15 minutes have been used out of the time, but without objection the gentleman from Indiana may proceed.

There was no objection.

Mr. LIEB. I will read an article from the Evansville (Ind.) Courier that was printed on March 30, 1916, as follows:

FIRST BARGE TO PASS CITY APRIL 6—NEW FREIGHT CARRIER COMPLETED AND WILL MAKE MAIDEN TRIP TO NEW ORLEANS.

The first of the self-propelled barges to be operated on the Ohio by the Inland Navigation Co. will pass Evansville April 6 or 7 on her maiden trip to New Orleans. This is the information brought to the city yesterday by Givin Fowler, freight agent for the new river transportation company. Mr. Fowler talked to Evansville shippers yesterday. The barge is named *Inco No. 1* and is of 1,500 tons capacity. Two other barges, one of 2,000 tons and one of 3,000 tons, are building in the Jeffersonville yards.

Fourteen men are required to operate each barge. The company's plans call for 36 of these barges, which can operate on a minimum draft of 3½ feet when the river is low. The freight for the first trip amounts to three times the barge's capacity, says Mr. Fowler, one shipment of 3,000 bathtubs for New Orleans being refused. Evansville shippers, by using the new barge line, can put freight on board direct for New Orleans.

Each barge is equipped with a steel weatherproof cargo box and is propelled by means of four internal-combustion engines. This quadrupling of plant makes it practically immune against a breakdown, and since the cooking and heating are done by electricity and all lighting is electric, there is no fire on board. This not only makes the barge a very safe carrier but also gives a low insurance rate, which is carried by the company.

The barge is further equipped with four watertight bulkheads, dividing it into five compartments. She is further equipped with wireless, permitting constant communication with headquarters. It is also equipped with an electric traveling crane with a telescopic boom, which may be extended outboard on either side for as many as 70 feet, enabling it to lift a load of 3 tons at a time.

It is expected at first to maintain a three-weekly service between St. Louis and New Orleans, and as each additional barge shall be completed, the frequency of the service will be increased accordingly.

The company expects to be able to carry freight to and from the river by rail, issuing in each instance a through bill of lading, absorbing loading and unloading charges, switching charges, car rental, and the like; the bill of lading to also cover insurance. Thus shipments are insured from the moment they are received until they are delivered.

The rates of freight will be, in round numbers, about 75 per cent of the all-rail rates, and in some cases less.

The CHAIRMAN. The gentleman's time has expired. All time has expired. The question is on the amendment offered by the gentleman from Wisconsin [Mr. FREAR].

The question was taken, and the amendment was rejected.

The Clerk read as follows:

Harbor of refuge at Grand Marais, Mich.: For maintenance, $10,000.

Mr. ALLEN. Mr. Chairman, I desire to ask unanimous consent to extend my remarks in the RECORD on the Ohio River.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent to extend his remarks in the RECORD. Is there objection? [After a pause.] The Chair hears none.

Mr. ALLEN. Mr. Chairman, in two former Congresses I have spoken at length upon the Ohio River improvement, and there are few things I can add to my former statements or in addition to what has been said here this afternoon; and I observe that no one, outside of the gentleman from Wisconsin [Mr. FREAR], has had aught to say against this great improvement.

At this time capitalists from my own State are arranging to build additional tipples at Huntington for handling Guyan Valley coal; also to build barges in which to transport the coal to markets down the Ohio and Mississippi and to supply the tributaries of these rivers.

It is also worthy of most careful note that contracts have been prepared providing for the construction of 150 steel barges of not less than 2,000 tons capacity for the transportation of coal to New Orleans and the Panama Canal.

These boats will be ready when the Government has executed its contract to give a dependable stage of 9 feet from Pittsburgh to Cairo.

I append a statement showing the number of vessels now operating on the river, together with the gross tonnage of each, as furnished by the Bureau of Navigation.

Vessels of the United States documented on June 30, 1915, at the ports of Pittsburgh, Cincinnati, Louisville, Evansville, Paducah, and Cairo.

Port.	Steam towing.		All other steam.		Gas towing.		All other gas.		Barges.		Total.	
	Number of vessels.	Gross tons.	Number.	Gross.	Number.	Gross.	Number.	Gross.	Number.	Gross.	Number.	Gross.
Pittsburgh	115	22,782	47	7,599	31	330	45	468	17	1,264	255	32,443
Cincinnati	31	4,930	31	7,631	38	404	24	292	5	436	129	13,693
Louisville	22	2,084	27	3,540	24	314	55	612	3	93	131	6,643
Evansville	20	1,959	16	3,143	10	143	45	923	7	639	98	6,807
Paducah	11	1,519	5	510	7	67	26	264	3	410	52	2,770
Cairo	3	146	3	734	.....	.....	29	291	1	447	36	1,618
Total	202	33,420	129	23,157	110	1,258	224	2,850	36	3,289	701	63,974

The above table does not include, of course, the number and tonnage of many barges, undoubtedly, which are engaged in carrying coal and not under document.

[Mr. DIXON addressed the committee. See Appendix.]

Mr. TREADWAY. Mr. Chairman, I move to strike out the last word.

This morning when that matter was up as to whether or not the Galveston sea wall was a new or old project, request for unanimous consent was made to return to that item and that was objected to by the chairman of the committee on the ground, as he stated, that the matter had been thoroughly debated yesterday. I desire to take exception to that statement in the fact that there was practically no debate whatsoever as to whether or not it was or was not a new item. The question was asked the chairman whether it was or was not, and he said it was, and we in the House here accepted his statement in good faith.

But, it has been very thoroughly proven that it was a new project, and therefore we should have had an opportunity to return to the item with that information before us and consider it from that standpoint. I do not understand why that permission was not granted. I maintain there was no discussion before the House whether it was a new project or not. The gentleman from Texas [Mr. EAGLE] was very frank in his statement when he said that he did not himself know whether it was or not.

Now, I want to submit this fact further, Mr. Chairman, that we not only had no discussion of the question of whether it was a new project or not, but when one of these four times under the special report was adopted in 1913 there was absolutely no discussion of it then. The item under which the chairman and the men advocating this appropriation claimed that the whole project was adopted—and it was not, and he can not prove it and no other man can—was part of the special report made to Congress on February 11, 1913, and on February 18, 1913, that separate item for the channel to Texas City went into the bill in the Senate without a particle of discussion, and was agreed to in conference here. The item has never been before this House.

Mr. BURGESS. The gentleman is mistaken.

Mr. TREADWAY. No; let the gentleman prove that I am mistaken. I wish the gentleman would. He is the one gentleman that I would like to hear argue this point. The gentleman sits by and does not argue the point; perhaps he will tell how it was voted into the bill in the committee; but we do not hear the gentleman from Texas getting up on the floor and explaining these provisions or when the project was adopted.

Mr. BURGESS. Mr. Chairman, will the gentleman yield?

Mr. TREADWAY. No; not now. I hope the gentleman will take his own time and prove to this House that I am mistaken. He is the one man I would like to have prove it—but in his own time. I have only five minutes.

Mr. BURGESS. Will the gentleman yield?

Mr. TREADWAY. No; I can not yield now, but I am very glad that for once I have gotten a rise out of the gentleman from Texas [Mr. BURGESS]. He is mighty good in getting "pork" provisions into the bill in the committee, but not in defending them on the floor. But we are not bringing up questions of "pork" now. We are debating the question whether the Galveston sea wall is a new item or not, and I maintain that it is new, and that it was not considered as an adopted project.

The CHAIRMAN. The time of the gentleman from Massachusetts has expired.

Mr. HULBERT. Mr. Chairman, I desire to oppose the motion to strike out.

When the Ohio River item was before the House I thought I had arranged with the chairman of the Committee on Rivers and Harbors that I should participate to the extent of five minutes in the discussion of that item, although I did not propose to speak in opposition to the item of $5,500,000 for the improvement of the Ohio River. But I did desire to avail myself of the opportunity at that time to make a comparison between the amount of money which has been expended and which is being appropriated for the Ohio River in this bill and the amount which has been expended and appropriated in this bill for the East River in New York.

Now, Mr. Chairman, on page 274 of the report of the chairman of the committee it is shown that the total number of short tons on the Ohio River is 9,530,000, having a value of $93,000,000, and the total number of passengers carried on that river during the year 1915 was 3,955,000. Within that same period of time upon the East River in New York the total amount of commerce was 46,553,000 short tons, having the value of $1,537,239,000, and the number of passengers carried on the East River during the year 1915 was 22,436,000.

Mr. BURGESS. Over the ferries?

Mr. HULBERT. No; not over the ferries. The people of New York go across the East River on the four bridges, which were built at the expense of the city, at an expense of $100,000,000. That is the way we make improvements in the city of New York, and that is not the way the Federal Government makes them in the city of New York.

In the period from 1868, when the project for the improvement of the East River was adopted—and I quote from page 30 of the chairman's report—there has been appropriated by the Federal Government $6,104,000, while during the same time there has been appropriated by the State of New York and by the city of New York and by local interests in the city of New York a total of $39,235,859. And upon the Hudson River, I want to tell this House that in all the time you have been making those $850,000,000 of appropriations all over the United States you have not given a million dollars to the Hudson River at New York City—not a million dollars in all the time that you have been appropriating; and yet, within that same period, the State and city and the local interests in New York have contributed for the improvement of the Hudson River $105,504,217.05.

The gentleman from Washington [Mr. HUMPHREY] stated the other day that he understood my colleague [Mr. BENNET] to say that the amount expended was not $105,000,000 but $203,000; and that illustrates the care which some gentlemen give to the consideration of some of the items affecting New York, because the $260,000—not $203,000—that my colleague spoke of was money to be appropriated, not for the improvement of the Hudson River, but for the East River, and it was a single item representing the contribution that the city of New York had to agree to make last year in order that it might get the Federal Government to contribute half of that amount for the improvement of Coenties Reef. [Applause]

The CHAIRMAN. The time of the gentleman from New York has expired. The Clerk will read.

The Clerk read as follows:

Harbor at Muskegon, Mich.: For maintenance, $7,500.

Mr. McLAUGHLIN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Michigan moves to strike out the last word.

Mr. McLAUGHLIN. I notice, Mr. Chairman, by reading the report of the committee and quoting from the report of the engineers, that whereas $12,500 is recommended for the maintenance and dredging of the harbor of Muskegon, the committee recommends and the bill contains only $7,500. I should like to ask the chairman of the committee why this reduction in the recommendation was made.

Mr. SPARKMAN. That reduction was made on the recommendation of Col. Taylor, from the office of the Chief of Engineers. I will say to the gentleman that we had Col. Taylor with us quite frequently while framing the bill and whenever we considered his presence necessary. It was he who made the recommendation regarding each item where the amount of the estimate was increased or reduced. When we reached this item he stated that the project could get along with $7,500 instead of the larger amount.

Mr. McLAUGHLIN. In the figures contained in the report, the figures furnished by the engineers, $7,500, the total of this appropriation, is to be used and is thought necessary for the use of one dredge, *General Meade*. Now, if the engineers are to do any work at that harbor except dredging—dredging at the beginning of the season and to keep it dredged during the year—it will be necessary to have more money than is provided, because that entire amount is for the operation of one dredge.

Mr. SPARKMAN. They have, or did have when this item was inserted in the bill, an amount of money on hand. As I said a moment ago, when we reached that item Col. Taylor, who had gone over the estimates very carefully, stated that the amount we have appropriated here was all that we needed for the purposes of the maintenance of that harbor.

Mr. McLAUGHLIN. I was hoping, Mr. Chairman, that the committee would make an appropriation for the improvement of that harbor and the repair of it. I called the attention of the committee to it when a former bill was being prepared. There is a gap on the one side of the pier, where the waves, coming in from the lake and reaching that point, spread out and are tearing away portions of one of the streets of the city.

I was told at first that the committee paid no attention to damages of that kind, and that the expense of them must be borne by the municipalities themselves. But the same bill carried appropriations for repairing highways that had been damaged as a result of harbor improvement, or by the action of water at harbors that were improved and maintained at the expense of the Government; and I was hoping that this appropriation might be large enough to enable the engineers to make some improvement to stop the damage which results from the defective work and from the failure to fill the gap. It would take only a few hundred dollars to make that improvement, and even if money enough for dredging is available, it seems to me there ought to be a slight increase, so that the damage to this street of which I have spoken may be repaired and further damage prevented, a line of work which the chairman of the committee and other members of the committee now say is proper. A suggestion on my part to that effect made some time ago was rejected, but now members of the committee approve it.

The CHAIRMAN. The time of the gentleman has expired.

Mr. McLAUGHLIN. I ask unanimous consent that I may proceed for five minutes.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent that he may proceed for five minutes. Is there objection?

There was no objection.

Mr. SPARKMAN. I shall be glad to answer the gentleman in so far as I can. I do not just understand the gentleman's complaint. That is, I do not understand his statement regarding the class of work he thinks ought to be done there, and that he says we are not doing.

Mr. McLAUGHLIN. This harbor is a passageway between Lake Michigan and Lake Muskegon, with piers on each side of the channel, which is about a mile long. At one place in the south pier there is an opening. There has never been any pier there. The waves come in from Lake Michigan, and, rolling along the channel, when they reach this gap they break and spread out.

Mr. SPARKMAN. Was that gap left by the Government in the original work it did there?

Mr. McLAUGHLIN. It has never been filled. I do not know whether the original project included the filling up of that gap or not, but it is there; and the effect of the waves is what I have stated to the gentleman. There is a street of the city that runs probably from 50 to 100 feet south of the south line of the channel, and the waves coming to that opening spread out and tear away the street. An effort has been made to have the Government take care of it, but for want of an appropriation it has not been done, and the expense has been borne by the city.

Mr. SPARKMAN. Let me ask the gentleman to what extent have the parties interested made any effort to have the Government take care of the matter?

Mr. McLAUGHLIN. I have not lately appeared before the committee, because I have understood that that kind of work was not provided for, and that where the Government makes an improvement and damage results to municipal property the Government pays no attention to it. But last year this bill carried a provision for repairs to a highway injured by a waterway in the State of Florida. At that time I called attention to what I believed to be a discrimination.

Mr. SPARKMAN. I think that was something quite different from this matter to which the gentleman is referring. In the Florida case the Government cut a channel across a highway that belonged to the county. It was a county highway, and the Federal Government has always made good that kind of damage; and it ought to do it. Now, I am not clear as to whether the work that the gentleman wants done is a class of work that Congress has been accustomed to appropriate for; but I would like to suggest to the gentleman that if he thinks it ought to be done by the Government he have a survey and examination made by the War Department through the engineers, and let a report be made to Congress, and then we will know just what ought to be done and how much it will cost.

Mr. McLAUGHLIN. It seems to me when the attention of the committee is called to it, and the result is known, the committee ought to take some action.

Mr. SPARKMAN. I think the gentleman has admitted that he has not called anyone's attention to it before this.

Mr. McLAUGHLIN. I have called attention to it before, and I think if the amount of this appropriation were left as first recommended by the engineers it would be sufficient to enable the Government to make those repairs. It needs only a little sheet piling.

Mr. SPARKMAN. There might be plenty of money, but unless the engineers were authorized to use it in that way it would not be used.

Mr. McLAUGHLIN. If it is put in there with the understanding that it is to be used for that purpose, without the specific direction——

Mr. SPARKMAN. We can not make appropriations in that way, I will say to my friend. We must have the estimate of the engineers and know where it is to be used. Otherwise we might find ourselves involved in expenditures that would reach up into the millions.

Mr. McLAUGHLIN. In the particular matter that I have called to the attention of the committee I dislike to see the appropriation for dredging reduced, because I know how often they are short of money for that purpose.

Mr. SPARKMAN. I would have no objection to increasing it if the engineers would tell us they need it.

The CHAIRMAN. The time of the gentleman has expired. The pro forma amendment will be withdrawn. The Clerk will read.

The Clerk read as follows:

Ship channel connecting waters of the Great Lakes between Chicago, Duluth, and Buffalo: For maintenance of improvement through Lake St. Clair, $25,000.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. I am very glad this appropriation is being made for this ship channel connecting the waters of the Great Lakes between Chicago, Duluth, and Buffalo, because it makes a connecting link through the existing Erie Canal with the Hudson River and the Atlantic Ocean. If all the coastal waterways were connected, it would not only bring the Great Lakes to the sea but would also connect up with the Atlantic coast inland to Florida. Some gentlemen have ridiculed the idea of the intercoastal waterway, but they always do it in good humor and through lack of information. Our distinguished and eloquent historian from Ohio, Dr. FESS, has referred to the broad view of George Washington more than 100 years ago, in contemplation of a western development through waterway arteries. It may be said that the same illustrious American foresaw the possibilities of the opening up of the channels along the Atlantic seaboard; because in his day the present great West was unknown, and anything beyond the Mississippi was feared, not only in the commercial but also in the pioneer sense. It was George Washington who surveyed Lake Drummond, which feeds the water into the Dismal Swamp Canal to-day—a rather phenomenal condition which even some of our scientific friends have not explained. The waters of Lake Drummond, surveyed by Washington with a view to establishing a canal in that section, are 20 feet or so above the canal itself, so that a natural and steady flow is assured by nature to the canal supplying a valuable aid to transportation between the North with the South.

For many years—nearly a century—the old Dismal Swamp Canal has been in operation. The serviceability of the old canal is underestimated by some, because the only information they

have is derived from Tom Moore's beautiful poem of "The Firefly Lamp." An odd basis for refusing appropriations with respect to a great public improvement, yet it is about equal to the wisdom of those who, when I came here 10 years ago would curtail appropriations for the Delaware River on the ground that all they knew about it was due a picture of George Washington crossing the Delaware to capture the Hessians at Trenton. And yet it is by such arguments as these that our great commercial interests are sometimes determined in the House.

We have now come to the conecting link of the Great Lakes, and I call the attention of our Great Lakes' friends to the fact that by reason of this connecting link of the Great Lakes they are connected with the Atlantic Ocean by the Erie Canal, which the State of New York alone constructed, beginning back in 1812, when the Congress of the United States, acting very much as it does with respect to some of the waterways improvements today, refused to join in the great enterprise. It was that Erie Canal which made it possible to develop the great West, and which did develop the metropolis of New York, which in prior days was not in the running with the first maritime city of the Nation—Philadelphia. [Applause.]

Mr. MAPES. Mr. Chairman, I ask unanimous consent to proceed for 10 minutes.

Mr. SPARKMAN. I ask unanimous consent that all debate on this paragraph and amendements thereto close in 10 minutes.

The CHAIRMAN (Mr. Cox). The gentleman from Florida asks unanimous consent that all debate on this paragraph close in 10 minutes. Is there objection?

There was no objection.

The CHAIRMAN. The gentleman from Michigan asks unanimous consent to proceed for 10 minutes. Is there objection.

There was no objection.

Mr. MAPES. Mr. Chairman, I desire to make a few observations about this bill before it is passed, and it is probably as appropriate for me to make them now while the Michigan items are under consideration as at any time.

It seems to me that Prof. Moulton in his work on "Waterways versus Railways" arrives at a correct conclusion and announces the principle which ought to govern Congress in enacting rivers and harbors legislation when he declares that "waterway development in the United States must at best be confined to a few particular projects where conditions combine in a very favorable manner." This bill does not, in my opinion, follow that principle and for that reason I shall vote against it.

This bill is a depleted Treasury, war times rivers and harbors appropriation bill, yet it carries 271 items of appropriation, aggregating a total of nearly $40,000,000, besides authorizing 84 surveys in order to provide an additional supply upon which to expend the Government money in the future should by any chance any of the present rivers and harbors become exhausted for that purpose.

If one-half of the statements in the minority report and of the critics of the bill made on the floor of the House about the extravagance and waste of these appropriations is true, then the bill ought not to pass and there should be a radical change in the policy of the Government, as far as rivers and harbors legislation is concerned. I doubt if this or any similar bill could pass if it was not for the fact that it carries an appropriation for so many different congressional districts and the natural dislike of the Members representing those districts to vote against it on that account. In fact, it carries an appropriation, recommended by the engineers, for a harbor in the district which I represent, but I do not think that I should be called upon to swallow a $40,000,000 appropriation for that reason or that the people of the district want me to do so. I know of no way to stop the practice as exemplified in this bill unless the majority of the Members of Congress stand out against it.

In my opinion a large part of the money expended by the Government in the past on inland rivers, especially in order to stimulate navigation upon them, has been wasted. This is evidenced by the fact that in many cases after spending several hundreds and sometimes millions of dollars in order to make them navigable they are now totally abandoned.

I do not believe that appropriations for the improvement of rivers and harbors generally on the scale in which they have been made for the last few years can be justified any longer on the plea that they are an aid to navigation. Notwithstanding the enormous and ever-increasing size of these appropriations, the evidence is practically universal that the commerce on our rivers is gradually and constantly diminishing, and the best students of the question seem to be in general accord on the proposition that the tendency will be the same in the future. Modern conditions of transportation do not seem to permit of inland river traffic. There are many reasons why that is so. Among them are the cost of construction and maintenance; the lack of uniformity in the depth of rivers and canals; the limited territory that can be served by river navigation; the fact that it is confined to the natural valleys and the level portions of the country; the cost of transshipment, loading, and reloading; the fact that river navigation in the North, at least, is impossible for several months in the year on account of the ice; the development of our railroads; the necessity for the speedy delivery of most commodities; and the fact that river navigation is confined very largely to such commodities as coal, timber, ore, building material, and so forth. As Prof. Moulton states it:

> The ability of the railways to extend their lines to every point of the compass, to develop a very network of branch and spur lines which can carry traffic from the most out-of-the-way source to any destination whatever, can not be matched by any system of waterways that could be developed.

The extravagance and waste in these appropriations have been such and the commerce on some of our rivers is so small as compared with the annual appropriation for their improvement and maintenance as to justify Mr. Burton, formerly Senator from Ohio, in declaring that it would be cheaper for the Government to buy the commerce on them and burn it than to spend what it does annually for their improvement and maintenance, to say nothing of the comparatively insignificant cost of transportation for carrying that commerce.

I sometimes wonder if Congress, following the lead of previous Congresses, does not get into the habit of voting large appropriations year after year without fully realizing the enormous sums that are actually being appropriated.

Mr. BOOHER. Will the gentleman yield?

Mr. MAPES. Yes.

Mr. BOOHER. I find 19 items in the bill for the State of Michigan. Will the gentleman point out one of those items that he would be willing to strike out of the bill.

Mr. MAPES. There has not been a single objection to any Michigan item by any Member of the House, and every one was recommended by the engineers. The most of them, such as the appropriation for the improvement of St. Marys River and the harbors on the Great Lakes, can not be compared with the appropriations for a number of the inland rivers in this bill. There is no comparison between the harbors on the Great Lakes and the river legislation carried in this bill.

Mr. BOOHER. Is there a single one——

Mr. MAPES. I can not yield further unless I am given more time.

The $40,000,000 carried in this bill, for example, to be expended in the next fiscal year, would build 1,000 miles of railroad, at a cost of $40,000 per mile. It is said that $850,000,000 have been appropriated by the Government altogether for rivers and harbors, enough, at the same cost, with which to build 21,000 miles of railroads. What is there to show for all this enormous expenditure of money?

The last Congress authorized the building of a railroad in Alaska at a cost of $25,000,000, a trifling amount as compared with the total amount spent on our rivers and harbors, and a little over one-half the annual appropriation for that purpose.

The creation of the Interstate Commerce Commission and the different State commissions, with authority to regulate railroad rates, has destroyed the force of the old argument that the possibility of river transportation has a tendency to keep down railroad rates, even though little commerce is actually carried on the rivers. But even if river and harbor appropriations did have a tendency in that direction, $40,000,000 to $50,000,000 per year expended on rivers and harbors in addition to the expense of these different commissions would be an enormous amount to pay for railroad regulation. It would be cheaper for the Government to build competing railroads and give them to private individuals to operate. In fact, the maintenance cost of rivers per mile after they are improved, contrary to general belief, is greater than the cost of maintenance of railroads per mile.

I am not opposed to all river and harbor legislation. In fact, I favor the proper expenditure of money by the Federal Government for the improvement of them, but I am opposed to expending it on the rivers and harbors of the country indiscriminately and regardless of whether they can ever be made use of for the purpose of navigation or not. It should be confined to the development of a few "particular projects."

The distinguished gentleman from Kentucky [Mr. SHERLEY], who is now presiding over this committee, in a very able report, recently made, on the fortifications appropriations bill, calls attention to the act of Congress approved March 3, 1885, which authorized the President to appoint a board to examine and report at what ports in the United States fortifications or other defenses were most urgently required and the character and

kind of defenses best adapted for each. The board authorized by that act of Congress, after making a thorough study and report on the subject, named the 27 different places which in its opinion ought to be fortified. Since that time Congress has had the benefit of the report of two other commissions on that subject, and has followed, in the main, in its fortifications appropriation bills the recommendations of those commissions. As a result the fortifications of the United States are as good as any in the world.

It seems to me that some such commission made up of experts ought to be appointed to study and report the rivers, harbors, and canals in the United States which ought to be improved and for which Congress would be justified in making appropriations, and after receiving such a report Congress should then confine itself in its rivers and harbors appropriation bills to the projects recommended by such a commission. [Applause.]

The Clerk read as follows:

St. Marys River at the falls, Michigan: Continuing improvement by the construction of a fourth lock, $800,000.

Mr. SCOTT of Michigan. Mr. Chairman, I move to strike out the last word for the purpose of asking the chairman of the committee why the bill differs from the recommendation of the engineer. I observe on page 292 that the engineers recommend the expenditure of $1,300,000 on the fourth lock. The work has been started and I am taking his recommendation for it, and I assume that he knows what he is talking about.

Mr. SPARKMAN. A portion of the $500,000 is to be taken care of in the sundry civil bill.

Mr. SCOTT or Michigan. Let me understand the gentleman. The balance of the $500,000 which does not appear in the bill is to be taken care of in the sundry civil bill?

Mr. SPARKMAN. Yes. It was not estimated for in this bill, but in the sundry civil bill.

Mr. COOPER of Wisconsin. Mr. Chairman, the gentleman from Michigan [Mr. MAPES] proposes that a commission be appointed, a commission to consist of persons other than Army engineers. Let me read what a great expert said concerning a similar proposal. Senator Burton was chairman of the National Waterways Commission, which, in Europe and in America, made an exhaustive study of the question of waterway improvements, and filed its report in the Senate in 1912. On page 78 of its final report—a report which it is well understood was prepared mainly by Senator Burton, its chairman—that commission says:

Numerous propositions have been made for the creation of a board of public works or other body which shall decide upon the feasibility and desirability of propositions for expenditures on rivers and harbors. The commission is unwilling to recommend a change of this kind, and points to the fact that the past recommendations of the Engineer Corps have been carefully prepared and with a degree of expert knowledge and comprehension of the commercial needs of the country which could not well be supplied by any other body or organization. The advantages which attach to the Engineer Corps are obvious. The members are in the permanent service of the Government and are free from those influences which would inevitably be brought to bear upon men in civil life. Those engineers now engaged in the work are carefully trained in the planning and execution of these improvements and have special qualifications for judging the feasibility and the cost of proposed river and harbor projects.

Mr. MAPES. Mr. Chairman, will the gentleman yield?

Mr. COOPER of Wisconsin. I yield.

Mr. MAPES. Is it not true that under the present system the responsibility is divided between Congress and the Engineers, and do we not in this very bill, in which the committee has reported what is a small number of projects for survey, 87, as called attention to by the minority report, in a great many instances instruct the Engineers to report upon one of two different propositions, thereby making it practically mandatory upon them to report in favor of one of them?

Mr. COOPER of Wisconsin. Mr. Chairman, the gentleman has evaded the proposition somewhat or has failed to notice that in answer to his proposal I read the opinion of the great national commission who traveled over Europe and over this country to study the general subject of river and harbor appropriations, and that they were unanimously and strongly opposed to such a commission as the gentleman advocated in his speech.

Mr. FESS. Mr. Chairman, will the gentleman yield?

Mr. COOPER of Wisconsin. Yes.

Mr. FESS. Has the gentleman from Wisconsin [Mr. COOPER] read that with approval or disapproval?

Mr. COOPER of Wisconsin. I read it as the opinion of the distinguished expert on river and harbor improvements, Senator Burton, and his fellow members of the national commission.

Mr. FESS. Is that the gentleman's answer to my question?

Mr. COOPER of Wisconsin. My own idea is that those splendid officers like Col. Taylor and his associates in the office of the Chief of Engineers, and also the other fine men in the Engineer Corps of the United States Army, are just as free from political or other influence, just as dependable to do what is right as would be such a commission as was proposed here to consist of three gentlemen appointed to Cabinet positions, all members of one party, and all confirmed by the Senate. [Applause.]

Mr. CRAMTON. Mr. Chairman, will the gentleman yield?

Mr. COOPER of Wisconsin. Does that meet the question of the gentleman from Michigan?

Mr. MAPES. Mr. Chairman, I would like to say——

Mr. FESS rose.

Mr. MAPES. I would like to say that I did not advocate any such commission as the gentleman has suggested.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. COOPER of Wisconsin. Mr. Chairman, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to proceed for five minutes more. Is there objection?

There was no objection.

Mr. COOPER of Wisconsin. I want to do that in order to reply to the second question of the gentleman from Michigan [Mr. MAPES] as to whether the bill does not propose that there shall be new surveys. Yes; but that does not require the engineers, after they have made the surveys, to report favorably upon them. On the contrary, the engineers can exercise the discretion which they have heretofore exercised and refuse to recommend for improvement any project which they may have been called upon to survey.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. COOPER of Wisconsin. Yes.

Mr. MANN. Is it not a fact that under the law the engineers are required not to report upon a project in detail or as to the surveying end of it until they have first found that commercially it is desirable?

Mr. COOPER of Wisconsin. Yes; and I thank the gentleman from Illinois for asking the question.

Mr. CLINE. Mr. Chairman, will the gentleman yield?

Mr. COOPER of Wisconsin. I can not yield now. I want to read what Senator Burton said on another occasion.

Mr. MAPES. Mr. Chairman, will the gentleman yield?

Mr. COOPER of Wisconsin. I can not yield now.

The CHAIRMAN. The gentleman from Wisconsin declines to yield.

Mr. COOPER of Wisconsin. Senator Burton addressed the National Rivers and Harbors Congress at its convention in this city in December, 1909. I have here the official report of the proceedings of that convention. Here is what Senator Burton said:

My friends, the president of this congress will say to you that we have known no North, no South, no East, no West in the years we have been together. [Applause.] We have taken up projects according to the measure of their merit, and I can vouch that members of the committee in many instances——

Mr. MAPES. Mr. Chairman, will the gentleman yield?

Mr. COOPER of Wisconsin. I can not yield now to the gentleman. I want to continue the reading—

and I can vouch that members of the committee in many instances have leaned over backward where their own localities were involved, and have given closer attention to projects in other places.

* * * * * * *

I have found many observant and intelligent men—

And this applies to the gentleman from Michigan [Mr. MAPES], as I infer from his remarks—

who have an idea that a very large share of our appropriations go for insignificant creeks and streams. Now, perhaps I might point out the benefit of improving many of these minor streams, a benefit which proportionately is often greater than even in the case of large rivers.

Observe that important statement of the Senator. Referring to the benefit from improving many of these minor streams, he says that it is—

A benefit which proportionately is often greater than even in the case of large rivers.

Mr. MAPES. Mr. Chairman——

Mr. COOPER of Wisconsin. I can not yield, Mr. Chairman.

Mr. CLARK of Florida. Mr. Chairman, I demand the regular order.

The CHAIRMAN. The regular order is the gentleman from Wisconsin.

Mr. MAPES. I would like to submit a parliamentary inquiry.

Mr. COOPER of Wisconsin. I object, Mr. Chairman. I do not desire to disoblige, but I have a duty to Senator Burton that I wish to perform. [Laughter.]

Mr. Chairman, I read further from the speech of Senator Burton to the great waterway convention:

You have had to meet the idea that there is a "pork barrel" somewhere. Whenever there is a man of superficial information on this

subject, or one who has had some project that has been turned down, and turned down hard because it had to be turned down, that man begins to talk about the "pork barrel."

[Applause.]

That is correct. You got that in at the right place. It says "applause" here. [Laughter.]

I will now read what he says immediately following his remarks about gentlemen with superficial information.

The CHAIRMAN. The time of the gentleman has expired.

Mr. COOPER of Wisconsin. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. COOPER of Wisconsin. The Senator continues:

There has been no line of appropriations made by this Government more carefully guarded than appropriations for rivers and harbors.

Now, I ask the especial attention of the gentleman from Michigan to a statement of the distinguished Senator on that occasion, which affords a complete answer to the question propounded to me by the gentleman a little while ago, and in which question he seemed to exhibit a fear lest there might be something wrong about the proposed surveys.

Mr. MAPES. Will the gentleman yield?

Mr. COOPER of Wisconsin. I can not. If the gentleman will please remain in status quo, as the gentleman from Wisconsin [Mr. FREAR] wants some of these projects to remain, until I finish this, then I will yield. [Laughter.]

Mr. MAPES. Mr. Chairman——

Mr. COOPER of Wisconsin. After declaring that—

There has been no line of appropriations made by this Government more carefully guarded than appropriations for rivers and harbors—

The Senator says—and I think this information will be interesting to the gentleman from Michigan:

In the first place, before anything is undertaken, there is a preliminary examination which is ordered by legislation; there must be a preliminary examination. Then, if that is favorable, a more detailed examination. Before the project is presented to Congress it must pass before a so-called board of review. By the time it gets to Congress it has had to pass through a pretty long gantlet. Then, when it reaches the Rivers and Harbors Committee, it has a still more severe experience—perhaps some of you think so, anyhow.

* * * * * * *

There has been no logrolling, no "pork barrel," no regard for individual prospects, or anything of that sort. [Applause.] No regard for any particular locality in the country.

Speaking of the advantages to be derived from adequate transportation facilities by water, the Senator remarks:

Then there is a second class of advantages that are arbitrary, due to their lowering of rates to drive waterways out of business. The best illustration with reference to that which I know is a case where a barge line on the Mississippi was carrying freight at 25 cents a hundred very profitably. The railways put down the rate to 10 cents a hundred until the barge line was driven out of business; then the railways put up the rate to 50 cents a hundred, where it has remained ever since. Now, that ought not to be allowed.

He then expresses the hope that the waterways and the railways in some way will agree to work together; that to work together would be for the interest of both.

It is really for the interest of both to work together. [Applause.] The time is coming when they will both see it. [Applause.]

The CHAIRMAN. The time of the gentleman from Wisconsin [Mr. COOPER] has expired. [Applause.]

Mr. HUMPHREY of Washington. Mr. Chairman——

Mr. SPARKMAN. I would like to inquire of my colleague how much time he wants?

Mr. HUMPHREY of Washington. I would like five minutes.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that debate on the paragraph and all amendments thereto end in five minutes.

The CHAIRMAN. Is there objection?

Mr. McLAUGHLIN. Mr. Chairman, I would like five minutes. Can the gentleman from Florida make it 10?

Mr. SPARKMAN. We have another paragraph to read in a moment.

Mr. McLAUGHLIN. Then I will wait until another paragraph is read.

The CHAIRMAN. The gentleman from Washington [Mr. HUMPHREY] is recognized for five minutes.

Mr. HUMPHREY of Washington. Mr. Chairman, I am very much pleased to know that the committee did not make any mistake in reference to one item, anyway; that is an item in the district represented by the gentleman from Michigan [Mr. MAPES]. Even he approved it.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield for a question?

The CHAIRMAN. Does the gentleman from Washington yield to the gentleman from Pennsylvania?

Mr. HUMPHREY of Washington. Yes.

Mr. MOORE of Pennsylvania. The gentleman from Michigan [Mr. MAPES] explicitly approved that item, and said that was a good item.

Mr. HUMPHREY of Washington. Well, in doing that he has only done what everybody else in this House has done. I am still waiting to see one man stand up and attack or condemn his own project.

Now, we are coming to the State of Wisconsin, and I am wondering whether some gentleman from that State will stand up and condemn some of those items.

Mr. Chairman, there are some more things that I want to call attention to, and one of them is that in the attempt to demonstrate that there has been a waste of appropriations because traffic on certain waterways has decreased, it does not necessrily follow that that is so, because there are three stages in waterway improvement. The first stage is before you have the railroad improvement, and then after you have it paralleled with a railroad improvement the waterway may be no longer valuable. But the time may come again when the waterway will again be very valuable.

I can cite one instance in my own State, the Columbia River, from Wenatchee to Kettle Falls. We have appropriated for several years for this part of the river, and I know that the distinguished chairman of this committee will agree with me when I say that there was no appropriation ever made that brought a greater return for the amount invested than that for the upper Columbia. That has been discontinued, because now it is paralleled by the railroad. But that does not mean that the money that was invested in that improvement was money wasted. The time may come again when it will be worth while to once more improve the Columbia River. So that the arguments made to that effect do not necessarily prove true. The people who make that argument ought to point out the particular items to which they refer.

My distinguished friend from Michigan [Mr. MAPES] was laboring under a wrong impression in regard to these surveys. Seventy per cent of the surveys that have gone into these bills in the last year or two have, if I remember correctly, been reported on unfavorably. And there never was, in my judgment, a greater mistake than to say that we ought to take the power of reporting upon these projects away from the engineers and give it to some commission. [Applause.] The moment you do that there will be politics in the appropriations.

I agree with what former Senator Burton said, read by the distinguished gentleman from Wisconsin [Mr. COOPER], that the Government engineers by training, by occupation, and by the positions which they hold during life are the best fitted of any body of men that we could possibly secure to pass upon these projects. I have never yet heard a just criticism leveled against the conduct of the engineers, except in particular cases, and I think I am well within the facts when I say that I never heard a Government engineer severely criticized on the floor of this House as to any project unless it was by some gentleman whose project had been unfavorably reported upon by that engineer.

The CHAIRMAN (Mr. COX). The time of the gentleman from Washington has expired. The Clerk will read.

The Clerk read as follows:

Black River at Port Huron, Mich.: Completing improvement and for maintenance, $25,000.

Mr. McLAUGHLIN. Mr. Chairman, I move to strike out the last word in order that I may have time to reply to statements that have been made.

The CHAIRMAN. The gentleman from Michigan moves to strike out the last word.

Mr. McLAUGHLIN. Mr. Chairman, I approve what the gentleman from Washington [Mr. HUMPHREY] has said, that this work ought to be left to the Corps of Engineers, made up of the men best fitted in this country to do this work. I have had considerable experience with them. They are the highest class of men, and, in my judgment, they are the most capable men who could be called upon for this work; and while they have differed from me, and while I have not been able to get from them the favorable reports that I wished, I have no criticism whatever to make of them. I believe they are men of splendid character, men of ability, without local bias, and as free from improper influence as any who can possibly be engaged for the work. It would be folly to organize a commission. It would be or become a political body and subject to or suspected of yielding to local influence and prejudice.

Now, the gentleman from Missouri [Mr. BOOHER], a member of the committee, asked the gentleman from Michigan [Mr. MAPES] if there were any provisions in this bill for harbors in

Michigan which he would wish to have stricken out. Evidently he thought that because small sums mostly were given for Michigan, nearly all for dredging and maintenance, we ought to object to some of them, because we object to projects where they have to go several feet deep in order to find water in the bed of what they call or wish to make into a river; that because we object to projects where they build a harbor because it touches a great automobile road, where the men from the cities using automobiles can stop at the so-called harbor and reach their yachts; because we object to such projects as these we are told we ought to object to all or to some at least of the improvements in the State of Michigan.

Mr. CLARK of Florida. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman yield?

Mr. McLAUGHLIN. I can not yield. The gentleman from Michigan [Mr. MAPES] rose to speak as the item relating to Grand Haven was reached. At Grand Haven there were 645,804 tons of freight last year. It is a great harbor which ought to be properly maintained.

I am particularly interested in three or four projects that are located in my district. One is at Muskegon, of which I have already spoken, my home city, where the item in this bill is only $7,500, altogether for dredging, where the business last year was 119,811 tons; and that is one of the very few projects mentioned in the committee's report concerning which it appears that the business is increasing year by year. I am sure it will increase even more rapidly in the future. Only a few years ago it was the greatest lumber town in the world, making more lumber than any other place in the world. Now it does not make a foot of lumber, and still, by unusual and commendable energy and thrift and public spirit, the people are building a city upon the ruins of the lumber business, and it is now one of the most prosperous cities in Michigan, having a population of about 35,000.

I am also interested in the harbor of Luddington, in my district, for which there is an appropriation in the bill of $250,000. The freight there last year was 1,510,437 tons. You do not have to bore into the ground there to find water for a harbor. It is perhaps the greatest car-ferry point in the world.

And I might speak of Manistee, another splendid harbor in my district, at which more salt is produced than at any other place in the United States; but that project, having been approved by Congress, the appropriations for its completion are carried in another bill.

Mr. SLOAN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. McLAUGHLIN. I will when I get through. Wait a moment. I am interested also in the harbor of Frankfort, where the report shows that last year there were 737,248 tons of freight. The appropriation for that point is only $5,000.

Do gentlemen accuse us of inconsistency if we do not object to those very moderate appropriations for those very worthy projects simply because we object to some in other parts of the country which we think are grossly improper? The fact has been spoken of, Mr. Chairman, that nearly $50,000,000 has been appropriated and has been used for improving harbors in the State of Michigan. I have not exact figures, but am safe in saying that three-fourths at least of that money was used for building locks and otherwise improving St. Marys River and for improving Detroit River. All of it ought not to be charged to Michigan; but if it were all so charged, the expenditure of every dollar was proper. In the year 1913 about 80,000,000 tons of freight passed through the St. Marys Canal; the value of that freight was nearly $1,000,000,000. There was paid for carrying that freight $44,380,000, and the value of the boats which carried it was about $4,500,000. The number of boats passing through the locks of St. Marys River in 1913 was nearly 24,000, and the net registered tonnage of them was nearly 58,000,000 tons. The total amount spent on St. Marys River is in the neighborhood of $25,000,000—$13,000,000 on the locks and $12,000,000 on the river itself. The Suez Canal, of which we read so much and which is generally thought to be a wonderful waterway, carried last year only 5,085 ships, of net registered tonnage amounting to a little more than 20,000,000 tons, or about one-fifth of the number at the Soo Locks and of little more than one-third the tonnage. And the Suez Canal is open all the year, while the St. Marys Canal is open only eight months of a year.

The Detroit River is a part of the boundary line between Michigan and Canada, and carries the immense commerce of several States, the commerce being strictly interstate and not chargeable to Michigan or to be credited to that State alone, although we would like to claim it if we could properly do so. Our Government has expended several million dollars—I do not know how many—on this river, and every dollar so used has returned profit of a hundredfold to the people of this country.

In 1913 the vessels passing through that river, not including ferryboats, railroad ferries, or other local craft, numbered 37,473, of net registered tonnage of 62,092,149 tons, carrying freight to the amount of 85,376,705 tons and of the value of $927,191,076.

A glance at these figures or a moment's thought to what they mean as representing the amount of business done on these two great waterways will justify all expenditure the Congress has made for their improvement and maintenance.

We are not to be charged with inconsistency in supporting appropriations for these projects, as we support other appropriations for Michigan that I have referred to, while we oppose, as we feel we must, some items in this bill that we believe are unjustifiable. We are real friends of rivers and harbors, believing in Federal aid to worthy projects, and we therefore oppose measures which bring reproach upon proper and legitimate river and harbor legislation. We will not stultify ourselves by approving an entire bill which contains appropriations for anything and everything, even if it does provide money for projects in or about our own State, every one of which is properly taken care of.

The CHAIRMAN. The time of the gentleman from Michigan has expired.

Mr. CLARK of Florida. Mr. Chairman——

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that debate on this paragraph and all amendments thereto close in five minutes and that the gentleman from Missouri [Mr. BOOHER] have that five minutes.

Mr. CLARK of Florida. I want two minutes.

Mr. CRAMTON. Mr. Chairman, I should like one minute.

Mr. CLARK of Florida. I believe I have been recognized. I want only two minutes.

Mr. SPARKMAN. Then, Mr. Chairman, I ask unanimous consent that debate on this paragraph and all amendments thereto close in eight minutes, two minutes to be used by the gentleman from Florida [Mr. CLARK], one minute by the gentleman from Michigan [Mr. CRAMTON], and five minutes by the gentleman from Missouri [Mr. BOOHER].

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate on this paragraph and amendments thereto close in eight minutes, two minutes to be used by the gentleman from Florida [Mr. CLARK], one minute by the gentleman from Michigan [Mr. CRAMTON], and five minutes by the gentleman from Missouri [Mr. BOOHER]. Is there objection?

There was no objection.

Mr. CLARK of Florida. Mr. Chairman, I just simply want to say that I am absolutely in favor of this bill, and expect to vote for every item in it. If the gentleman from Michigan [Mr. McLAUGHLIN], who would not yield to me a moment ago, will point out in this bill a single river where the testimony shows that you have to dig 10 feet into the bed of it to get water, I will vote against it. The gentleman ought not to make such a statement as that, which is absolutely and entirely at variance with all the facts.

Mr. GOOD. Will the gentleman yield for a question?

Mr. CLARK of Florida. For a question only.

Mr. GOOD. Will the gentleman vote against the bill if we can point out a river where the Member of the House who lives in the vicinity says you are likely to cross the river at some point before you know you have reached it?

Mr. CLARK of Florida. I will not, because I would rather take the testimony of the gentleman who lives on the river than to take the testimony of a gentleman who lives miles away. I know the river that the gentleman refers to, and I can not yield further; but I want to say that gentlemen ought not to make such statement as that, because there is not a word of truth anywhere about any item in this bill which shows that any river is so dry that you have got to dig 10 feet into the bed of it to get water. It is preposterous, it is ridiculous, and it is unworthy of any gentleman upon this floor.

I yield back the remainder of my time.

Mr. CRAMTON. Mr. Chairman, the gentleman from Missouri [Mr. BOOHER] wanted to know about our Michigan items, and seemed to think that because some other items in this bill have been criticized, therefore the Michigan items should be criticized. I have here a memorandum which states that the report of operation of the Panama Canal for the first 10 months and 15 days shows practically 5,000,000 tons of freight carried, at an operating expense of about $5,000,000. As my colleague [Mr. McLAUGHLIN] has said, the Soo Canal has received about $25,000,000 out of the $45,000,000 charged to our State. The

Soo Canal carries in 15 days as much freight as the Panama Canal carried in more than 10 months, at an operating expense for the Soo Canal of about $10,000. And the same freight that goes through the Soo Canal in 15 days, equal in amount to that which goes through the Panama Canal in 10 months, goes on down through the lakes and rivers that are appropriated for and charged to Michigan in this bill. [Applause.]

Mr. BOOHER. There can not very much freight go through the Panama Canal now, because it is closed by slides, and almost any river can beat it, as far as freight is concerned, now.

Mr. CRAMTON. These figures do not apply to the time when the canal has been closed by slides.

Mr. BOOHER. I am vesy sorry that the simple question I asked the gentleman from Michigan [Mr. MAPES] has stirred up such a tempest. There was nothing in it to excite anybody. The gentleman had stated that there were many projects in this bill that were unworthy and ought to be stricken out. I only wanted to find out whether there was one of these unworthy projects in the State of Michigan, where there were 19 different projects, with nearly $1,500,000 appropriated for them, but he had not paid enough attention to the bill to know whether there was an unworthy project in Michigan or not. How, then, can he say he has paid enough attention to the bill to know that there is a single unworthy project in the bill?

Mr. HUMPHREY of Washington. I want to call the attention of the gentleman from Missouri to the fact that Michigan is not so wonderfully above the others. I call his attention to the first item in the Michigan projects, on page 23, lines 17 and 18:

Harbor at Ontonagon, Mich.: For maintenance, $9,000.

For maintenance, $9,000. Now, they had a tremendous commerce there last year of 12,032 tons. Can you find many projects in the bill where there is any greater amount spent for maintenance in proportion to the business that is done? [Laughter.]

Mr. BOOHER. Mr. Chairman, I did not ask the question for the purpose of irritating the gentlemen from Michigan or stirring them up. I wanted to know if the gentleman had so carefully examined the bill that he could point out a single item in Michigan that was unworthy. That was all there was to it. The gentleman from Michigan [Mr. MCLAUGHLIN] flies into a passion because the question was asked and says they are all good projects. I do not know whether they are or not. The engineers report favorable on every one of them, and every one is carried in the bill, and no one, not even the distinguished gentleman from Wisconsin, has raised his voice against it. I do not know why.

Mr. CRAMTON. Will the gentleman yield?

Mr. BOOHER. Yes.

Mr. CRAMTON. Are there any items in the bill from any section of the country which do not have the recommendation of the engineers?

Mr. BOOHER. If there is one I do not know it. I would be glad for the gentleman to point it out.

Mr. CRAMTON. I was seeking information.

Mr. BOOHER. If there is one I would be glad to have the gentleman point it out. I do not know of one in the bill.

Mr. GREEN of Iowa. How about the Arkansas River?

Mr. MAPES. Will the gentleman yield?

Mr. BOOHER. Yes.

Mr. MAPES. The gentleman is a member of the committee that reported this bill, and I will ask him if the appropriations for the rivers and harbors in any other State have been passed over without criticism from any Member of the House as they have in the State of Michigan?

Mr. BOOHER. No; and I am glad there has not been any criticism of the Michigan items, but they are no better than the other items in the bill; but I do not know whether the gentleman from Wisconsin will pass them entirely or not. We can not tell. The gentleman ought to have been able to tell us whether any of them was objectionable, or that they were not objectionable, but he would not say either way. He could have answered my question yes or no. As far as the gentleman from Iowa is concerned, who asked about the Arkansas River, it has been recommended favorably by the engineers from time immemorial. The memory of man does not go back to the time when the engineers have not indorsed it, and they asked for more money than they got.

Mr. GREEN of Iowa. Has the gentleman read the last report?

Mr. BOOHER. Yes; I have.

Mr. GREEN of Iowa. Where it says that all the money has been thrown away, and they recommend the discontinuance of it.

Mr. BOOHER. Oh, no; the gentleman is mistaken. If he will sit down and read the report to get what there is in it and not what is outside of it, he will find he is mistaken. The River and Harbor Committee has not reported a single item that is not recommended by the Board of Engineers.

The Clerk read as follows:

Clinton River, Mich.: For maintenance, $1,500.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word in order to enlighten the House on this question relating to the commerce of certain ports. I wish to call attention to some statistics which have been prepared for me by the Department of Commerce. They throw a great deal of light on the general meaning and significance of river and harbor work. Unfortunateiy, we have been unable to obtain statistics covering the coastwise trade. Time and again efforts have been made to induce Congress to authorize appropriations for this purpose, but none have been made. The Secretary of Commerce has asked for appropriations to obtain them, but he has not succeeded.

The gentlemen from Michigan are particularly proud of the tonnage that passes through the Soo. They do not discuss, or very lightly, the enormous appropriations that have gone to the State of Michigan in order to provide them with the Soo and their other waterways. They should not be modest about it, for their record in that regard is one of the very best amongst the 48 States of the Union. They have not missed much in the matter of appropriations.

I have in my hand the record submitted by the Secretary of the Treasury, which indicates that up to the two last river and harbor bills Michigan had taken out of the Treasury a little in excess of $48,000,000 for the purpose of improvements within its own limits. It is fair to assume they have gone to $50,000,000 since. Therefore it does not seem entirely generous of the gentleman from Michigan to belittle the smaller projects throughout the country and find fault with certain sections for endeavoring to get appropriations for the improvement of their rivers. Michigan has been beautifully taken care of; due, of course, to the activity and energy of her Representatives in Congress. They are entitled to all the credit that comes to active, hustling Representatives, who hate the pork barrel, but who desire to take back home something to show their people.

Mr. GOOD. Will the gentleman yield?

Mr. MOORE of Pennsylvania. No; I can not yield. I have said something about the sums going to Michigan approximating $50,000,000, I believe, and Michigan is only one State in the Union. They have taken $50,000,000 up to date substantially, and yet the gentleman from Michigan [Mr. MAPES], finding everything pretty well covered at home, sees no special reason why anybody else should be considered—leave it to Michigan, "Dear old Michigan," they are certainly all right up in Michigan. [Laughter.] Mr. Chairman, I have no fault to find with their having gotten what they have got—I am glad they have it—but I do question whether they ought to prevent anybody else getting what is needed elsewhere. The gentleman from Michigan [Mr. MCLAUGHLIN] on several occasions has indicated that the greatest tonnage of the world passes through the Soo Canal. I give him credit for that statement. I can not get the coastwise statistics, so I will not dispute domestic figures with him just now; but I know that the tonnage that passes through the locks is made up very largely of iron ore and copper ore and coal; it is not the most valuable tonnage in the world, but it is great for weight; it is splendid for showing tonnage. I am going to produce some figures about foreign tonnage, however.

Mr. STAFFORD. What about the wheat?

Mr. MOORE of Pennsylvania. Oh, there is some wheat there, and we buy it and consume it, and we pay Michigan and other Western States well for it. I am glad we have the money once in a while to do that, because it helps make Michigan prosperous.

Mr. LONGWORTH. What about automobiles?

Mr. GOOD. And Fords?

Mr. MOORE of Pennsylvania. Oh, we buy them when we get the money, but we can not buy them as numerously as you do in Michigan or in Iowa or in Nebraska. It is the farmers mostly that buy automobiles.

Mr. GOOD. Why not ask for them in this bill? You get most everything else.

Mr. MOORE of Pennsylvania. We are waiting for the Agricultural bill; we will ask for automobiles in the Agricultural bill. [Laughter.]

Mr. GOOD. But it is easier to get them in this bill. All you have to do is to ask for them.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Under leave previously granted, Mr. MOORE of Pennsylvania inserted the following table of statistics:

Number and net tonnage of sailing and steam vessels entered and cleared in the foreign trade of the United States during the fiscal year ended June 30, 1914.

[By geographical divisions.]

Geographical divisions.	Entered.		Cleared.		Total entered and cleared.	
	Vessels.	Net tons.	Vessels.	Net tons.	Vessels.	Net tons.
Atlantic	10,489	26,401,314	10,084	25,491,836	20,573	51,893,150
Pacific	5,319	6,042,347	5,236	5,798,238	10,555	11,840,585
Gulf	4,697	7,608,628	4,986	8,453,138	9,683	16,061,766
Great Lakes	20,512	13,336,288	19,344	13,440,197	39,856	26,776,485
Total	41,017	53,388,577	39,650	53,183,409	80,667	106,571,986

Total values of imports and exports into and from the United States during the fiscal year ended June 30, 1914.

[By mode of transportation and geographical divisions.]

Geographical divisions.	Imports.	Exports.	Total imports and exports.
Water borne:			
Atlantic	$1,360,519,398	$1,299,062,457	$2,659,581,855
Pacific	130,767,796	125,991,894	256,759,690
Gulf	120,983,430	570,139,028	691,122,458
Great Lakes	104,996,047	52,565,775	157,561,822
Interior	20,441,982	705	20,442,687
Total water borne	1,737,708,653	2,047,759,859	3,785,468,512
In cars and other land vehicles	156,217,004	316,819,289	473,036,293
Total	1,893,925,657	2,364,579,148	4,258,504,805

NOTE.—The above tables cover only the commerce of the United States with foreign countries. No data are available for the domestic coastwise commerce.

Mr. CALLAWAY rose.

Mr. SPARKMAN. Oh, Mr. Chairman——

Mr. CALLAWAY. Why, I have not spoken to-day. [Laughter.]

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

[Mr. CALLAWAY addressed the committee. See Appendix.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Harbor at Green Bay, Wis.: For maintenance, $18,000.

Mr. MANN. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Illinois moves to strike out the last word.

Mr. MANN. Mr. Chairman, it is now almost 5 o'clock. I would like to get the attention of the House for a moment. The House sat this morning at 11 o'clock. While it did not proceed immediatelly to the consideration of this bill, the delay this morning was not long. We have read to-day three pages of the bill and three or four more paragraphs. Very few of the paragraphs that have been read to-day have been contested. While the discussion has been interesting and illuminating, most of it has been in reference to matters not involved in the paragraphs which have been read.

I had hoped that it might be possible to finish the bill to-day, but that, evidently, is impossible. I hope that gentlemen of the House on both sides will endeavor to restrain themselves a little bit, so that we can make more progress with this bill before half-past 5 o'clock; but it is not unlikely that we will have to remain here Monday until we finish it. While I am not anxious about too great expedition, still I think we ought to get through with this bill sooner or later, and I hope gentlemen will appreciate the condition. [Applause.]

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Harbor at Two Rivers, Wis.: For maintenance, $3,500.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. I will do a great deal to comply with the wishes of the minority leader. I wish to say that I have not, as a rule, discussed anything except the items under consideration.

A few moments ago the gentleman from Washington [Mr. HUMPHREY] invited my attention to the fact that the Wisconsin items were about to be approached, and he wanted to know what my attitude would be with respect to them. If I wait until these items are finished, and remain silent, I have no doubt he will call attention to that fact. The members of the Committee on Rivers and Harbors will bear me out in the statement that I have not asked for the inclusion of one of these items in the bill. Members of the committee nod their heads. The engineers have approved these items, and they speak for themselves. I have stated that I have nothing at stake. I think as much of one side of the State of Wisconsin as the other, and I say that for the reason that I could not be bought for any amount of money that might be put in this bill. I am now about to make a statement which I have never made before, that gentlemen came to me here in my office from my home town, appointed by the governor of the State of Wisconsin, to get me to indorse an item of several million dollars for a project which would go past my own home. It was to go to the engineers. Gentlemen here are aware of the facts. I told them they could not secure my support; that I did not believe it was a worthy project, and I told them so.

Wisconsin has the second largest commerce of any State in the country, unless you count that which goes through the Soo Canal. Three harbors that I can name carry 60,000,000 tons. They are named right in this minority report, and they get $53,000 in this bill. It would make no difference to me whether they got more or less. It is not a question of the amount. I do not agree with the gentleman from Pennsylvania [Mr. MOORE] that it is a question of fighting for your State or fighting for your project. I believe it ought to be allowed without a fight if it is a worthy project. The commerce in the place where I live was larger at one time than that of the port of Philadelphia, because the boats were constantly moving by, with great rafts. To-day it will float the largest boats upon the Mississippi River, but it has no commerce. I am not urging any project. I would not urge a project, and I could not be influenced by that argument. I do not believe you can buy any man in the House. I do not want that conclusion put upon his actions. I know gentlemen here are trying to represent their constituencies. I have made no criticism of anyone heretofore, and I do not propose to make one now. I say this, that in the criticisms I have made of these different projects there has been no personal reasons for what I have said. I ask the committee to bear we out in that. I have simply told the conditions that surrounded the project, according to the facts shown by official reports.

The Brazos River gets $390,000 and carries a commerce of 1,080 tons annually. We get for the whole State of Wisconsin, I think, $308,000 for over 60,000,000 tons. But that does not make any difference. It does not make any difference if it is $1,000,000, or if it is nothing at all. The question ought to be determined on the merits of each project.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last two words.

Mr. SPARKMAN. How much time does the gentleman want?

Mr. MOORE of Pennsylvania. Five minutes.

Mr. SPARKMAN. I ask unanimous consent that all debate on this paragraph and amendments thereto close in five minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that debate on this paragraph and all amendments thereto close in five minutes. Is there objection?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, one trouble with the gentleman from Wisconsin [Mr. FREAR] is this—and I say it in all kindness—in his treatment of this subject of rivers and harbors he takes himself too seriously. When he indicates that anyone would suggest that he might personally be bribed, or, for that matter, that any other Member of the House might be bribed or "bought," in the sense that he would be unduly or corruptly influenced to act for or against a measure, he is unfair to himself and to the House. No one has made any such insinuation with respect to him or his purposes. I think I have read the gentleman from Wisconsin as closely in the matter of his characteristics as any man here. I know him. I like him. I believe him to be honest, and it is unnecessary to say that I believe him to be sincere; but I believe him to be misled with respect to his agitation against a river and harbor bill. Some men are influenced, not as he has indicated, by the governor or influential men of a State coming to them, but some men are influenced in another way, and it is most unfortunate. It indicates the vanity that sometimes bubbles up in an individual, and I do not wish to impute it to the gentleman from Wisconsin. But some men are unduly influenced more by what appears in the newspapers or in the magazines than by any other influence.

I suspect when the gentleman from Michigan [Mr. MAPES] delivered his interesting speech here that he had it in mind that the public sentiment was drifting against the river and harbor bill; not that his project was not worthy, nor, for that

matter, that the gentleman from Wisconsin's projects are not worthy, but because it might be a little more beneficial from the public or political viewpoint to appear at least to be standing against what, after all, you are really for. Why should we play two sides in a matter of such importance? Why not be more direct? It is true as gospel, and your constituents expect it, that you stand for those things which your constituents desire you to stand for. Otherwise, what is the purpose of coming to Congress? If you do not come to represent your constituents, what are you here for?

The gentleman from Michigan would not go back to his constituents in good countenance if he protested against an item for his district. The gentleman from Wisconsin, challenged by the gentleman from Washington, will not now oppose or say that he will oppose a single item for rivers and harbors in Wisconsin. He stands for these items, notwithstanding the governor of his State may have come to him on his bended knees and pleaded with him to vote for something in his State.

Mr. FREAR. I do not wish that statement to go unchallenged, for the governor has never said a word to me about it.

Mr. MOORE of Pennsylvania. I amend my remarks to that extent. But the gentleman does not rise in opposition to any proposition from his own State. Even the gentlemen from Michigan who have taken inspiration from our inland friend of Iowa—even the gentlemen from Michigan who have joined in the opposition to certain projects—have no word of protest to the projects in their own State, notwithstanding they have mounted up to nearly $50,000,000. And yet this wonderful tonnage of which they boast—and upon which I congratulate them—so far as the foreign-tonnage part of it is concerned, is only a half of what it is along the Atlantic seaboard, and only one-sixteenth in value.

Mr. ADAMSON. Will the gentleman yield?

Mr. MOORE of Pennsylvania. I yield.

Mr. ADAMSON.

> 'Tis sweet to hear the watchdog's honest bark
> Bay deep-mouthed welcome as we draw near home.

Mr. MOORE of Pennsylvania. It is. While that is old, it is good and appropriate.

Mr. McLAUGHLIN. Mr. Chairman, we were asked if there was any project in Michigan that ought to be stricken from the bill, and the gentleman from Washington [Mr. HUMPHREY] rises and speaks of Ontonagon. I want to say that no Michigan Member asked to have that put in the bill, and it was put in by the committee of their own accord.

The Clerk read as follows:

Harbor at Green Bay, Wis.: For maintenance, $18,000.

Mr. MILLER of Pennsylvania. Mr. Chairman, I move to strike out the section. I think the gentleman from Pennsylvania [Mr. MOORE] who last had the floor is mistaken about the fact that Members are opposed to this bill, or different sections of it, because the newspapers throughout the country, or the magazines, say that there is pork in it. I shall not vote for this bill, but not because the people of my district would reflect upon me if I did. I am not a candidate for renomination to Congress, as I do not care to return and would not come back under any circumstances. I have been in Congress in past years, and in this Congress and my present term is as long as I want to come. [Applause.]

I am opposed to this bill for one reason, because the Government can not afford to pay the money that is being appropriated in it. There is about $20,000,000 in this bill that I would like to vote for. I would like to vote for the project which appropriates money for the rivers and harbors in the vicinity of New York City, some $2,000,000; I would like to vote for the appropriation for the Delaware River, some $2,500,000; I would like to vote for the appropriation for the Ohio River, some $5,000,000; I would like to vote for the appropriation for the Mississippi River, some $6,000,000; but when I come to vote for those I have to vote for some twenty-odd million dollars more provided for in the bill that I do not believe ought to be appropriated.

The country needs the money and will need it badly before this Congress meets again in 1918. That is why I shall vote against the bill. I do not know whether there is any pork in it, but I presume there is by what Members have said on the floor, but I believe that some of these sums ought not to be appropriated. In the early part of the year 1915, I received letters from a committee of business men in the Mississippi Valley asking my support for a proposed appropriation for the Mississippi River. I answered the letters saying if you will have a fair bill prepared and introduced as a separate measure for the improvement of the Mississippi River, and only ask for what you ought to have, I will vote for it, but if you put the appropriation in the river and harbor bill, where there are millions of dollars included with it that ought not to be in it, I will not vote for it.

I regret that this House can not have a separate vote on these worthy measures. The gentleman from New York [Mr. BENNET] stated in his remarks that when one of the large battleships, costing some $18,000,000 and carrying a crew of 800 men, passes from the lower bay past Governors Island to the navy yard, at one point in the channel for a long distance there is but 1 foot of water under the keel of the vessel. An appropriation is asked to deepen this channel and is included in the $2,000,000 appropriation above referred to. It should be granted. It should be presented to the House in a separate bill; and the same should be done for the appropriation for the Delaware River, the Ohio River, the Mississippi River, Galveston Harbor, and the appropriation for the harbor and rivers and improvements at Chicago. If that was done there would be no logrolling; no pork could get into the bill, and the Government would save $20,000,000 this session as it saved that amount in the last session of the Sixty-third Congress, and an equal amount in the first session of the Sixty-third Congress through the help of Senator Burton, of Ohio.

I shall therefore vote against this bill on final passage. I withdraw the amendment I offered.

Mr. FOCHT rose.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in two minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent that all debate on the paragraph and all amendments thereto close in two minutes. Is there objection?

Mr. FOCHT. Mr. Chairman, I would like to have five minutes.

The CHAIRMAN. Is there objection to the request?

Mr. MOORE of Pennsylvania. Mr. Chairman, reserving the right to object, my colleague from Pennsylvania [Mr. FOCHT] has asked for five minutes, and I would like to have one or two.

Mr. FOCHT. Oh, I will give the gentleman one of mine.

Mr. MOORE of Pennsylvania. I do not think that would be quite satisfactory.

The CHAIRMAN. Is there objection to the request?

Mr. SPARKMAN. Mr. Chairman, I will amend my request so as to make it five minutes.

The CHAIRMAN. The gentleman from Florida amends his request to five minutes. Is there objection?

There was no objection.

Mr. FOCHT. Mr. Chairman, it is a well-known fact that Pennsylvania never yet had any appropriations out of this bill that are at all commensurate with the importance of the tonnage carried down the Delaware or from Pittsburgh, and the people of our great State have often wondered why it is that there was not some accomplishment with respect to a greater port in Philadelphia; but I will allow that matter to be taken care of by the gentlemen who represent Philadelphia, Mr. MOORE and others. However, in the matter of these little mulligrub, skipper streams they have been talking about here on the floor, I desire to say that I have, throughout my political career, freely voted for every conceivable kind of charity, public benefaction, and improvement and betterment, but I would like to know from those of you who have bills here providing for an appropriation of untold thousands of dollars for the improvement of little streams, such as has been referred to here, into which you must dig 10 feet before you can find any water, streams over which railroads and wagon and highway bridges are constructed, under and through which grow willow trees, I would like to know whether it is not almost impudent to ask intelligent, fair-minded men to vote for any bill containing such measures as those when the allegations have not been disavowed on this floor. Until they are I am not going to say that I can vote for the bill. [Applause.]

Mr. SPARKMAN. Mr. Chairman, will the gentleman yield?

Mr. FOCHT. Yes.

Mr. SPARKMAN. I simply rise in response to the gentleman's challenge to disavow that statement.

Mr. FOCHT. The gentlemen who made them have not.

Mr. SPARKMAN. If the gentleman from Pennsylvania can find any such streams as he has mentioned, I shall not disavow it.

Mr. FOCHT. Oh, a member of the gentleman's committee [Mr. CLARK of Florida], makes the allegation, and the gentleman from Michigan [Mr. MAPES] makes the allegation, and other gentlemen here have made even broader impeachments.

Mr. SPARKMAN. Mr. CLARK is not a member of the committee, and he made no such statement.

Mr. FOCHT. I heard what he said and what others have repeatedly alleged, and that is why the measure is discredited throughout the land as a "pork-barrel" bill. They take the

worst, of course, and believe the rest is the same. Clean it up and we will all be glad to vote for it.

Mr. SPARKMAN. The claim of "pork" comes from such reckless statements as the gentleman has just made.

Mr. FOCHT. It is not a reckless statement; it has been made countless times before, and the RECORD is written full of allegations of reckless waste and extravagance in appropriating to make navigable dry creeks and so-called rivers in this evident old-time logrolling process of attack upon a Treasury already empty. [Applause.]

Mr. MOORE of Pennsylvania. Mr. Chairman, I rise to indorse the statement of the gentleman from Florida [Mr. SPARKMAN], that it is due to such statements as that just made, unwittingly I am sure, by my colleague, the gentleman from Pennsylvania [Mr. FOCHT], that this Congress of the United States sometimes fails to attend to its own business, but tends to yield up its prerogative to the whim of some cartoonist or editorial writer. Congress ought to be big enough to do the business which it swears it will do when it meets at the beginning of the session. It ought not to yield constantly to what is written in the skyscrapers of New York or Chicago and by men who do not know or can not know the facts. Why should Congress disbelieve its committees and tremble every time it hears the cry of pork? The trouble is that gentlemen are trying to inject politics into this bill. I deplore it, for there is no politics in a bill in which all parties are interested. These provisions come with the approval of the engineers; they come to us here through a committee of this House, and gentlemen who are attending to other business in which they expect to be trusted can not consistently and justly criticize a great committee like that on rivers and harbors, because it is presumed to be as well informed as any other committee which brings a bill into the House.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired. All time has expired, and the Clerk will read.

The Clerk read as follows:

Harbor at Milwaukee, Wis., including harbor of refuge: For maintenance, $11,000.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, I move to strike out the last word. I only want to make some general observations respecting the criticisms that have been offered. Most of the general objections are to the alleged fact that we are appropriating for worthless creeks. I took occasion some time ago to examine into the bills for four years, and I found that the appropriations for the creeks that were included in the bills for those four years amounted to a little less than a million dollars and that the tonnage floated on these same creeks during those four years was valued at $1,000,000,000. The tonnage carried upon the creeks appropriated for in the bill annually—and I hope the gentleman who criticized these creeks will listen to me; I see that his attention is directed elsewhere——

Mr. FOCHT. What is that?

Mr. HUMPHREYS of Mississippi. The tonnage carried on the little creeks about which the gentleman complains amounted in those four years to twice as much as has ever been estimated for American commerce passing annually through the Panama Canal.

So much for the creeks.

Mr. CALLAWAY. Will the gentleman yield?

Mr. HUMPHREYS of Mississippi. I decline to yield.

Mr. HULBERT. Will the gentleman yield for a question?

Mr. HUMPHREYS of Mississippi. I can not yield. This is the first time I have taken the floor during the progress of this debate, and I want to talk facts now rather than to deal in fancies.

The tonnage carried by the little rivers provided for in this bill—and this does not include the Delaware River, or the East River, or the rivers that connect the Great Lakes, or the Mississippi River, or the Ohio River, just the little rivers that are provided for in this bill, and the creeks—last year amounted to more than 100,000,000 tons, and that was all American tonnage.

Now, let us take some standard by which to measure that. When we undertook to build the Panama Canal, or, rather, when we had completed it and undertook to ascertain the facts upon which to predicate the tolls that should be charged upon the tonnage, the President, Mr. Taft, selected Prof. Emery Johnson as an expert to ascertain about what tonnage would pass through the canal.

His estimate was that the tonnage through the canal would probably be ten and one-half million tons a year. That included coastwise tonnage and foreign tonnage—all the tonnage that would pass through the Panama Canal in a year. The little rivers provided for in this bill carried last year more than 100,000,000 tons, ten times as much tonnage as it was estimated would pass through the Panama Canal in any one year, foreign and domestic both included.

Now, in view of these facts it does occur to me that gentlemen ought not to indulge in general criticisms of the bill and charge the committee with wastefulness in making these appropriations. I do not know very much about the various items in the bill. I was a member of the committee for a number of years, though I am not on it now. I know there is no railroad on the face of this earth that can carry a billion dollars' worth of merchandise at a cost of $1,000,000 for maintenance, for instance, and that is what the creeks alone provided for in this bill carried in four years. I submit that these criticisms, except as they may be directed to particular items—these general criticisms—are misleading. Upon them are based the criticisms we hear in the country. Now, so far as "logrolling" is concerned and the "pork barrel" and it being a "bill of thieves," these criticisms, in my opinion, it is not necessary to reply to.

The CHAIRMAN. The time of the gentleman has expired.

Mr. HUMPHREYS of Mississippi. Mr. Chairman, I ask unanimous consent for five minutes more.

The CHAIRMAN. Is there objection?

Mr. HULBERT. Reserving the right to object, I would like to ask the gentleman——

The CHAIRMAN. Does the gentleman object?

Mr. HULBERT. Reserving the right to object——

The CHAIRMAN. Does the gentleman object?

Mr. HULBERT. No; I do not object.

Mr. HUMPHREYS of Mississippi. I served on the Committee on Rivers and Harbors for 13 years, 6 years under the chairmanship of Mr. Burton, 2 years under the chairmanship of Mr. ALEXANDER, and the rest of the time under the chairmanship of the gentleman from Florida [Mr. SPARKMAN].

All three framed their bills along identical lines.

My opinion is that the criticisms generally against this bill are wholly unfounded. I do not believe, for instance, that the criticisms which I hear sometimes from my colleagues on this side that during the past the Southern States did not get fair treatment is just. The fact of the business is, so far as the rivers of this country are concerned, the Southern States have had and will continue to get the bulk of the appropriations made for rivers. That is not merely because of any sectionalism. It is because when God made the rivers he put them in the South. Any man who will look at the map of the United States will see why the large part of the appropriations go to the southern rivers. And the Republican Party during its administration has been equally as just and equally as generous to the items of the South as the Democratic Party has been since it has been in power. [Applause.]

I never have heard a sectional question raised in the committee. I never had one man in my 13 years of service, either on the committee or off of it, directly or indirectly, make a proposition to me that he would vote for the projects I was interested in if I would vote for the projects he was interested in. Frequently, yes, very frequently, when projects were proposed that I did not agree to, that I did not believe ought to be put in the bill, I have stood in the committee and fought them, and every other member of the committee has done the same thing, but I realized the fact that nobody but the uncivilized man insists upon having everything exactly as he wants it. That is the difference between the civilized man and the uncivilized man. The savage insists upon having everything he wants, "he wants what he wants when he wants it," and if the other man has it he knocks him on the head and takes it away from him. It is the civilized man that recognizes the futility of such proceedings. You must yield to the judgment of other people sometimes and recognize their rights.

Now, Mr. Chairman, I thought it not entirely out of place that I should make these observations. I am interested, of course, in one of the projects carried in this bill. Perhaps that will be stated as the reason why I defend the whole bill. But the interest which I represent particularly is a project which I have for many years pleaded to have presented to Congress as a single item, to take the judgment of Congress upon it as a single project; and I hope that in the near future we shall have that opportunity. [Applause.]

Mr. HULBERT. Mr. Chairman, I rise to oppose the motion, merely to put into the RECORD a statement of fact, that one of the creeks included in the list that the gentleman referred to in New York, namely, Newton Creek, had a tonnage in 1915 of 5,541,116 tons, valued at $226,000,000.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Harbor at Racine, Wis.: Continuing improvement, $200,000.

Mr. COOPER of Wisconsin. Mr. Chairman, this afternoon my colleague from Wisconsin [Mr. LENROOT] made a speech in

which he objected to the incorporation in the bill, although it had been incorporated, of the sea-wall project for Galveston, Tex. The gentleman claimed that the Galveston sea-wall project is a new one, and that under the rule adopted by the committee it ought not to have been included in the bill. Thereupon, the chairman of the committee, the gentleman from Florida [Mr. SPARKMAN], in replying to the gentleman from Wisconsin, said that the provision for the sea wall at Galveston was on all fours with the provision for Racine, Wis.

That means, as I understand, that the provision in this bill for Racine is for a new project. Is that it, I will inquire of the gentleman from Florida?

Mr. SPARKMAN. What is the question that the gentleman asked?

Mr. COOPER of Wisconsin. Does the gentleman say that the project at Racine is a new project?

Mr. SPARKMAN. No; I do not.

Mr. COOPER of Wisconsin. The gentleman from Wisconsin [Mr. LENROOT] claimed that the project for a sea wall at Galveston is new, never adopted by Congress, and he seemed to demonstrate the truth of his contention.

Mr. SPARKMAN. I do not share in the gentleman's opinion of the demonstration. [Laughter.]

Mr. COOPER of Wisconsin. Well, as I understood the argument of my colleague from Wisconsin, I thought the project for the sea wall a new one.

Now, as to the project at Racine Harbor, I wish to show that it at least is not a thieves' proposition. [Laughter.] Racine, as many gentlemen know, lies between Chicago and Milwaukee, on the shore of Lake Michigan, about an hour and a quarter's ride from Chicago and half an hour or less from Milwaukee. With its compactly built suburbs, it has 45,000 or more of population. It is one of the greatest manufacturing cities of its size in the United States.

The old project for the harbor consisted of two parallel piers running east from the mouth of the river into Lake Michigan, one called the south pier, the other the north pier. Always during storms from the lake, especially northeast storms, there was great trouble caused by the wind driving the water up between the piers and along the docks, far into the city. To remedy this serious condition Congress, on March 2, 1907, adopted a new project providing for a north breakwater and a south breakwater, both to extend to the shore, and for the removal of both of the old piers. Two years later Congress appropriated money to complete only the north half of the project, but with the express understanding that if after it was completed experience should show the necessity for the construction of the south half, then it also should be completed.

Experience soon demonstrated the necessity for the completion of the south half of the project.

I was at home in December, 1913, and saw the storm described in the letter which I am about to read. The letter is from one of the lake captains who were caught with their vessels in the harbor in that storm.

Before I read the letter gentlemen should know that the steamer mentioned in it was up around a bend in the river and three-quarters of a mile or more from Lake Michigan. The letter is as follows:

RACINE, WIS., *November 12, 1913.*

Hon. H. A. COOPER,
Washington, D. C.

DEAR SIR: I wish to state that on November 6 I arrived in Racine at 4 a. m., loaded with 2,826 tons of coal consigned to the Carroll Coal Co. The weather being fine, I arrived at the Carroll Coal Co. dock at 7.30 and ready to start unloading. I started unloading at 8 a. m. and continued unloading Thursday, Friday, and Saturday, and on Saturday noon it started to blow quite hard from the northeast and continued increasing. At 4 a. m. Sunday all hands were called on deck to get out more lines, as considerable sea had made and steamer started parting her lines, caused by the undertow. We worked continually from that time until Monday afternoon, when the wind shifted to the westward, which caused the sea to moderate.

We parted every working line we had several times, then we got out our 9½-inch brand new hawser. We got two parts out of each end of the boat, which she snapped like shoestrings. After using up 1,000 feet of our hawser, or, in fact, the whole line, we could do nothing but start working our engine. We had made junk of $650 worth of lines and we had no more, so we started working our engine ahead and astern. About every five minutes, as our steamer would rush ahead, we would back the engine, and when she would rush astern would work ahead.

All this time we lay in the middle of the river and did not know what moment our steamer would rush into the bridge ahead of us. All this time our anchor was down at the bottom, but would drag wherever she went. I must also say that the Carrol Coal Co. dock is three-fourths of a mile from the mouth of the river and around a bend, and that at normal stage of water their docks are between 4 and 5 feet above water, and must say that the sea rolled at least 2 feet over the docks, causing our steamer to roll and pound, in which we were afraid that our rudder and shoe would be damaged. On Monday morning while we were still in midstream I called Mr. George T. Caystile, manager of the Carrol Coal Co., and asked him to call our agent, D. Sullivan & Co., Chicago, on long-distance phone and ask him to send us 120 fathoms of 6½-inch new line by express in order to have something to tie our steamer up to the dock with. This arrived at 3 p. m. Monday afternoon and cost us $145 more. By 6 o'clock Monday afternoon we were once more alongside of the dock.

Under the conditions at Racine at present I hope I never will be asked to fetch another load there, and think that after our owners received my letter stating conditions here I am satisfied they will not send us here again unless conditions are improved.

GEO. A. MONTGOMERY,
Captain of the Steamer Nyanza.

I received a letter also from another captain describing his equally dangerous and costly experience in the harbor during the same storm. His letter was printed in the RECORD in the last Congress.

The engineers find that the completion of only half of the project is entirely insufficient, and they recommend that the other half of the Arrowhead project be completed by the construction of the south breakwater and the removal of the south pier.

A provision to carry out this recommendation of the engineers was incorporated in the bill two years ago. A similar provision was incorporated in the last bill. It passed the House without an adverse comment. When it reached the Senate, Senator Burton put the provision in the bill which he offered as a substitute.

Mr. SPARKMAN. Mr. Chairman, I wish to correct if possible an erroneous impression that seems to have been much upon the mind of the gentleman from Wisconsin [Mr. COOPER], although I may not be able to do so.

I stated this morning all that I had to say at the time and all that I deemed necessary as to the status of the three items I then mentioned in so far as their relation to new projects was concerned. The remarks I made were mainly on the Galveston item, and were intended to show that it was an old project. I said there were two others in the same class, making three in all, the one at Racine, Wis., being one of them. Now I wish to say that while I do not think the rule we established regarding new projects was strained in any one of the cases in order to get those three items into the bill, yet if it was strained at all it was in the case of the project at Racine. I think, however, indeed I am sure, that project was clearly within the rule and was no exception to the same. It was postponed originally until an experiment could be made showing its necessity. Later on the engineers reported the work as necessary, and recommended that it be done, just as they did with reference to the sea wall at Galveston, work on that part of the project having been postponed until certain conditions were complied with. When those conditions were met, that part of the already adopted project was ready for an appropriation, which is carried in this bill; they came forward and recommended that the work go on. They did the same thing with reference to the Lake Union & Washington Canal. Certain work was postponed there until other work was done. We had by appropriate legislation adopted the project, and when this work was done the engineers came forward and recommended that the deferred work go on, and we have made provision for it in this bill.

Now, that in brief is the history of the three projects, and I was correst this morning when I said that there was no exception to the rule concerning new projects in either one of these cases.

Mr. LENROOT. Will the gentleman yield?

Mr. SPARKMAN. Certainly.

Mr. LENROOT. I want to ask the gentleman whether he examined the adoption of the project at the port of Racine?

Mr. SPARKMAN. I examined it very fully.

Mr. LENROOT. Does not the gentleman know that every part of that project in the engineer's report was expressly adopted by law, and in Galveston Harbor it was not?

Mr. SPARKMAN. I do not know anything of the kind. I have stated the facts correctly, the gentleman's assertion apparently to the contrary notwithstanding.

Mr. COOPER of Wisconsin. Mr. Chairman, I ask unanimous consent for three minutes.

Mr. MANN. Mr. Chairman, I make the point of order that there is no quorum present.

Mr. SPARKMAN. Mr. Chairman, I move that the committee do now rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. SHERLEY, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 12193, the river and harbor bill, and had come to no resolution thereon.

LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. ASHBROOK for three days, on account of important business,

To Mr. HAMILTON of Michigan, indefinitely, on account of illness.

LOUISIANA.

Mr. DUPRÉ. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the subject of the geographical description of the State of Louisiana.

Mr. BARNHART. I would like to ask if it relates to this bill.

Mr. DUPRÉ. Yes; it is cognate to the bill.

The SPEAKER. Is there objection?

There was no objection.

HOUR OF MEETING ON MONDAY.

Mr. RAINEY. Mr. Speaker, I ask unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. on Monday next.

The SPEAKER. The gentleman from Illinois asks unanimous consent that when the House adjourns to-day it adjourn to meet at 11 o'clock a. m. on Monday next. Is there objection?

There was no objection.

Mr. FESS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the Ohio River project.

The SPEAKER. Is there objection to the request of the gentleman from Ohio?

There was no objection.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Waldorf, one of its clerks, announced that the Senate had passed the following resolution:

Resolved, That the Secretary be directed to return to the House of Representatives, in compliance with its request, the bill (H. R. 10384) to regulate the immigration of aliens to, and the residence of aliens in, the United States.

ENROLLED BILL SIGNED.

The SPEAKER announced his signature to enrolled bill of the following title:

S. 5016. An act to authorize the reconstruction of an existing bridge across the Wabash River, at Silverwood, in the State of Indiana.

ADJOURNMENT.

Mr. RAINEY. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 35 minutes p. m.) the House adjourned until Monday, April 10, 1916, at 11 o'clock a. m.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Acting Secretary of the Treasury, transmitting a draft of legislation to authorize the Secretary of the Treasury to advertise and sell abandoned customs boarding stations Pass a l'Outre, South West Pass, and "the Jump" (H. Doc. No. 1005); to the Committee on Public Buildings and Grounds and ordered to be printed.

2. A letter from the Acting Secretary of the Treasury, submitting estimates of appropriation, "Building, Bureau of Engraving and Printing laundry, Bureau of Engraving and Printing laundry machinery" (H. Doc. No. 1006); to the Committee on Appropriations and ordered to be printed.

3. A letter from the Acting Secretary of the Treasury, submitting an estimate of appropriation to pay for services of special counsel in the civil proceedings against the Capital City Dairy Co., of Columbus, Ohio, for recovery of taxes on oleomargarine out of which the Government was defrauded (H. Doc. No. 1007); to the Committee on Appropriations and ordered to be printed.

4. A letter from the Secretary of War, transmitting a letter from the Chief of Engineers, together with a copy of a report from a special board of officers of the Corps of Engineers, on preliminary examination of waterway from Lake Superior to the Mississippi River, also a copy of report by the Board of Engineers for Rivers and Harbors on reexamination of this waterway (H. Doc. No. 1008); to the Committee on Rivers and Harbors and ordered to be printed, with illustrations.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. STOUT, from the Committee on the Public Lands, to which was referred the bill (H. R. 600) to validate title to the town site of McCabe, in the State of Montana, reported the same with amendment, accompanied by a report (No. 511), which said bill and report were referred to the Committee on the Whole House on the state of the Union.

CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, committees were discharged from the consideration of the following bills, which were referred as follows:

A bill (H. R. 11903) granting an increase of pension to Charles B. Boyd; Committee on Invalid Pensions discharged and referred to the Committee on Pensions.

A bill (H. R. 11568) granting an increase of pension to William Lendemann; Committee on Invalid Pensions discharged and referred to the Committee on Pensions.

PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XII, bills and resolutions were introduced and severally referred as follows:

By Mr. COPLEY: A bill (H. R. 14387) to authorize the construction of a bridge across the Fox River at Geneva, Ill.; to the Committee on Interstate and Foreign Commerce.

By Mr. JOHNSON of Washington: A bill (H. R. 14388) to create in the War Department and the Navy Department, respectively, a roll designated as "the Civil War Volunteer officers' retired list," to authorize placing thereon with retired pay certain surviving officers who served in the Army, Navy, or Marine Corps of the United States in the Civil War, and for other purposes; to the Committee on Military Affairs.

By Mr. STEELE of Iowa: A bill (H. R. 14389) to authorize the Secretary of Agriculture to license establishments for and to regulate the preparation of viruses, serums, toxins, and analogous products for use in the treatment of domestic animals, and for other purposes; to the Committee on Agriculture.

By Mr. BURNETT: A bill (H. R. 14390) to transfer certain beats in St. Clair County, Ala., to the Anniston division of the northern judicial district of Alabama; to the Committee on the Judiciary.

By Mr. NELSON: A bill (H. R. 14391) authorizing the purchase of a site and the erection of a public building thereon at Madison, Wis., and for other purposes; to the Committee on Public Buildings and Grounds.

By Mr. TAGUE (by request): Resolution (H. Res. 196) directing the Secretary of the Treasury to ascertain and transmit to the House of Representatives certain information relative to Anglo-French bonds in the hands of national banks; to the Committee on Banking and Currency.

By Mr. COLEMAN: Resolution (H. Res. 197) to authorize and empower the Secretary of the Interior immediately to investigate a certain substitute for gasoline, and to authorize an appropriation therefor; to the Committee on Appropriations.

PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills were introduced and severally referred as follows:

By Mr. ASHBROOK: A bill (H. R. 14392) granting an increase of pension to Phoebe Keiser; to the Committee on Invalid Pensions.

By Mr. AUSTIN: A bill (H. R. 14393) for the relief of the estate of Richard J. Jarnagin; to the Committee on Claims.

By Mr. AYRES: A bill (H. R. 14394) granting an increase of pension to Matthias Gates; to the Committee on Invalid Pensions.

By Mr. CASEY: A bill (H. R. 14395) granting a pension to Louisa Schatzel; to the Committee on Pensions.

By Mr. COLEMAN: A bill (H. R. 14396) granting a pension to Eliza J. Reed; to the Committee on Pensions.

Also, a bill (H. R. 14397) granting a pension to Andrew J. Woomer; to the Committee on Pensions.

By Mr. FITZGERALD: A bill (H. R. 14398) granting a pension to Alfred Rogers; to the Committee on Pensions.

By Mr. FREEMAN: A bill (H. R. 14399) granting an increase of pension to Ellen Hartie, Norwich, Conn.; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14400) granting an increase of pension to Caroline P. Young, of Chaplin, Conn.; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14401) granting an increase of pension to Charity A. Vooris, of Eastford, Conn.; to the Committee on Invalid Pensions.

By Mr. GLASS: A bill (H. R. 14402) for the relief of George E. Pickett, 3d; to the Committee on Claims.

By Mr. GREGG: A bill (H. R. 14403) for the relief of Charles Funk; to the Committee on Claims.

By Mr. HUDDLESTON: A bill (H. R. 14404) granting a pension to John Buckelew; to the Committee on Pensions.

By Mr. McGILLICUDDY: A bill (H. R. 14405) to remove the charge of desertion from the naval record of John C. Warren, alias John Stevens; to the Committee of Naval Affairs.

By Mr. MONDELL: A bill (H. R. 14406) granting a pension to Martha A. Curtis; to the Committee on Invalid Pensions.

Also, a bill (H. R. 14407) granting an increase of pension to Mary J. Dupes; to the Committee on Invalid Pensions.

By Mr. MORGAN of Oklahoma: A bill (H. R. 14408) granting an increase of pension to Alem Snyder; to the Committee on Invalid Pensions.

By Mr. MOSS of West Virginia: A bill (H. R. 14409) granting an increase of pension to Robert C. Stanley; to the Committee on Invalid Pensions.

By Mr. POWERS: A bill (H. R. 14410) granting a increase of pension to Washington M. Brown; to the Committee on Invalid Pensions.

By Mr. RAINEY: A bill (H. R. 14411) granting a pension to Elizabeth Collier; to the Committee on Invalid Pensions.

By Mr. RODENBERG: A bill (H. R. 14412) granting a pension to Elizabeth Pfroender; to the Committee on Invalid Pensions.

By Mr. ROUSE: A bill (H. R. 14413) granting an increase of pension to John N. Havlin; to the Committee on Invalid Pensions.

By Mr. RUSSELL of Missouri: A bill (H. R. 14414) granting a pension to Susan E. Patterson; to the Committee on Pensions.

By Mr. SMITH of Idaho: A bill (H. R. 14415) for the relief of O. W. Lindsley; to the Committee on Claims.

By Mr. STAFFORD: A bill (H. R. 14416) granting a pension to Henry Hertzer; to the Committee on Invalid Pensions.

By Mr. WM. ELZA WILLIAMS: A bill (H. R. 14417) granting an increase of pension to Madison B. Mann; to the Committee on Invalid Pensions.

PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By Mr. ASHBROOK: Evidence to accompany House bill 13930, for relief of Philip McKinney; to the Committee on Invalid Pensions.

Also, evidence to accompany House bill 13993, for relief of William A. Griner; to the Committee on Invalid Pensions.

By Mr. AUSTIN: Petition of citizens of Maryville, Tenn., favoring national prohibition; to the Committee on the Judiciary.

By Mr. BAILEY: Protest of D. D. Blauch, T. J. Clinefelter, Charles Rigby, Albert Tilley, S. M. Wilson, T. S. Tilley, C. J. Smith, G. M. Marsh, C. W. Cole, W. L. Kauffman, J. M. Trefts, Arthur E. Oldham, George Lees, and Harry Jones, all of Johnstown, Pa., against the passage of House bills 491 and 6468, denying admission to the mails to certain publications; to the Committee on Ways and Means.

By Mr. CALDWELL: Petition of Lincoln Lodge, International Order Good Templars, of Corona, and Woman's Christian Temperance Union of Corona, N. Y., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of sundry citizens of the second district of New York, protesting against the Burnett immigration bill; to the Committee on Immigration and Naturalization.

Also, memorial of Holy Name Society of St. Sebastian, of Woodside, Long Island, indorsing House bill 6468; to the Committee on the Post Office and Post Roads.

By Mr. COLEMAN: Petition of sundry citizens and organizations of the State of Pennsylvania, favoring national prohibition; to the Committee on the Judiciary.

By Mr. COLLIER: Petition of Association for the Relief to Riparian Owners of Eastern Bank of Mississippi River relative to control of the river; to the Committee on Flood Control.

By Mr. COPLEY: Petition of citizens and employees of the Elgin National Watch Co., of Elgin, Ill., against passage of bills to amend the postal law; to the Committee on the Post Office and Post Roads.

Also, memorial of members and friends of the First Congregational Church of Geneva, Ill., favoring national prohibition; to the Committee on the Judiciary.

By Mr. DALE of New York: Petitions of Philip Hiss, John J. Amory, Walter C. Burrell, and Richard Henry Gatling, favoring adequate preparedness; to the Committee on Military Affairs.

Also, petition of Henry Steers, of New York, against House bill 8036, relative to eight-hour law for officers, etc., on tugboats; to the Committee on the Merchant Marine and Fisheries.

Also, petition of women voters of the State of Washington, demanding immediate and favorable report of Susan B. Anthony amendment; to the Committee on the Judiciary.

By Mr. DILLON: Memorial of National Wholesale Lumber Dealers' Association, favoring House bill 651, relative to charges by common carriers; to the Committee on Interstate and Foreign Commerce.

Also, memorial of the Grand Valley Rural Credits League, of Lincoln County, S. Dak., against rural-credits bill; to the Committee on Banking and Currency.

By Mr. ELSTON: Petition of C. E. Griggs and other citizens of Alameda County, Cal., against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of C. E. Griggs and other citizens of Alameda County, Cal., against passage of the Sunday observance bill in the District of Columbia; to the Committee on the District of Columbia.

By Mr. ESCH: Memorial of the National Wholesale Lumber Dealers' Association, of Philadelphia, Pa., favoring passage of House bill 651, relative to recovery of charges by common carriers; to the Committee on Interstate and Foreign Commerce.

Also, petition of sundry citizens and organizations of Wisconsin, favoring national prohibition; to the Committee on the Judiciary.

By Mr. FLYNN: Petition of Henry Stiers, of New York, against House bill 8036, relative to eight-hour law for officers, etc., on tugboats; to the Committee on the Merchant Marine and Fisheries.

Also, petitions of Walter C. Burrell, John J. Amory, Richard Henry Gatling, and Philip Hiss, all of New York, favoring adequate preparedness; to the Committee on Military Affairs.

By Mr. FREEMAN: Petitions of sundry citizens and organizations of the State of Connecticut, favoring national prohibition; to the Committee on the Judiciary.

Also, petitions of Lyman Briggs and 15 others, of Eastford, Conn., against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of F. H. Plumb, of Stafford Springs, Conn., favoring censorship of motion pictures; to the Committee on Education.

By Mr. FULLER: Petition of citizens of Somonank, Ill., favoring a tax on mail-order houses; to the Committee on Ways and Means.

By Mr. GALLIVAN: Petition of United States penitentiary guards at Leavenworth, Kans., relative to increase in pay; to the Committee on Appropriations.

Also, memorial of citizens of Boston, Mass., favoring national prohibition; to the Committee on the Judiciary.

By Mr. GANDY: Petition of citizens of Hot Springs, S. Dak., favoring national prohibition; to the Committee on the Judiciary.

By Mr. GORDON: Petition of H. H. Myers and 11 other citizens of Cleveland, praying for enactment of House bill 5792; to the Committee on Agriculture.

By Mr. HASTINGS: Memorial of Methodist Episcopal Sunday School of Gore, Okla., favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of J. L. Ealy, camp commander United Confederate Veterans, Camp Stand Waite, Stilwell, Okla., favoring passage of House bill 11078, relative to pensions for Confederate veterans; to the Committee on Invalid Pensions.

By Mr. HAYDEN: Petition of Mrs. Ollie Frank and 15 other citizens of Phoenix, Ariz., against the passage of House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

Also, petition of Mr. R. E. Kalfus and 39 other citizens of Phoenix, Ariz., opposing the passage of House bill 652; to the Committee on the District of Columbia.

Also, petition of Mary L. Beloat and 48 other citizens of Buckeye and Liberty, Ariz., favoring the adoption of a prohibition amendment to the Constitution of the United States; to the Committee on the Judiciary.

By Mr. HINDS: Petition of 17 citizens of Sanford and Trinity Methodist Episcopal Sunday School, of South Portland, Me., favoring national prohibition; to the Committee on the Judiciary.

By Mr. HOLLINGSWORTH: Memorial of the Ohio State Automobile Association, Cleveland, Ohio, asking that the high cost of gasoline be investigated and measures taken to reduce the same; to the Committee on Rules.

By Mr. HUMPHREY of Washington: Petition of sundry citizens of Seattle and Oakville, Wash., against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. JOHNSON of South Dakota: Petition of sundry citizens of South Dakota; to the Committee on Banking and Currency.

By Mr. JOHNSON of Washington: Petition of 20 citizens of South Tacoma, 14 citizens of Cowlitz County, and 6 citizens of Carrolls, all in the State of Washington, against Sunday observance bill for the District of Columbia; to the Committee on the District of Columbia.

Also, petitions of sundry citizens and organizations of the State of Washington, favoring national prohibition; to the Committee on the Judiciary.

Also, memorial of Skamokawa Grange, No. 425, of Skamokawa, Wash., favoring House bill 13882, for the construction of a military highway between Vancouver Barracks and Fort Canby, Wash.; to the Committee on Military Affairs.

Also, petition of 20 citizens of South Tacoma, Wash., against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. KENNEDY of Rhode Island: Petitions of sundry citizens and organizations of the State of Rhode Island, favoring national prohibition; to the Committee on the Judiciary.

By Mr. KETTNER: Petition of San Diego County Federation of Women's Clubs, Mrs. H. E. Ricksecker and 123 others, favoring the Chamberlain-Hayden bill; to the Committee on the Public Lands.

Also, petition of Fortuna Woman's Civic Club, Mrs. R. R. Smith, president, and Mrs. H. A. Bliler, secretary, of Fortuna, Cal., favoring bill for national-park service; to the Committee on the Public Lands.

Also, petition of Peter G. McIver and 8 others, of Redlands, Cal., favoring prohibition of liquor traffic in the District of Columbia, Hawaiian Islands, and Porto Rico, also national prohibition; to the Committee on the Territories.

Also, petition of Mrs. Florence E. Survant and 3 others, of Needles, Cal., favoring national prohibition; to the Committee on the Judiciary.

Also, petition of Association of Collegiate Alumnæ, Southern California Branch, Mrs. Henry Goodall, president, of San Bernardino, Cal., favoring Keating-Owen bill; to the Committee on Labor.

Also, petitions of Nellie R. Short, of Victorville; Virginia E. Messick, of Victorville; Mrs. M. B. Messick, of Victorville; and Percival Thompson, of Coronado, all in the State of California, favoring national defense; to the Committee on Military Affairs.

Also, petition of Charles Saleman, of San Diego; W. P. Buck and Peter J. Beckar, of San Diego, Cal., favoring strict neutrality; to the Committee on Foreign Affairs.

Also, petition of W. M. Healey, assistant secretary Pacific Religious Liberty Association; Mrs. M. E. Waldron and 4 others; Emmet S. McCollum and 36 others; Mrs. O. C. Smith and 12 others; Mrs. Viola L. Speers and 8 others; P. E. Switzer and 5 others; W. C. Perrin and 3 others; Mrs. G. H. Smith and 13 others; Mrs. Wetherber and 12 others; Thomas J. Sutherland and 13 others; Thomas Roach and 12 others; Mrs. Elsey Endsley and 13 others; Mrs. Annette Rowe and 9 others; Mrs. F. Knorr and 13 others; P. E. Mass and 35 others; H. E. Tallaut and 16 others; J. M. Pease and 12 others; and Edgar A. Stopher and 12 others, all of San Diego, Cal., protesting against House bills 6468 and 491, to amend postal laws; to the Committee on the Post Office and Post Roads.

Also, petition of Edgar A. Stopher and 12 others, of San Diego, Cal., protesting against bill to permit the erection of a monument in Arlington National Cemetery to the nuns who served as nurses in the Civil war; to the Committee on Military Affairs.

Also, petition of Edgar A. Stopher and 12 others, of San Diego, Cal., protesting against a bill to make October 12, Columbus Day, a legal holiday in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of Harriett E. van Schaick and 10 others and P. H. Reed and 20 others, all of Colton, Cal.; N. A. Stevens and 1 other, of San Diego, Cal.; Mrs. Annette Rowe and 9 others; Mrs. Elsie Endsley and 16 others; P. E. Mass and 37 others; and H. E. Tallaut and 15 others, protesting against House bill 652, to provide for the closing of barber shops in the District of Columbia on Sunday, or any other like religious measure; to the Committee on the District of Columbia.

By Mr. LINTHICUM: Petitions of sundry citizens, indorsing House bill 6915, providing for an indefinite leave of absence at half pay for superannuated postal employees; to the Committee on the Post Office and Post Roads.

Also, petition of sundry citizens, indorsing House bill 11168, providing 30 days' annual leave to United States employees of the Naval Gun Factory; to the Committee on Naval Affairs.

By Mr. LOUD: Petition of C. C. Barnes and 20 other citizens of Big Rapids, Mecosta County, Mich., favoring passage of the Susan B. Anthony amendment enfranchising women; to the Committee on the Judiciary.

By Mr. MAPES: Petition of Jesse Walls and 118 other citizens of Kent County, Mich., against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. MEEKER: Petition of eight citizens of St. Louis, Mo., favoring an embargo on arms, etc., for belligerent nations; to the Committee on Foreign Affairs.

By Mr. MILLER of Delaware: Memorial of mayor and council, of Wilmington, Del., favoring passage of House bill 6915, granting indefinite leave of absence to certain postal employees; to the Committee on the Post Office and Post Roads.

By Mr. MOORE of Pennsylvania: Memorial of Philadelphia Yearly Meeting of Friends, against preparedness; to the Committee on Military Affairs.

Also, memorial of Chamber of Commerce of Philadelphia, Pa., favoring establishment of Government institution for treatment of leprosy; to the Committee on Appropriations.

By Mr. OAKEY: Petition of citizens of Hartford County, Conn., for the passage of woman-suffrage amendment; to the Committee on the Judiciary.

By Mr. POU: Petition of 15 farmers, of Franklin County, N. C., relative to rural credits; to the Committee on Banking and Currency.

By Mr. PRATT: Petition of Rev. H. A. Pease, Rev. C. A. Steucke, E. J. Carpenter, and sundry other citizens of Ithaca, N. Y., opposing the passage of Senate bill 645 and House bill 642, providing for the closing of barber shops in the District of Columbia on Sunday; to the Committee on the District of Columbia.

Also, petition of Reading Grange, No. 50, and Schuyler County Pomona Grange, Mrs. J. W. Jennings, of Watkins, N. Y., secretary, favoring national prohibition; to the Committee on the Judiciary.

Also, petition of Christian Endeavor Society of the First Congregational Church, of Ithaca, N. Y., E. R. Smith, president, favoring the passage of all measures relating to the prohibition of the liquor traffic; to the Committee on the Judiciary.

Also, petition of James C. Moore, G. A. Thorp, and sundry other citizens of Hornell, N. Y., opposing the passage of the postal bills introduced by Mr. FITZGERALD and Mr. SIEGEL; to the Committee on the Post Office and Post Roads.

Also, memorial of W. T. Kellogg, L. A. Baker, Rev. H. A. Pease, Rev. C. A. Steucke, Rev. J. C. B. Moyer, and other sundry citizens of Ithaca, N Y., opposing the passage of the postal bills introduced by Mr. FITZGERALD and Mr. SIEGEL; to the Committee on the Post Office and Post Roads.

By Mr. RANDALL: Memorial of Commonwealth Club, San Francisco, Cal., against preparedness; to the Committee on Military Affairs.

Also, petition of United Brethren Sunday School, of Puente, Cal., favoring national prohibition; to the Committee on the Judiciary.

By Mr. SLAYDEN: Petition of citizens of Bexar County, Tex., against passage of Senate bill 645, relative to Sunday observance in the District of Columbia; to the Committee on the District of Columbia.

Also, petition of citizens of Bexar County, Tex., against passage of bills to amend postal laws; to the Committee on the Post Office and Post Roads.

By Mr. SMITH of Idaho: Memorial of Commercial Club of Lewiston, Idaho, favoring House bill 10400, for appropriation for construction of roads through forest reserves; to the Committee on Agriculture.

Also, petition of citizens of Coolin and Gilbert, Idaho, favoring national prohibition; to the Committee on the Judiciary.

By Mr. SULLOWAY: Petition of Herbert E. Linscott, of South Merrimack, N. H., approving House bills 6468 and 491; to the Committee on the Post Office and Post Roads.

By Mr. TIMBERLAKE: Petitions of citizens of Snyder, Fort Morgan, and Loveland, Colo., against the Sunday-observance bill for the District of Columbia; to the Committee on the District of Columbia.

Also, petition of citizens of Snyder, Loveland, Berthoud, and Fort Morgan, Colo., against passage of bills to amend the postal laws; to the Committee on the Post Office and Post Roads.

By Mr. WALSH: Petition of George B. Haskell and 35 others, indorsing the Gillett bill, House bill 10924; to the Committee on Alcoholic Liquor Traffic.

Also, petition of Massachusetts State Federation of Woman's Clubs, indorsing Gillett bill, House bill 10924; to the Committee on Alcoholic Liquor Traffic.

SENATE.

MONDAY, *April 10, 1916.*

(Legislative day of Thursday, March 30, 1916.)

The Senate met at 11 o'clock a. m., on the expiration of the recess.

Mr. SHEPPARD. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Hitchcock	Overman	Stone
Bankhead	Hollis	Page	Sutherland
Borah	Husting	Pittman	Swanson
Brady	Johnson, Me.	Poindexter	Taggart
Brandegee	Jones	Pomerene	Thomas
Bryan	Kenyon	Ransdell	Thompson
Burleigh	Kern	Reed	Underwood
Chamberlain	La Follette	Robinson	Vardaman
Chilton	Lane	Saulsbury	Wadsworth
Clapp	Lodge	Shafroth	Walsh
Clark, Wyo.	Martin, Va.	Sheppard	Warren
Colt	Martine, N. J.	Sherman	Weeks
Culberson	Myers	Shields	Williams
Cummins	Nelson	Simmons	Works
Dillingham	Newlands	Smith, Ga.	
Gallinger	Norris	Smith, S. C.	
Hardwick	Oliver	Smoot	

Mr. KERN. I desire to announce the unavoidable absence of the senior Senator from Florida [Mr. FLETCHER], who is away on official business. He is paired with the Senator from Idaho [Mr. BRADY].

I desire also to announce the unavoidable absence of the Senator from Arizona [Mr. SMITH], on account of illness.

I wish also to announce the unavoidable absence of the junior Senator from Maryland [Mr. LEE], who is paired with the Senator from West Virginia [Mr. GOFF].

These announcements may stand for the day.

Mr. CHILTON. My colleague [Mr. GOFF] is absent on account of illness.

The VICE PRESIDENT. Sixty-five Senators have answered to the roll call. There is a quorum present.

NATIONAL DEFENSE.

Mr. JONES. Mr. President, I desire to give notice that on Wednesday, the 12th, at the conclusion of the remarks of the Senator from California [Mr. WORKS], I shall submit some remarks on preparedness and the pending military bill.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States.

The VICE PRESIDENT. The pending amendment is the amendment of the Senator from Georgia [Mr. HARDWICK] to the amendment of the Senator from South Carolina [Mr. SMITH].

Mr. CHAMBERLAIN. I understood that the Senator from Georgia [Mr. HARDWICK] desired to address himself to that amendment. I do not see him present. Besides, I understood that we were going to take up the sugar bill this morning at 11 o'clock.

Mr. OVERMAN and others. At 12 o'clock.

The VICE PRESIDENT. The Senator from Georgia [Mr. HARDWICK] answered to the roll call.

Mr. SMOOT. The sugar bill is to be taken up not later than 12, and we can begin now.

The VICE PRESIDENT. The question is on the amendment of the Senator from Georgia to the amendment of the Senator from South Carolina.

Mr. NORRIS. Let us have the amendment to the amendment read.

The VICE PRESIDENT. The Secretary will state it.

The SECRETARY. On page 2, line 17, strike out the words "and useful in the manufacture of fertilizers."

Mr. SIMMONS. Mr. President, I had supposed that the sugar bill would not be taken up at 11 o'clock, but I am ready to proceed with it now, unless the Senator from Oregon wishes to go on with the military bill until 12 o'clock.

Mr. CHAMBERLAIN. It is immaterial to me. If the Senator prefers I am willing to go ahead with this bill until 12 o'clock.

Mr. JONES. I think it was the general understanding that the sugar bill would come up at 11. The unanimous-consent agreement says "not later than 12." I know Senators who are expecting to speak on the pending amendment are not here.

Mr. SIMMONS. I am ready to go on with the sugar bill.

Mr. CHAMBERLAIN. Then I ask unanimous consent that the pending bill be temporarily laid aside in order that we may take up the sugar bill, under the unanimous-consent agreement.

The VICE PRESIDENT. Is there objection? The Chair hears none, and lays House bill 11471 before the Senate.

DUTY ON SUGAR.

The Senate, as in Committee of the Whole, proceeded to consider the bill (H. R. 11471) to amend an act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913, which had been reported from the Committee on Finance with an amendment.

The VICE PRESIDENT. The amendment of the Committee on Finance will be read.

The SECRETARY. The Committee on Finance reports to strike out all after the enacting clause of the bill and in lieu thereof to insert:

That the third proviso of paragraph 177 of the act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913 (Stat. L., vol. 38, pp. 114 to 202, inclusive), be, and is hereby, amended to read as follows: "*Provided further*, That on and after the 1st day of May, 1920, the articles hereinbefore enumerated in this paragraph shall be admitted free of duty."

SEC. 2. That the proviso of paragraph 178 of the aforesaid act be, and is hereby, amended to read as follows: "*Provided*, That on and after the 1st day of May, 1920, the articles hereinbefore enumerated in this paragraph shall be admitted free of duty."

Mr. SIMMONS. Mr. President, the difference between the bill as passed by the House and the Senate committee amendment, which is in the nature of a substitute, is very simple. The act of October 4, 1913, provided that after the 1st day of May, 1916, sugar should be admitted free. The bill as passed by the House repealed the free-sugar proviso of the act of 1913, thereby placing sugar upon the dutiable list without any limitation as to time. The Senate committee amendment retains the free-sugar provision of the act of 1913 and extends the time when it shall go into effect from May 1, 1916, to May 1, 1920. That is to say, the effect of the Senate committee amendment is simply to extend the time when sugar shall cease to be dutiable and become free—four years longer—the original act having extended the time for nearly three years.

When the original act was passed the time for the free proviso to go into effect, to which I have referred, was extended to meet a situation which existed at that time with respect to the industry in this country. The justification for the present proposed extension is to meet another and a new situation growing out of the needs of the Treasury and the general revenue situation of the Government.

The Senate committee in its amendment seeks to preserve the principle enunciated in the original act in favor of free sugar and to provide for the emergency, which it is believed will be of a temporary character, by again extending the time so as to bridge over the present revenue situation created by the effect of the war conditions in Europe.

Mr. President, when the act of 1913 was framed and when it was decided that sugar should be untaxed, but that to meet a situation it was necessary or expedient and just to extend that period for three years, the Congress, acting upon the report of the Finance Committee, decided that during the three years while sugar was to remain on the dutiable list, the duty should be reduced so as to conform to the theory upon which the bill was framed, to wit, as a revenue-producing measure based upon competitive rates. Carrying out the purpose of giving the people the benefit of the same ratio of reduction upon sugar during the three years it was to remain upon the dutiable list that was given with respect to the other articles retained upon the dutiable list in the bill, your committee proceeded to reduce the duties of the Payne-Aldrich bill upon sugar just as it proceeded to reduce them upon other articles.

The duties imposed by the Payne-Aldrich bill upon sugar were protective. We reduced those duties upon sugar about 25 per cent. That was about the same or probably a little greater reduction than those made upon other staple articles taxed by both the Payne-Aldrich bill and by the present law. In other words, Mr. President, we reduced the duties upon sugar during those three years just about in the same ratio that we reduced the Payne-Aldrich duties upon woolens and cotton goods and upon iron, steel, and many other articles. So, if this period is again extended for four years, sugar will be dutiable as other articles in the act are dutiable, not upon a protective basis, but upon a revenue basis, according to the revenue standard fixed in that bill; that is to say, Mr. President, if the duties which the present law imposes upon woolens and cotton goods, upon iron, steel, and other commodities are revenue rates or free-trade rates, as our Republican friends are in the habit of saying, then sugar, which was then subjected to the same degree of reduction, will also be continued upon a revenue basis.

Mr. President, the attitude of both political parties in this country in the past toward sugar has been one of alternately favoring free and dutiable sugar. The Mills bill, which was a Democratic measure, free listed sugar. The McKinley bill, which was a Republican measure, also free listed sugar. The Wilson bill, a Democratic measure, took sugar off the free list, where the McKinley bill had placed it, and placed a duty upon it of 40 per cent ad valorem.

Mr. SMOOT. Mr. President, I think the Senator from North Carolina perhaps would like to be absolutely accurate in the statement he is making.

Mr. SIMMONS. Yes. I am not making this statement in a controversial spirit at all.

Mr. SMOOT. Nor do I intend to make my statement in that spirit.

Mr. SIMMONS. If I am inaccurate, I shall be very much obliged if the Senator from Utah will correct me.

Mr. SMOOT. What I wanted to suggest to the Senator from North Carolina was that the McKinley bill provided a bounty on sugar, instead of a tariff.

Mr. SIMMONS. Oh, yes; but it placed sugar upon the free list. The Wilson bill, as I said, Mr. President, a Democratic measure, took sugar from the free list where the McKinley bill had placed it and placed it upon the dutiable list. The Dingley bill, a Republican measure, retained sugar upon the dutiable list and increased the duty upon it. The present tariff law, following the Mills bill, placed sugar upon the free list, but postponed the time when the law should go into effect for about three years.

The discussions in Congress and outside of Congress on the several bills to which I have referred show that the change in attitude of the two parties with reference to the taxing or untaxing of sugar has been influenced largely—not altogether, but largely—by the financial condition of the Treasury and the need of the Government for revenue. Revenue considerations were probably as influential in bringing about the diverse treatment of this commodity by the Republican Party as by the Democratic Party.

Now, Mr. President, in order to show that apparently our Republican friends have felt as we did, that sugar, a necessary of life, consumed by all the people, the poor as well as the rich, ought to be untaxed when the revenue situation of the Government permitted, I wish to read some extracts from the speeches of leading Republican Senators, with reference to this subject, when the last four bills to which I have referred were under consideration in the Senate.

When the McKinley bill, placing sugar upon the free list, was before the Senate in 1890, Senator Aldrich, who was a conspicuous leader of the Republican Party and a recognized authority upon matters pertaining to the tariff and revenue, addressing himself to that bill, said:

> Whatever duty we remove from raw sugars will be for the benefit, and the direct benefit, of the people of the United States.

Senator Hale, then prominent in Republican councils, and also a recognized authority, said:

> The reciprocity amendment, adopted by the Republican Congress and signed by a Republican President, was based upon the determination of the Republican Party to put upon the tables of the American people untaxed sugar, and to reduce the surplus revenue of the country to the extent of $60,000,000 a year.

Mr. Morrill, the author of the Morrill Tariff Act, speaking to the same general effect, said:

> The question of adding free sugar to the breakfast table presents even a stronger case than tea and coffee presented in 1872 for like treatment. Every dollar of the duty imposed comes out of the poor as well as of the rich. If you can prudently—

Said Mr. Morrill—

> do without the revenue of over $50,000,000, clearly it should be done without hesitation. There is no article so largely and so equally consumed by the people.

That was when the Republican Party proposed to put sugar upon the free list, and as a result of the attitude of leading Senators representing the dominant party it was placed upon the free list.

Four years afterwards, when the Wilson bill, which took sugar from the free list, where the McKinley bill had placed it, and put it upon the dutiable list, on the amendment of Senator Jones, of Arkansas, imposing a duty of 40 per cent ad valorem upon it, was under consideration in the Senate, Senator Peffer, Populist Senator from Kansas, but who, affiliated with the Republican Party before, after, and while he was in Congress, offered an amendment to place sugar upon the free list, and it was supported by every Republican in the Senate. After the failure of that proposed amendment in Committee of the Whole to put sugar upon the free list, the great Senator from Rhode Island, Senator Aldrich, with, I think, some little evidence of pique, said, addressing himself to the Democratic Senators who had voted against the amendment:

> I say to you now, that when this question is reached in the Senate, we shall try on this side of the Chamber to secure, if possible, a vote for free sugar.

There was no proposition then to retain a bounty upon sugar. Senator Peffer knew when he introduced that amendment——

Mr. CURTIS. Mr. President, will the Senator please give the year when that occurred?

Mr. SIMMONS. 1894.

Mr. CURTIS. That was at a time when we were producing very little, if any, beet sugar.

Mr. SIMMONS. I think we were producing some beet sugar at that time; but that is not pertinent to the line of argument which I am pursuing. I say that when Senator Peffer offered that amendment, which was supported by all the Republicans, to put sugar on the free list; when Senator Aldrich gave utterance to the sentiments that I have just read, to the effect that, notwithstanding the Peffer amendment had been defeated in Committee of the Whole, when it got into the Senate he and his party would try, if possible, to get another vote to put sugar on the free list—there was, I say, at that time no thought on the part of Senator Aldrich or any other Republican Senator that if sugar should be put on the free list in a Democratic measure the Democratic Party would put a bounty upon sugar. Everybody knew that the Democratic Party was then, as now, and always, irrevocably opposed to bounties. Hence when, in 1894, the proposition to retain sugar on the free list came from the Republican side of the Chamber, with the support of the leaders and the entire body of the Republican side, it meant free sugar without bounty; and while the attitude of the party in 1890, when the McKinley bill was adopted, with reference to putting sugar upon the free list might in part have been dictated by the supplemental policy of a bounty upon sugar to protect the American producer, whose product was about to be put upon the free list, in 1894, when the Democrats were taking it off of the free list and were met with opposition from the Republican Party and with the insistence on their part that it should remain upon the free list, it was unequivocally a vote to free list sugar without any reference to or expectation of a bounty to the sugar producers to supply the place of the duty they sought to remove.

Senator Hale, addressing himself to the Wilson bill, in which the Democrats put a duty on sugar, said:

> Mr. President, there is one thing that is certain as the coming of the tides and sunrise, and that is that whatever happens to be put finally into the bill and is comprehended in its features when it passes, the American people will not go long without a return to the features of free sugar for the breakfast tables of the people, thereby saving to those breakfast tables an annual tax of beween $60,000,000 and $70,000,000.

Senator Aldrich, in addressing himself to the bill in general terms—the other quotation that I have given from him had reference to the Peffer amendment—said:

> I include also the representatives of the third party, those gentlemen who have always asserted that they were the friends of the people; they have signalized that friendship to-day by joining their Democratic allies in forcing upon the people of the United States—

What?—

> this unjustifiable, indefensible, and infamous (sugar) tax. I said this tax was infamous—

Said the Senator—

> and if I could employ any stronger word than that in characterizing it I should be glad to do so.

Senator Allison added his mite, and, of course, his mite was mighty, with this observation:

> Mr. President, if I had my way, I should strike from this bill every vestige which provides a duty on sugar.

But the duty on sugar was retained, notwithstanding the stubborn opposition and aggressive fight made against it by the leaders of the Republican Party, backed by the whole body of that party in this Chamber.

In 1897, three years after that, when the Dingley bill was before the Senate, increasing the duty on sugar from 40 per cent at valorem under the Wilson bill to 1.63 cents per pound, the report of Mr. Dingley declared and recognized that the purpose in retaining this duty and increasing it was in part in order to get more revenue. Senator Aldrich, still not satisfied that there should be a tax upon sugar, and evidently still adhering to his original views as expressed in 1890 on the McKinley bill and in 1894 on the Wilson bill, with that wisdom which characterized him in dealing with practical questions, yielded to the revenue necessities of that day, and waived at the time his opposition to a tax upon sugar. He said:

> The pressing necessity for securing greatly increased revenue seems to render a return to the Republican policy of free sugar, adopted in 1890, an impossibility.

I suppose he meant the Republican policy upon this subject as exemplified and as enunciated in the McKinley bill.

The demand for revenue purposes, and a belief that every reasonable effort should be made to encourage the production of beet sugar in the United States, led a majority of the Finance Committee to recommend the high rates upon sugar which are contained in the bill now before the Senate.

Senator White, of Louisiana, who, although a Democrat, was in favor of a duty on sugar, as the Senators from that State have generally been. In his discussions of this bill, referring to the attitude of the Republican Party in 1890 and 1894, he makes clear the Republican thought and purpose at that time with reference to taxing sugar when a tax on it was not needed for revenue requirements, and that that purpose was correctly expressed and outlined in the speeches of leading Republicans which I have cited. Senator White said:

The American breakfast table was a source of solicitude on the other side of the Chamber during that debate—

Referring to the debate on the McKinley bill.

We were told that the poor man was entitled to have his sugar without any tariff mixture. Untaxed sugar was something that the Republican Party guaranteed to every American consumer. He must have sugar and he must have it free from tax. Yet, Mr. President, the same distinguished gentleman, I repeat, who at that time so roundly denounced the Democrats in this Chamber because of the imposition of a small sugar tariff, are here to-day levying a greater tax, as a result of their experience and in the face of their own advertised promises and record.

* * * * * * *

During the consideration of the Wilson bill, day by day it was dinned into the public ear of this country that the only true method of bringing about a correct solution of this entire tariff subject regarding sugar and the only way to build up the sugar industry was to impose a bounty. Throughout the consideration of that bill, from the day the debate began until it concluded, we were informed by the Senators from the other side of the Chamber that a tax on sugar was an outrage.

Mr. President, I have not recited these positions of the Republican Party for the purpose of making any political capital or for the purpose of entering into any partisan discussion. I have recalled them simply for the purpose of trying to show that, at the bottom, both parties believe, because of the fact that sugar is such a universal article of food, consumed equally by the rich and the poor, that it ought, if the Treasury conditions will permit, to be one of the untaxed articles, and that, so feeling, both of these parties have in the past placed sugar alternately upon one list and alternately upon the other list, and the revenue requirements of the Government have in large measure prompted and influenced the action taken in each case.

Mr. President, at this time I shall content myself with the statement I have made with reference to this measure, supplementing it only by the statement of what is known to every Senator—that the present financial situation, very much to our regret, on account of circumstances which we can in no way control, makes it necessary for us to have a large amount of additional revenue. Recognizing sugar as one of the best of all the revenue-producing articles, having reduced the rates to the revenue basis, according to the standards of our Democratic tariff act, we feel constrained to yield to the necessities of the hour, and further to extend the time for untaxing this food necessity.

I do not desire to say, and shall not at this time say, more with reference to this bill; nor do I desire, now or at any time during this debate, to engage in a partisan discussion of the tariff. I shall, however, if it becomes necessary as the debate proceeds, have more to say, although I trust we may avoid any prolonged or partisan discussion on account of the well-known anxiety of the Senate to expedite certain other legislation of great importance and emergency, and on account of the fact that it is important that this measure should be passed before May the 1st, when, otherwise, sugar will under the present law become free. Speedy action is also especially necessary in view of the fact that the sharp disagreement between the House and the Senate, if the Senate substitute passes, may require considerable time in conference, and the conference report may become the subject of considerable discussion in the one or the other body.

Mr. GALLINGER. Mr. President, will the Senator from North Carolina permit a question before he takes his seat?

Mr. SIMMONS. Yes.

Mr. GALLINGER. I have listened very carefully to the speech of the Senator; and while I think he might well have omitted some things that he has incorporated in his speech, yet I will ask the Senator this question: I assume that if this side of the Chamber can not have the House bill, which I think a large proportion of the Republicans prefer, the Senator will welcome our assistance in passing the amendment which he has reported from the Committee on Finance?

Mr. SIMMONS. Of course, Mr. President, we shall welcome the assistance of Senators on the other side. I have tried very hard to say nothing with respect to this question, upon which I think there is accord to a large extent on both sides of the aisle, that might be presumably displeasing to the minority side of the Chamber.

Mr. NEWLANDS obtained the floor.

Mr. SMOOT. Will the Senator yield to me for a moment?

Mr. NEWLANDS. Certainly.

Mr. SMOOT. I simply wish to say to the Senate that I did not intend to speak on this subject, and I thought we could get a vote on it very promptly; but the remarks of the Senator from North Carolina will compel me to make a statement. Therefore I shall desire to occupy a few minutes of the time of the Senate.

Mr. NEWLANDS. Mr. President, I trust that the contingency referred to by the Senator from New Hampshire [Mr. GALLINGER] will not occur, that the substitute providing for free sugar after 1920 offered by the Senate Finance Committee for the action of the House will be defeated, and I trust that the Democrats of the Senate will stand by the views of the President and the House as the best expression of Democratic sentiment upon this subject, rather than upon the views of the Democratic members of the Finance Committee.

I shall be brief, Mr. President, in my discussion of this question. I shall go no further back than the last Democratic convention, when a free-sugar plank urged before the committee on platform of the Democratic Party was defeated without, if my memory is correct, a dissenting vote.

I also refer to a unanimous report of the Democratic members of the Finance Committee of the Senate made only a short time before the meeting of the Democratic convention at Baltimore, in which those Democratic members unanimously reported in favor of a revenue duty upon sugar, declaring that it had been the traditional policy of the Democratic Party to levy such a duty.

We all know the history of the free-sugar proviso in the last tariff act. The President of the United States at that time urged, whilst the tariff was under consideration by the Ways and Means Committee of the House, that sugar should be put upon the free list, and I am reliably informed that at that time and before his expression of opinion there were only two members of the Ways and Means Committee of the House who favored free sugar. The Ways and Means Committee of the House yielded to the views of the President, and a provision insuring the reduced duty on sugar until 1916 and then putting it on the free list was put in the tariff.

The President also, when the bill came to the Senate, made a similar request of the Democratic members of the Finance Committee, and they yielded, the members of that committee being almost identical in membership with the Democratic membership of the Finance Committee at the preceding Congress, which declared that the traditional policy of the Democratic Party favored a revenue duty upon sugar.

A number of Senators from the West, including myself, who represented the arid and semiarid region, realizing that beet-sugar production was the basic agricultural product of that region, upon which in a large degree the agricultural prosperity of the region rested, endeavored to convince both the Senate Finance Committee and the President that fair dealing with reference to the beet-sugar industry required only a moderate reduction in the duty on sugar to a revenue basis and not ultimate free trade, but without result. There were enough members representing that region who, if they had acted independently of the caucus action, could have beaten the proviso establishing free trade in 1916; but being unwilling to defeat the will of the party as expressed in a party caucus, they finally reluctantly assented.

Mr. President, conditions have now changed. The European war is on. The country needs revenue, and we realize that as a result of diminished production of beet sugar in France, in Russia, and in Germany it was a fortunate thing that sugar production had been stimulated in this country by a duty upon sugar, whether that duty was of a revenue or of a protective character, for it had developed the production of nearly a million tons annually, pretty nearly one-sixteenth of the production of the world, within the boundaries of the United States, exclusive of our insular possessions, and unless that production had been stimulated the cutting off and the shortage of the production of Europe would have very largely added to the very largely increased price caused by the war.

Mr. President, I shall not go into the economics of this question now. I insist upon it that the Democratic Party declared that it would accomplish the revision of the tariff in such a way as not to injure or destroy any legitimate industry, and so I believe that as an industry beet-sugar production is en-

titled to fair and proportionate treatment with the other industries of the country.

I find in looking over the tariff act that the farm products of other regions, some 50 in number, in Schedule G, are dutiable, such as barley, macaroni, oats, butter, vegetables, eggs, poultry, hay, honey, citrus fruits, apples, and so forth. I presume the Democratic Party kept those products in the tariff act in redemption of the pledge made at Baltimore that they would have regard for every American industry in this revision and that meant a regard for agricultural as well as manufacturing industry, and that therefore they would not hurry these products to the free list, even though it might bring about a freer breakfast table.

I assume that the Democratic Party did that from a sense of justice and not simply from a desire of concilating the agricultural interests in the humid region represented by the major part of the Democratic Party in Congress, and I insist upon it that justice and fair dealing require the same considerate treatment of the agricultural industries of the arid and semiarid region as it does of the agricultural industries of the humid region.

Mr. President, I regret very much to differ with the members of the Finance Committee of my own party upon this subject. I do not indulge in contention with them upon the subject. I regret that they, in view of the utterances of the Democratic members of the Finance Committee in the past, the traditional policy of the Democratic Party and the last expression of the party at Baltimore, did not fall in line with Democratic sentiment as expressed by the President and the House of Representatives in their recent action. So far as I am concerned, whilst I desire to stand with Democrats, I prefer to stand with the President and the House upon this subject rather than with the Democratic members of the Senate committee.

Mr. SMOOT. Mr. President——

The PRESIDING OFFICER (Mr. HOLLIS in the chair). Does the Senator from Nevada yield to the Senator from Utah?

Mr. NEWLANDS. Certainly.

Mr. SMOOT. The Senator has on two or three occasions made the statement that the President is in favor of the House provision. By what authority does the Senator make that statement?

Mr. NEWLANDS. I do not do it by any direct authority. It was in the air at the time that the administration as a revenue matter proposed to do away with the proviso which put sugar upon the free list in 1916. Nothing was said about simply extending the period of the duty, and I assumed that the action of the House in absolutely, not qualifiedly, repealing the proviso was in harmony with the President's views.

Mr. SMOOT. I simply wanted the Senator to put in the RECORD if he knew from just what source his information came.

Mr. NEWLANDS. No; I have no direct expression, but it was in the air; it was generally believed at the time, and it was doubtless believed by the Democrats of the House, who almost unanimously voted for the repeal of the proviso without qualification.

Now, Mr. President, as to economic aspects of this question, I stand only for a revenue duty upon sugar.

Mr. SIMMONS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from North Carolina?

Mr. NEWLANDS. Certainly.

Mr. SIMMONS. Mr. President, I do not know upon what authority the Senator makes the statement with reference to the President's attitude. I am not myself advised upon it, but I do feel that it is safe to say that I am sure the President has no hostility to this provision of the Senate committee.

Mr. NEWLANDS. Mr. President, I will not add to my utterance upon that subject. All I can say is that it was apparently the view of the President, and certainly the expression of the Democrats of the House following his suggestion has been in favor of the repeal of this proviso without qualification.

As to the economic aspects of this question, Mr. President, we are about to enter upon an economic crisis at the close of the European war. No one can foretell the result of that war upon the economics of the world. The administration itself is apprehensive, and one of its reasons for recommending the organization of a tariff board is that the consideration of tariffs and action upon tariffs might be of the highest importance in the economic defense of this country, doubtless realizing that an invasion of cheap goods as the result of low wages and hard times abroad might be paralyzing to the industries of the country. So it has been engaged in the study of that question and also in the study of the question as to the anti-dumping provision, all these studies stimulated by the apprehension that an invasion of goods from abroad at the end of this war may be as destructive to the wage earners of our country as an invasion of men.

It is wise to take proper caution, and inasmuch as the caution of the hour demands that we should repeal this proviso, why should we qualify it? Why should we refuse to leave future action upon sugar as upon other subjects, to the wisdom of the hour, guided by experience and information and knowledge, instead of putting this industry in a strait-jacket as a result of apprehension created by present action upon future conditions?

The debate during the discussion of the present tariff developed the fact that Cuba could deliver in New York and in New Orleans raw sugar for 2 cents a pound. As against that we know that the lowest price which can be accepted by farmers in the arid and semiarid regions for their beets is $5 a ton, and that they insist upon a higher price and claim that they are being dealt with unfairly by the sugar-beet factories in giving them a lower price.

The average amount of sugar found in a ton of beets is from 200 to 300 pounds, the average, possibly, being about 250 pounds. So if we divide $5 by 250, we have 2 cents a pound as the price paid by the manufacturer for the sugar in the beets themselves, delivered to the factory. So there we have these basic facts—raw sugar delivered in New Orleans and New York by Cuba, before the war, for 2 cents a pound; sugar in the beet—not raw sugar, not sugar in a manufactured state—delivered to the factory at the rate of 2 cents a pound. We all know that the price of refining raw cane sugar is about one-half the price of putting beets through the factory. We all know that the price of freight from New York and New Orleans to Mississippi and Missouri points is about one-half of the price of freight from the arid and semiarid regions to those points. How, then, will it be possible, if the duty on sugar is abandoned, for the beet-sugar raisers of the arid and semiarid region to compete with Cuba, which is capable of raising its production to an amount almost sufficient to supply the world with sugar, which is capable of delivering cane sugar in a raw state at New York and New Orleans for 2 cents a pound?

Then, do you wish to submit the entire sugar industry to the changes of conditions in Cuba itself—a revolutionary country, where at any time war, the result of domestic and civil conditions, can paralyze that industry, as it did prior to the Spanish-American War, reducing the entire production of that island, I believe, to about 400,000 tons, whereas to-day its production is nearly 2,000,000 tons.

Is it wise, if we are to enter upon a condition of economic as well as of military preparedness, to submit one of the most important food products of this country to the chance of revolution in Cuba, when, by a moderate revenue duty, beneficial to the Treasury of the United States, we can maintain, at least, and perhaps stimulate, a domestic industry that will result in the production of sugar and the maintenance in the end of a lower price level for sugar throughout the world?

Mr. President, I shall not dwell upon this subject further at this time. I will, in closing, merely express the hope that just at the time when we are entering upon an era of preparedness—military, industrial, and economic—we shall act with that deliberation and caution which should characterize our action upon so important a question, uncontrolled by all these considerations of consistency, lest, in endeavoring to square the action of to-day with the action of two years ago, when the action of two years ago was directly contradictory to the action by the Democratic members of the Senate Finance Committee of six months before and to the traditional policy of the Democratic Party, we should produce a condition of depression in the advancement of this great agricultural industry.

Mr. THOMAS. Mr. President, two years ago the Democratic Party, then for the first time in many years in control of both Houses of Congress and of the national administration, proceeded to legislate in accordance with certain pledges which it had made to the people of the United States, and which involved, as the subject of first consideration, a thorough revision of the tariff laws. That majority approached the subject with a full appreciation of its importance and of the necessity of systematic procedure thoroughly representative of a majority of Democratic sentiment. The result was the enactment of what is popularly known as the Underwood-Simmons tariff law.

Schedule E of that statute reduced the duties upon sugar and provided that upon the 1st day of May, 1916, those duties should cease, when sugar would automatically go upon the free list. That decision was not reached without much controversy, some of which was acrimonious, but it was reached neverthe-

less; and, when reached, represented the Democratic attitude upon the subject and the Democratic construction of the Baltimore platform as well.

With those of my party who may challenge this statement I have no quarrel. There is no question that those who contend that the platform did not commit the party to free sugar and those who contend that the platform did commit the party to free sugar both find in that platform a substantive plank as a basis of their respective contentions, but the fact is that the party crystallized its own official construction of its duty as there outlined in the provisions of the Underwood law.

I had hoped, Mr. President, that, whether right or wrong in this conclusion, the vexed subject had been finally laid at rest and that our method of securing revenue would be hereafter largely confined to taxes upon wealth, as contradistinguished from taxes upon consumption. This conclusion was never accepted by those interested in the commodity, or by a great number of them, and it has been, therefore, the subject of more or less agitation ever since, always accompanied by the contention that the perpetuation of the tax was essential to the existence of the industry, although, when the amount of the duty was finally determined, it was declared with equal emphasis by its opponents that it was an inadequate protection.

We are now, Mr. President, confronted with a bill, the purpose of which is to strike out the provisos of schedule E and go back to the old régime, whereby an article of prime and universal necessity is to be indefinitely burdened with a tax, only a portion of which, as levied under its provisions, ever finds its way into the Treasury of the United States.

The Senate committee having charge of the bill, after due consideration, by its majority members have reported a compromise which is quite as distasteful to me as it is to my genial friend from Nevada [Mr. NEWLANDS], but for an entirely different reason. My objection to it is that the law as it stands should not be disturbed; his that it is not made a permanent feature of our tariff law, as the House bill provides. These differences, however, Mr. President, are always bound to arise with regard to the vexed question of protection, and particularly between Democrats who believe in protection and those who do not; and that, I think, is the fundamental difference between the Senator from Nevada and myself, who, if I am to judge from his many public utterances, worships at the shrine of protection with an ardor equal to that of my distinguished friend from Utah [Mr. SMOOT].

Mr. NEWLANDS. Mr. President, will the Senator permit me to interrupt him?

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Nevada?

Mr. THOMAS. I yield.

Mr. NEWLANDS. Mr. President, I hardly think the Senator fairly represents my view regarding the tariff. I am not a free trader; I believe in a moderate tariff for revenue, so adjusted as not by sudden and precipitate reductions to prostrate industry and produce unemployment and want. I believe in the reduction of the excesses of a Republican high protective tariff; I believe that in proceeding from high protection to a moderate revenue basis we should proceed gradually, as our platform calls for; that the country, having placed itself upon the cliff of high protection, can not safely throw itself over the cliff to the levels below; and that the wise thing is to climb down slowly and laboriously without wrecking the country's industries. With this view I have sustained reasonable, moderate reductions in the tariff and am prepared to consider favorably others, bearing in mind the Democratic platform of Denver, which declared for a gradual reduction of tariffs toward a revenue basis, and bearing in mind also the similar plank in the Democratic platform of Baltimore, which declared that these reductions should be effected without imperiling or destroying any American industry.

Now, if the Senator can make a high protectionist out of the doctrine which I have thus enunciated, I am sure that I can not complain of the manner in which he seeks to do it, for he has been entirely good-natured about it; I can only complain of his logic.

Mr. THOMAS. Mr. President, I would not for the world intentionally misrepresent the view or the position of my very dear friend upon any subject, least of all upon the tariff. I am willing to accept his explanation for what it may be worth. If I erred in classifying him with that school of protectionists of which the Senator from Utah is one of the chief apostles, I will retract it and place him in that school of protection of which the senior Senator from Iowa [Mr. CUMMINS] is so distinguished an advocate and representative; and I do so because I can not distinguish between the attitude of the Senator from Nevada, as just outlined, and that of the late, sometime prominent, but now lamated Progressive Party upon the subject. I known that the Senator believes in stepping down from the "high pinnacle on to the distant plain," but I am satisfied that he would protest against the stepping-down process long before we reached the plain, and would insist upon suspending us somewhere between the top of the cliff and the plain below.

I am no free trader, Mr. President. Free trade might be classified in the language of the lamented Ingalls as "an irridescent dream." I am in favor of a tariff for revenue, because it is impossible to get rid of a tariff entirely; but, except as the protection is incidental to revenue duties, I am no protectionist. We belong, therefore, Mr. President, to different schools; and it is evident now, as it always has been, that, whatever the official views of the great political parties on the subject of protection may be, there is a divergence of sentiment among the members, at least of the Democratic Party, upon the subject, which never has been and, I presume, never will be reconciled.

Mr. President, the real object of this bill, however one may judge from expressions regarding it, is to prolong the duty on sugar. Its ostensible object is to provide revenue in order to meet the necessities of the Government. My contention that it is but an ostensible object is due to the fact that if it be necessary to raise a revenue upon sugar at all, or any other necessity of life, that necessity should find expression in legislation which would place in the Treasury of the United States every dollar of the tax so levied, instead of diverting a part only into the Treasury, and the other part into the pockets of the interests identified with the subject of the tax. In other words, if revenue is the prime motive behind this bill, and it is necessary to obtain it by taxing sugar, then we should tax it in such wise as to realize more than twice the amount of revenue for the Government. This can be effected by an excise tax of similar amount to the duty which is to be prolonged by the Senate substitute, and every cent of it would go into the Treasury of the United States. Moreover, Mr. President, the tax so raised would be a fixed quantity, and would not diminish in amount as the domestic product increased in amount.

It is estimated, speaking roundly, that the present duty upon sugar gives the Government an annual revenue of $43,000,000; but an excise tax at a similar rate on all sugar—that produced at home and that imported—would give the Government, in round numbers, $86,000,000 of revenue annually. Upon the assumption, therefore, that our present duty requires us to obtain revenue, and that the exigency justifies us in raising it from an article like sugar, then common sense, to say nothing of wise statesmanship, would readily suggest an excise tax as a substitute for the existing tariff duty of substantially 1 cent per pound.

But, Mr. President, that view does not seem to be a popular one. It found but little favor in our committee, which seemed to be reluctant to place an internal-revenue duty upon a necessity of life, lest the resentment consequent upon it should make the tax unpopular, although conceding what is self-evident, that the alternative of the excise tax could not affect the price of sugar any more than it is affected by the protective duty. I felt, Mr. President, and I still feel, that if the financial affairs of the Government are so desperate that taxes upon consumption should be prolonged, even temporarily, the dominant body should meet the situation by raising the revenue in the best way—by so raising it that the Government will receive all the returns, albeit, Mr. President, the subject of the tax should be a necessity of life.

Let me ask why we should for the sake of revenue give this favored industry further protection at such tremendous cost to the consumer? Certainly no one to-day will question the universal prosperity of the industry, with perhaps here and there an exception. Certainly not the most ardent protectionist will contend that it needs protection at this time. The contention must be, in the very nature of things, that hereafter, when present conditions shall have changed, the industry will need the further protection of the Government if it is to continue.

But we have, as I say, agreed upon a substitute, and if I vote at all I shall vote, with much reluctance, for it. It means that the proviso in Schedule E, instead of becoming operative on the 1st of May next, will become operative on the 1st of May, 1920. In other words, a postponement of the day of free sugar for four years is provided for in the substitute. This, according to present estimates, will yield $172,000,000 for that quadrennial period; but it also gives the manufacturers and producers of sugar $172,000,000. By this substitute, and upon the theory that we are obliged to have the revenue, we propose to donate to a great, prosperous, and wealthy industry an equal amount of money by authorizing its collection from the consumer. This may be all right; but I can not reconcile it with

my notions of Democratic duty, or with my views of practical, useful legislation. If it be right, then every view which I have expressed upon this subject since the Underwood bill came to the Senate for consideration is wrong. That may not be a remarkable thing. All of them may be entirely erroneous. Nevertheless, I believed them then, as I believe them now, to rest upon a firm basis, and to correctly outline the Democratic position upon the historic question of a duty for revenue.

Mr. CLARKE of Arkansas. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Arkansas?

Mr. THOMAS. I do.

Mr. CLARKE of Arkansas. I think the Senator made the statement that the sugar consumed in this country was divided about equally between that produced in continental America and the islands, on the one hand, and that imported from other sections.

Mr. THOMAS. Yes.

Mr. CLARKE of Arkansas. Does the Senator know how much of the half imported is imported from Cuba?

Mr. THOMAS. Why, practically all of it, Mr. President. I think perhaps fifteen or twenty thousand tons come from other sources.

Mr. SIMMONS. All of it except about 2,000,000 pounds, I think.

Mr. THOMAS. From Cuba?

Mr. SIMMONS. Yes; all except 2,000,000 pounds.

Mr. THOMAS. I accept the correction.

Mr. CLARKE of Arkansas. The Senator corrects his figures, then, as to the amount of bounty that would be given to the untaxed sugar. Practically all sugar is imported in raw condition by the Sugar Trust. The Cuban sugar pays 80 per cent of the rate named in the pending bill.

Mr. THOMAS. Much more than that; the Cuban duty is a trifle over a dollar a hundred pounds—a trifle over a cent a pound.

Mr. CLARKE of Arkansas. Would not the importers of sugar add the entire tariff, and would not they get 20 per cent of $172,000,000 in addition to the $172,000,000?

Mr. THOMAS. That I think is true, Mr. President. Of course, my estimates were based upon the fact that the bulk of the sugar imported into the country to make up the deficiency and supply the needs of the people comes from Cuba. But I think the question asked by the Senator from Arkansas must be answered affirmatively. To this sum of $172,000,000 should be added the amount to which his question refers.

Mr. President, in the consideration of this measure two years ago, and the ultimate disposition that was made of it, the Senators from Louisiana were out of accord with their party action. Their position was perfectly consistent and entirely honorable. It was based upon a situation peculiar to that State as they understood it. I want to say here by way of digression, with regard to the sugar of Louisiana, that the real menace to it is not in the abrogation of all duties but in the expansion of the beet-sugar industry. The industry in the State of Louisiana has been the subject of the fostering care of the United States for a century. Climatic conditions, problems of labor, and other considerations have demonstrated that this protection, extended for so many years, has not been sufficient to place the industry upon a self-sustaining basis, and never will. On the other hand, during the last quarter of a century a new sugar industry, protected for the greater part of its existence, but a new industry nevertheless, has asserted itself, and to-day produces nearly one-fourth of the total consumption of sugar in this country. It has expanded and will continue to expand in the Far West, tariff or no tariff, until by the processes of natural growth and natural selection the less favored industry in the State of Louisiana must ultimately disappear. I believe the time will come when the action of the Sixty-third Congress upon this subject, much as it may have directly affected the material welfare of the State of Louisiana, for whose people I have every consideration, will be regarded as the wisest step that could have been taken regarding it, since during the interval between the enactment of the law and the time when it was designed to take effect due provision could be made for doing away with the industry in that State and taking up other and more profitable pursuits.

I venture the assertion that if a tariff of 100 per cent ad valorem were placed upon sugar in 25 years from now the domestic product would be confined to our insular possessions and to the great semiarid and arid regions of California and the Rocky Mountain West, enjoying, as they do, physical advantages which adverse legislation can not affect and which do not need the protecting influence of legislation to make them operative.

Mr. President, the production of sugar never was so profitable to manufacturers as it is now and as it has been since August, 1914. I venture to say that no industry upon this continent can show more prodigous returns than those derived by the sugar companies of Porto Rico and Hawaii and the beet-sugar companies in the United States, with here and there an exception due either to poor management or undesirable location. The price of sugar at present is phenomenal, and there is no question in my mind that it is going to be higher for a long time before it falls.

In this connection I want to call attention to a few comments that I have clipped recently from some of the newspapers upon this subject. I first refer to the Chicago Journal of the 21st day of March last. This paper says:

There is a possibility of Chicago housewives being compelled to pay 10 cents a pound for sugar within a very short time.

The United States exported more sugar in the year ended March 15 than in any year in the history of the country. The export of refined sugar on that date totaled 173,684 tons, as compared with a total of 25,873 tons for the year ended March 15, 1915.

Let me digress here, Mr. President, with the statement that we have become exporters of the refined product within the last 24 months. Prior to the outbreak of the war the export of sugar from the United States was negligible. To-day, owing to changed conditions—and of course that adds to the price of the domestic product—we have become great exporters of sugar to other nations, and the trade which has been thus acquired will survive the war for many years if there be any truth in the reports of the provisions that are being made by the allies for trade conditions after the war as affecting their future relations with their present enemies, the central empires.

The result of this unprecedented export trade is that sugar is now $7.20 per 100 pounds wholesale. One year ago it was $6.35 per hundred. On January 1 of this year sugar could be purchased in Chicago for $6.20 per hundred, wholesale. The retail price now is from 7½ cents to 7¾ cents.

The biggest buyers of American sugar are England and France. Norway and Sweden, which formerly purchased their supply in Germany, have been compelled to turn to the United States. Added to these buyers are Italy, shut off from Austria, and Greece, formerly a buyer on the German and Austrian markets.

"If Europe was to talk peace to-morrow, the price of sugar would fall off $1 per hundred," said N. N. Jacobson, of Reid, Murdoch & Co., wholesale grocers. "But unless they begin the peace talk within the next few months there is a possibility of the retail price going to 10 cents a pound. At best, an estimate of the probabilities of sugar going much higher is a gamble. Merchants do not count on making much profit on sugar, and when the price advances they generally shut down on their orders, and consumers do not use as much."

W. T. Chandler, vice president of the Franklin MacVeagh Co., wholesale grocers, said that he believed the advance in price was temporarily checked.

"I do not know whether the rumors of peace talk have anything to do with this or not," he said. "Of course peace would mean that they would resume the production of sugar in Europe, which would mean a falling off in our export trade. This obviously would mean cheaper sugar at home.

"The price charged by the merchant is regulated by the wholesale price and advances very slowly. Profit is not looked for, and there will consequently not be any big increase—a jump of from 7 to 10 cents a pound, I mean. I would not care to speculate on what sugar will do. But I admit that 10-cent sugar is a possibility."

From the Rocky Mountain News, of Denver, Colo., of March 18, I clip the following:

SUGAR GOING UP—NO HOPE OF ITS EVER COMING DOWN.

The price of sugar is advancing steadily, with no prospect for any immediate or remote reduction. The passing of the bill keeping the tariff duty on sugar, together with an unprecedented demand for the product, means the development of manufacturing facilities, restricted only by funds to finance projects, the ability to secure materials and suitable locations, according to W. L. Petrikin, of the Great Western Sugar Co. The building of eight factories, two in Nebraska, two in Wyoming, and four in Utah, will begin at once, actual construction being deferred until action upon the sugar bill, which passed the National House Thursday by a vote of 364 to 14.

How familiar that sounds, Mr. President! It is the usual "hold up," warning. Action upon these new structures will be deferred until final action is taken by the Congress of the United States upon the subject of free sugar. I know of two or three new enterprises in my own State and an adjoining State which will not be halted, in my judgment, by anything of the sort, although in a sense they are not new enterprises. In the main they simply consist in the transplantation or transfer of old sugar plants, located in unsatisfactory places, to newer and more attractive locations.

I also refer to and ask leave to insert in the RECORD without reading it a similar quotation from a New York paper of the 16th of March.

The PRESIDING OFFICER. Without objection, it will be so ordered.

The matter referred to is as follows:

SUGAR SITUATION ACUTE.

NEW YORK, *March 16.*

The situation in the sugar market is rapidly growing acute. Both spot and refined sustained further advances to-day, the latter rising 15 points, to 6.90 cents. Price of raws was marked up 13 points, to

5.77 cents. It is pointed out that since Secretary McAdoo made his speech in favor of the repeal of the duty on sugar the price of that article has risen 2 cents a pound.

In well-informed sugar circles the belief is growing that the only way this rise in the price of sugar and sugar products can be arrested is by the rescinding of this duty. It is pointed out that Cubar interests practically control the sugar market of the world, and they can mark up prices at their will. Insular prices, in consequence, are raised hand in hand with the Cuban interests. Shortage in the crops of Germany and Austria has in no way served as a check to the Cuban market, which is controlled by United Fruit, Canadian Pacific, Cuban-American, and Cuban Cane Sugar Corporation interests.

Mr. THOMAS. Now, Mr. President, let me briefly refer to some of the phenomenal conditions, some of the remarkable profits, some of the tremendous incomes that beet-sugar companies have enjoyed in consequence of this rise in prices. I read a quotation from a trade journal published in New York:

Profits: The Great Western Sugar Co. was organized in 1905 with a capital of $30,000,000, of which there is outstanding $13,630,000 preferred and $10,544,000 common. The common stock was "all water," according to the testimony of its president, Mr. Morey.

I may add that fully 30 per cent of the preferred stock was watered also.

The attached forecast of the Great Western Sugar Co.'s position indicates the prosperity of this "infant" industry. On January 1 it had $10,000,000 in cash and $10,000,000 in sugar, making a total surplus of $20,000,000. The Central Aguirre, of Porto Rico, is now paying dividends at the rate of 24 per cent per annum, but it is suggested to go on a 10 per cent basis next quarter, making dividends at the rate of 40 per cent per annum.

Many of these "infants" are expected to disclose their real profits after the tariff bill, insuring an added profit of $22.40 per ton for the next four years or indefinitely, has safely passed the Senate and the House. In anticipation sugar stocks have shown a further advance.

I do not care to read the table, but will insert it in the RECORD with the permission of the Senate.

The matter referred to is as follows:

Name of company.	Price Mar. 1, 1914.	Price February, 1916.	Price Mar. 31, 1916.
South Porto Rico Sugar Co. (preferred)	$59.00	$110.00	$117.00
South Porto Rico Sugar Co. (common)	30.00	170.00	197.00
Central Aguirre Sugar Co. (preferred)	35.00	165.00	177.00
Central Aguirre Sugar Co. (common)	15.00	167.00	181.00
Fajardo Sugar Co. (preferred)	14.00	86.00	100.00
American Beet Sugar Co. (preferred)	65.00	95.00	95.00
American Beet Sugar Co. (common)	20.00	68.00	74.00
Great Western Sugar Co. (preferred)	91.00	112.00	114.00
Great Western Sugar Co. (common)	45.00	140.00	206.00
Michigan Sugar Co. (preferred)	85.00	100.00	100.00
Michigan Sugar Co. (common)	35.00	102.00	112.00
Utah-Idaho Sugar Co. (par. 10, preferred)	6.50	12.50	12.50

The rescission of the duty would partially reduce the price to the consumers. Nothing else will do it. But I think the removal of the duty would unquestionably result in lowering the price, because the expectation of free sugar prior to the outbreak of the war sensibly affected the price. It was one of the few necessities of life the price of which was actually reduced—I will not say by the law, but I believe that to be the fact—between the enactment of the law and the month of August, 1914.

We have heard much about the high cost of living. It is a question more acute to-day than it ever has been. Here is one instance, on example, one opportunity for lowering to some extent the price to consumers of a prime necessity of life by allowing this law to go into effect in accordance with its original purpose and intent.

Mr. President, I have prepared a somewhat rough table giving an estimate of the profits of beet sugar during the last two years, based upon the Colorado beet-sugar crop for 1915 of Willett & Gray, who are the recognized authority upon the subject.

The beet-sugar crop of the State of Colorado for the year 1915 was 244,499 tons—about one-third of the entire crop. This is the equivalent of 547,677,760 pounds. At 6 cents a pound, less $2.70 cost of production per hundred—and that is the cost testified to or stated before the Hardwick committee in 1912 of producing sugar at that time—that would leave a profit of $3.30 per hundred. With sugar at 6 cents and a total profit for the crop of $18,063,366, upon an estimated próduct of 200,000 tons at 5 cents per pound for the crop of 1914, would produce $12,544,000, or a total in the two seasons of $30,617,366, a profit which is probably less than that actually realized; and of course it does not take into consideration the by-products of the industry, which in 1914 were worth about 47½ cents per ton.

Of the above production the Great Western Co. should be credited with about two-thirds; that is to say, it produces about two-thirds of the entire beet-sugar crop of the State. This gives it $20,412,578 for the two years. The other companies—the American Beet Sugar Co. being the principal one—would represent the beneficiaries of the remaining third.

On the 5th day of April the Wall Street Journal said that the American Beet Sugar Co. had announced earnings for the year ending March 31 at $3,000,000. I am satisfied that this represents but a small portion of its actual profit. Senators may perhaps remember that during the hearings before the committee appointed to inquire into the President's charge concerning a lobby, it was admitted by Mr. Oxnard, the founder of this company, that the actual money invested in his concern was $4,000,000, when it was capitalized at $5,000,000 preferred, with $15,000,000 of common. The admission of this company as to its earnings for 1915 means that for a single year its net profits have been three-fourths of the amount of money originally invested and three-fifths of the amount of money actually invested by it in the business up to the time of that lobby hearing.

Mr. President, in this connection I wish to call attention to the statement of the New York News Bureau of March 30, 1916, regarding the Great Western. This is from Boston:

It is understood that the Great Western Sugar Co. has been ripening a melon that is almost ready for plucking. This company, one of the largest beet-sugar producers in the world, has prospered enormously since the war lifted raw sugar prices to the highest level of years. The common stock, of which there is $10,544,000 outstanding, has advanced from 50 last September to the present market of 200. There is likewise $13,630,000 7 per cent preferred outstanding, the authorized amount of each issue being $15,000,000. The American Sugar Refining Co. is a substantial minority stockholder.

I will come to the share feature of the sugar situation a little later on. I ask leave to insert without reading the remainder of this quotation.

The PRESIDING OFFICER. Without objection it is so ordered.

The matter referred to is as follows:

Great Western Sugar has paid common dividends of 5 per cent since January, 1910. The company issues no financial statements, but it is said on authority that the 1915 earnings were safely over 50 per cent on the common stock. For the current year, if sugar prices hold, the company may easily earn $70 a share. Therefore, so far as earnings alone count, the company could easily multiply its present dividend, but beecause of the uncertainty regarding possible tariff reduction directors have so far stifled the temptation. Great Western had approximately $10,000,000 cash on hand at the beginning of the present year and about the same amount in sugar. It is likely that current liabilities were small, so that the excess current assets were probably equal to $200 per share on the common stock, setting off plants against the preferred-stock issue.

Great Western Sugar is in a position to pay a handsome extra dividend in cash, or to capitalize part of its bulky surplus by the declaration of a stock dividend. The belief is prevalent that some such action is a near-by probability.

Mr. THOMAS. At or about this same time the American Beet Sugar Co. announced a 6 per cent dividend on its common stock. This followed the passage of the House bill repealing the provision regarding free sugar.

Mr. President, there are other companies, as well, engaged in the production of cane sugar, whose condition is equally prosperous and whose returns in proportion to the amount of their capital stock are equally great.

I ask leave to insert, without reading, articles from the San Francisco News Bureau of Monday, March 6, 1916, March 10, 1916, and an article from the San Francisco Chronicle of March 15, 1916, and relating to the financial affairs of certain Hawaiian companies.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

HAWAIIAN SUGAR STOCKS.

[San Francisco News Bureau, Monday, Mar. 6, 1916.]

Honolulu: While stocks continue to climb, investors, speculators, and all persons interested in Hawaiian sugar stock or its profits, which means practically all the business men in the Territory, are wondering how large a part of the millions now held in reserve will be paid out in special dividends. That extra dividends will be declared by most of the companies is generally conceded on all hands, though no intimation of any official nature has been given out that any such plan is in the wind. Dividends of from 20 to 30 per cent, and even higher in some instances, were paid by the sugar companies during 1915, but without exception those on a paying basis piled up huge reserves because of the then uncertain prospect of the sugar tariff. Free sugar is not even a remote danger, and there is no prospect of an early termination of the European war to reduce prices. With land and mills in the best condition ever known in the history of the industry on these islands, and with bulging treasuries, it is held certain that big dividends will be paid as soon as the bill repealing the free-sugar clause has safely passed Congress and been signed by the President. Sixteen companies had on hand cash balances totaling $8,751,000 at the end of 1915, according to the best obtainable information.

HONOKAA SUGAR EARNINGS.

[San Francisco News Bureau, Mar. 10, 1916.]

Honolulu: Honokaa Sugar Co. and the Pacific Sugar Mill, by the purchase of 175,000 shares of stock in the Hawaiian Irrigation Co. (Ltd.), the price totaling more than $95,000, now own practically all the shares

in the latter corporation, according to reports presented to Honokaa and Pacific Sugar shareholders at their annual meeting. The annual report of F. A. Schaefer, president of Honokaa, follows, in part: "The cost of producing a ton of sugar was considerably reduced, viz, from $65.133 to $54.242, these figures not including bond interest, etc., while the net profit on the crop over and above all charges was $161,849, which includes a charge of $17,720 sinking fund on the bonds, which is payable to the trustees during this year. During the year the directors, on the authorization of the stockholders, purchased a four-sevenths interest in 122,500 shares of the Hawaiian Irrigation Co. (Ltd.) for the sum of $81,479, paying for the same in cash. This purchase gives to this company and its neighbor, Pacific Sugar Mill, practically all of the shares of the Hawaiian Irrigation Co. (Ltd.), and is expected to prove very advantageous."

The annual report of F. A. Schaefer, president Honokaa Sugar Plantation, also refers to the fact that the cost of production was reduced approximately $11 per ton.

—

[From the San Francisco Chronicle, Mar. 15, 1916.]

SIXTEEN HAWAIIAN COMPANIES HAD $8,751,000 CASH ON HAND.

(By Charles Remington.)

Sixteen Hawaiian sugar plantations, according to actual figures in some instances and estimates in others, closed the year with $8,751,000 cash on hand. This fund has been built up during the past two or three years in anticipation of free sugar. Now that the likelihood of free sugar in the next few years is practically past, the fund will be kept nearly intact for the purpose of meeting this or other unforeseen vicissitudes. The fund, however, is deemed large enough by most of the plantations, so the stockholders in most instances can reasonably expect a full distribution of 1916 earnings, which promise to break all records. The amount of the cash balances on hand December 31, 1915, were:

Ewa	$593,000
Hawaiian Agricultural	600,000
Hawaiian C. & S. Co	1,316,000
Hawaiian Sugar	550,000
Honomu	240,000
Kekaba	390,000
Koloa	90,000
Maui Agricultural	1,122,000
McBryde	71,000
Olaa	453,000
Oahu Sugar	1,000,000
Onomea	715,000
Pepeekeo	400,000
Pioneer	415,000
Waialua	398,000
Wailuku	400,000
Total	8,751,000

Mr. THOMAS. Now, Mr. President, how can it be contended that the extension of this duty is essential to the existence or even to the welfare of this great industry? I am aware that it is said we must not estimate or legislate with regard to existing conditions which are phenomenal, and I admit that they are unusual. I am aware also that it is said that unless this legislation shall proceed these industries will wither away and perish with the return of peace.

Mr. President, if the Great Western Sugar Co., with its $20,000,000 of surplus, and if the other beet-sugar companies with their millions of surplus, and if the sugar companies in the insular possessions with their millions upon millions of surplus are to perish and to disappear when peace shall again gladden the earth with her presence, unless their power to levy toll upon the American people shall be prolonged, then they constitute industries which ought to perish, because it is evident that if prolonged it is only a question of time when they will absorb into their treasuries all that remains worth absorbing not already acquired by similar huge institutions also basking in the sunshine of prosperity consequent upon the suffering and desolation of Europe.

In my section of the country, Mr. President, sugar companies occupy a peculiar advantage. They have capitalized not only the tariff and capitalized the future in their common stock, but as I directed the attention of the Senate two years ago, they have also capitalized inequalities in transportation rates, all of them working to the disadvantage of the consumers in the beet-sugar producing region.

Mr. President, there is a close and indissoluble connection between the great transportation companies of the United States and those huge industries which dominate almost every avenue of human effort and enterprise. Through the conjunction of the control of big business with the control of transportation lines throughout the country competition becomes impossible, and the coexistence of others engaged in the same lines of business is one of grace and of kindly consideration, dependent on good behavior. Equal right to the channels of trade for legitimate competition no longer survives.

It is a singular fact that this industry, about which my distinguished friend from Nevada is so concerned, the beet-sugar industry, has, in conjunction with the American Sugar Refining Co., its principal shareholder, so cunningly devised and manipulated railroad rates as to enjoy a tremendous advantage over the people who are said to enjoy the benefits of this protective duty in the States of Colorado, Wyoming, Utah, and Idaho; and I may assure you that the advantage is pressed to the limit. For example, the rate upon 100 pounds of sugar from Denver to San Francisco, although it is down grade practically all the way, is 30 cents a hundred higher than the rate upon sugar from San Francisco to Denver. The rates upon sugar from Denver to the common points of the Missouri River are similarly arranged. James J. Hill once said that you could kick a barrel of flour and start it rolling in Minneapolis and it would of its own volition roll clear to New Orleans. I might paraphrase this statement by saying that you could kick a barrel of sugar in Denver and start it rolling and it would reach Galveston of its own volition. Yet the rates from Denver to Galveston upon practically all commodities, including such commodities as sugar, are greater than the rates for the same commodities from Galveston to Denver, up grade all the way.

Mr. President, it is generally supposed to be a law of economics that where the supply of a given article gluts the market the price falls. The sugar companies in Colorado produce several times as much sugar as can be consumed there, but the price does not fall worth a cent. On the contrary, the price rises, and we actually pay more for the sugar consumed in the States I have mentioned than in any other part of the United States. This is made possible by the scheme of freight manipulation to which I have adverted.

I have prepared a table which I here insert based upon sugar at $6.90 in New York, wholesale, giving the wholesale price in different parts of the country, among others at Denver:

CANE.	Cents.
San Francisco	7.10
Phoenix, Ariz	7.55
Denver, Colo	7.45
Billings, Mont	7.85
Carson City, Nev	7.55
Boise, Idaho	7.85
Sante Fe, N. Mex	7.45
Omaha, Nebr	7.23
Seattle, Wash	7.05
Portland, Oreg	7.25
Cheyenne, Wyo	7.45
Topeka, Kans	7.33
Des Moines, Iowa	7.25
Pierre, S. Dak	7.43
Bismarck, N. Dak	7.63
BEET.	
San Francisco	6.90
Phoenix, Ariz	7.35
Denver, Colo	7.25
Billings, Mont	7.65
Carson City, Nev	7.35
Boise, Idaho	7.65
Sante Fe, N. Mex	7.25
Omaha, Nebr	7.03
Seattle, Wash	6.85
Portland, Oreg	7.05
Cheyenne, Wyo	7.25
Topeka, Kans	7.13
Des Moines, Iowa	7.15
Pierre, S. Dak	7.23
Bismarck, N. Dak	7.43

With sugar at $6.90 in New York, cane sugar is $7.45 in Denver and beet sugar is $7.25 in Denver. In Billings, Mont., is located one of the largest factories of the Great Western Sugar Co. It produces many thousands of tons of sugar every year. It produces so much, indeed, that it is supposed by its owners to be in a chronic danger of bankruptcy when the question of tariff is agitated. With sugar in New York at $6.90, cane sugar at Billings is $7.85 and beet sugar is $7.65, with the result, Mr. President, that beet sugar manufactured at Billings or at Longmont or any other point in my own and adjoining States can be purchased by the consumer at Omaha and Kansas City, who can then pay the freight upon it to the point of consumption for less than it can be obtained at the very door of the factory producing it.

The amount in round numbers of this added charge, upon the basis of 80 pounds of sugar per capita, to the people of my State is about $250,000 per annum. Calculate what that has aggregated in the last 16 years, during which time the system has been in operation, and then add a similar tax upon the people of Utah, Arizona, New Mexico, Wyoming, Idaho, and Montana, for the same period, and some faint conception may be formed of the tremendous aggregate burden placed upon the people of that section of the country where sugar is produced more abundantly than elsewhere, wrung from them by the skillful and shrewd manipulation of transportation rates which operate as an added protective tariff, then ask what claim this industry has upon the American Congress. I am afraid the burden will be upon us always unless the Government, realizing the impossibility of changing these conditions by what it calls control, shall take over the great lines of transportation and operate them, as they should be operated, on terms of equality for all the people.

Mr. President, this intolerable situation is made possible by the cooperation of the American Sugar Refining Co., which, as

I have stated, is the largest single shareholder of the bulk of these concerns. It could end the practice if it would by the mere threat of competition.

It was stated, I think on the floor, somewhere in my presence, that the interest acquired a good many years ago in the beet-sugar companies by the American Sugar Refining Co. had been disposed of and that the American Sugar Refining Co. is at present arrayed against the beet companies and the ardent advocate of free sugar. Indeed, that bugaboo has been paraded before the eyes of the American people ever since the Democratic Party came into power in 1912 and directed its attention to a rectification of the abuses consequent upon the existence of this tariff.

The contrary is the fact, Mr. President. This concern deliberately set about securing control of the beet-sugar industry as far back as 1902. In a speech which I delivered upon this floor in September, 1913, I gave the details of the transaction and how it was accomplished. It is not necessary here to recapitulate them. Suffice it to say that at that time I inserted in the RECORD extracts from hearings upon the subject demonstrating that the American Sugar Refining Co. was largely interested in beet-sugar companies, which produced about 54 per cent of all the beet sugar in the United States, the interest of the refining company in these companies being approximately 42 per cent, or virtual control. The total amount in dollars of the holdings at that time was stated to be, in round numbers, about $23,500,000. In the recent annual report dated March 8, 1916, of the American Sugar Refining Co., I find this statement:

INCOME FROM INVESTMENTS.

The profit and loss account shows a larger return on "Income from investments" than in 1914. This is owing to larger dividend returns from its holdings of beet-sugar stocks, which companies as producers of their own raw material have prospered greatly with the higher range of prices. There has been a corresponding and substantial increase in the market value of these beet-sugar holdings which, however, have not been reappraised in the item of "Investments general," where they are carried at the same value as in former years. While the company during the last few years has disposed of certain beet-sugar stocks, as opportunity offered, and has so reported to its stockholders, it still has an interest in seven companies acquired many years ago and now carried for investment purposes solely.

If we turn now to its comparative statement for the years 1913, 1914, and 1915 it will be perceived that the profit from its own operations, that is to say the profit from the active and direct business of the company for 1915 were but $2,991,465.39. But its income from investments was $2,312,646.21, and the amount of its general investments are there stated as $22,577,772, or within a million dollars of the amount stated in 1913 as the total par value of all its holdings in beet-sugar companies. Evidently it has disposed of a very small proportion of these investments.

Now, Mr. President, I think that our common experience of human nature will tell us, if, indeed, that were necessary, that the investment of a great concern like the American Sugar Refining Co., producing an income in an amount which is the equivalent of that derived, its own business would hardly be antagonistic to the continuance of a protective duty, the existence of which is so very necessary to the preservation thereof.

But, Mr. President, we have the positive statement of Mr. Atkinson, now, I think, the president of that company, made before one of the committees of Congress, expressly declaring that the company was not identified with the free-sugar movement and was opposed to it, although he believed that some reduction of duty might be made.

There are companies, Mr. President, which are advocates of free sugar and which are engaged in the refining business, but to say that the American Sugar Refining Co., the greatest of them all, that huge concern with its millions upon millions of capital, controlling a majority of the sugar consumption of the United States, practically in control of seven of the great beet-sugar companies of the United States, which it acquired that competition with them might end, is advocating a policy or assuming a position antagonistic to its own expressed interests, is to assume something which is certainly not consistent with its general practice or with the laws of commercial procedure.

I have here, Mr. President, a statement of the refiners in the United States who favor free sugar, those who are undeclared, and those who are opposed to free sugar, which, at this point in my remarks, I ask leave to insert without reading.

The PRESIDING OFFICER. Without objection, it is so ordered.

The matter referred to is as follows:

REFINERS IN THE UNITED STATES FAVORING FREE SUGAR.

Federal Sugar Refining Co., New York.
Arbuckle Sugar Refining Co., New York.
Combined refining capacity, 15,000 barrels daily.

REFINERS IN THE UNITED STATES UNDECLARED BUT PROBABLY FAVORING FREE SUGAR.

Revere Sugar Refining Co., Boston.
Warner Sugar Refining Co., New York; in favor of moderate tariff before last Ways and Means Committee (1911).
McCahn Sugar Refining Co., Philadelphia.
Pennsylvania Sugar Refining Co., Philadelphia.
Combined refining capacity, 12,500 barrels daily.

REFINERS IN THE UNITED STATES OPPOSED TO FREE SUGAR.

American Sugar Refining Co., Boston.
National Sugar Refining Co., Long Island City.
National Sugar Refining Co., Yonkers.
American Sugar Refining Co., Brooklyn.
American Sugar Refining Co., Jersey City.
American Sugar Refining Co., Philadelphia.
American Sugar Refining Co., New Orleans.
Colonial Sugar Refining Co., New Orleans.
Henderson Sugar Refining Co., New Orleans.
C. & H. Sugar Refining Co., San Francisco.
Western Sugar Refining Co., San Francisco.
Combined refining capacity, 57,000 barrels daily.

NOTE.—The Revere, McCahn, and Pennsylvania Sugar Refining companies, while undeclared, probably would not oppose "free sugar" because, so far as I know, they make no special profits as the result of the tariff. The reasons for "opposed to free sugar" are clearly evident, as the companies named have, directly or indirectly, connections that make substantial profits because of the tariff.

Mr. THOMAS. Mr. President, I deny broadly that any duty whatever is essential to the continuation or the prosperity of the beet-sugar industry, and I base this denial, Mr. President, in some degree upon the statements and admissions of men connected with the industry from its inception and to which I had occasion to advert some two years ago. The Senator from Nevada [Mr. NEWLANDS] declares that inasmuch as Cuba can lay down sugar in the United States at 2 cents and inasmuch as the beet-sugar companies can not manufacture sugar at any such price a duty is necessary, if the latter pursuit is to continue.

Mr. President, upon the assumption that these figures are correct the conclusion drawn by the Senator is obvious. Conceding for a moment for the sake of the argument that they are correct, let me ask what great calamity would result to this country if its hundred million people could secure this prime necessity of life for a trifle over 2 cents a pound? Think of the saving to them if, indeed, it were true that from an isle of the sea near to our shores this great blessing were possible, and think, Mr. President, of what could be accomplished by diverting the capital and the labor now connected with this highly-protected industry into other sources of desirable production. To my mind, those conditions are not at all undesirable, and I would welcome the day when every necessity of life essential to the existence of human kind could be reduced in proportion, so that they would in abundance be within the reach of every man, every woman, and every child in the Nation. It is to me a much more pleasing prospect than the levying of a tax upon every stick of candy in the baby fingers of every child in this country in order that these huge concerns with their millions may add to their vast possessions year after year.

But, Mr. President, I do not think the Senator from Navada knows, and I am sure that I do not, what the cost of Cuban sugar or of beet-sugar production in this country is. I know that Mr. Oxnard said in 1899 that with sugar at 4 cents a pound he could make enormous returns upon his proposed investment, and I am satisfied that he enlisted a good deal of capital upon the faith of that statement. I know that such a thing as the cost of a pound of beet sugar is impossible of definite calculation. You can get it, if you please, in one factory to-day, but the price in that very factory may vary to-morrow; you can get an average, if you please, in half a dozen factories; but to say that it is possible either in Cuba or in the United States to ascertain and fix a definite cost or an actual cost of sugar production is to make a statement which I think, Mr. President, it is impossible to support.

In all of the calculations that I have seen upon the subject—and I have seen a good many—I have discovered no allowance for by-products, no allowance for efficiency in the factory force or the lack of it, no allowance based on the sugar content of the beet, nor in the wear and tear, which is an essential factor in the matter of cost, nor have I ever been able to see a balance sheet showing the actual amount of expenditure and the actual amount of receipts, between which is the difference of profits, from which the cost can be intelligently calculated.

I recall, Mr. President, that when the Hardwick committee was in session the chairman demanded from some of the witnesses before that committee a statement of the cost of beet-sugar production, and Mr. Truman G. Palmer, then the expert and the representative of the beet-sugar companies, in writing upon the subject to Mr. Charles C. Hamlin, also a representative of the beet-sugar interests, said that there was no way out of compliance; but instead of calling witnesses to be examined

by the committee he thought it would be better to wait until the hearing was over and then issue a circular calling attention to it—a most disingenuous way, putting it mildly, of meeting a demand of the chairman of an important committee regarding a subject absolutely essential to a proper understanding of the situation.

Mr. President, I shall not take the time of the Senate in going in detail into this matter of the cost of production; but I assert now, as I asserted then, that whatever the effect may be in other sections of the country, the great arid and semiarid regions of the West, including California, the natural home of this industry, can produce beet sugar at an ample profit upon the capital actually invested without any protection whatever. Nature has furnished conditions there, Mr. President, which constitute the best possible protection and which legislation can not affect or destroy.

The sugar beet is a peculiar vegetable. In its initial stages of growth it needs a great deal of water; in its medium stages of growth it needs very little; during the sugar-forming period it needs none. Our system of irrigation enables us to regulate this demand of the plant so that at its various stages of growth and maturity it may be supplied with precisely the moisture that it needs. It is not there subject to the conditions of a more humid region, which is liable to periods of undue moisture and of undue drought. That element is the subject of artificial regulation. It needs constant sunshine; and out in that region there are from 300 to 320 days of sunshine every year. It needs cool nights, and at that altitude, more than a mile above sea level, the nights are always deliciously cool, however sultry the weather may be at midday.

Those conditions, Mr. President, will ultimately assert, indeed they are now asserting, themselves as against the industry in other sections. A good many factories have been built in some of the States farther east, in some of the humid States; built sometimes for purposes of speculation, sometimes for political reasons, as was the case of the factory in Iowa, which, according to the lobby hearings, was built more to affect and influence the attitude of the then senior Senator from Iowa, Mr. Allison, than to make sugar for the multitude. His State being interested in this great industry through the erection of a lonely plant, he would naturally want to protect it. Other great factories have been built in unfavorable sections and in the best of faith. They can not compete with the conditions to which I have adverted, even with a tariff that might be specially designed for their protection. Hence, I say, that in the natural progress of the development and growth of an industry these natural, necessary, and superior advantages must assert themselves, and in the course of time all of the production will be gathered into that region. Indeed, that gathering process has been in evidence for some time. A large number of the factories in my State have been transplanted from Michigan, from Wisconsin, and from Nebraska; a large number of those in other of the arid States have been transplanted from other sections in order to get the advantage, the absolutely necessary advantage, of these natural conditions.

To say, therefore, that these huge concerns, with their treasuries bursting, Mr. President, with millions, and which are dropsical with watered stock, need an extension for four years more of the duty of 1 cent per pound, or need it indefinitely, if they are to exist at all, does not comport with the actual conditions, and never did.

My distinguished friend from Nevada [Mr. NEWLANDS] declares that beet sugar is entitled to fair protection. He believes it, and he doubtless thinks that this bill gives fair protection if we should accept its provisions as it came from the House.

Mr. NEWLANDS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Nevada?

Mr. THOMAS. I do.

Mr. NEWLANDS. Mr. President, I think the Senator from Colorado will find that I insisted that this agricultural product should receive the same fair treatment as is received by other agricultural products, and inasmuch as almost all the agricultural products of the humid region are upon the dutiable list, it would be unfair to put this agricultural product, which is especially the product of the arid and semiarid regions, upon the free list. I did not say that it was entitled to protection.

Mr. THOMAS. Mr. President, I am very glad that the Senator from Nevada has corrected me, as I do not desire to misrepresent him. The note which I took during the course of his remarks is that "beet sugar is entitled to as fair protection as other agricultural products are." I was coming to that. I think the Senator, who has been in public life for a long time, knows that this so-called system of protection of purely agricultural products is the veriest of all the humbugs of protection.

Why, Mr. President, think of a protective duty in this country on potatoes and wheat and asparagus and eggs and other commodities, of which we produce an abundance and much of which we export. That is merely the sop, the tub, thrown to the farmer whale by the protectionist of the past, and, unfortunately, many of the farmers have been deceived and deluded into a false sense of security in consequence of it. They actually think it does them good. Why, during the consideration of the Canadian reciprocity bill we were face to face with the remarkable spectacle that the farmers of the United States were going to be ruined if we had reciprocity with Canada, and that the farmers of Canada were going to be ruined if they had reciprocity with America. That condition of things, Mr. President, absurd as it was, actually found a serious lodgment in many minds, notwithstanding the ruin so freely prophesied was due to the resulting prosperity and monopoly of trade in agricultural products by the other.

Mr. NEWLANDS. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Nevada?

Mr. THOMAS. I do.

Mr. NEWLANDS. The Senator from Colorado will bear in mind, however, that the duties to which I referred upon the agricultural products of the humid region were not duties that were imposed upon them by a Republican tariff, but are the duties that are imposed by a Democratic tariff.

Mr. THOMAS. Does the Senator from Nevada mean to say that the Republican Party did not impose those duties?

Mr. NEWLANDS. They did, yes; but they were maintained by the Democratic Party, and I insist——

Mr. THOMAS. They did impose those duties, and we did not have the courage of our convictions and remove them all. They perform no function save to encumber the statute books.

Mr. WILLIAMS. We reduced them, however, by about 50 per cent.

Mr. THOMAS. That is true.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. The Senator from Colorado has the floor. Does the Senator yield; and if so, to whom?

Mr. BORAH. Mr. President——

Mr. THOMAS. As I said before, these were designed to flatter the credulity of the farmers, and, having a great voting agricultural population, we partially continued that protection, because we were unable, in view of our individual differences, to make effective all the reforms in tariff legislation which some of us wanted to make.

Mr. NEWLANDS. Mr. President, will the Senator from Colorado permit me to interrupt him there?

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Nevada?

Mr. THOMAS. Yes.

Mr. NEWLANDS. Just right there, in connection with what the Senator says—and I admire the Senator's candor; I think he has very properly commented upon this action—I insist upon it, that in whatever method we do act the action shall be fair and proportionate as between different sections of the country.

Mr. THOMAS. In other words——

Mr. NEWLANDS. If we conclude to remain upon a protective basis as to certain agricultural products in the humid regions, where, perhaps, votes are necessary, fairness demands that we shall not drift the agricultural products of another region absolutely to the free list.

Mr. THOMAS. Mr. President, the Senator's admission——

Mr. BORAH. Mr. President——

Mr. THOMAS. Just a moment and I will yield. The Senator's position virtually is that because it may seem necessary to protect the potatoes of the Wisconsin or the Michigan farmer, who has a hard time to make a living at all, in order to be fair it is equally necessary that we should protect these huge aggregations of capital which manufacture beet sugar and who now have more money than they know what to do with.

Mr. NEWLANDS. Mr. President——

Mr. THOMAS. I must yield now to the Senator from Idaho.

Mr. NEWLANDS. I wish the Senator would let me say right there——

The PRESIDING OFFICER. The Senator from Colorado has the floor, and declines to yield.

Mr. THOMAS. With the consent of my friend from Idaho, I will give the Senator from Nevada another chance.

Mr. NEWLANDS. I wish the Senator from Colorado would distinguish between the great aggregations of capital that simply put an agricultural product into shape for consumption and the great agricultural industry itself that produces that product upon the farm.

Mr. THOMAS. I am coming to that.

Mr. NEWLANDS. I will join with the Senator from Colorado in any movement that will prevent extortion on the part of great aggregations of capital, that will prevent unjust discrimination as between sections regarding freight rates, and so forth, but I am talking about the basic industry. You can not maintain this industry unless you have beets; and if you produce beets you must have sugar factories, of course; and, however obnoxious they may be to our ideas of monopoly, our prejudice against the monopoly which produces the sugar product should not prevent us from dealing fairly with the basic industry itself.

Mr. THOMAS. Mr. President, with the permission of the Senator, I will say that I am coming to that feature of the situation pretty soon; but I have reached the point where I can not distinguish between the farmer who waters his stock and may therefore need protection and the beet company that waters its stock because of protection.

Mr. BORAH. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Idaho?

Mr. THOMAS. I yield to the Senator from Idaho.

Mr. BORAH. In the interest of the rule and precedent, I ask that the Senator from Colorado be permitted to proceed by unanimous consent.

The PRESIDING OFFICER. The Senator from Colorado will be allowed to proceed by unanimous consent.

Mr. THOMAS. Mr. President, I am very grateful to my friend from Idaho, but if I properly understand the present parliamentary situation, the recent appeal of the Senator from Mississippi [Mr. WILLIAMS] from the ruling of the Chair upon that subject has smashed all previous records and leaves us at liberty to conduct ourselves as we please.

The PRESIDING OFFICER. The present occupant of the Chair feels that he is bound by that rule, but, by unanimous consent, the Senator may proceed.

Mr. THOMAS. Mr. President, the Senator from Nevada is concerned, and very properly so, for the beet raiser. So am I. He is the man whom I would fain protect, if protection is necessary, and he needs it, but he needs it from the refiners and not from the Congress of the United States; he needs it from the only customer that he has, not from legislation that we may enact; and if we enacted it, Mr. President, it would not amount to much for him, because, as I have stated, all, or nearly all, such legislation designed for the ultimate producer fails usually to realize the hopes of its advocates.

Now, my friend the Senator from Nevada perhaps does not know that, although the price of sugar has advanced from about 4 cents to nearly 8, and will go to 10 cents, although the surpluses of the refiners have advanced from $2,000,000 and $4,000,000 and $5,000,000 to $5,000,000, $10,000,000, and $20,000,000; that, although their common stock has advanced from $4 and $10 and $15 up to $100 and $150 and $205 per share, there has been no increase in the prices paid to the Colorado farmer for his beets, and not very much anywhere. The farmer of my State makes to-day what he did before. Rising markets mean nothing to him.

In order to demonstrate this, I shall read a couple of letters which I have received from gentlemen fully acquainted with the conditions in my State. I wanted first-hand information about it before making the statement, and so I wrote them. One is from Mr. Albert Dakan, the attorney of the Beet Growers' Association. His letter is dated March 24, and he says:

> Answering yours of the 20th instant, there has been no advance made to the beet grower of northern Colorado by the Great Western Sugar Co. in its 1916 contract. The new contract is the same in price paid for beets as that of 1915.

The other is from Mr. John A. Cross, for many years sheriff of his county, afterwards State senator, and at present postmaster at Loveland, Colo., where one of the great factories of the Great Western Co. is situated. His letter is dated March 23, and is as follows:

> DEAR FRIEND THOMAS: Yours received to-night. The Great Western Sugar Co.'s contracts for beets for 1916 are for just the same price that they paid last year; and they paid their laborers at the factory during the last campaign the very lowest wages that they could get men to work for, and we shorthanded much of the time, and worked their men very hard. They keep their expenses for labor and production down to the very lowest possible point, while they are making their millions every year.

O Mr. President, if my friend the Senator from Nevada could enact a system of tariff legislation which would be carried past the manufacturer and benefit the man who toils in the field, so that it might shower its blessings upon his product, I would gladly join him; but this sugar tariff is all absorbed long before it reaches the grower.

Now, what is the spectacle? The farmers, working from sunrise to sunset, during the storm and heat and changeable weather conditions, with the expense of living rising in all directions, with fair knowledge of the fact that the company which constitutes his only customer is prospering as such institution never prospered before, must content himself with practically the same compensation, and that barely sufficient to pay the actual cost of production. My recollection, Mr. President—I may not state it accurately—is that it requires about 12 tons of 15 per cent beets to the acre to pay the cost of the farmer's production. What he gets above and beyond that is profit; but that does not take into consideration interest upon his capital or the value of his farm.

Mr. President, paralleling these conditions here, let me turn for a moment to those which prevail in the countries at war. The Government of France has fixed the price which the farmer shall receive for beet roots at $9.65 per ton. The average here is $5.50. In Austria-Hungary the price is fixed at $8.12 per ton minimum. In Belgium—even in poor, desolated Belgium—the German authorities have stipulated a price of $8.49 per ton. Our Department of Agriculture shows that the average price which the farmer receives in this country is $5.54, less than the average paid in Germany prior to the war; and yet these concerns, bursting and bulging with enormous and incalculable profits, declare that they can not exist unless we continue the protective duty of 1 cent a pound, which means an added cost of a necessity of life of $86,000,000 per year to the consumers of this country.

Mr. President, I want to advert now to a phase of the subject of labor cost which I should like my friend, the junior Senator from Iowa [Mr. KENYON], to hear, but unfortunately he is not in the Chamber. He has taken a great and laudable interest in the antichild labor bill. He has given the subject great consideration, and is the chief advocate of that measure in this body. His whole heart is in the subject, but his attention has been directed so far, chiefly if not entirely, to the conditions of child labor in the factories of the country, and particularly in the factories of the South. I want to emphasize the fact that, notwithstanding the profits of this industry, notwithstanding its great and unexpected prosperity, child labor is conspicuous in the beet fields of Colorado. It is one basis of productive energy to as great, if not a greater, extent than before the war, and certainly to as great a degree as child labor has ever been exploited in the Southern States.

I shall read, Mr. President, an article from a newspaper, the Denver News, which is entirely devoted to the features of the House bill now under consideration, and which does not approve the position which I, as a Senator from Colorado, occupy toward it.

A few days ago the Rocky Mountain News—I think it was the 12th of March—published an article entitled "Labor in fields retards pupils. Child-labor committee report estimates 5,000 children work in beet industry."

That is in my State, but one of the many Commonwealths engaged in this industry. I will read the article:

> Five thousand children are reported to be working in the beet fields of Colorado during the growing season of each year, according to figures given out last week by the national child-labor committee. School-teachers and the national child-labor committee, as well as other authorities, have been gathering information on this subject for some years, a part of which has been made into reports.
>
> The committee declares that the children are overworked in the fields, so much so that their progress in their studies is seriously hampered.
>
> The children are used principally in caring for the beets while they are growing. The farmer who contracts with the beet-sugar factory to grow a certain number of acres is told that he must place a proportionate number of persons upon the tract. If he has 20 acres, he will require a certain number of laborers; if 40 acres, he must have twice the number. The work of thinning, cultivating, topping, and irrigating the beets is done by contract, the head of a family being paid a certain price per acre—from $18 to $20—for the work.

The first subhead is:

> SIX-YEAR-OLD CHILDREN WORK.
>
> Russian men usually contract to do the work, and when the farmer looks about for some one to engage for the summer, he inquires for a family with the number of members to correspond with that required for the work. Ordinarily the contract is made for a father, mother, and children to make up the required number.
>
> The age of the children is said to be taken into consideration under the contract, and those of tender years are not expected to do any of the field work. But the real working of the system is declared, both by teachers in the Denver public schools and by others who have investigated the matter, to be that the children of 6 years are sent into the fields. Those from 8 to 10 are said to be employed constantly during the weeding, thinning, and topping seasons.
>
> An investigator states that he had found the practice has been for work to commence in the fields as early as 3 o'clock in the morning, when the first sign of day begins to peep in from the east.

Six-year-old children at 3 o'clock in the morning begin their daily toil.

The next subhead is:

SEVENTEEN HOURS OF LABOR.

At 7 o'clock the workers have breakfast, sometimes going to the "Russian house" for it and sometimes it being served in the fields, so that the labor does not cease. Again at noon the workers are fed in the same way, being allowed a half hour for that purpose. They take their supper at about 6 o'clock and return to their labors, staying out in the fields until 8 o'clock at night, or even later.

The average hours of work for children in the fields is declared to be about 17 during the busiest seasons.

One abuse of the system that investigators say they have discovered results in a charge of peonage. This is that if the family desiring to take a contract for the handling of the beets upon a farm is not as large as required under the rules, the head of the house hires children from other families.

Sometimes the farmer does the managing himself, hiring men, women, and children to do the actual labor.

I am satisfied, Mr. President, that this statement does not apply to the American farmer. A great many of the farm workers in the beet field, who are emigrants from Russia, Bohemia, and other countries, having acquired money sufficient to make an initial payment, purchase lands of their own and engage largely in the work of raising beets and work their children upon their farms. Such is my information.

The work of thinning and weeding is done on the knees, usually in soil that was irrigated the day before or maybe only a few hours before, and is wet and cold.

Denver teachers who have had charge of children used in the fields during the summer state that the work keeps the youths out of school during two months of the year set apart for their education. The teachers also say that children come in from the fields so worn out as to be unable to do satisfactory studying for several weeks. The effect is that they practically lose about four months of the school year, and are kept in grades twice as long as those who are able to attend regularly.

One teacher in the Denver schools received the following letter from a pupil who had been hired from a city family to do work in the fields during the summer:

"DEAR TEACHER: It is rainy to-day so I could write you a letter. We was working very, very hard the last two weeks, and we did work last Sunday, too, because beets grow so fast.

"We get up in the morning 3 o'clock every day and we work till 12 o'clock, then we have our dinner about half an hour, and then we go to work till 7.15, so we worked about 15 or 16 hours. Oh, it's too hard! I wish I didn't have to go any more to work beets and could spend my time in school. School is what I like, but I have to make my living to work so hard."

The next subhead is:

WALKS 80 MILES ON KNEES.

"Four of us worked 60 acres of beets, and in this month I have to walk on my knees 80 miles, and thin the beets at the same time, and to hoe that 80 miles, it takes me to do it about 34 days. I get $6 an acre to block and thin, so I make $90. But it's too hard to walk that 80 miles on your knees on hot summer days. I get sleep about six hours a day, and you know it isn't enough for that kind of job.

"Soon as I lay in a bed I am sleeping in about three minutes, and I never wake up until our clock strikes to alarm. I am glad it's raining to-day so I could rest a little. I am going to make our dinner now, and after dinner I am going to sleep.

"I tell you everything about hard work when I come to Denver."

The report of the National Labor Committee says that the children between 7 and 15 employed yearly in the sugar-beet fields of Colorado, according to estimates made by the superintendent of schools, lose two or more school months as a result.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Ohio.

Mr. THOMAS. I yield to the Senator.

Mr. POMERENE. What discount is given by the sugar mills out there upon the sugar which is consumed by these little children?

Mr. THOMAS. Alas! Mr. President, no discount is given, either to them or to anybody else. These companies are absolutely democratic when it comes to discounts. All consumers look alike to them.

SCHOOL WORK SERIOUSLY AFFECTED.

That the loss of schooling seriously affects the progress of the beet workers in school is shown by the fact that the average per cent of retardation among the beet workers is 53 per cent as compared with an average of 20 per cent for the nonbeet workers, says the report.

The work the children do in "pulling" and "topping" the beets involves great physical strain when continued for 12 hours a day throughout the harvesting season.

The report states that compared with the total number of persons engaged in beet culture, the number of children under 14 employed is small, and that therefore the industry would not suffer if they were eliminated.

The compulsory education law is not enforced in the beet sections, and the report recommends the reorganization of the school system on a county unit instead of a district basis to secure enforcement of the law by removing it from local influence, and thus control the employment of children in the beet fields

Mr. SMOOT. Who is the author of the letter? Will the Senator say?

Mr. THOMAS. This is taken from the Rocky Mountain News of March 12. It is attributed to "inquiries made by the national child-labor committee of school teachers as well as other authorities."

Mr. SMOOT. I do not know how it is in Colorado or the other States, but I do know that the laws in my State compelling children to go to school are absolutely enforced.

Mr. THOMAS. Mr. President, of course I accept the Senator's statement; and yet I think he will admit that children are employed to work long hours in the beet fields of Utah just as they are in the other beet-sugar States of the West.

Mr. SMOOT. Mr. President——

Mr. SMITH of South Carolina. Mr. President——

Mr. THOMAS. I yield to the Senator from South Carolina. I will yield to the Senator from Utah in just a moment.

Mr. SMITH of South Carolina. I simply wanted to ask the Senator from Colorado if the supervision of these children is included in the Keating child-labor bill?

Mr. THOMAS. The Senator must answer his own question, because I think he knows more about that bill than I do, as I have not yet read it. My impression, however, from the discussion which accompanied the remarks of the Senator from Iowa [Mr. KENYON] is that it does not include agricultural laborers.

I now yield to the Senator from Utah.

Mr. SMOOT. I will simply say to the Senator, in answer to what he has stated, that the children in the State of Utah do work in the beet fields for the thinning of beets only. It is the easiest work that a child can do. It is the most healthy work that a child can do, because he is out of doors. They are all paid so much per row. I have never heard anybody, either a parent or anyone else in the State, complain of the work; but I do know that it is a most profitable work for a child, and has done a great deal of good toward keeping children off the street, and has brought in a fair income to the child; and in many cases it is the means of starting a savings account that grows each year.

Mr. THOMAS. Will the Senator inform me how many hours the children work in his State?

Mr. SMOOT. I do not think they work over eight or nine hours a day. Mr. President—none that I know of.

Mr. THOMAS. I am glad to know that.

Mr. POMERENE. Mr. President——

The PRESIDING OFFICER. Does the Senator from Colorado yield to the Senator from Ohio?

Mr. THOMAS. I do.

Mr. POMERENE. Is the number of hours limited by statute in the Senator's State as to child labor on the farms?

Mr. SMOOT. No; not on the farms.

Mr. POMERENE. Or in the beet fields?

Mr. SMOOT. But I will say this to the Senator: In our State the children mostly help the father upon the farm. So many of them are beet growers. They all have small patches to cultivate. There are no great, large acreages of beets grown in the State of Utah. Some of them have an acre, some of them 2, hardly any of them above 10 acres. The father takes the children with him during the thinning of the beets, and the children thin the beets while he is doing the other necessary hard work in connection with the cultivation of the beets.

Mr. THOMAS. Mr. President, I am very glad to learn that the State of Utah seems to be a shining exception to this situation, and I wish its example could be copied, and copied at once, by the adjoining States. In my State, and I think in some of the others, the work to which I am now referring is done largely by Mexicans and their children, by Russians and their children, by Bohemians and their children. They work in colonies, living somewhere in the towns during the winter season, and exploiting the beet fields in companies during the summer.

As to the extent to which this practice goes, I am unable to say; but I feel sure that in the State from which I hail, which yields one-third of all the beet sugar produced in the United States, whose refiners are to-day the owners of more millions than they ever imagined in their wildest dreams of accumulation, do not stand very well before the American public in pleading for a continuation of this tax, when it is evident that they not only pay the farmer no more for his beets than they did before, they not only do not pay their factory workers any more than they did before, but they obtain the benefit of, if they are not directly responsible for, the exploitation of little children working 14 to 17 hours a day in the production of the crop which is essential to their industry. They do not appeal to me, Mr. President, in the light of these facts, even if it were necessary that we should tax 100,000,000 people indefinitely, to the end that they may continue to prosper.

I have said more perhaps than I had intended to say upon this subject. I felt it my duty to give expression to my views with regard to the expediency of this proposed legislation, largely because I represent in small degree that section of the

country which is interested in the subject. I believe that these facts should be laid before the public in order that they may properly judge of the wisdom or propriety of our action in postponing the operation of this law.

Mr. President, the enormous profits which these companies are reaping from our people through the agonies of Europe, and the consequent change of business conditions, pay but little of the taxes levied for the support of the States where they operate, and practically none at all upon their surplus. Those with which I am familiar are organized in the State of New Jersey, where their tax is regulated with regard to the amount of their capitalization. The taxes which they pay in my State are paid upon their visible property. I think the only tax which they pay upon their vast accumulations of money is the 1 per cent exacted by our Federal income-tax law.

We need revenue, Mr. President, and need it badly. We are going to expand the area of our expenditures, and therefore we shall be obliged to increase taxation far beyond its present extent. I believe that a tax of 5 per cent upon these enormous profits, or 10 per cent, if you please—a tax upon the accumulated wealth of the country—is far more just and far more desirable at this supreme moment in the national affairs than the extension of a tax upon an absolute necessity of life, only one half of which we realize; the other half going to swell the millions of these big and favored institutions.

I would that it were possible to-day to substitute for the Senate bill an increase of the income tax upon these huge concerns, and thereby compel wealth to pay a more equal portion, a more just portion, of the revenues needed in the operations of our Government. The committee of which I am a member have decided otherwise. With much reluctance, I have accepted the compromise which they have offered; and if I cast my vote at all, I shall feel compelled to support it.

Mr. CURTIS. Mr. President, the chairman of the committee announced in his opening statement as one of the reasons for continuing the law the fact that the Republicans had placed sugar upon the free list in 1890. I desire to call the Senator's attention to the fact that while sugar was placed upon the free list in the act of 1890, yet, to encourage the production of beet, sorghum, or cane sugar in this country, a bounty of 2 cents a pound was to be paid upon beet, sorghum, or cane sugar produced within the United States. In addition to that there was a provision to secure reciprocal trade with countries producing and exporting sugar, molasses, coffee, and other products, and if any country failed or refused to enter into satisfactory arrangements with this country the importation of sugar from that country should pay a duty.

In 1890 the production of beet sugar in this country amounted to only 2,353,568 pounds, while the production in 1915 amounted to 1,328,000,000 pounds. I think the great increase in the production of beet sugar under the protective system of the Republican Party is evidence of what may be done with that industry if it is properly protected.

I do not blame the other side for continuing this law for four years. I should be pleased if the majority would remove the limitation and agree to the House bill which repeals the law, and, for one, I shall support the House provision in preference to the Senate provision. But I am not criticizing the Senators on the other side, because they need the revenue, and need it badly.

The amount of duty collected on sugar each year has been a great addition to the revenues of the Government. In 1914 the amount collected was about $61,000,000, while the sugar imported that year upon which a duty was collected amounted to about 5,000,000,000 pounds. There were over 2,000,000,000 pounds of sugar produced in the United States and nearly 2,000,000,000 pounds were brought from the noncontiguous territories of the United States—Porto Rico, Hawaii, and the Philippines. When it is remembered that the ordinary receipts of the Government for the year ending June 30, 1915, including over $39,000,000 corporation income tax, over $41,000,000 individual income tax, and $52,000,000 emergency or war tax, amounted to over $697,000,000, and the ordinary disbursements for that year amounted to $731,000,000, which left a deficit for the year of over $33,000,000, it is not surprising that the Democratic majority should desire to have the benefit of a duty on sugar. They need it, and need it badly.

It must be remembered that the deficit for the fiscal year to date is nearly $53,000,000, and it is estimated that it will amount to over $64,000,000 by June 30, 1916; and it is estimated by the department that the excess of appropriations, exclusive of deficiencies and miscellaneous, over estimated revenues for the year ending June 30, 1917, will amount to over $366,000,000, and the increased estimates for 1917 over the same for 1916 amount to more than $195,000,000. It will be noticed that the deficiencies have been excluded from the estimates by the department; and you will agree that it is wise to exclude them when you remember that this administration has already presented three emergency deficiency measures at this session of Congress, when heretofore one such measure has usually answered the purpose of the department at one session.

Personally I am very sorry that the Senate Committee on Finance amended the House bill and limited its operation to four years. I should like to see a duty on sugar, for I believe in protecting that industry, and believe that if properly protected it will not be long until all the sugar consumed in the United States will be produced in this country. The great increase in the production of beet sugar justifies this prediction. Ten years ago there was produced in the United States only about 600,000,000 pounds of beet sugar, while in 1914 the production amounted to over 1,000,000,000 pounds.

The chairman of the committee stated that this additional revenue was needed, and left, or at least tried to leave, the impression that it was because of the great decrease of revenues collected and the conditions brought about by the war. An examination of the reports of the Secretary of the Treasury will show that under the change the loss in revenue from customs in 1915, as compared with 1913, was only $109,000,000, while there was collected in corporation income tax, individual income tax, and emergency or war-revenue tax $133,262,884 in the year 1915. It seems to me that, instead of laying this matter upon the war, Senators on the other side ought to be honest and say that it is brought about by the mistake they made when they wrote the Underwood law upon the statute books of this country.

I shall vote for the House bill because I believe in the American system of protection; and if the Senators on the other side were fair in their contention instead of voting for this measure they would do what was suggested by the Senator from Colorado a few moments ago and lay the duties upon some other articles. I congratulate the majority in coming over at least to four years of protection; and I hope that before the vote occurs to-morrow they will agree to the House bill and let it go through instead of supporting the Senate amendment, which continues the duty on sugar for four years.

Mr. SMOOT obtained the floor.

Mr. CURTIS. Mr. President, I make the point of no quorum.

The PRESIDING OFFICER (Mr. MARTINE of New Jersey in the chair). The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Bankhead	Husting	Oliver	Smith, Ga.
Brandegee	Johnson, Me.	Overman	Smith, Mich.
Broussard	Jones	Owen	Smoot
Bryan	Kenyon	Page	Sterling
Burleigh	La Follette	Phelan	Sutherland
Chamberlain	Lane	Pittman	Swanson
Chilton	Lewis	Poindexter	Thompson
Clapp	Lippitt	Pomerene	Tillman
Clark, Wyo.	Lodge	Reed	Underwood
Colt	McCumber	Robinson	Vardaman
Curtis	Martin, Va.	Saulsbury	Wadsworth
Gallinger	Martine, N. J.	Sheppard	Warren
Hardwick	Myers	Sherman	Williams
Hitchcock	Nelson	Shields	Works
Hollis	Newlands	Simmons	
Hughes	Norris	Smith, Ariz.	

Mr. SMITH of Michigan. I desire to announce the unavoidable absence of my colleague [Mr. TOWNSEND], who is detained from the Senate on account of illness in his family. I should like to have this announcement stand for the day.

The PRESIDING OFFICER. Sixty-two Senators have responded to their names. A quorum is present.

Mr. SMOOT. Mr. President, the unanimous-consent agreement provides that the vote shall be taken not later than 5 o'clock to-morrow upon the pending bill. I wish to say to the Senator from North Carolina that I understand there are some Senators who desire to speak to-morrow. I do not particularly care if I speak this afternoon or not, or whether I speak at all. The Senator from Massachusetts [Mr. LODGE] I think wants to be heard, and we shall have ample time to-morrow to dispose of the bill. I ask unanimous consent that the Senate proceed to the calendar under Rule VIII and consider bills to which there is no objection.

Mr. SIMMONS and Mr. WILLIAMS addressed the Chair.

The PRESIDING OFFICER. The Senator from North Carolina.

Mr. WILLIAMS. I rose to respond to the request for unanimous consent.

Mr. SIMMONS. I wish to state that if there is any Senator on either side of the Chamber who desires to speak upon the pending bill I will object to the request of the Senator from Utah, but if there is no Senator who desires to speak I would not feel disposed to object.

Mr. WILLIAMS. If the Senator from Utah will ask unanimous consent simply to take up the calendar, I shall not object, but if he asks unanimous consent to consider only such bills as are upon the calendar that no Member shall choose to object to I shall object to that request.

Mr. SMOOT. I wish to state to the Senator from Mississippi that there are 18 pages of bills now on the calendar to be considered under Rule VIII. At least 99 per cent of them could probably be passed this afternoon if we proceed to the calendar under Rule VIII and consider only unobjected cases, but if we proceed under Rule VIII the very first bill on the calendar is a bill to provide for stock-raising homesteads, and for other purposes, and no doubt it would take the afternoon to dispose of that bill and perhaps longer.

Mr. WILLIAMS. That is not the effect of my objection. My objection to this method of proceeding is that whenever there is any bill of any real importance upon the calendar to which one, two, three, four, or five Senators may object, but to which, it is hoped, a majority of the Senators would not object, and which might be passed, it is passed over from day to day indefinitely and is never considered, and the only measures that are taken up are local bills of one sort and another in which no one is interested except those in the neighborhood or from the particular State or section, and they are gotten out of the way, while if a bill is of some importance and you get it off the calendar you have something off the calendar finally. We ought, in fact, in this body to have one calendar day every week or every two weeks, at any rate, for the consideration of nothing but the calendar, and I hope the Committee on Rules, before many weeks, will report such a rule, but I shall object to merely the consideration of such bills as are not objected to. I think the power of one man in the Senate is too extensive, anyhow, and I do not care to accentuate it.

Mr. OVERMAN. If it is the Senator's idea to get a bill through to which Senators object, we would not make any headway with the calendar. We would continue just on that one bill.

Mr. WILLIAMS. If we are to go to the calendar this afternoon, it ought to be for the consideration of some of the important bills that are upon the calendar.

Mr. SMOOT. If the Senator from Mississippi is going to object there is no need of discussing it further. I wish to say to the Senator that many bills on the calendar must go to the House and be passed by the House, and if bills to which there is objection are held back here there may not be any action on those measures to which there is no objection, and I fear the legislation will fail in the House.

Mr. WILLIAMS. I will not object to them when they are reached in regular order.

Mr. SMOOT. Do I understand that the Senator from Mississippi objects?

Mr. WILLIAMS. I think the Senator understands it.

The PRESIDING OFFICER. Objection is made.

Mr. SIMMONS. I understand that the Senator from Massachusetts is going to take the floor.

Mr. LODGE. No; I have no desire to make a speech on the sugar bill. At the appropriate time I intend to offer as an amendment a provision in regard to dyestuffs. I shall not debate it at any length. I will offer that amendment now and ask that it be read.

The PRESIDING OFFICER. The amendment will be read.

The SECRETARY. It is proposed to amend the bill by inserting the following:

That on and after the day following the passage of this act there shall be levied, collected, and paid upon the articles named herein when imported from any foreign country into the United States or into any of its possessions, except the Philippine Islands and the islands of Guam and Tutuila, the rates of duties which are herein prescribed, namely:

DUTIABLE LIST.

First. All products of coal, produced in commercial quantities through the destructive distillation of coal or otherwise, such as benzol, toluol, xylol, cumol, naphthalin, methylnaphthalin, azenaphten, fluorin, anthracene, phenol, cresol, pyridin, chinolin, carbazol, and other not specially provided for and not colors or dyes, 5 per cent ad valorem.

Second. All the so-called "intermediates," made from the products referred to in paragraph 1, not colors or dyes, not specially provided for, 3½ cents per pound and 15 per cent ad valorem.

Third. All colors or dyes derived from coal, 7½ cents per pound and 30 per cent ad valorem.

FREE LIST.

Fourth. Acids: Acetic or pyroligneous, arsenic or arsenious, chromic, fluoric, hydrofluoric, hydrochloric or muriatic, nitric, phosphoric, prussic, silicic, sulphuric or oil of vitriol, and valerianic.

Fifth. Coal tar, crude, pitch of coal tar, wood or other tar, dead or creosote oil.

Sixth. Indigo, natural.

SEC. 2. That paragraphs 20, 21, 22, and 23 of Schedule A of section 1 of an act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved 9 o'clock and 10 minutes p. m. October 3, 1913, and paragraphs 387, 394, 452, and 514 of the "free list" of section 1 of said act, and so much of any heretofore existing law or parts of law as may be inconsistent with this act are hereby repealed.

Mr. LODGE. I move that as a new section to be added to the amendment proposed by the committee.

PENSIONS AND INCREASE OF PENSIONS.

Mr. SMOOT. I move that the Senate proceed to the consideration of Order of Business 222 on the calendar, being the bill (S. 4856) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

Mr. SIMMONS. Mr. President, I wish to inquire of the Senators on the other side of the Chamber if there is any objection to our proceeding to vote upon the amendment to the sugar bill and upon the bill now. Under the unanimous-consent agreement we are to vote not later than 5 o'clock to-morrow. I assume that we could consistently with the rule vote now, and I do not see any reason, if no Senator is ready to speak, why the matter should be put over until to-morrow in order to enable Senators to speak. Why should we not vote now?

Mr. SMOOT. I understand that there are one or two Senators who intend to speak briefly on the bill, but they are not here to speak now and they will be ready to speak to-morrow. Of course the discussion of the Army bill could be carried on until 5 o'clock to-morrow, but I want to assure the Senator that there is no intention whatever to delay the passage of the bill. The only object that I have in the world is to occupy the time of the Senate profitably during the afternoon in passing bills upon the calendar.

Mr. SMITH of Georgia. Mr. President, it does seem to me, if we intend to pursue that course, we should begin at the top of the calendar, and dispose of bills which are near the top of the calendar first.

Mr. SMOOT. We would not dispose of them this afternoon.

Mr. SMITH of Georgia. It would begin the disposition of them.

The PRESIDING OFFICER (Mr. OVERMAN in the chair). The question is on the motion of the Senator from Utah.

Mr. WILLIAMS. Would a motion to proceed to the calendar take precedence of the motion made by the Senator from Utah to pick out a particular bill on the calendar and proceed to its consideration?

The PRESIDING OFFICER. The Chair will inquire of the Senator from North Carolina [Mr. SIMMONS] if he proposes to lay aside what is known as the sugar bill?

Mr. LODGE. That is not the unfinished business.

Mr. SIMMONS. That is not necessary, I think, because under the unanimous-consent agreement we shall have to vote on the bill to-morrow evening not later than 5 o'clock.

The PRESIDING OFFICER. The motion of the Senator from Utah is first in order.

Mr. WILLIAMS. Mr. President, a parliamentary inquiry. Does not a motion to proceed to the consideration of the calendar take precedence of a motion to pick out a particular bill on the calendar out of its order and proceed to its consideration?

The PRESIDING OFFICER. The Chair holds that the motion of the Senator from Utah is first in order.

Mr. WILLIAMS. Then I offer as a substitute for the motion of the Senator from Utah a motion that the Senate proceed to the consideration of the calendar.

Mr. SMOOT. That motion can not be made under the rule.

The PRESIDING OFFICER. The motion of the Senator from Mississippi can not be entertained, it being against the rule. The question is on the motion of the Senator from Utah.

Mr. CHAMBERLAIN. Mr. President, a parliamentary inquiry. The motion will not have the effect to displace the unfinished business?

The PRESIDING OFFICER. The Chair understands that it does not.

Mr. CHAMBERLAIN. I have no objection, then.

Mr. WILLIAMS. Is it not in order to substitute for the motion of the Senator from Utah a motion to proceed to the calendar?

The PRESIDING OFFICER. The Chair thinks not, under the rules of the Senate.

Mr. SMITH of Georgia. Mr. President, I suggest the absence of a quorum.

Mr. CLAPP. Mr. President, a point of order. There has been no business transacted since the last call.

The PRESIDING OFFICER. No business having been transacted since the last call of the roll, the question raised by the Senator from Georgia can not be entertained.

Mr. WILLIAMS. Does the Chair rule that it is not in order for me to substitute for the motion of the Senator from Utah a motion to proceed to the consideration of the calendar?

The PRESIDING OFFICER. Under the rules the motion of the Senator from Mississippi is not in order until the motion of the Senator from Utah is disposed of.

Mr. WILLIAMS. Even to substitute one bill for another?

The PRESIDING OFFICER. The Chair thinks that under the rules of the Senate that can not be done. The question is on the motion of the Senator from Utah.

Mr. WORKS. Mr. President, a parliamentary inquiry. I understand the unfinished business was laid aside for the sole purpose of considering the sugar bill. If that be so, I make the point of order that we should go back to the consideration of the Army bill.

The PRESIDING OFFICER. The Army bill was laid aside, and it is the unfinished business. The question is on the motion of the Senator from Utah. [Putting the question.] The Chair is in doubt.

Mr. SMOOT. I ask for the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded to call the roll.

Mr. GALLINGER (when his name was called). I have a general pair with the senior Senator from New York [Mr. O'GORMAN]. For that reason I withhold my vote.

Mr. JOHNSON of Maine (when his name was called). I have a general pair with the junior Senator from North Dakota [Mr. GRONNA]. In his absence I withhold my vote.

Mr. MYERS (when his name was called). I have a pair with the Senator from Connecticut [Mr. MCLEAN]. As he is absent, I withhold my vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the Senator from West Virginia [Mr. GOFF] to the Senator from Maryland [Mr. LEE] and vote "nay."

Mr. UNDERWOOD (when his name was called). I have a general pair with the junior Senator from Ohio [Mr. HARDING]. He is absent on important business, and I withhold my vote.

Mr. WILLIAMS (when his name was called). I transfer my pair with the Senator from Pennsylvania [Mr. PENROSE] to the Senator from New Jersey [Mr. HUGHES], and I vote "nay."

The roll call was concluded.

Mr. JOHNSON of Maine. I transfer the pair which I have heretofore announced to the junior Senator from Nevada [Mr. PITTMAN], and I vote "yea."

Mr. BRYAN (after having voted in the negative). I transfer my pair with the junior Senator from Michigan [Mr. TOWNSEND] to the junior Senator from Tennessee [Mr. SHIELDS] and allow my vote to stand.

Mr. LEWIS. I wish to announce the absence of the Senator from New York [Mr. O'GORMAN], he having been called to New York on official business.

Mr. CHILTON. I have a pair with the Senator from New Mexico [Mr. FALL], which I transfer to the Senator from Indiana [Mr. KERN] and vote "nay."

Mr. DILLINGHAM (after having voted in the affirmative). I inquire if the senior Senator from Maryland [Mr. SMITH] has voted?

The PRESIDING OFFICER. The senior Senator from Maryland has not voted.

Mr. DILLINGHAM. Then I will withdraw my vote, having a general pair with that Senator.

Mr. OWEN. Has the Senator from New Mexico [Mr. CATRON] voted?

The PRESIDING OFFICER. He has not voted.

Mr. OWEN. I withhold my vote, being paired with that Senator.

Mr. CURTIS. I wish to announce that the Senator from New Mexico [Mr. CATRON] is paired with the Senator from Oklahoma [Mr. OWEN];

The Senator from Delaware [Mr. DU PONT] with the Senator from Kentucky [Mr. BECKHAM];

The Senator from Idaho [Mr. BRADY] with the Senator from Florida [Mr. FLETCHER]; and

The Senator from Massachusetts [Mr. WEEKS] with the Senator from Kentucky [Mr. JAMES].

The result was announced—yeas 36, nays 24, as follows:

YEAS—36.

Borah	Curtis	Martine, N. J.	Simmons
Brandegee	Johnson, Me.	Nelson	Smith, Mich.
Broussard	Jones	Norris	Smoot
Burleigh	Kenyon	Oliver	Sterling
Chamberlain	La Follette	Page	Sutherland
Clapp	Lane	Poindexter	Thompson
Clark, Wyo.	Lippitt	Pomerene	Wadsworth
Colt	Lodge	Saulsbury	Warren
Cummins	McCumber	Sherman	Works

NAYS—24.

Bryan	Martin, Va.	Sheppard	Swanson
Chilton	Overman	Shields	Taggart
Hardwick	Phelan	Smith, Ariz.	Thomas
Hollis	Ransdell	Smith, Ga.	Tillman
Husting	Reed	Smith, S. C.	Vardaman
Lewis	Robinson	Stone	Williams

NOT VOTING—36.

Ashurst	Fall	James	Owen
Bankhead	Fletcher	Johnson, S. Dak.	Penrose
Beckham	Gallinger	Kern	Pittman
Brady	Goff	Lea, Tenn.	Shafroth
Catron	Gore	Lee, Md.	Smith, Md.
Clarke, Ark.	Gronna	McLean	Townsend
Culberson	Harding	Myers	Underwood
Dillingham	Hitchcock	Newlands	Walsh
du Pont	Hughes	O'Gorman	Weeks

So the motion was agreed to; and the Senate, as in Committee of the Whole, proceeded to consider the bill (S. 4856) granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent relatives of such soldiers and sailors.

It proposes to pension the following persons at the rate given:

Nettie Johnson, widow of John W. Johnson, late of Company F, One hundred and fifty-fifth Regiment Indiana Volunteer Infantry, $12 per month.

John George Bauer, late of Company G, Fifth Regiment Iowa Volunteer Cavalry, $30 per month in lieu of that he is now receiving.

Corda P. Gracey, widow of Samuel L. Gracey, late chaplain Sixth Regiment Pennsylvania Volunteer Cavalry, and former widow of Harrison O. Pratt, late of Company M, First Regiment Massachusetts Volunteer Heavy Artillery, $12 per month.

Elizabeth Propson, widow of John Propson, late of Company I, One hundred and twenty-eighth Regiment New York Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Sarah E. Marsh, widow of Charles H. Marsh, late of Company D, First Regiment Connecticut Volunteer Cavalry, $20 per month in lieu of that she is now receiving.

Cecilia Murphy, widow of Charles Murphy, late of Battery M, Third Regiment New York Volunteer Light Artillery, $20 per month in lieu of that she is now receiving.

Andrew H. Nichols, late of Company C, Second Regiment Connecticut Volunteer Heavy Artillery, $36 per month in lieu of that he is now receiving.

Mary E. Norton, widow of Silas M. Norton, late of Company K, Sixteenth Regiment Connecticut Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Ann Odell, widow of Thomas Odell, late of Company K, Twentieth Regiment Connecticut Volunteer Infantry, $20 per month in lieu of that she is now receiving.

William R. Latimer, late of Company F, Fourteenth Regiment Connecticut Volunteer Infantry, $36 per month in lieu of that he is now receiving.

Rebecca L. Lapaugh, widow of John D. Lapaugh, late of Company C, Sixteenth Regiment Connecticut Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Lide Smith, widow of Albert G. Smith, late of Company F, Fifty-second Regiment Illinois Volunteer Infantry, $12 per month.

Alice R. Hutchinson, widow of Henry A. Hutchinson, late of Company B, Eleventh Regiment Rhode Island Volunteer Infantry, $12 per month.

Mary Pritchard, widow of Claudius B. Pritchard, late of Company I, Second Regiment Minnesota Volunteer Infantry, and former widow of John Pelas, late of Company G, Fourth Regiment Wisconsin Volunteer Cavalry, $12 per month.

Henry Brown, late of Company B, Fifth Regiment, and Com-A, Seventh Regiment, Delaware Volunteer Infantry, $21 per month.

Moses Green, late of Company B, Fourteenth Regiment Michigan Volunteer Infantry, $30 per month in lieu of that he is now receiving.

George E. Newall, late first lieutenant Company A, Eighth Regiment Michigan Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Alice Quigley, widow of Charles Quigley, late of Company G, Tenth Regiment Michigan Volunteer Infantry, $12 per month.

Winifred Whitney, helpless and dependent child of Adrial L. Whitney, late of Company C, First Regiment Maine Volunteer Light Artillery, $12 per month.

Marie A. Smith, widow of Lawrence Smith, late of Company K, Thirty-ninth Regiment Wisconsin Volunteer Infantry, $12 per month.

Elizabeth S. Chaplain, former widow of John W. Minton, late of Company C, Fifteenth Regiment Illinois Volunteer Cavalry, and widow of Charles Chaplain, late of Company A, Fortieth Regiment Illinois Volunteer Infantry, $12 per month.

Ellen Edwards, widow of Presley Edwards, late of Company H, One hundred and fifty-fifth Regiment Illinois Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Francis M. George, late of Company I, One hundred and fifty-fourth Regiment Illinois Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Harvey W. Hoover, late of Company A, First Regiment Mississippi Marine Brigade Volunteer Infantry, $30 per month in lieu of that he is now receiving.

John Fry, late of Company G, Eighty-ninth Regiment Indiana Volunteer Infantry, $36 per month in lieu of that he is now receiving.

John M. Davidson, late of Company I, Ninety-first Regiment, and Company F, One hundred and twentieth Regiment Indiana Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Justine M. Thrift, widow of William H. Thrift, late of Company D, Sixteenth Regiment Iowa Volunteer Infantry, and major and additional paymaster, United States Volunteers, War with Spain, $25 per month in lieu of that she is now receiving.

Samuel E. Wilson, late of Company G, Fifty-sixth Regiment Illinois Volunteer Infantry, $30 per month in lieu of that he is now receiving.

John Harper, late of Company A, Ninth Regiment Maine Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Mary J. White, widow of Albert E. White, late of Company K, Eighty-ninth Regiment Illinois Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Elsie A. Platt, widow of Charles Platt, late of Company B, First Battalion Connecticut Volunteer Cavalry, $20 per month in lieu of that she is now receiving.

Adelaide M. Tarbox, widow of George H. Tarbox, late of Company E, Eighteenth Regiment Connecticut Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Mary Whipple, widow of Lucian A. Whipple, late of Company F, Second Regiment Rhode Island Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Hannah A. Hill, widow of Robert Hill, late of Company E, Sixty-fifth Regiment Illinois Volunteer Infantry, $20 per month in lieu of that she is now receiving.

John C. Brown, late of Company H, Eighth Regiment Tennessee Volunteer Cavalry, $36 per month in lieu of that he is now receiving.

Michael Reuss, late of Company H, Sixty-first Regiment New York Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Henry Waltz, late of Company K, Forty-sixth Regiment Ohio Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Moses Hull, late of Company D, Seventh Regiment Kentucky Volunteer Cavalry, $40 per month in lieu of that he is now receiving.

Margaret M. Lane, widow of Marion D. Lane, late of U. S. S. *Grampus, Nymph,* and *Hastings,* United States Navy, $20 per month in lieu of that she is now receiving.

William Crome, late of Company H, One hundred and thirty-sixth Regiment Illinois Volunteer Infantry, $50 per month in lieu of that he is now receiving.

James C. Green, late of Company C, One hundred and seventh Regiment Pennsylvania Volunteer Infantry, $24 per month in lieu of that he is now receiving.

John Gowland, late of Company G, Eighth Regiment, and Company M, Sixteenth Regiment Pennsylvania Volunteer Cavalry, $50 per month in lieu of that he is now receiving.

John B. Hammer, late of Company D, One hundred and thirty-eighth Regiment Pennsylvania Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Henry Lichtley, late of Company B, Fiftieth Regiment Pennsylvania Volunteer Infantry, $21 per month in lieu of that he is now receiving.

Malisa A. Sherk, widow of William Sherk, late of Company M, Fifth Regiment Pennsylvania Volunteer Cavalry, and Company F, Nineteenth Regiment Veteran Reserve Corps, $12 per month.

Fannie M. Carey, widow of Daniel W. Carey, late of Company I, and principal musicion One hundred and third Regiment New York Volunteer Infantry, $12 per month.

Nathaniel Haskell, late of Company E, Fifth Regiment Maine Volunteer Infantry, and Company B, First Regiment Maine Veteran Volunteer Infantry, $36 per month in lieu of that he is now receiving.

Edwin J. Walton, late of Company C, First Regiment United States Volunteer Sharpshooters, $50 per month in lieu of that he is now receiving.

Robert N. B. Simpson, late of Company A, Fourth Regiment Delaware Volunteer Infantry, $30 per month in lieu of that he is now receiving.

William O'Neal, late of Company E, Forty-fifth Regiment Ohio Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Silas Blodgett, late of Company H, First Regiment District of Columbia Volunteer Cavalry, and Company K, First Regiment Maine Volunteer Cavalry, $30 per month in lieu of that he is now receiving.

Ella A. Tyler, widow of Benjamin F. Tyler, late of Company K, Twenty-sixth Regiment Ohio Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Emma J. Beal, widow of Horace W. Beal, late of Company A, Thirteenth Regiment Illinois Volunteer Infantry, $20 per month in lieu of that she is now receiving.

James Beaton, late of Company G, Twenty-first Regiment New York Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Mary C. Knowlton, widow of John O. Knowlton, late of Company C, Ninth Regiment Vermont Volunteer Infantry, $12 per month.

Sarah C. Greenfield, widow of John Greenfield, late of Company L, Twenty-second Regiment New York Volunteer Cavalry, $20 per month in lieu of that she is now receiving.

James H. Moser, late of Company F, Twenty-third Regiment Ohio Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Adelia C. Macauley, widow of Orlando H. Macauley, late captain Company H, Thirteenth Regiment Kansas Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Barney Sancomb, late of Company I, Twenty-sixth Regiment New York Volunteer Cavalry, $30 per month in lieu of that he is now receiving.

William P. Nelson, late of Company D, Seventeenth Regiment Iowa Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Marion Kilborn, late of Company I, Ninety-eighth Regiment, and Company H, Sixty-first Regiment, Illinois Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Albert J. Sprinkle, late of Company B, Eighty-first Regiment Ohio Volunteer Infantry, $24 per month in lieu of that he is now receiving.

Thomas White, late of Company E, Twenty-seventh Regiment, and Company C, Thirty-third Regiment, Indiana Volunteer Infantry, $36 per month in lieu of that he is now receiving.

James S. Meek, late captain Company H, Ninety-seventh Regiment Indiana Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Michael Demuth, late of Company G, Forty-fourth Regiment Indiana Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Benjamin Simpson, late of Company I, Fifty-first Regiment Indiana Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Aaron Benjamin Waggoner, alias Aaron Benjamin, late of Company D, Twenty-fifth Regiment Indiana Volunteer Infantry, $30 per month in lieu of that he is now receiving.

John Merchant, late of Company M, Eighth Regiment New York Volunteer Heavy Artillery, and Company G, Tenth Regiment New York Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Elmira E. Morrison, widow of James W. Morrison, late of Company C, Sixty-ninth Regiment Indiana Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Sarah J. Cadle, widow of Richard Cadle, late quartermaster Eleventh Regiment Iowa Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Ellen Temperance Smith, helpless and dependent daughter of George W. Smith, late of Company C, Fifteenth Regiment Kansas Volunteer Cavalry, $12 per month.

Carrie S. Cross, widow of Samuel K. Cross, late first lieutenant Company A, Second Regiment Kansas Volunteer Cavalry, $20 per month in lieu of that she is now receiving.

James Hawkins, late of Company B, Third Regiment Tennessee Volunteer Mounted Infantry, $30 per month in lieu of that he is now receiving.

Martha A. Hodges, widow of James L. Hodges, late captain Company K, Third Regiment Minnesota Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Leora L. Macarey, widow of Harlow E. Macarey, late first lieutenant Company K, Twenty-eighth Regiment Michigan Volunteer Infantry, $12 per month.

Charles Leeder, late of Company C, Eleventh Regiment Illinois Volunteer Infantry, $30 per month in lieu of that he is now receiving.

John S. Allison, late of Company G, One hundred and sixth Regiment Illinois Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Ida C. Martin, widow of Edwin L. Martin, late of Company K, Fifty-seventh Regiment Illinois Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Guy Beebe, late of Company F, Seventy-third Regiment Ohio Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Ellen Lambert, former widow of Robert Lambert, late of Company F, Twenty-eighth Regiment Maine Volunteer Infantry, $12 per month.

George W. Doyle, late of Company A, Fifth Regiment Vermont Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Harvey D. Plummer, alias Harvey D. Picknell, late of Company H, First Regiment New Hampshire Volunteer Heavy Artillery, $30 per month in lieu of that he is now receiving.

Benjamin H. Whipple, late of Company B, First Regiment New Hampshire Volunteer Heavy Artillery, $30 per month in lieu of that he is now receiving.

William H. Gallup, late of Company D, One hundred and forty-ninth Regiment Indiana Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Peter Soncrant, late of Company A, One hundred and eighty-ninth Regiment Ohio Volunteer Infantry, $30 per month in lieu of that he is now receiving.

David Moody, jr., late of Company A, Sixteenth Regiment, and Company I, Twentieth Regiment, Maine Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Alphonso W. Longfellow, late of Company C, First Regiment Maine Volunteer Sharpshooters, $36 per month in lieu of that he is now receiving.

Clara P. Boulter, widow of Eugene A. Boulter, late of Company C, Nineteenth Regiment Maine Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Christian C. Forney, late of Company F, Nineteenth Regiment Ohio Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Mary A. Moreland, widow of George W. Moreland, late of Company I, Eighty-second Regiment Indiana Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Rebecca J. Short, widow of Ferdinand E. Short, late of Company C, Thirty-fifth Regiment Illinois Volunteer Infantry, $24 per month in lieu of that she is now receiving: *Provided*, That in the event of the death of John L. Short, helpless and dependent child of said Ferdinand E. Short, the additional pension herein granted shall cease and determine: *Provided further*, That in the event of the death of Rebecca J. Short, the name of said John L. Short shall be placed on the pension roll at $12 per month from and after the date of death of said Rebecca J. Short.

Mary C. Finlay, widow of Andrew Finlay, late of Companies D and K, Forty-seventh Regiment Illinois Volunteer Infantry, and former widow of John Dolman, late of Company G, One hundred and fifty-third Regiment Indiana Volunteer Infantry, $12 per month.

Annie P. Marchant, widow of Amaziah B. Marchant, late of Company H, Twelfth Regiment Rhode Island Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Henry C. Pennington, late of Company E, One hundred and eighty-fourth Regiment Pennsylvania Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Edward P. Carman, late of Company F, First Regiment Maine Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Sophronia Porter, widow of John W. Porter, late of Company K, Ninety-fourth Regiment Illinois Volunteer Infantry, $12 per month.

Mary E. B. Bruson, formerly Blackmar, late nurse, Medical Department, United States Volunteers, $20 per month in lieu of that she is now receiving.

William F. Wiley, late captain Company K, Twenty-fourth Regiment Massachusetts Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Julia C. Bradley, widow of David B. Bradley, late of Company F, Thirteenth Regiment Wisconsin Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Matilda Weger, widow of John W. Weger, late of Company F, First Regiment Oregon Volunteer Infantry, $12 per month.

Mercy A. Martin, widow of Milton Martin, late captain Company F, First Regiment Wisconsin Volunteer Cavalry, $20 per month in lieu of that she is now receiving.

Mandana C. Thorp, widow of Thomas J. Thorp, late colonel One hundred and thirtieth Regiment New York Volunteer Infantry, $30 per month in lieu of that she is now receiving.

Mary M. Lose, widow of Daniel Lose, late of Company G, Two hundred and third Regiment Pennsylvania Volunteer Infantry, $12 per month.

Lulu S. Knight Bigelow, widow of Jonathan G. Bigelow, late captain, Eightieth Regiment, and Company K, Eighty-third Regiment United States Colored Volunteer Infantry, $20 per month, with an additional $2 per month on account of the minor child of said Jonathan G. Bigelow until she reaches the age of 16 years, said pension to be in lieu of all pension now being paid on account of the service of this soldier.

Sarah A. Hanson, widow of George H. Hanson, late of Company G, One hundred and twenty-eighth Regiment Indiana Volunteer Infantry, $25 per month in lieu of that she is now receiving.

Hugh Harbinson, late of Company B, Sixty-fifth Regiment Indiana Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Nellie S. Nason, widow of Nahum A. Nason, late of Company I, Thirteenth Regiment Maine Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Ruth A. Hazzard, widow of Robert C. Hazzard, late of Company A, Ninth Regiment Delaware Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Celina C. Smith, widow of Jesse Smith, late of Company G, One hundred and twenty-sixth Regiment Illinois Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Jacob Baker, late of Company F, Sixteenth Regiment Michigan Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Herbert Wadsworth, late second lieutenant Company E, Twenty-eighth Regiment Maine Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Joanna Swander, widow of William H. Swander, late assistant surgeon Seventy-ninth Regiment Ohio Volunteer Infantry, $25 per month in lieu of that she is now receiving.

James Hanners, late of Company G, Fifth Regiment Missouri State Militia Cavalry, $16 per month.

John Stone, late of Company E, Tenth Regiment Missouri Volunteer Cavalry, $40 per month in lieu of that he is now receiving.

Eva Helena Patten, widow of Ambrose E. Patten, late of Company E, Twenty-eighth Regiment Maine Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Job D. Marshall, late of Company G, Ninth Regiment Delaware Volunteer Infantry, $24 per month in lieu of that he is now receiving.

Hiram Stevens, late of Company F, Thirteenth Regiment Maine Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Louis Badger, late of Company D, Fourth Regiment Indiana Volunteer Cavalry, $40 per month in lieu of that he is now receiving.

Martha Nutter, former widow of George D. Trembley, late of Company G, One hundred and forty-second Regiment Indiana Volunteer Infantry, $12 per month.

Erastus T. Bowers, late of Company G, Fifty-sixth Regiment Illinois Volunteer Infantry, $36 per month in lieu of that he is now receiving.

David McLean, late of Company E, Nineteenth Regiment Wisconsin Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Alonzo E. Martin, late of Company H, Fourth Regiment Maine Volunteer Infantry, $36 per month in lieu of that he is now receiving.

Edwin W. Clark, late of U. S. S. *Sabine*, *Ohio*, and *Passaic*, United States Navy, $30 per month in lieu of that he is now receiving.

John Kern, late of Company H, Seventeenth Regiment Wisconsin Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Corydon B. Lakin, late first lieutenant Company B, First Regiment District of Columbia Volunteer Cavalry, $40 per month in lieu of that he is now receiving.

Emma J. Wamaling, widow of C. Thomas Wamaling, late acting third assistant engineer, United States Navy, $25 per month in lieu of that she is now receiving.

Thomas E. Sharp, late of Company E, One hundred and ninety-ninth Regiment Pennsylvania Volunteer Infantry, $30 per month in lieu of that he is now receiving.

Della W. Crane, widow of James M. Crane, late of Company C, Fourth Regiment Michigan Volunteer Cavalry, and former widow of Edwin R. Clark, late captain Company B, Thirtieth Regiment Massachusetts Volunteer Infantry, $12 per month.

Elvira Louisa Kanady, widow of Sanford B. Kanady, late of Company C, Twenty-ninth Regiment Illinois Volunteer Infantry, $20 per month in lieu of that she is now receiving.

Lorenzo D. Emory, late of Company K, Twenty-third Regiment Indiana Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Alvin E. Tennant, late of Company C, Seventh Regiment Illinois Volunteer Cavalry, $30 per month.

Nephi Owen, late of Company A, One hundred and fifteenth Regiment Indiana Volunteer Infantry, $40 per month in lieu of that he is now receiving.

Richard H. Bellamy, late of Company C, One hundred and thirty-ninth Regiment Illinois Volunteer Infantry, $24 per month in lieu of that he is now receiving.

James M. Dailey, late second lieutenant Company E, One hundred and twentieth Regiment Indiana Volunteer Infantry, $50 per month in lieu of that he is now receiving.

Elizabeth Holt, widow of John Holt, late of Company B, Twenty-second Regiment Indiana Volunteer Infantry, $24 per month.

Mr. JOHNSON of Maine. On page 10, I move to strike out lines 1, 2, 3, and 4, in the following words:

The name of Edwin J. Walton, late of Company C, First Regiment United States Volunteer Sharpshooters, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

The amendment was agreed to.

Mr. JOHNSON of Maine. On page 18, I move to strike out lines 15 to 18, inclusive, in the following words:

The name of Mary E. B. Bruson, formerly Blackmar, late nurse, Medical Department, United States Volunteers, and pay her a pension at the rate of $20 per month in lieu of that she is now receiving.

The amendment was agreed to.

Mr. JOHNSON of Maine. On page 18, I move to strike out lines 19 to 22, inclusive, in the following words:

The name of William F. Wiley, late captain Company K, Twenty-fourth Regiment Massachusetts Volunteer Infantry, and pay him a pension at the rate of $50 per month in lieu of that he is now receiving.

The amendment was agreed to.

The bill was reported to the Senate as amended, and the amendments were concurred in.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the House had passed the concurrent resolution (S. Con. Res. 16) to authorize the printing of the proceedings in Congress and in Statuary Hall relative to the unveiling of the statue of Henry Mower Rice.

The message also announced that the House had passed a bill (H. R. 10384) to regulate the immigration of aliens to, and the residence of aliens in, the United States, in which it requested the concurrence of the Senate.

The message further announced that the House had passed a concurrent resolution (No. 26) providing for the printing of 1,500 copies of the journal of the fiftieth national encampment of the Grand Army of the Republic for the year 1916, in which it requested the concurrence of the Senate.

The message also announced that the House had passed a concurrent resolution (No. 27) providing for the printing of 20,000 copies of the revised edition of United States bankruptcy laws, as prepared by the Committee on Revision of the Laws of the House of Representatives, etc., in which it requested the concurrence of the Senate.

ENROLLED BILL SIGNED.

The message further announced that the Speaker of the House had signed the enrolled bill (S. 5016) to authorize the reconstruction of an existing bridge across the Wabash River, at Silverwood, in the State of Indiana, and it was thereupon signed by the Vice President.

PETITIONS AND MEMORIALS.

Mr. GALLINGER presented the petition of C. Stanley Emery and others, citizens of Concord, N. H., praying for national prohibition, which was referred to the Committee on the Judiciary.

He also presented the memorial of Herbert E. Linscott, of South Merrimack, N. H., remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which was ordered to lie on the table.

He also presented a memorial of 22 citizens of Nashua, N. H., remonstrating against appropriations being made for sectarian purposes, which was ordered to lie on the table.

Mr. POINDEXTER presented a memorial of Vale Grange, No. 453, Patrons of Husbandry, of Richland, Wash., remonstrating against an increase in armaments, which was ordered to lie on the table.

He also presented a petition of the Washington State Branch, Congressional Union for Woman Suffrage, praying for the adoption of the Susan B. Anthony woman-suffrage amendment to the Constitution, which was ordered to lie on the table.

He also presented a memorial of Local Grange No. 201, Patrons of Husbandry, of Bellingham, Wash., remonstrating against any change being made in the parcel-post law, which was referred to the Committee on Post Offices and Post Roads.

Mr. BURLEIGH presented a petition of the congregation of the Congregational Church of Cumberland, Me., praying for national prohibition, which was referred to the Committee on the Judiciary.

Mr. PHELAN presented resolutions of the Woman's Foreign Missionary Society of the Methodist Episcopal Church of Oakland district, Berkeley, Cal., favoring the enactment of legislation to prohibit the sale of alcoholic liquors in Porto Rico, Hawaii, and the Philippines, and also to prohibit the exportation of alcoholic liquors from the United States to Africa, which were referred to the Committee on Pacific Islands and Porto Rico.

He also presented petitions of Local Branch, International Alliance of Theatrical Stage Employees, of Oakland; of Typographical Union No. 46, of Sacramento; of Local Union, Brotherhood of Electrical Workers, of Oakland; and of Mailers' Local Union, No. 9, of Los Angeles, all in the State of California, praying for the passage of the so-called Burnett immigration bill, which were referred to the Committee on Immigration.

Mr. NELSON presented petitions of sundry citizens of Minnesota, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. WADSWORTH presented memorials of sundry citizens of New York, remonstrating against the enactment of legislation for compulsory Sunday observance in the District of Columbia, which were ordered to lie on the table.

He also presented a petition of sundry citizens of Rochester, N. Y., praying for national prohibition, which was referred to the Committee on the Judiciary.

He also presented a petition of sundry citizens of Troy, N. Y., praying for the enactment of legislation to prohibit interstate commerce in the products of child labor, which was referred to the Committee on Interstate Commerce.

Mr. HOLLIS presented petitions of sundry citizens of New Hampshire, praying for national prohibition, which were referred to the Committee on the Judiciary.

Mr. MYERS. I present a petition of Kalispell Court, Guardians of Liberty, of Kalispell, Mont., in favor of a constitutional amendment to prohibit sectarian appropriations for educational purposes and also opposing any such appropriations in the Indian appropriation bill, which I ask may be received.

The VICE PRESIDENT. The petition will lie on the table.

Mr. MYERS. I also present a petition of residents of Whitefish, Mont., in favor of a constitutional amendment to prohibit sectarian appropriations for educational purposes and also opposing any such appropriations in the Indian appropriation bill, which I ask may be received.

The VICE PRESIDENT. The petition will lie on the table.

Mr. MYERS presented the petition of A. M. S. Kindlow, of Montana, praying for an appropriation of $1,000,000 for the Flathead irrigation project, which was ordered to lie on the table.

Mr. ROBINSON presented a petition of the Common Council of San Diego, Cal., praying for the establishment of a submarine naval base at San Diego, Cal., which was referred to the Committee on Naval Affairs.

He also presented memorials of sundry citizens of South Carolina, remonstrating against the enactment of legislation to prohibit interstate commerce in the products of child labor, which were referred to the Committee on Interstate Commerce.

REPORTS OF COMMITTEES.

Mr. SAULSBURY, from the Committee on Public Buildings and Grounds, to which was referred the bill (H. R. 6442) to provide for the exchange of the present Federal building site in Newark, Del., reported it without amendment.

Mr. SHEPPARD, from the Committee on Commerce, to which was referred the bill (H. R. 759) to provide for the removal of what is now known as the Aqueduct Bridge across the Potomac

River and for the building of a bridge in place thereof, reported it with amendments and submitted a report (No. 334) thereon.

MARKING OF CONFEDERATE SOLDIERS' GRAVES.

Mr. CHAMBERLAIN. From the Committee on Appropriations I report back favorably, without amendment, the joint resolution (H. J. Res. 171) to continue in effect the provisions of the act of March 9, 1906, and I ask unanimous consent for its consideration. The joint resolution has passed the House. A similar joint resolution has passed the Senate. The original act has been continued in force from year to year, and it is hoped that the work may be completed the coming year.

Mr. SMOOT. The Senator reports it from the Committee on Appropriations?

Mr. CHAMBERLAIN. Yes; it was handed to me by the chairman of the committee a couple of days ago.

The PRESIDING OFFICER. Is there objection to the present consideration of the joint resolution?

There being no objection, the joint resolution was considered as in Committee of the Whole, and it was read, as follows:

Resolved, etc., That the act entitled "An act to provide for the appropriate marking of the graves of the soldiers and sailors of the Confederate Army and Navy who died in northern prisons and were buried near the prisons where they died, and for other purposes," approved March 9, 1906; and continued in full force and effect for two years by joint resolution approved February 26, 1908; and for the additional period of one year by a joint resolution approved on February 25, 1910; and for the additional period of two years by a joint resolution approved December 23, 1910; and for the further additional period of two years by a joint resolution approved March 14, 1914, be, and the same is hereby, continued in full force and effect for two years from the expiration of the present continuation, March 13, 1916; and the unexpended balance of the appropriation made by said act of March 9, 1906, is continued and made applicable for expenditure during the additional period of two years herein provided for: *Provided*, That the triplicate registers provided for in the original act shall include the time and place of death of each Confederate soldier prisoner of war: *Provided further*, That the compensation of the commissioner shall be fixed by the Secretary of War.

The joint resolution was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

RAILWAY LAND GRANTS IN IOWA (S. DOC. NO. 404).

Mr. CHILTON, from the Committee on Printing, reported the following resolution (S. Res. 160), which was considered by unanimous consent and agreed to:

Resolved, That the papers relating to railway land grants in Iowa, transmitted in response to Senate resolution 166, Sixty-third Congress, which was submitted by the Senator from Iowa [Mr. CUMMINS] and agreed to on August 19, 1913, be printed as a Senate document, with illustrations.

DAUGHTERS OF THE AMERICAN REVOLUTION (S. DOC. NO. 392).

Mr. CHILTON, from the Committee on Printing, reported the following resolution (S. Res. 161), which was considered by unanimous consent and agreed to:

Resolved, That the eighteenth report of the National Society of the Daughters of the American Revolution for the year ended October 11, 1915, transmitted to Congress pursuant to law by the Secretary of the Smithsonian Institution, be printed as a Senate document, with illustrations.

FEDERAL PROBATION (S. DOC. NO. 393).

Mr. CHILTON, from the Committee on Printing, reported the following resolution (S. Res. 162), which was considered by unanimous consent and agreed to:

Resolved, That the manuscript submitted by the Senator from Oklahoma [Mr. OWEN] on March 28, 1916, entitled "Memorial in re Federal Probation Bill (S. 1092)," by Charles L. Chute, secretary New York State Probation Commission, be printed as a Senate document.

ALLOTMENT OF INDIAN LANDS (S. DOC. 394).

Mr. CHILTON, from the Committee on Printing, reported the following resolution (S. Res. 163), which was considered by unanimous consent and agreed to:

Resolved, That the manuscript submitted by the Senator from Oklahoma [Mr. OWEN] on March 23, 1916, entitled "Memorial of Creek Nation as to Withdrawal of Certain Tribal Lands from Allotment," by R. C. Allen, national attorney for Creek Nation, be printed as a Senate document.

THE MERCHANT MARINE (S. DOC. NO. 395).

Mr. CHILTON, from the Committee on Printing, reported the following resolution (S. Res. 164), which was considered by unanimous consent and agreed to:

Resolved, That the manuscript entitled "The Farmer and the Shipping Bill," by Carl Vrooman, Assistant Secretary of Agriculture, be printed as a Senate document.

FINANCING THE FARMER (S. DOC. NO. 396).

Mr. CHILTON, from the Committee on Printing, reported the following resolution (S. Res. 165), which was considered by uninamous consent and agreed to:

Resolved, That the manuscript submitted by the Senator from Ohio, Mr. HARDING, on March 10, 1916, entitled "How to Finance the Farmer—Private Enterprise, not State Aid," by Myron T. Herrick and R. Ingails, be printed as a Senate document.

BILLS AND JOINT RESOLUTION INTRODUCED.

Bills and a joint resolution were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CULBERSON:

A bill (S. 5427) referring certain claims against the Choctaw and Chickasaw Nations of Indians to the Court of Claims; to the Committee on Indian Affairs.

By Mr. TAGGART:

A bill (S. 5428) granting a pension to E. R. Bigham; and

A bill (S. 5429) granting a pension to Susan S. Stran (with accompanying papers); to the Committee on Pensions.

By Mr. BURLEIGH:

A bill (S. 5430) granting a pension to Frank D. Haskell; to the Committee on Pensions.

By Mr. MARTIN of Virginia:

A bill (S. 5431) granting a pension to Francis G. Schutt; to the Committee on Pensions.

By Mr. JONES:

A bill (S. 5432) confirming a patent heretofore issued to Wapato Charley, an Indian in the State of Washington; to the Committee on Indian Affairs.

By Mr. POMERENE:

A bill (S. 5433) granting an increase of pension to Oliver Harding; to the Committee on Pensions.

By Mr. JOHNSON of Maine:

A bill (S. 5434) granting an increase of pension to Albert A. Burleigh; to the Committee on Pensions.

By Mr. CHAMBERLAIN:

A bill (S. 5435) to amend section 4472 of the Revised Statutes of the United States, relating to the carrying of dangerous articles on passenger steamers; to the Committee on Commerce.

By Mr. PAGE:

A bill (S. 5436) granting a pension to Charlotte Goding (with accompanying papers); to the Committee on Pensions.

By Mr. OWEN:

A bill (S. 5437) to further amend the act of Congress entitled "An act providing for publicity of contributions made for the purpose of influencing elections at which Representatives in Congress are elected," approved June 25, 1910, to extend the same to elections for United States Senators and for presidential electors, and to regulate, control, and limit campaign and other contributions and expenditures in connection with such elections, and to define corrupt practices in connection therewith, and for other purposes; to the Committee on Privileges and Elections.

By Mr. MYERS:

A bill (S. 5438) for the relief of Nels A. Levang; to the Committee on Public Lands.

By Mr. MYERS (for Mr. FLETCHER):

A bill (S. 5439) for the relief of the Southern States Lumber Co.; to the Committee on Claims.

By Mr. LEWIS:

A bill (S. 5440) to reduce night work in post offices; to the Committee on Post Offices and Post Roads.

By Mr. CHAMBERLAIN:

A joint resolution (S. J. Res. 119) to permit the issuance of medical and other supplies to the American National Red Cross for a temporary period; to the Committee on Military Affairs.

HOMESTEAD ENTRIES.

Mr. MYERS submitted an amendment intended to be proposed by him to the bill (S. 5379) validating certain homestead entries, which was referred to the Committee on Public Lands and ordered to be printed.

NATIONAL DEFENSE.

Mr. REED submitted an amendment intended to be proposed by him to the bill (H. R. 12766) to increase the efficiency of the Military Establishment of the United States, which was ordered to lie on the table and be printed.

THE UNITED STATES SUPREME COURT.

Mr. OVERMAN. Mr. President, I have an article prepared by B. F. Long, of North Carolina, which I ask may be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EPITOME FROM A CHAPTER ON THE FOURTH CIRCUIT.

[By B. F. Long, of North Carolina.]

"There is nothing so powerful as truth, and often nothing so strange."

Statement in regard to the acts of Congress relating to the Supreme Court, the precedents of Presidents in appointments thereto, the ages of judges when appointed, length of service after 70 years old,

and a comparison of the fourth circuit and the three adjacent circuits, to wit, the third, the fifth, and sixth.

The Judicial Code, section 116, creates nine judicial circuits and provides—section 119—for an allotment by the Supreme Court of its members, one each, to a circuit, among the nine circuits; it provides—section 215—that the Supreme Court of the United States shall consist of a Chief Justice and eight associates justices, or nine judges, corresponding in number to the number of circuits. Although there is no mandatory provision requiring each circuit to have at all times a member of the Supreme Court appointed from the residents within its boundaries, such, nevertheless, is contemplated by the statutory allotment and assignments, and is really the spirit of the laws, for all the circuits are of equal dignity, vested with equal rights and power, and subject to the same duties, obligations, and regulations. It is therefore clear, upon the broad and just grounds of equality and equity, that one circuit shall not have two judges while a sister circuit has none.

We do not discuss the reasons, but we nevertheless state facts which are of deep concern, relative to the exclusion since 1864—51 years—of the fourth circuit (Maryland, Virginia, West Virginia, North Carolina, and South Carolina) from a seat on the Supreme Bench. Exclusion for 51 years, since the death of Taney, challenges attention and arouses inquiry. It is fair to look further and observe what has been done in these 51 years in States and circuits contiguous to the fourth on the north, south, and west of it.

During these 51 years the third circuit, adjoining the fourth on the north, has had the following members of the court:

1. William Strong, 1870–1880.
2. J. P. Bradley, 1870–1892.
3. George Shiras, 1892.
4. Justice Pitney.

During the same time the fifth circuit, on the south, has had:

1. W. B. Wood, 1880–1887.
2. L. Q. C. Lamar, 1888–1893.
3. Justice and Chief Justice White, 1894.
4. Justice Joseph Lamar.

During the same 51 years the sixth circuit, adjoining on the west, has had:

1. Chief Justice Chase, 1864–1873.
2. Chief Justice Waite, 1874–1888.
3. Edwin M. Stanton, 1869 (but did not qualify).
4. Justice Swayne, appointed in 1862, but served 17 years after 1864.
5. John Marshall Harlan, 1877.
6. Stanley Matthews, 1881–1889.
7. H. B. Brown, 1890.
8. Howell Jackson, 1893.
9. Justice Day.
10. Justice Lurton.
11. Justice McReynolds.

So it is a fact that the three adjacent circuits to the fourth have had these 19 recognitions, two full benches plus one, since the fourth has had a member.

Comparisons usually are odious, but this one is not made with such motive. It is stated only to bring to light a condition which we believe has not been called to the attention of the Executive.

If the 10 Senators of the fourth circuit, heretofore representing 9,000,000 people, had presented this status of affairs to the Executive it may be that the fourth circuit would have been restored to her rightful place amongst the sisterhood of circuits. This state of affairs evidently has been overlooked. But it is said that the 11 appointments in the sixth can be explained from the fact that so many Presidents have come from that circuit. If that is true, and a proper precedent, then the fact that the present Executive was born and reared in the fourth circuit makes it peculiarly proper for him at the proper time to restore the equilibrium. The opportunity may not come again in another half century. But, apart from this consideration, upon all the incontrovertible facts above set forth it is respectfully urged that the fourth circuit is entitled, agreeably to the manifest intention of the laws, to have a place of equality with her sister circuits.

With regard to the five States composing the fourth circuit, it may be of interest to refer to their relations to the Department of Justice before the war, when they did have recognition. In those early days Virginia was recognized on the Supreme Bench in the persons of:

1. John Blair, 1789–1795.
2. Bushrod Washington, 1798–1829.
3. P. P. Barbour, 1836–1841.
4. John Marshall, 1801–1835.
5. Peter V. Daniels, 1841–1860.

Representing a total service of 95 years. Virginia also had Attorneys General Randolph, Lee, Wirt, and Mason.

Maryland had on the bench:

1. Thomas Johnson, 1791–1793.
2. Samuel Chase, 1796–1811.
3. Gabriel Duval, 1811–1836.
4. Roger B. Taney, 1836–1864.

Representing a total service of 70 years; and as Attorneys General she had Smith, Pinkney, Taney, Nelson, Johnson, and lately Bonaparte.

South Carolina had Rutledge appointed but not confirmed, and William Johnson appointed in 1804 and served till 1834—30 years. As Attorney General she had one, Hugh S. Lagare.

North Carolina had on the bench:

1. James Iredell, 1790–1799.
2. Alfred Moore, 1799–1804.

Representing a service of 13 years only, more than seven times less time of representation than Virginia, more than five times less than Maryland, and more than twice less than South Carolina.

It is singular that North Carolina, largely the most populous of all the States in the fourth circuit and always having had lawyers and judges of eminence among her citizens, should never have had an Attorney General in the Cabinet. Indeed, it will be seen that Virginia has been represented in the Cabinet before the war 22 times, Maryland 18, South Carolina 6, and North Carolina only 4.

Coke has said it required the lubrications of 20 years to make a perfect lawyer. It has also been said it requires the attrition of 20 years to make the perfect judge. If these opinions as to the time required to effect proficiency are sound, the thoroughly equipped judge is found at about the age of 61. The opinions of great lawyers are at variance with Oslerism. And so, too, is the sentiment of Homer, the greatest poet of all time, for he speaks of "a green old age, unconscious of decays that proves the hero born in better days."

But the idea has been advanced that as section 260 of the code provides the judge may resign at 70, after 10 years' service, and get full pay, that he should be barred from appointment if he is 60 or slightly over at appointment. This is a non sequitur. This has not been the custom.

There is nothing in the law compelling retirement at 70, nor providing pay unless there is a service of 10 years, nor arbitrarily or otherwise barring appointment at a certain age, nor is there a limitation restricting the discretion of the appointing power.

There is the express provision favorable to age and service at 70, and there is also an express provision which shows respect for age—section 216 of the code—which says:

"The Associate Justices shall have precedence according to the dates of their commissions or, when the commissions of two or more of them bear the same date, according to their ages."

These are all the statutory rules relating to the age of the judge.

The precedents for a century or more, established under the laws of Congress, in appointing lawyers of mature experience and age to the Supreme Bench, are in direct conflict with the notion that he should be ineligible when on the shady side of 60. Indeed, such a hard and fast rule, if followed, would bar many from Congress and from the Presidency as well. Some men are stronger at 60 than others at 40. Each particular case heretofore has been determined upon its merits. Taney was appointed at 59 and served 28½ years. Waite was appointed at 58 and served 14 years. Moore was appointed when quite young, but ill health compelled his resignation in four years.

The appointments heretofore made establish the precedents and rules of action by the Executive at variance to modern suggestions that a man should be effaced at or near 60. This contention is proven by reference to a few appointments.

The 22 appointments set forth below constitute about one-third of all the judges who served on the Supreme Bench from the foundation of that court. Dates are given as of nearest birthday:

1. Judge Lurton, appointed at 65 or 66.
2. Ward Hunt, appointed at 63 (served over 10 years).
3. L. Q. C. Lamar, appointed at 63.
4. William Strong, appointed at 62.
5. Samuel Blatchford, appointed at 62 (served over 11 years).
6. Howell Jackson, appointed at 61.
7. Justice Holmes, appointed at 61.
8. Justice Shiras, appointed at 60.
9. Chief Justice Taney, appointed at 59 (served 28½ years).
10. Thomas Johnson, appointed at 59.
11. Gabriel Duval, appointed at 59.
12. J. P. Bradley, appointed at 58 (served 22 years).
13. Chief Justice Waite, appointed at 58 (served 14 years).
14. Chief Justice Chase, appointed at 57.
15. John Blair, appointed at 57.
16. John McKinley, appointed at 57.
17. Peter V. Daniels, appointed at 57.
18. W. B. Woods, appointed at 57.
19. Stanley Mathews, appointed at 57.
20. Justice Peckham, appointed at 57.
21. Chief Justice Fuller, appointed at 56.
22. Levi Woodbury, appointed at 56.

It is a remarkable fact that 36 of the 56, the total of the predecessors of the present Chief Justice on the Supreme Bench, served periods ranging in time from 10 to 34 years, though mature in age at the date of their respective appointments. The record is a wonderful one, demonstrating the large majority to have been men sound in body and mind and capable of exacting and exalted service, virile exemplars of former days.

An examination of the record also discloses the remarkable fact that 20 of the judges of the Supreme Court—nearly one-third of all who ever served after appointment—served long periods, varying in time, after they reached 70, besides the long service before 70.

In verification of the statement their ages and names and the length of service after 70, is given as follows:

1. Chief Justice Taney served after 70 years old 17½ years.
2. Duvall served after 70 years old 12½ years.
3. Wayne served after 70 years old 10$\frac{5}{12}$ years.
4. Field served after 70 years old 10 years.
5. Marshall served after 70 years old 9$\frac{5}{12}$ years.
6. Nelson served after 70 years old 9¾ years.
7. Catron served after 70 years old 9 years.
8. Bradley served after 70 years old 8⅝ years.
9. Cushing served after 70 years old 8$\frac{1}{12}$ years.
10. Harlan served after 70 years old 8⅓ years.
11. Clifford served after 70 years old 7 years.
12. Smith Thompson served after 70 years old 6½ years.
13. McLean served after 70 years old 6 years.
14. Daniels served after 70 years old 6 years.
15. Swayne served after 70 years old 6 years.
16. Grier served after 70 years old 5$\frac{5}{12}$ years.
17. Gray served after 70 years old 4¾ years.
18. Miller served after 70 years old 4 years.
19. Blackford served after 70 years old 3⅓ years.
20. Waite served after 70 years old 1⅓ years.

LONGEVITY ON THE BENCH AND AT THE BAR.

The completion by Lord Halsbury, on September 3, of his ninetieth year reminds one of many remarkable cases of longevity both on the bench and at the bar. The illustrious Sergt. Sir John Maynard was at his death in his eighty-ninth year, having been within a few months of his death Lord Commissioner of the Great Seal. The Right Hon. James Fitzgerald, the Prime Sergeant of Ireland, died in 1834, in his ninty-fourth year, after a great career at the bar in Ireland and in the Irish and English Houses of Parliament, being requited with the offer of a peerage, which was, however, declined. Mr. Robert Holmes died in 1859, in his ninety-fourth wear, as father of the Irish bar, of which he was an acknowledged leader although a stuff gownsman, having refused the highest promotion and the office of solicitor general. Lord Plunket, Lord Chancellor of Ireland, died in 1854 in his ninetieth year; Lord Lyndhurst at his death in 1864 was 90; Lord Brougham at his death in 1869 had all but completed his ninetieth year; and Lord St. Leonards at his death in 1875 was 94. The Right Hon. Thomas Lefroy, Lord Chief Justice of Ireland, who presided over the Irish Court of Queen's Bench in 1866 when he was past 90, died in 1869 in his ninety-third year. Vice Chancellor Bacon, who died in 1895 in his ninety-seventh year, continued to discharge the duties of vice chancellor till 1886. In Canada, Sir James Robert Gowan, who died in 1910 in his ninety-sixth year, had the unique record of 60 years of judicial work. (Law Notes, Nov. 15, 1915.)

These are a few who grew old—not in years but in deeds, service, and honor.

We have illustrious examples in the different States where eminent judges, cotemporaries of some of the justices mentioned above, served on the bench long after they had reached three score and ten. Two of these may be mentioned because they made State, National, and international reputations—Chief Justice Richmond M. Pearson and Chief Justice Thomas Ruffin. Pearson was unsurpassed in America as a common-law lawyer and judge. Ruffin was a familiar acquaintance of Marshall and Kent, and by them and such as they was esteemed one of the ablest judges in all branches of the law who ever presided over courts among English-speaking people. It may be added that no lawyer, perhaps, in America ever rendered more efficient and lasting service to his country than John B. Minor, professor of common and statute law of the University of Virginia, who died in the harness when he had passed his four score years.

The Supreme Court of the United States is the only court from whose judgments there is no appeal. "None but the judgments of the Lord are just and righteous altogether." Nevertheless in the government of men the power must be lodged somewhere for final arbitrament, and where mankind hope justice and righteousness may be established. This transcendent power is given the Supreme Court. This Supreme Court magnifies the importance of its decrees and that these guardians of the Constitution, the life, liberty, and perpetuity of the Union shall be ripe in wisdom and virtue and mature in years and experience.

This statement is made to present a few obscured or forgotten truths. The best way to arrive at the truth is to examine things as they actually have been, now are, and not as they are imagined or fancied to be either by ourselves or others. From what has heretofore been stated, it logically follows when two of the circuits each have two members of the court that two others are denied membership, and this inevitably results in inequality. This has not always been so as to any one of the nine, except as to the fourth for the last half century. History will associate the discrimination with the penalties of the Civil War. The appointing power of the present can view the past with poise and calmness and recall Maryland, Virginia, North Carolina, and South Carolina were four of the original 13, whose first succession established this great Republic; and although three of them joined the second secession they paid the debt in full of the vanquished, without murmur, and without dishonor, and became again more powerful constituents of a restored Union. The immediate precedents of exclusion were set at the close of the war, and unhappily acquiesced in since, but the time has come when the sunshine of fraternity and equality should break through and dispel the long-continued eclipse. The Most High visited upon his chosen people a sentence of wandering in the wilderness of only 40—not 51 years.

The sole purpose of this simple statement will be effected if in anywise the appointing power is aided in an examination of the facts, to the end that equality and justice shall be reestablished between circuits and States of equal dignity and power and entitled to equal rights under the laws.

Although, since the end of reconstruction, these five States—practically one-ninth of the Republic—have been accorded the untrammelled right to vote in presidential elections, and to have representation in Congress, their sole dependence and hope for equitable representation in the other—the judicial department—has been in the appointing power.

Is it not one of the most notable occurrences in our history that this great people throughout their humiliation of a half century have borne it patiently and without uttering a word of complaint or criticism?

Since there is no virtue so great and godlike as justice, does not this extraordinary situation appeal to the head and heart of a thoughtful President, capable of "hearing courteously, considering soberly, answering wisely, and deciding impartially?"

ARMY DENTAL CORPS.

Mr. SMITH of Georgia. Mr. President, I present a letter from William C. Crenshaw, of Atlanta, Ga., president of the National Association of Dental College Faculties, addressed to the senior Senator from North Carolina [Mr. OVERMAN], which I ask may be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ATLANTA, GA., *March 23, 1916.*

Hon. LEE S. OVERMAN,
United States Senate, Washington, D. C.

MY DEAR SIR: You were a member of the Senate Military Committee and actively interested in several Army Dental Corps bills which were considered and reported by the committee and passed by the Senate, each of which bills provided that the three grades of rank of lieutenant, captain, and major should be available to the Dental Corps subject to the same periods of service required in the case of Medical, Pay, and other Staff Corps. You were particularly interested in minimizing the discrimination in the matter of rank and status which the Congress was influenced, through unidentified and mysterious sources, to inflict on the dental profession and its schools.

I therefore write you to again assure you of the profession's appreciation of your interest in the object stated, and also to urgently ask a continuance of your active support of an effort to so amend the dental provisions of the pending Army reorganization bill that the Dental Corps may, for the sake of its efficiency and because of the immeasurable effect of its military status on the civil status of the profession, be accorded rank and a military status commensurate with the profession's civil status and with the importance of its function in preserving and restoring the health, comfort, and efficiency of those of our fellow citizens who are called to arms in defense of the democracy of our country and of our country's claim to accord its people equal opportunity without discriminating distinctions.

The executive and the legislative branches of the Government have been in accord with the general policy of placing the several staff corps on a parity in the matter of rank and pay, so that the highly educated specialist in medicine and surgery and the specially trained officers of the Pay and other Staff Corps are on an equal footing. Experience has proven the wisdom of this policy, while digressions therefrom result in discriminating distinctions destructive of the esprit de corps essential to efficiency and economy.

The claim made but a few years ago in behalf of the Medical and other Staff Corps that equality of rank and pay should obtain between officers educated at their own expense and those educated at Government expense has not only been established as just, but has resulted in attracting to both the Army and the Navy Medical Corps a more highly educated, broadly qualified, and notably efficient class of surgeons. The same claim and the same reasoning would apply with equal force and similar results in the case of dental officers who treat those of our fellow citizens whose lives are offered in defense of their country. To deny the dental surgeon an equality with other officers whose function is the amelioration of human suffering and the preservation of human efficiency, and instead attempt to degrade him to the military position of the Army horse doctor, carries with it an equal degradation of the soldier to the level of the military horse.

Many of your colleagues are convinced—in fact, it is almost uniformly recognized—that the Army and Navy personnel require and have a right to expect the Government to provide the most competent general medical and special surgical service available, and it is also generally recognized that there can not be an equality in the competency of the service rendered by the several different professions represented in the Army and Navy if there is not also an equality in their social, professional, and official status.

In support of the object of the amendment, a tentative draft of which you indorsed to Senator CHAMBERLAIN on the 17th instant, I append hereto excerpts from the views of the Military Committees of the Senate and House on similar bills, which were expressed in their official reports, and also the views of many nondental men of prominence in the educational affairs of the country, and additionally some data bearing on the high status and the extraordinary results accomplished by the Canadian Army Dental Corps, and also on the unparalleled results of the dental service in connection with the European war.

Surgery is surgery, whether practiced by a medical doctor or a doctor of dental surgery. There was never a greater contribution to the science and art of surgery nor a more blessed boon to suffering mankind everywhere, especially to the soldier wounded on the field of battle, than the discovery and application by dental surgeons of surgical anesthesia.

I will probably send Senator SMITH a copy of the above referred to collection of data on the subject and ask him to have it printed and made available to other Senators who are interested in the attainment of this almost universally approved object.

With a deep sense of gratitude to you personally and in behalf of my profession, I remain,

Yours, very sincerely,

WILLIAM C. CRENSHAW,
President of the National Association of Dental College Faculties.

HOUSE BILL REFERRED.

H. R. 10384. An act to regulate the immigration of aliens to and the residence of aliens in the United States was read twice by its title and referred to the Committee on Immigration.

UNITED STATES BANKRUPTCY LAWS.

The VICE PRESIDENT laid before the Senate the following concurrent resolution (No. 27) of the House of Representatives, which was read and referred to the Committee on Printing:

Resolved by the House of Representatives (the Senate concurring), That there be printed 20,000 copies of the revised edition of United States bankruptcy laws, as prepared by the Committee on Revision of the Laws of the House of Representatives, the said 20,000 copies to be distributed as follows: Three thousand copies to the Senate folding room, 3,000 copies for the Senate document room, 7,000 copies for the House folding room, and 7,000 copies for the House document room.

GRAND ARMY OF THE REPUBLIC.

The VICE PRESIDENT laid before the Senate the following concurrent resolution (No. 26) of the House of Representatives, which was read and referred to the Committee on Printing:

Resolved by the House of Representatives (the Senate concurring), That there shall be printed as a House document 1,500 copies of the journal of the fiftieth national encampment of the Grand Army of the Republic, for the year 1916, not to exceed $1,700 in cost, with illustrations, 1,000 copies of which shall be for the use of the House and 500 for the use of the Senate.

NATIONAL DEFENSE.

Mr. REED. Mr. President, I ask leave, out of order, at this time to introduce an amendment to the so-called military bill. I am introducing the amendment now in order that it may be printed for the consideration of Senators.

Briefly stated, the amendment provides pay for militia officers above the rank of captain who are engaged in active service.

I also ask to have printed in the RECORD a number of telegrams bearing upon the subject matter of the amendment.

The military bill, as it is drawn, deprives all officers above the rank of captains serving with their companies of pay. The alleged basis for that action is that officers above the rank of captain do no work of importance. It is claimed that they do not give their time and labor to the upbuilding of the National Guard.

In order to ascertain whether the allegations referred to were founded in fact or otherwise, I sent two forms of telegrams to various officers of the National Guard which I ask leave to insert in the RECORD. One of these forms was sent to captains commanding companies. The other form was sent to officers above the rank of captain. I employed the two forms and caused them respectively to be sent to the classes of officers referred to for this reason: Those sent to captains commanding companies would elicit answers from men who will, under the terms of the bill, receive pay. The amendment does not in any manner affect their pay, therefore, their opinions and statements of fact are in no manner colored by interest. The other telegram sent to officers who will be affected by the amendment I

propose affords them an opportunity to frankly state their views, and the facts relative to the character of service by them rendered.

I ask leave to insert in the RECORD: First, a copy of the telegram sent by me to officers above the rank of captain together with the answers by me received thereto. Second, a copy of the telegram sent by me to the captains commanding companies together with the answers I received.

The PRESIDING OFFICER (Mr. HOLLIS in the chair). Without objection, it is so ordered.

Mr. REED. The copy of the telegram sent by me to officers above the rank of captain is as follows:

[Telegram.]

APRIL 9, 1916.

In justification of Senate bill which fails to provide pay for other than company officers, it is claimed that staff officers do not devote any considerable portion of their time to military work. How much of your time and money do you annually devote to the National Guard? Wire immediately.

JAMES A. REED.

The replies received from officers above the rank of captain are as follows:

NEVADA, MO., *April 10, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Commanding general is responsible for instruction, discipline, government, equipment, condition, movement, and operations of National Guard, requiring his constant supervision and attention, devoting very large part of his time, as he must pass upon everything. Colonels are responsible for instruction and discipline of their regiments, keeping up strength and interest, visiting companies, handling correspondence, and countless matters requiring fully half their time in city regiments. Majors are required to supervise drill of their battalions, giving four nights each week in country regiments; majors visit towns in which companies are stationed, supervising same. Brigade and regimental adjutants, quartermasters, and inspectors of rifle practice handle all work and correspondence of their departments, giving fully half their time in addition to other duties. All officers above named devote much time to study schools and correspondence schools to keep abreast of progress in military matters.

Duties of company commander require much time, and pay should be at least as much as that provided in the Senate bill, but lieutenants are given proportionately too much, as they give relatively much less than any other officer in this Guard; and as between captains and lieutenants the relative pay fixed in Hay bill is much more equitable than in Senate bill. In National Guard of this State amount of time devoted to military duties is, generally speaking, in direct ratio to rank of the office, and in strict fairness pay should be proportional to rank, as it is with enlisted men in this bill, and with officers in the Army. However, we regard the provisions of the Hay bill, fixing the pay of all officers above the grade of captain at the same sum fixed for that grade as based upon the principle that the higher officers are willing to make greater sacrifice of their time, and we therefore earnestly indorse the rates of pay fixed in section 76 of the Hay bill. We call attention to the fact that section 112 of the Senate bill provides that only officers paid under section 108 shall be called in case of war. If these two sections stand no officer above the rank of captain would be eligible to Federal service in war. We are in the National Guard to serve the United States.

HARVEY C. CLARK,
Brigadier General Commanding.
A. B. DONNELLY,
Colonel First Regiment.
W. A. RAUPP,
Colonel Second Regiment.
F. A. LAMB,
Colonel Third Regiment.
J. D. MCNEELEY,
Colonel Fourth Regiment.
E. M. STAYTON,
Major Battalion Field Artillery.

—

ST. JOSEPH, MO., *April 9, 1916.*

JAMES A. REED,
United States Senate, Washington, D. C.:

Relative to representation that colonels, and so forth, of militia do not devote any considerable time to it, will state that between 400 and 500 communications pertaining to militia originate in or are forwarded, transmitted, or received in my office each month, including militia orders, letters, reports, returns, vouchers, applications, and so forth. My telephone toll bill on military business the past month was $25. Two-thirds of my time is devoted to my regiment and I make a living with the other third. Two-thirds of the work of my law-office stenographer is military work; one-half of my office suite is devoted to military work. About 30 different forms of printed military blanks are required to be used. Am willing to bring to Washington, without Government expense, a couple of trunks full of military files of my office to substantiate above, asking only in return that if enemies of the National Guard are found to have misrepresented on this point their statements on all others be regarded with suspicion. If any Senator who opposes Federal support to brigade, regimental, and battalion commanders will personally visit any near-by regimental headquarters of Washington or Baltimore National Guard and go through the files, he will be surprised at the extent of work involved and will turn against those upon whom he has heretofore relied for information. Gen. Clark devotes two-thirds of his time to military work, notwithstanding he is a prominent lawyer. My majors devote considerable time to work of instruction, organization, and inspection. My adjutant devotes two or three hours a day to military work. For any further information wire me. Am ready to back all statements with proof.

JOHN D. MCNEELY,
Colonel Fourth Missouri Infantry.

ST. JOSEPH, MO., *April 9, 1916.*

JAMES A. REED,
Senate, Washington, D. C.:

Relative to Senate bill refusing recognition to officers above rank of captain, permit me to state that our brigade commander, Gen. Clark, was lieutenant colonel of Volunteers in Spanish War. Long prior to that was company commander, and previously an enlisted man. I am an honor gradute of Missouri State Military School, where I was a cadet five years. Served as officer in this regiment in Volunteers, 1898–99. Have attained rank by gradual promotion. Lieutenant colonel and majors of regiment have been officers for from 14 to 25 years and earned promotion by service. I submit that it would be utterly discouraging to them if Congress declares promotion earned by faithful service deprived them of recognition under the bill.

JOHN D. MCNEELY,
Colonel Fourth Missouri Infantry.

—

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Statement that field and staff officers devote but little time to guard absolutely untrue and ridiculous on its face. As colonel of the First Infantry I average five nights a week and every spare moment I can get away from my business. Majors and staff officers I require to be present three nights, besides calling on them occasionally in the daytime. Thursday of each week these officers are required to be at the armory from 6 to 11.30 p. m. Is the Senate willing to believe any business, or the Government itself, could be conducted successfully if the head of it or the executive department gave it but little time? The colonel and his staff occupy relatively the same position to a regiment as the President and his Cabinet do to the Government. Furthermore, I might have a company captain and fine soldier and deserving of promotion to major, or especially fitted for the staff. If his means were limited, he could not give up pay of company officer and assume expense as major without pay.

ARTHUR P. DONNELLY,
Colonel First Infantry.

—

KIRKSVILLE, MO., *April 9, 1916.*

JAMES A. REED,
Washington, D. C.:

I spend many days in inspecting scattered companies and keeping them up to standard. I have been a captain for years, and I find that a major spends more time out of the city. His work is more difficult than that of a captain. He, too, should receive pay.

J. E. REGOR, *Major.*

—

TRENTON, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Have been an officer in the National Guard since 1902. Service continuous; company commander greater portion of that time; have made probably 10 or more trips inspecting and instructing companies; not in home town in the past year.

W. D. STEPP,
Major, Fourth Infantry, National Guard.

The copy of telegrams sent by me to captains of companies is as follows:

[Telegram.]

APRIL 9, 1916.

In justification of Senate bill, which fails to provide pay for other than company officers, it is claimed generals, colonels, majors, and staff officers do not in fact devote any considerable portion of their time to military work. Wire facts. Also have captains commanding companies wire statements of amount of work done by generals, colonels, majors, and staff officers. Must have answers immediately.

JAMES A. REED.

The replies received from captains commanding companies are as follows:

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Information received here to the effect that claims are made in Washington that generals, colonels, majors, and staff officers devote but little time to National Guard service. At a meeting of company commanders of the First Infantry, National Guard of Missouri, this evening the undersigned decided to protest the attempt to exclude above officers from pay. Desire to state that all these officers devote at least three nights a week, and often more. The organization could not exist if they are discriminated against. In fact, the higher the rank the greater the amount of time devoted to the service. This applies from general to second lieutenant.

George V. Stewart, Captain Company A; R. W. Rombauer, Captain Company B; A. R. Sourwein, Captain Company C; Gunther Meier, Captain Company D; G. M. Faught, Captain Company E; E. F. Lloyd, Company F; J. R. Robinson, Captain Company G; E. J. McMahon, Captain Company H; J. F. Carmack, Captain Company I; Fred Bottger, Captain Company K; John Schweitzer, Captain Campany L; J. J. Koch, Captain Company M; N. B. Comfort, Captain Machine Gun Company.

—

KANSAS CITY, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

We earnestly indorse the rates of pay fixed in the Hay bill. The higher the officer the more time he is required to give the service. This applies to every officer in the National Guard.

Capt. F. G. Ward; Capt. W. E. Coe; Capt. John Constable; Capt. W. B. Johnson; Capt. C. F. Jones; Capt. T. C. Ross; Capt. W. A. Smith; Capt. F. W. Hardin; Capt. A. Barnes; Capt. G. E. Sanstrom; Capt. W. Osgood; Capt. A. Johnson.

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Colonel devotes practically all his evenings to guards; majors and staff officers' presence required three nights a week. Senate bill provides promotion must be made from guard. No company officer who was being reimbursed for time and expense could afford assume additional expense of colonel, major, and staff officer and at the same time sacrifice the small amount the Government gave him as company officer. As a result would be impossible to fill vacancies in higher rank, or else have inefficiency on account of their wealth. We would have a lot of companies with no directing head.

N. B. COMFORT,
Captain Machine Gun Company.

—

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Hope you offer amendment to include all officers in pay provision of Senate bill. Strength of a regiment lies in its colonel, majors, and staff officers, as well as company officers. They are compelled to spend as much time as anyone—never less than three nights a week.

J. J. KOCH,
Captain Company M.

—

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington. D. C.:

Bill should include field and staff officers in pay. Absolutely necessary or legislation will be a failure. If present officers should resign, no company officer would accept additional expense and worry of field officer, thereby losing pay as company officer.

JOHN SCHWEITZER,
Captain Company L.

—

TRENTON, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Officers of higher rank have more responsibility, and much is required of them, having attained their rank by reason of having served in the various lower grades. Their continued services is, in my judgment, very necessary.

W. C. WILLIAMSON,
Captain, Fourth Infantry, National Guard of Missouri.

—

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

The higher the rank of officer in National Guard, more time, expense, and responsibility. Organization would fail if they neglected their business.

G. M. FAUGHT,
Captain Company E.

—

ST. LOUIS, MO., *April 8, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

If your statement of time devoted by field and staff officers were correct, there would be no regimental organization, but 12 little organizations instead of 1 homogeneous whole.

J. R. ROBINSON,
Captain Company G.

—

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

The colonel has to devote more time; majors and staff officers same time as company officers; their expense is also great.

E. J. MCMAHON,
Captain Company H.

—

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Successful administration of a regiment requires more time of colonel and major and staff officers than anyone. I personally declined a major's commission on account of time and expense.

A. R. SOURWEIN,
Captain Company C.

—

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Our colonel devotes more time to regiment than any man in service; staff officers and majors same time as company commanders.

R. W. ROMBAUER,
Captain Company B.

—

ST. LOUIS, MO., *April 9, 1916*

Senator JAMES A. REED,
Washington, D. C.:

No truth in statement about field and staff officers; the passage of bill failing to provide pay for these officers would result in this organization weaken the bill immeasurably.

J. F. CARMACK,
Captain Company I.

—

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Regiment could not exist if colonel and staff failed to give time and attention.

GEO. W. STEWART,
Captain Company A.

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Colonel, majors, staff officers devote fully as much time as company officers. Failure to provide pay unjust, and would operate to prevent any captain accepting promotion or serving on staff.

GUNTHER MEIER,
Captain Company D.

—

ST. LOUIS, MO., *April 9, 1916.*

Senator JAMES A. REED,
Washington, D. C.:

Colonel devotes practically all his evenings and large part of days to guard; majors and staff officers compelled to stand same time as company officers. Hope bill is amended to include them in pay.

FRED BOTTGER,
Captain Company K.

—

ST. JOSEPH, MO., *April 9, 1916.*

JAMES A. REED,
United States Senate, Washington, D. C.:

Colonel of regiment, being highest rank, does more work than company commander. Paper work of company multiplied in his office by 12 or 14, same being number of subordinate organizations dealt with by colonel and adjutant.

CHAS. E. HOLT,
Captain Company M, Fourth Missouri.
W. A. MANN,
Captain and Adjutant, Fourth Missouri.

—

PIERCE CITY, MO., *April 10, 1916.*

Hon. JAMES A. REED,
United States Senate, Washington, D. C.:

The higher the rank the more time given the service. This applies to every officer from brigadier general to second lieutenant. We earnestly indorse rate of pay fixed in Hay bill.

Elmer Throwbridge, Captain Company A, Second Infantry, National Guard Missouri; Ed. C. Clarke, Captain Company B, Second Infantry, National Guard Missouri; Joseph H. Hull, Captain Company C, Second Infantry, National Guard Missouri; Fred A. Nesbit, Captain Company D, Second Infantry, National Guard Missouri; S. A. Martin, Captain Company E, Second Infantry, National Guard Missouri; H. A. Hibler, Captain Company F, Second Infantry, National Guard Missouri; S. A. Fillingham, Captain Company G, Second Infantry, National Guard Missouri; Fred A. Nesbit, Captain Company I, Second Infantry, National Guard Missouri; Paul A. Frey, Captain Company K, Second Infantry, National Guard Missouri; Wm. S. Moon, Captain Company L, Second Infantry, National Guard Missouri; Wm. A. Oglesby, Captain Company M, Second Infantry, National Guard Missouri; W. M. Williams, Captain Machine Gun Company.

DUTY ON SUGAR.

Mr. SIMMONS. I think, Mr. President, we are now in position to resume the consideration of the sugar bill.

The Senate, as in Committee of the Whole, resumed consideration of the bill (H. R. 11471) to amend an act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved October 3, 1913.

Mr. BROUSSARD. Mr. President, I had intended addressing the Senate at some length upon the substitute reported by the Committee on Finance of the Senate to the House bill repealing the free-sugar clause of the Underwood tariff bill. I quite realize, as we all do here, that the main controversy with regard to this matter will most probably take place as the result of the conference between the two Houses upon their disagreement. I can not, however, permit the bill to come to a vote without at least expressing myself with regard to the substitute reported by the committee, because of the great interest which Louisiana has as the result of this legislation.

These are unusual times and on every hand the question of preparing this country for defense because of the conditions existing in Europe has focused the public mind upon what preparedness really contemplates. Of course, we all understand that preparedness has for its primary purpose the organization upon some systematic and scientific plan of the various arms of defense used during times of war. But conditions in Europe have shown us that that alone will not suffice to have this country thoroughly prepared for its defense. So we see in some quarters that efforts are being made to prepare the commercial conditions of the country against the result of the European war after it shall have terminated.

Suggestions have come to Congress, through various sources, as to the necessity of various preparations and for the enactment of some laws to save the industries of this country from the dumping on the American market of a large quantity of goods cheaply produced after the close of the war in Europe. Other suggestions have come to us in the shape, for instance, of the suggestion that there should be a protective tariff upon dyestuffs, in order that we may not be entirely dependent upon Germany for those commodities essential to the manufacture of the clothing of the people of this country. Various other suggestions have been made; for instance, such as the construction of a plant or plants in order to produce the nitrates of this

country. All of these suggestions have grown out of conditions that have made the necessity for them apparent, as the result of the war in Europe. I take it, that sugar comes in the category of things as to which we ought to prepare as the result of conditions that we find existing in the two largest sugar-consuming countries now engaged in the war.

Let us note, for instance, the conditions of Germany. Germany, which heretofore has produced more sugar than was necessary for her own consumption, was enabled, because of that surplus production, to build up a large trade with England by disposing of her surplus sugar upon that market, which enabled her to purchase goods from England for the use of the German people. Germany to-day, though practically closed from outside traffic, and certainly unable to get any sugar from anywhere else, finds herself enabled to furnish her people with the sugar requisite for their everyday consumption. We find that the price of sugar in Germany, because of the policy pursued by Germany, has not yet reached 5 cents a pound. England, which heretofore had purchased sugar so very cheaply of Germany, because of the overproduction of sugar in that country, found herself at the outset of the war closed from a market that had theretofore supplied her with sugar, and found herself under the necessity of approaching our supply market in order to secure the necessary quantity of sugar to supply her people.

What has been the result? The result is that sugar is selling in England to-day at 9 cents a pound, as compared with less than 5 cents in Germany, simply because, on the one hand, Germany was prepared to meet those conditions and England was totally unprepared. The policy which this bill suggests, if carried out by this Government, must inevitably place us in the same situation should we at some subsequent time become involved in a great contest—which I hope will never occur—and will place us in the identical position in which we find England to-day. If we have not prepared ourselves to produce either from a domestic source or through our insular possessions sufficient sugar to supply the American people, we shall find ourselves in the same attitude in which we find the British people to-day. Not only will we have to pay double or thrice the normal price of sugar, but we shall be compelled, in order to enable us to secure the quantity of sugar requisite to supply the American people, to submit ourselves to other difficulties. For instance, over and above the enhanced value of sugar to the British people, because of the war in Europe, we find that within the first year and a half of the contest, while the British people were compelled to pay over $125,000,000 in excess of what they had been paying for the same quantity of sugar in the year and a half preceding that time, in order to get this sugar, she was compelled to encroach upon our source of supply; and the American people, taking no part at all in the war, have found themselves contributing on that one item alone over $175,000,000 because of the advanced price of sugar, through the competition of the British people with us upon the market from which we draw our supply.

I am calling attention to these facts, because the policy which this bill as amended by the Senate Finance Committee would place upon the domestic production must of necessity stop the development of that industry and must of necessity place us in the same condition in which England was in August, 1914, when the great war broke out.

But, Mr. President, looking at the report of the committee with regard to this legislation, I find this statement:

> In making this recommendation your committee regrets that owing to the abnormal conditions, both as respects the revenues and expenditures of the Government, on account of the European war and legislation made necessary by it, the revenue requirements make it inexpedient at this time to dispense with the revenues which will accrue to the Treasury from the temporary continuance of existing duties upon sugar and the other articles of the sugar schedule hereinbefore enumerated.

The committee states that it regrets that it is at this time compelled to permit the continuance of the existing duty for a period of four years. I feel indeed sorry, Mr. President—and I know that the regret which I express at the attitude of the party to which I belong is shared by the people whom I represent, who also lend their allegiance to the Democratic Party—I regret indeed that the party does not find itself able to afford more opportunity, more consolation, as the result of this legislation, than is contemplated by this report and by the utterances of Senators on this side of the Chamber.

We have looked at the sugar situation from many viewpoints; we have had our trials and tribulations in regard to it for the last four years. The industry has been in a condition tottering upon the verge of absolute bankruptcy. Many of those engaged in it in the last few years have gone into bankruptcy; many others have survived by extraordinary efforts to maintain themselves until the prices were enhanced as the result of the war going on in Europe. We had hoped that when this step was taken it would define the attitude of the Democratic Party on this question, and that that attitude would be one affording some opportunity for those in Louisiana engaged in the industry to continue it without having, as they have had for the last three years, the threat of the annihilation of that industry hanging over them. Of course, under this policy, while this tariff will help them during the period of four years in contemplation by this bill, if that is the final action of Congress; yet we must know that, as a result of that policy, there can be no advancement in the development of the industry and that no additional money can possibly be invested in an industry the life of which is fixed by statute and the life of which can not be extended beyond the limitation fixed in the statute.

So, I say, I regret that the people of Louisiana can find so little consolation at this time when the party declares that its purpose to continue the present duty for a period of four years is not dependent upon whether it may accrue to their interest or not; it is not dependent upon whether they are to receive that sort of encouragement at the hands of the party to which they belong; but it depends solely and entirely upon the condition of the Treasury; that their condition is not to be consulted, but solely and exclusively the condition of the Treasury is to be consulted in legislating with regard to that industry. This is a keen disappointment to me, as a Democrat. It will prove a keen disappointment to the Democrats of Louisiana.

I do not want to make it appear that the people engaged in the production of sugar in Louisiana want to be discriminated in favor of by any legislation by Congress. All they ask is to be treated upon an impartial equality with other people engaged in other industries throughout the country. They are not asking at the hands of Congress, they are not asking at the hands of the Democratic membership of the other House or of this that they be selected with a view of being favored, but they do insist upon the declaration of the platform of their party; they do insist that they shall have that same equal and fair treatment that other industries in the country are receiving and are admitted to be receiving under the same bill which we seek to amend here. That that industry should be selected from the other industries of the country, that it should be ordered when not needed, to stand aside or to come forward and deliver whenever the Treasury is without funds, and that it should be turned out of doors whenever the Treasury has sufficient money to administer the Government is not Democratic, and it does not appeal to the sense of fairness and justice of any man; yet that is the attitude in which that industry is placed. The people of Louisiana are told, in substance, as in so many words, "Whenever the Treasury requires you to contribute toward the maintenance of the Government, you can come forward and deliver your share of the taxes to conduct the Government, but whenever we can raise such taxes in some other way then you must stand out and be extinguished, because there is no need for your services." I do not believe that that attitude could be sustained before the American people if that issue were permitted to be presented to them, because their sense of fairness, their sense of justice, would not permit that attitude to be held very long on this floor or elsewhere.

Mr. President, what has been the attitude of the party to which I belong, with regard to this matter, since it has come into power? Just prior to the presidential election the House of Representatives passed a bill putting this article on the free list. When the convention was held at Baltimore that proposition was pending before the Finance Committee of the Senate. After the platform had been written and the candidate of the party had been selected the Senate Committee on Finance reported upon the free-sugar bill which had been passed by the other House and reported as a substitute for the House free-sugar proposition a bill carrying practically the same duty as exists to-day.

Mr. HARDWICK. Mr. President, I do not wish to disturb the Senator, but I want to ask him a question.

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from Georgia?

Mr. BROUSSARD. I yield for a question.

Mr. HARDWICK. Will not the Senator admit that the Baltimore platform contains specific approval of the tariff-schedule bills passed by the House of Representatives?

Mr. BROUSSARD. No; I will not admit that, Mr. President, nor will I discuss that proposition. I had intended going over the entire subject matter, but I do not wish to detain the Senate.

Mr. HARDWICK. Very well.

Mr. BROUSSARD. But I will not admit that, of course, nor will I discuss it at this time.

Mr. HARDWICK. Just one other question. Will the Senator put in his remarks the words of the Baltimore platform on that point?

Mr. BROUSSARD. The words of the Baltimore platform?

Mr. HARDWICK. Yes; on the tariff-schedule bills passed by the House of Representatives.

Mr. BROUSSARD. The Senator and I have thrashed that out time and time again, and I could no more convince him than he could convince me. The difference between the Senator and myself is that I was one of those who drafted the platform and the Senator was not. So we can not convince one another.

Mr. HARDWICK. I do not want to bother the Senator, but I only have the knowledge that Democrats generally have from what the committee did and what the convention adopted. I should just like to ask the Senator, so that he will not misrepresent the attitude of the party, to put in connection with his remarks, or read now to the Senate and to the country, what the platform at Baltimore said about the tariff-schedule bills of the House of Representatives, one of which was the bill providing for free sugar?

Mr. BROUSSARD. Mr. President, I will not do that, either. I have stated already that the Senator and I have discussed that on many occasions, and I have no hope of converting the Senator from his conclusions; and, of course, having been one of those who drafted the particular platform in question, I have absolute knowledge of what I speak. I do not intend to discuss that, but I want to present this aspect of the question to the Senate: The House having passed the free-sugar bill, the Democratic convention having been held at Baltimore, the platform having been adopted and announced and the candidate selected, the Finance Committee of the Senate reported back to the Senate and substituted for the free-sugar bill of the House a bill carrying a duty, practically the duty now in the law, and the extension of which is sought to be accomplished by both the House and the Senate bills. Subsequently the passage by the House of the Underwood bill brought to the Senate a proposition on the part of the House as a part of the Underwood bill to impose on sugar a duty of three-fourths of the then existing duty, with free sugar at the end of three years. In that proposition the Senate concurred; so that that provision is in the law.

At this session of Congress the House, finding that the Treasury needs the money, finding that the Treasury can not get along with the duty on sugar abandoned as provided in the Underwood law, continues indefinitely that duty, which is the sensible thing to do, because no one can tell just how long the Treasury will be in need of this 1 cent a pound duty on sugar; no one can tell what two or three or four years may bring, and, furthermore, everybody understands that this Congress cannot bind upon that proposition a subsequent Congress which will sit here four years hence.

Now, what attitude does the committee of the Senate take with regard to the last House action? The Senate committee comes back at the duty fixed by the House at 1 cent a pound, and retorts by saying that, after four years that duty of 1 cent a pound shall cease; in other words, before the assembling of the Baltimore Convention the House favored free sugar and the Senate would not abide by it, but after the convention had been held and the candidate had been elected, at this time the House says that the duty of 1 cent, which was retained in the Underwood tariff law for a period of three years, is necessary to supply the Government with the needed money for its operations; but the Senate says "we will not need it after four years"; and so we propose to legislate for whatever Congress may be sitting here four years hence, all the time holding this threat over that great industry so as to stop its development, so as to prevent an opportunity for securing credit in order to produce the quantity of sugar that could and would be produced under normal conditions in this country. So that it all leads us back to the proposition with which I started, that we are now adopting a policy similar to the policy which England has pursued; and, if, perchance, within any short period of time this country should become involved in any extensive military operations, regardless of whether we are able to reach our base of supply in Cuba, regardless of whether our Navy could insure our commercial vessels reaching the ports from which we draw our sugar, we would find that the competition in those ports would put us at the same disadvantage under which England finds herself at this moment.

If 30 or 40 years ago England had pursued the policy of developing the sugar industry in her tropical islands, and had lent some sort of encouragement to the people engaged in that industry, instead of catering to that trade next to her, which gave her cheaper sugar than could be given by the people who produced sugar on her islands—if she had pursued that policy, at this time, when it is so difficult for her to get the means with which to conduct the great war, she would not find herself compelled to disburse great sums of money in order to supply her people with sugar. So it will be with this country. If we are made to rely absolutely upon the importation of sugar to supply the demands of this country it is inevitably going to result in this country as it resulted in England should we find ourselves engaged in war at any time.

I did not, as I said, Mr. President, intend to deal very extensively with this question, but I did want to express the regret which I feel, the regret which I know the Democrats of Louisiana feel, toward the attitude represented in this report and so often stated upon this floor, that the people of the State of Louisiana must look to a policy under which, if they continue to grow sugar, they must compete with the world without any duty at all, and, if any duty is imposed upon the article, the production of which forms the main industry of the State, it will not be because there is any concern with regard to the people of Louisiana or their investment or their methods of livelihood, but because the needs of the Treasury require that they shall contribute something toward replenishing that Treasury. I repeat, I regret this act of my party, and Democrats in Louisiana join me in expressing this regret, which we all feel in that State.

Mr. SMITH of Georgia. Mr. President, I had expected at this time to move to take up another measure, but I understand there is no objection to proceeding at once to a vote on amendments to the pending bill.

Mr. SIMMONS. That is my understanding.

Mr. SMITH of Georgia. If we are prepared to go on and vote upon the amendments to the pending bill, I do not desire to move to proceed to the consideration of another measure; but if we are not so prepared, I wish to move to proceed to the consideration of Calendar No. 18, being Senate bill 706.

The PRESIDING OFFICER. The question is, as the Chair understands, on the amendment offered by the committee to strike out and insert.

Mr. LODGE. No, Mr. President; I have moved an amendment to the amendment of the committee.

The PRESIDING OFFICER. The Chair stands corrected. The question is on the amendment offered by the Senator from Massachusetts to the amendment reported by the committee.

Mr. LODGE. The amendment I have offered is to add a new section to the amendment proposed by the committee.

The PRESIDING OFFICER. The question is on the amendment proposed by the Senator from Massachusetts to the amendment reported by the committee.

Mr. SIMMONS. I suggest the absence of a quorum.

The PRESIDING OFFICER. The absence of a quorum is suggested. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Kern	Poindexter	Stone
Brandegee	La Follette	Pomerene	Sutherland
Broussard	Lane	Ransdell	Swanson
Burleigh	Lewis	Saulsbury	Taggart
Chamberlain	Lodge	Shafroth	Thomas
Chilton	Martine, N. J.	Sheppard	Thompson
Clapp	Nelson	Sherman	Tillman
Clark, Wyo.	Norris	Shields	Underwood
Colt	Oliver	Simmons	Vardaman
Dillingham	Overman	Smith, Ariz.	Wadsworth
Gallinger	Owen	Smith, Ga.	Warren
Hardwick	Page	Smith, Mich.	
Hughes	Phelan	Smith, S. C.	
Johnson, Me.	Pittman	Smoot	

Mr. LEWIS. I desire to announce the absence of the Senator from New York [Mr. O'GORMAN], who has been called to his State on official business.

The VICE PRESIDENT. Fifty-three Senators have answered to the roll call. There is a quorum present. The pending amendment is the amendment offered by the Senator from Massachusetts [Mr. LODGE] to the amendment reported by the committee.

Mr. LODGE. Mr. President, I have no intention or desire to discuss this amendment. Its purpose is to place duties on certain dyestuffs and coal-tar products with a view of encouraging the development of that industry here, and the production of those acids which are essential in the production of explosives, and of which we are now almost completely destitute.

I think all the Senators are familiar both with the need of these acids for the purposes of defense and with the great need of the dyestuffs caused by the scarcity due to the war in Europe; and all I desire is to have a vote upon the amendment.

Mr. SIMMONS. Mr. President, I have not read carefully the amendment offered by the Senator from Massachusetts. In fact, I have not read it at all. I did not know whether the Senator would press the amendment or not. I wish to ask the Senator from Massachusetts if this is not the bill introduced in the House by Mr. HILL, of Connecticut, and known as the Hill bill?

Mr. LODGE. It is the bill that was introduced in the House by Mr. HILL, of Connecticut.

Mr. SIMMONS. I wish to ask the Senator what is the average rate of duty provided by it? About 75 per cent, is it not?

Mr. LODGE. Five per cent on the first, all products of coal; 3¾ cents per pound and 15 per cent ad valorem on the intermediates; and 7½ cents per pound and 30 per cent ad valorem on all colors or dyes derived from coal.

Mr. SIMMONS. I have understood that that is about an average of 75 per cent ad valorem. That bill is before the House committee, and there have been some conferences over here with some persons interested in the industry. I do not think even those interested in the industry have asked quite as much protection as the Hill bill affords; and without discussing it, I hope the amendment offered by the Senator from Massachusetts will not prevail.

Mr. UNDERWOOD. Mr. President, I did not intend to discuss this question; but before voting on it I should like to have an opportunity to state my reasons in reference to it.

This amendment seeks, in the main, to increase the tax on what are known as coal-tar dyes. There are some other side propositions in the amendment, but that is the main question. The tax placed on coal-tar dyes in the Dingley bill amounted to 30 per cent ad valorem. Under the Dingley bill a large number of these dyes were imported into this country; but gradually an industry grew up and occupied about 10 per cent of the American field. In other words, we produced at home about 10 per cent of our coal-tar dyes. The other 90 per cent were imported from Germany. I think one reason why a larger percentage of coal-tar dyes was not manufactured in this country was because the textile manufacturers rather slighted the American production, and claimed that the American manufacturers did not make as successful dyes as the German dyes. I have serious doubts in my own mind as to whether that was the case.

When the Payne Ways and Means Committee met to write a new tariff bill after the Dingley rate had been on the statute books for, I think, 14 years, the producers of coal-tar dyes came before that committee, asking for an increase, and the Payne committee denied the increase, claiming that the 30 per cent tax was sufficient. When the last tariff bill was written, and the Democratic Ways and Means Committee was organized, the home producers of coal-tar dyes came before the Ways and Means Committee and did not ask for an increase of the tax. There was a very great demand on the part of the textile manufacturers of the country for a reduction of this tax.

The manufacturers of coal-tar dyes in this country who appeared before the committee—and they were the leading men in the business—stated that they did not ask for an increase; that they could run their business on the present tax, but that to reduce the tax would seriously jeopardize their business. There were five or six million dollars of revenue raised from this source; and after the Ways and Means Committee over which I presided had given careful consideration to the question, in view of the fact that there was a large amount of revenue raised, that the tax was what might be called a competitive tax, because there were large importations coming into the country, and also because the manufacturers of coal-tar dyes were satisfied and asked for no further increase the committee decided not to change the rate in any particular, and passed the bill through the House leaving on coal-tar dyes the 30 per cent that was in the Dingley bill and the 30 per cent that was in the Payne bill, and that is the law to-day. There were some other dyes in the chemical schedule that were increased in the House bill; but when the bill came to the Senate, the Senate saw proper to put them back to the old rates.

Mr. President, that is the historic statement of the facts. At that time there was a very considerable importation of coal-tar dyes into this country. There is practically none to-day. The American manufacturer has almost the undisputed field in the American market; but it is contended that after the war is over this market will be jeopardized by importations from abroad. The same rate stands here to-day that stood under the Dingley bill for 14 years, when the highest protective tariff that was ever on the statute books of this country was in existence, and those who maintain that theory of levying taxes did not find any necessity for raising the tax.

When the Payne bill was written, and the case was presented to them, the importations were coming from Germany; there was nothing to interrupt the importation; but they saw no occasion to raise the tax. The manufacturers came before the Democratic Ways and Means Committee and asked for no increase; and to-day we find the country manufacturing these coal-tar dyes in the main with almost all its men in the army. A great burden of indebtedness is accumulating on that country, and taxes must be higher. The industries of Germany are practically closed down in this line, because they have not had the men nor the market in which to produce them.

The labor required for the manufacture of coal-tar dyes is that of chemists—not ordinary common labor, but men of a high degree of education. They must be college-bred men. Many of those men to-day are buried under the battle fields of France and Russia, and never will come back to the factories again. After this war is over it will be years before this industry in Germany can be reorganized again and put on the competitive basis on which that country conducted it during the time the Dingley bill was on the statute books and the Payne bill was on the statute books.

I do not desire to delay the Senate on the important vote that awaits us this evening to go into a further discussion of this case. With no importations coming into the country to-day, knowing that after the war in Europe is over it will be years before the industry can be reorganized or put in a position where it can again compete as it did, and knowing the further fact that the rate of taxation at the customhouse to-day on the statute books is the one that had the approval of the Republican Party for 16 years, in my judgment, at least, this side of the Chamber should defeat the amendment by a solid vote.

Mr. LODGE. Mr. President, it is quite true that the duty of 30 per cent was imposed in the Dingley bill, but it is equally true that it did not develop the industry. It is equally true that it was not raised at the time of the passage of the Payne-Aldrich bill. The textile manufacturers, the users of dyes, opposed any increase. They wanted it reduced. They felt that they could buy their dyestuffs cheaper in Germany, and they prevailed with the committee then, of which I happened to be a member, and maintained the rate of 30 per cent, under which it had been demonstrated that the industry could not be developed in this country.

I recognized the opposition of the textile manufacturers at that time. I knew how strong it was. I thought they were shortsighted; and now they find themselves unable to procure dyestuffs.

As for Germany having closed down those factories, those are some of the factories she has not closed down. She may not be making dyestuffs, but she is making the acids used in explosives at every factory in Germany where it is possible to make them to-day. That organization is not broken down and will not be.

As to the rates, I merely want to call attention to the statement of the committee of the American Chemical Society at Seattle in September, 1915. It is from the address of the president, Prof. Charles H. Herty, of Chapel Hill, N. C., and he refers to the report of their committee:

> As a guide to what this increase should be, we have the judgment of the committee of the New York section of this society, a committee representative of all interests concerned, in the persons of B. C. Hesse, chemical expert in coal-tar dyes, chairman; H. A. Metz, for the importers; J. B. F. Herreshoff, for the manufacturers of heavy chemicals; I. F. Stone, for the American coal-tar dye producers; J. Merritt Matthews, for the textile interests; David W. Jayne, for the producers of crude coal-tar products; and Allen Rogers, chairman of the New York section. The unanimous report of this committee, which was unanimously adopted by the section, says: "It has been conclusively demonstrated during the past 30 years that the present tariff rate of 30 per cent on dyestuffs is not sufficient to induce the domestic dyestuff industry to expand at a rate comparable with the consumption of dyestuffs in this country and that, therefore, all dyestuffs made from coal tar, whether they be aniline dyes or alizarin, or alizarin dyes, or anthracene dyes or indigo, so long as they are made in whole or in part from products of or obtainable from coal tar, should all be assessed alike, namely, 30 per cent ad valorem plus 7½ cents per pound specific, and that all manufactured products of or obtainable from coal tar, themselves not dyes or colors and not medicinal, should be taxed 15 per cent ad valorem and 3¾ cents per pound specific."

That is the recommendation of the American Chemical Society, and those are the figures followed in the bill. At the present moment, with no dyestuffs coming to this country, if we had the manufacturers here, of course, they would make money; but no one is going to invest money in the manufacture of dyestuffs when he knows that the industry will be destroyed as soon as the war, which at the present moment is a prohibitory tariff, ends.

Mr. UNDERWOOD. Mr. President, will the Senator yield?

Mr. LODGE. I yield to the Senator from Alabama.

Mr. UNDERWOOD. Is it not a fact that a large company is being organized in New York right now to make these dyes? That is my understanding.

Mr. LODGE. I do not understand that any company is ready to go on with this manufacture unless the people interested in it can get some assurance that they will not be ruined, as they have been before, by German dumping.

Mr. UNDERWOOD. I have seen prospectuses sent out, showing that they were seeking to raise capital, some months ago.

Mr. LODGE. I have not heard of the establishment of that industry.

Mr. STONE. Mr. President, will the Senator tell me what would be the total ad valorem equivalent of the figures he read as being recommended?

Mr. LODGE. I have not figured it out. The Senator from North Carolina said it would be 75 per cent.

Mr. SIMMONS. About 75 per cent.

Mr. UNDERWOOD. If the Senator will allow me, as he asks for information, I think the rate of duty proposed—30 per cent ad valorem and 7½ cents a pound specific—would amount to 45 per cent altogether.

Mr. SIMMONS. I have not worked it out. I have simply seen the statement made that it was about 75 per cent, as I understood.

Mr. LODGE. The Senator from North Carolina said it was 75 per cent. I understood it was 45 per cent.

At all events, Mr. President, I think we are now reaping the fruits of our improvidence. If we had given these industries suitable protection we would not now have a famine of dyestuffs and we should be able to supply ourselves with explosives. I am anxious to build up the industry chiefly because I think it is important that we should have a source from which we can draw supplies of picric acid and the other acids used in and essential to the manufacture of explosives.

This duty will, of course, produce revenue, and I think will be of great advantage to the country, of course, from my point of view as a protectionist, in building up the industry; but wholly apart from that, I think it would be of great advantage to the country to have a source for the production of these acids.

I do not care to go further into the discussion.

Mr. STONE. Mr. President, has this amendment been before the Committee on Finance? I mean, has it been acted upon by them?

Mr. LODGE. No; Mr. President. I took it upon myself to offer the amendment.

Mr. STONE. Oh, I am not at all criticizing what the Senator has done. I am asking for information.

Mr. LODGE. Oh, no; it was not submitted to the committee. I simply offered the amendment as an individual Senator, that is all. I hope the Senator does not think I have been disrespectful or have gone beyond my rights in doing so.

Mr. STONE. I have remarked that I did not. It was hardly necessary to make that remark. I am fully conscious of the fact that the Senator is proceeding entirely within his rights.

Mr. SIMMONS. Mr. President, I have no doubt this is a very delightful conversation, but we can not hear it over here.

Mr. LODGE. It was a delightful conversation.

SEVERAL SENATORS. And complimentary?

Mr. STONE. No; it was agreeable.

Mr. LODGE. Perfectly.

Mr. STONE. Mr. President, I am not sure that I am ready to vote on this proposition.

Mr. GALLINGER. For it?

Mr. STONE. I am not sure that I am ready to vote on it—for it or against it. I am impressed with the idea that it is of very great importance to the industries of this country that the subject of the manufacture of dyes should be given very thoughtful and attentive consideration. Just what ought to be done with respect to it, I am not prepared to say to my own satisfaction. I should have been glad to have this measure considered fully by the Committee on Finance, and all the facts gone into and the needs of the situation well understood. While it is true that 30 per cent ad valorem has been the tax prevailing for a great many years, that fact alone is not sufficient to satisfy me that it is the rate that ought to be prescribed.

I feel that this is rather an exceptional case—the making of dyes—the building up of the dye industry in the United States. I could go on here giving some reasons that impress me, at least, but I do not care at this time to go into it or to provoke discussion with regard to it. I should have been very glad, however, to have the matter made the subject of a sufficient inquiry and discussion, to have had the facts laid before us afresh, to enable us to pass upon it with a greater degree of intelligence, I think, than the Senate is about to pass upon it.

While the Senator has acted with great propriety and entirely within the limits of his rights, I regret that he has seen proper to throw this matter into the Senate in this connection.

Mr. LODGE. Mr. President, I agree with the Senator from Missouri that this is an exceptional case. That is the only thing that led me to offer the amendment—not because I do not think there are other items in the tariff law which ought to be changed, but because I think this is very exceptional.

Last summer the Secretary of War pointed out to the country the necessity of building up the dyestuffs industry, with a view to the manufacture of explosives. The matter has been before the committee. I have heard reports that the party responsible for legislation were about to bring it forward, and I have been hoping that they would do so. I should have been glad to unite with them in any legislation looking to the building up of this industry, which I think involves a great deal more than the mere question of a rate of duty or a rate of taxation or the development of an industry. Nothing has been done, however, and the winter has gone, so I have offered this amendment. I wanted to bring it to the attention of the Senate. I have offered it in the form recommended by the American Chemical Society, and embodied in a bill by Mr. HILL, of Connecticut, in the House. I merely wish to bring it to the attention of the Senate and ask a vote upon it.

Mr. SIMMONS. Mr. President, I do not desire to discuss this matter, because I do not think the Senate is likely to adopt as an amendment a bill that is now pending in the other House and is being given, by the Ways and Means Committee of that body, very serious consideration. While I have not the remotest idea that they will adopt this particular bill, I think the probabilities are that that committee will bring out some bill to meet the extraordinary situation which the Senator from Massachusetts and the Senator from Missouri correctly state exists with reference to this particular industry.

As chairman of the Committee on Finance, I have myself had a number of consultations, together with other majority members of the committee, with persons interested in this industry. Last week I held quite a lengthy conference with certain gentlemen who represent jointly the manufacturers of dyestuffs and colors and acids and the textile manufacturers. I was given to understand that they did not desire, nor did they need, the great increase provided in the Hill bill. They were not asking for that; neither did they think that their industry had been altogether suppressed in this country by reason of inadequate tariff protection. They rather attributed—and I think there is good ground for that—the fact that the industry in this country has not developed under the high protective rates that have obtained heretofore, especially those that obtained a great many years ago, that were much higher than the Payne-Aldrich rates, to the fact that certain countries in Europe, by combination, had acquired a world monopoly, and had employed to suppress the development of the industry in this country the methods that are ordinarily employed by trusts. I understand that these gentlemen desire some protection against that; and, as the Senator from Massachusetts has said, the Secretary of Commerce and his force up there, in connection with the Bureau of Foreign and Domestic Commerce, have been working upon that side of the question.

Mr. President, I have no doubt during the session, both on this side of Congress and the other side, this matter will be given serious consideration, and of course there ought not to be any action regarding a matter so important upon an amendment offered here to another bill, which has never been before the committee and which has had no consideration whatever.

Even under the present circumstances the dye industry in this country is making very rapid progress. The Senator referred to some large industry established in some other State than the one I have in mind. In my own State I read the other day a very interesting account of arrangements which have already been perfected for the establishment at Sanford, in that State, of a very large plant for the manufacture of dyestuffs, and all over the country they are beginning to establish factories for this purpose. I have here a statement contained in a speech made not long since by Dr. Edward Ewing Pratt, who is Chief of the Bureau of Foreign and Domestic Commerce of the Department of Labor, in which he says:

> Since the outbreak of the European war the American coal-tar dyestuff industry has made great strides forward. The factories in existence at that time have greatly increased their output. New establishments for the manufacture of intermediates have been brought into existence. Thousands of tons of benzol and coal tar heretofore recklessly wasted are now being saved and utilized.
>
> The census of manufactures taken in 1909 reported the total output of coal-tar dyestuffs manufactured in this country to be 5,890,000 pounds, valued at $1,813,000. The output was probably much increased over these figures at the time of the outbreak of the European war. Since that time the five domestic concerns manufacturing dyestuffs have doubled their outputs. Another factory, the branch of a large German firm, has greatly increased its output. Still another factory manufacturing aniline has quadrupled its output.
>
> But the great need and the great demand for dyestuffs have also brought many new concerns into the field. There are now nine new plants making aniline and intermediates. Their total output is approximately 18,000 pounds daily. One new plant for manufacturing

dyestuffs, capitalized at $2,000,000, is now in existence, and is producing at the rate of 1,000 pounds daily. Another plant will be ready for operation about November 1. Another company, capitalized at $15,000,000, has started plans for extensive works in different sections of the country.

Our total production of coal-tar dyestuff materials at the present moment is probably over three times the production prior to the European war.

Mr. President, I do not wish to discuss this matter any further. I hope we will now have a vote.

Mr. BRANDEGEE. Mr. President, I think this is a very important amendment. The Senator from North Carolina states that there is a bill pending in the House, but I understand the House committee has not even reported the bill.

Mr. SIMMONS. They have had hearings, I will say to the Senator, and quite extensive hearings, showing that it has been considered there.

Mr. BRANDEGEE. I understand. I had no idea this amendment was to be offered by the Senator from Massachusetts, and I am free to say I am not prepared to discuss the matter extensively; but when the Senator from Massachusetts stated that his amendment was the bill introduced by Mr. HILL, of Connecticut, I turned to the RECORD to see what he had said about that question in the House. I find here in the RECORD under date of February 14, 1916, on page 2523 of the RECORD, the remarks of Mr. HILL upon this industry, upon its history, upon the various rates of duty which have been imposed upon these articles in the past, and there are certainly some most astounding statements in his speech, astounding in that they show the absolute dependence upon—not to say abject subjection of this country to—Germany in this whole question of dyestuffs and acids and chemical products.

I will read just one extract, which is the testimony of Dr. Pratt, who is the chief of the Bureau of Foreign Commerce, and it is said to appear on page 202 of the hearings. He says:

The European artificial dyestuff industry is more than a large and prosperous industry. It is a highly organized combination of manufacturers seeking not only to enlarge their output and to compete with similar manufacturers in other parts of the world, but carrying on a definite industrial program looking to the control of the market and the ultimate elimination of important competitors. This factor in the situation has made it practically impossible for the American dyestuff industry up to the present time to get a really firm foothold, and has made it necessary for us to import a large proportion of our dyestuffs and has placed us in the position where we find ourselves to-day, practically in the midst of a dyestuff famine.

The methods used by the European dyestuff manufacturers should not be unfamiliar to us Americans. When an American manufacturer has developed a certain dye and is selling it in considerable quantities the European manufacturers have suddenly reduced the price far below the actual cost of production, either in this country or abroad, and hence the American manufacturer has been forced to withdraw quite rapidly from the manufacture of that particular dye. These unfair methods of competition on the part of our competitors in Europe would not be tolerated for a moment under the recent trust legislation except for the fact that those who are responsible for these methods are not amenable to the laws of the United States.

In glancing hurriedly over this speech of Mr. HILL numerous instances are given of the situation of our manufacturers at present. In reference to one concern it is testified that it was compelled to pay for its dyes alone over $300,000 more during 1915 than it did during 1914. We all know—every Senator and Representative knows—the distress that all the producers of textiles who use these dyes have been in during the last year.

I am very glad the Senator from Massachusetts offered this amendment. If there is a similar measure pending in the House, it seems to me Democratic Senators might well enough allow this amendment to go to conference, and if the House committee intends to do anything to help relieve this famine and the extortion of our citizens by this foreign trust—for it is a great foreign trust—they can, if they choose, modify what we propose and let the conference committee report out what may be agreed upon in conference and put it on a bill that will stand some chance of getting through both Houses at the present session.

Owing to the situation of the public business in the House, the amount of time taken up on contested matters, I am free to say that I am not at all optimistic that any legislation on this subject which will be of any substantial benefit will receive any consideration worthy of the name on the floor of the House if reported out as an independent measure. I think if our Democratic friends are as sincere in their desire to try to make this Nation not utterly dependent upon a belligerent for this great necessity, now is the chance to demonstrate it and let this amendment go on the bill and go to conference at least. They will control both branches of the conferees, and no damage will be done by letting it go there and getting some consideration.

While I wish I were better prepared to speak upon this matter than I am, I felt that I would like to say as much as I have said.

Mr. BRANDEGEE subsequently said: Mr. President, I should like to have permission to have incorporated in the remarks which I made a few moments ago a letter to Mr. LONGWORTH, of the House of Representatives, and also a letter from the Secretary of the Treasury to the Speaker of the House, which appear on page 5247 of the RECORD.

The VICE PRESIDENT. Without objection, it is so ordered.

The letters referred to are as follows:

NEW YORK, *February 23, 1916.*

Mr. NICHOLAS LONGWORTH,
Room 319, House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: I have just read the copy of Congressman HILL'S speech before Congress on the dyestuff bill (H. R. 702), and on page 11 I read that yourself and Mr. HILL discussed the writer's statement before the Ways and Means Committee regarding our recent dyestuff purchases in China.

In order to have the matter entirely correct in your mind, I would say that you will find, on page 119 of the printed hearing before the Ways and Means Committee on the dyestuff bill that the writer answered your question as to exorbitant cost of dyestuffs, stating that my company had just paid $5.75 a pound for aniline black (made by Badische, in Germany), which we had purchased from China.

These identical goods in normal times would have cost us 20 cents per pound, or a total of $1,748, whereas we are now compelled to pay more than $52,000.

Since that time we have made another purchase of same goods from Shanghai, paying $7.50 per pound instead of $5.75, and on February 14 last we were quoted $12 a pound for exactly the same material from China.

This latest quotation means an advance of 6,000 per cent over the normal before-the-war figure of 20 cents per pound.

Yours, very truly,

R. H. COMEY CO.,
GEO. W. WILKIE,
For the Company.

—

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
Washington, March 9, 1916.

SIR: Owing to conditions arising out of the European war, the Bureau of Engraving and Printing, which prepares all Government notes and other securities, national-bank notes and Federal reserve notes, postage and revenue stamps, and currency of the Philippine government, has found it impossible to purchase colors for inks in sufficient quantities in the United States to carry on its work. It has been compelled for over a year to use cheap and unsatisfactory substitutes for some of the colors, and as time has gone on even these substitutes have become more and more difficult to purchase, and it seems to be only a question of a short time until the supply of them will be exhausted. At present the Bureau of Engraving and Printing has only two weeks' supply of reds and blues, which are the most important colors used by it.

Some time ago an order for 145,000 pounds of blues and reds was placed in Germany, and through the assistance of the State Department permission was granted for the exportation of these colors. The first of several consignments has just reached this country. Under the tariff act some, if not all, of these colors are dutiable, and it seems to me it is proper at this time and under these conditions for Congress by joint resolution to authorize the importation of all of these colors free. It is impossible to buy these colors here. The prices that are now paid for them in Germany are higher than the prices before the war plus the duty. The duty will be approximately $12,000, and it will be necessary to go to Congress for a deficiency appropriation if this duty is paid. There can be no question of this importation injuring in any manner any American industry.

I therefore have the honor to request that a joint resolution authorizing the admission free of duty of approximately 145,000 pounds of dry colors, valued at $40,000 to $50,000 (the exact amount not being determinable at this time owing to the fluctuations of exchange), from Germany for the use of the Bureau of Engraving and Printing, the same having been ordered December 10, 1915, and shipment being made to and in the name of the Secretary of the Treasury, said colors to be exclusively for the use of the Bureau of Engraving and Printing, may be passed by Congress. As part of these colors has already been shipped and some of them are now in this country, I request that immediate action on this resolution may be taken, if possible.

I inclose herewith a suggested form of resolution.

Respectfully,

BYRON R. NEWTON,
Acting Secretary.

HON. CHAMP CLARK,
Speaker of the House of Representatives.

Mr. JOHNSON of Maine. Mr. President, I am ready to vote at the proper time for any duty upon dyestuffs that may be necessary to establish or encourage their manufacture in this country and to make our textile mills independent of the manufacturers abroad for all the dyes which they use. But it seems to me we ought to have more information than we have at present, and that this is not the proper place to introduce the amendment and call for action on this very important matter.

I remember very well having something to do with the chemical schedule of the last tariff bill, as a member of the Finance Committee, and the attitude of the textile mills of New England toward any additional duties on dyestuffs. I recall that the Underwood bill, as it came to the Senate from the House, carried a duty upon anthracene and alizarin, and dyes derived from them, and upon indigo, which had hitherto been upon the free list, and I remember the attitude of all the textile mills of New England, and largely throughout the country, in regard to an increase of duties or placing duties on articles which had

theretofore been on the free list. There were protests and delegations visited Washington. I remember they came from some of the mills in New England which were large users of these dyes.

I realize that there is a hardship at this time, that they are compelled to pay largely increased prices owing to the cutting off of the importation of dyes which they are compelled to use; but, with no chance to investigate the matter, with no hearings by any committee of the Senate, with no investigation and no report, it seems to me we have no information upon which to act, as to what the duty ought to be now, and what action should be taken. I say this in explanation of the vote which I shall cast.

Mr. SIMMONS. I may say that in an informal way the committee has been considering it.

Mr. JOHNSON of Maine. But not the committee of the Senate; the committee of the House.

Mr. SIMMONS. The committee of the Senate in an informal way, the members of the committee, certainly myself as chairman, have been considering and studying the data, conferring with those interested both in the manufacture of dyes and those engaged in the textile industry.

Mr. JOHNSON of Maine. I am very glad to have that information from the Senator from North Carolina, but I do not understand that any bill is pending or has been referred to the committee for consideration.

Mr. SIMMONS. No.

Mr. JOHNSON of Maine. I simply wished to say this in explanation of my vote at this time.

Mr. SMOOT. Mr. President, I can not see that it makes any difference whether this amendment has been referred to the Finance Committee or not. There never has been a tariff bill presented to the Senate since I have been a Member when there have not been amendments offered that had never been referred to the committee.

Mr. SIMMONS. If the Senator will pardon me——

The VICE PRESIDENT. Does the Senator from Utah yield to the Senator from North Carolina?

Mr. SMOOT. Certainly, for a question.

Mr. SIMMONS. Of course the Senator understands that no one is questioning the right of the Senator from Massachusetts to offer the amendment in this way, without having it go before the committee?

Mr. SMOOT. I understand that; and I also understand that I have no apology or excuse to offer for my vote on this amendment as Senators on the other side of the Chamber are doing. I do not have to get up on the floor of the Senate and say this is not the proper time to vote for it. I know as well as I know I am alive that the present rate of duty will never fully establish the industry in this country. I have said so upon this floor not once but a dozen times. When the manufacturers of the East were here, as the Senator from Maine has said, pleading that the rate be not increased, I have always said that it was selfishness upon their part, and now the conditions of the world are such that it has brought it home to them and they find themselves next to helpless.

Mr. President, it is not only the coal-tar dyes that need protection in the chemical schedule, it is the schedule as a whole. Since the passage of the tariff act I have called the attention of the Senate upon two occasions to the utter destruction by it of the manufacture of chemicals in this country. The machinery has been thrown to the junk pile, and that, Mr. President, will continue if there is no change in this schedule after the war is over and matters become normal.

Mr. OWEN. Mr. President, will the Senator yield for a question?

Mr. SMOOT. Certainly.

Mr. OWEN. What is the average duty now on the chemical schedule?

Mr. SMOOT. Does the Senator mean taking the schedule as a whole?

Mr. OWEN. Yes; all the way through.

Mr. SMOOT. I should judge about 23 or 24 per cent, although I have not looked it up of late.

Mr. OWEN. What is the labor cost?

Mr. SMOOT. I would say that the labor cost in a few classes of chemicals is very low indeed. There are others where the labor cost is as high as 85 per cent. So I can not state to the Senator what the average would be.

Mr. OWEN. The reason why I called the attention of the Senator to it was because the average, as shown by the tariff bill in 1909, when those figures were made up, was 8 per cent as against 28 per cent average. The labor cost was only 8 per cent on an average, while the total levy was 28 per cent.

Mr. SMOOT. I do not know who made up the figures, but if there is any man in this country or any other country who says the full line of chemicals and dyestuffs as covered by the chemical schedule in the tariff law of 1913 is only 8 per cent says something that is absolutely untrue. It can not be. I do not know who made up the figures, but they are wrong, or else the Senator from Oklahoma has misunderstood his informant.

Mr. OWEN. Mr. President, if the Senator will permit me, I will state that the 28 per cent was made up by the Committee on Finance of the Senate, and the 8 per cent was made up by figures which I found in the census and which I made up myself, and I know, therefore, they are correct.

Mr. SMOOT. If the Senator made them up himself, he certainly missed a great part of the cost of manufacturing chemicals. There is no question about that.

I am not going into a discussion of the tariff question at this time. I am ready to vote upon this amendment. I think it ought to be adopted, and I believe myself there are many Democrats in this body who believe it ought to be adopted. If you are going to build up this industry, I say it will not only require a change in the coal-tar paragraph, but it will require a change in the whole schedule, and the sooner it comes the better it will be for the country.

Mr. NORRIS. Mr. President, I dislike very much to be required to vote on this amendment with the information the Senate has before it. For some time now we have read a great deal in the press, including some statements from officials to the effect that there ought to be action by Congress in regard to the dyestuff proposition. I am not certain if the evidence were produced that I would not support this amendment. I would like to vote for a law that would bring about the development of this industry. But we have here offered from the floor of the Senate an amendment which has not received the consideration of any committee or of any official. No investigation has been made as to whether the rates fixed in the amendment are reasonable and fair, and no Senator has offered, at least to my satisfaction, any evidence showing that the rates provided for in the amendment are proper and just.

I am not finding fault with the Senator from Massachusetts for offering the amendment on the floor of the Senate without the consideration of the committee, and we could consider and act on it if it were on a subject of which we had general knowledge or on which the Senator could give us definite information as to the cost of production and other things that ought to be taken into consideration in fixing a just tariff. I should like to vote for a bill or an amendment that would develop this industry. It seems to me the desirability of its development has been shown by recent events during the war. But the tariff now on the statute books is one that was placed there a great many years ago. I understand it was in the Dingley law; that it was in the Payne-Aldrich law, and that it is in the present Democratic law without any change. If those different changes of the tariff had made a change in this rate, we would have had something on which to base our judgment, but it does not seem to me to be quite fair to expect us to vote for tariff rates upon an important question like this without having some evidence as to what would be a fair and sufficient tariff to develop the industry. It certainly is not a scientific way of making a tariff bill, especially upon the subject of dyestuffs, as to which Senators are not informed and the ordinary person has no direct information.

Therefore it strikes me that it is my duty to vote against the amendment. I do so without intending to condemn it or to say that I should not vote for it if the proper showing were made in its behalf.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Massachusetts [Mr. LODGE].

Mr. LODGE. I ask for the yeas and nays on the amendment, Mr. President.

Mr. SHERMAN. Mr. President, I shall not consume very much time, but some question has been raised as to whether or not there is any satisfactory evidence before the Senate on the wisdom or unwisdom of the amendment which has been offered by the Senator from Massachusetts [Mr. LODGE]. The Secretary of Commerce has given us divers kinds of advice on a great many subjects, and among them is the line of merchandise mentioned in this amendment. The only criticism I have to make on his suggestions is the manner in which he describes the dyestuff industry in this country. He refers to it as an "incipient industry." I might criticize the phrase, but we have government by phrase making now very largely, and this is probably in keeping with other branches of the service. I have understood that the word "incipient" ordinarily applied to various epidemics, such as smallpox, measles, and the like, but I never understood that an industry in this country was classified as a disease, except by this administration. This

industry is referred to as an "incipient industry." It may have been an inadvertence or it may have been intentional, but with this preliminary explanation, Mr. President, I wish to read what Secretary Redfield said. I unfortunately did not observe in the dispatch in which this address was reported the particular place where it was delivered, and I am now trusting to my memory in order to give it a habitation. I think, however, it was at Trenton, N. J., in which he used the following language, which I commend to my brother from Nebraska [Mr. NORRIS]:

> Capital hesitates under existing conditions to embark heavily in an undertaking where there is a strong probability, if not a certainty, that upon the return of normal conditions an incipient, half-developed American industry would be exposed to prolonged and relentless underselling by foreign competitors possessing almost boundless resources, financial and technical.

Mr. NORRIS. Mr. President, will the Senator from Illinois yield to me?

Mr. SHERMAN. Certainly.

Mr. NORRIS. I should like to ask the Senator if he has any evidence before him in regard to the rates which are proposed in this amendment? Are they fair? Would they develop the industry? Are they too high or too low?

Mr. SHERMAN. I can only give the Senator an opinion. There is nothing in the recommendation made by the Secretary of Commerce bearing on the subject.

Mr. NORRIS. I understand that. The question upon which I was particularly seeking light was not so much as to whether we should pass some law for the development of this industry, but what ought to be the rates in such a new law.

Mr. SHERMAN. Does the Senator ask whether the rates proposed in the amendment are reasonable or fair or otherwise?

Mr. NORRIS. Yes.

Mr. SHERMAN. I can only give my own opinion that I have formed upon such investigation as I have been able to make and such information as I have been able to gather in a general way without any special knowledge of the industry. I will say that I am willing to vote for the amendment. I believe the rates proposed in it are not out of the way in view of the condition that we are now facing.

Mr. SMOOT. Mr. President, will the Senator from Illinois yield to me?

Mr. SHERMAN. Yes.

Mr. SMOOT. In answer to the question asked by the Senator from Nebraska [Mr. NORRIS]——

The VICE PRESIDENT. Does the Senator from Illinois yield for a question or for a speech, or does he yield the floor?

Mr. SHERMAN. Well, I do not understand the ruling that was made the other day, but that does not make any difference. I am perfectly willing to yield the floor if it is necessary.

Mr. SMOOT. I will not proceed.

Mr. SHERMAN. I am unable to state what the rule is in the Senate. We voted both ways on it. I am willing to yield the floor to the Senator from Utah.

Mr. SMOOT. I do not want the Senator to yield the floor to me.

Mr. MARTINE of New Jersey. Since this inquiry——

Mr. GALLINGER. Mr. President, I think we had better not have another speech.

Mr. MARTINE of New Jersey. Well, it is not——

The VICE PRESIDENT. Just a moment. Does the Senator from Illinois yield?

Mr. MARTINE of New Jersey. I thought the Senator from Illinois was about to take his seat.

Mr. SHERMAN. No, sir. I will not yield to the Senator from New Jersey except for a question, but I shall be very glad to yield for a question.

Mr. MARTINE of New Jersey. I thought the Senator from Illinois had concluded his remarks.

The VICE PRESIDENT. The Senator from Illinois has not concluded.

Mr. MARTINE of New Jersey. Very well.

Mr. SHERMAN. I shall be glad at any time to yield to the Senator from New Jersey for a question.

Mr. MARTINE of New Jersey. My purpose was not so much to ask a question as it was to give——

The VICE PRESIDENT. The Senator from Illinois has the floor.

Mr. MARTINE of New Jersey. I will say what I desire to say later.

Mr. SHERMAN. Mr. President, I have myself enough information to vote for the amendment proposed by the Senator from Massachusetts, and I sincerely hope that the amendment may be adopted. It will not only furnish the ground upon which this industry may recover itself, but it is to be hoped it will produce some additional revenue; and while that is not the primary purpose of many of us on this side of the Chamber, yet it is a matter that ought not to be cast lightly aside. We are needing some additional revenue. If the amendment should be adopted, upon both grounds it would, in my judgment, be a very wise provision. While we can not originate money bills, we can by way of amendment propose them and send them across to the other House, and in that way give them at least a valid excuse to consider them before a committee. So, in the case of this amendment, if it should be adopted by the Senate, it would be an indication that we are soberly considering the question involved.

Mr. MARTINE of New Jersey. Mr. President, apropos of this matter and since this discussion on the question of dyestuffs, prompted by the amendment of the Senator from Massachusetts [Mr. LODGE], I called up the Department of Commerce to learn as nearly as I could what the situation might be. A number of gentlemen in New Jersey interested in the manufacture of aniline dyes have appealed to me by letter and some have called on me personally. A day or two ago I had occasion to go to Jersey City, where I noticed a number of large plants devoted to the manufacture of dyes and dyestuffs, and I observed that enormous additions to them were being built. Hence I was prompted to make inquiry of the Department of Commerce. They tell me that we are now manufacturing in this country a little over half the amount of dyestuffs we consumed before the war. So we are not utterly prostrate and do not need the tickling of an additional tariff.

I then inquired of the department what their knowledge was as to the construction of plants for the further manufacture of aniline dyes, and they informed me that under the present tariff the dyestuff plants are putting up additions on all sides, and the only difficulty now is not the lack of capital, because capital is freely and plentifully offered, but the only trouble is to get adequate quantities of machinery required for the manufacture of these dyes. The tariff seems amply adequate, according to the department, for the establishment of plants and the manufacture of all the needed dyes.

Now, this eternal call for a little more, this cry "hold me up by the chin that I may survive a little longer," is not only heard with reference to dyestuffs but it is heard with reference to sugar, and to the sugar bill the amendment of the Senator from Massachusetts is sought to be tacked on. I want to say for myself as to the sugar question that I believe sugar is vitally necessary for the welfare of man, and, in addition, in ordinary slang parlance it is sometimes said when we have money with which to buy that we have "the sugar." So sugar is necessary not only in connection with the purse but for our physical well-being.

This question was all thrashed out before the people some time ago, and in the Senate of the United States we pronounced in favor of a free breakfast table. That was our slogan, and with that slogan we went before the people. We promised a free breakfast table to the people, and we voted for it. They believed in it, and I believe in it as much now as ever; but there has been a perpetual propaganda on the part of a few men—and there are comparatively few interested in the sugar industry—and they have been keeping up the never-ending clamor that we must continue the tariff on sugar. I have heard it right along from the day we pledged ourselves to vote for free sugar.

The brief visit I made to Hawaii during the past summer opened my eyes as to sugar. If there ever was a sugar oligarchy on God's footstool, I know it is the sugar oligarchy in the islands of Hawaii, now a part of the United States. I have been advocating free sugar, and I told my friends in New Jersey that I was in favor of abolishing the duty of 25 cents a bushel on their potatoes. I voted for that conscientiously, and they are getting a better price for their potatoes now than they ever did before. I voted for that with all the relish in the world; and yet I now find myself confronted with a situation where I must vote to impose a duty on sugar. We are all agriculturists in a way, though there are very few of us who are real farmers; but I should like some one to find me a product known to man and cultivated in the United States that will produce a return equivalent to the return produced by sugar in the islands of Hawaii; and yet under the provision of the pending bill we are to continue longer the duty on sugar. In Hawaii the product runs from a minimum of 3 tons up to 5 and even 7 tons, not of sugar cane but of raw sugar, per acre. Put that into dollars, and then I ask you, with what grace can our Democratic Party go before the people and advocate a duty on sugar?

I am not telling tales out of school, but you all know that the Democratic Senators had a caucus, and it was agreed that we should support the bill which has been presented by the distinguished chairman of the Finance Committee, the Senator from North Carolina [Mr. SIMMONS]. I there voiced my protest and

cast my vote against it, but I was so overwhelmingly buried—there was but one other, I think, who voted "nay" with me—that finally, in deference to the opinion of my party and their counsels, but much against my judgment, I agreed to vote to continue the tariff on sugar; but, so help me, I will not vote for an increased tariff on dyestuffs while present prospects are so good.

Mr. BRANDEGEE. Mr. President, will the Senator from New Jersey tell me whether the Department of Commerce informed him that in this country we are only making 2 colors out of a total of 1,800 different colors made by German manufacturers of dyestuffs?

Mr. MARTINE of New Jersey. They did not say that; but, since the Senator has brought that out, they said that we do not produce the same variety of colors as is produced in Germany.

Mr. BRANDEGEE. I think that agrees with my statement.

Mr. MARTINE of New Jersey. Well, that is all right.

Mr. LODGE. We are making about 15 colors, while there are about 1,800.

Mr. MARTINE of New Jersey. I do not know whether 1,800 is absolutely the correct number, but I understand that it depends very much upon a man's condition as to how many shades he sees in the rainbow. [Laughter.]

Mr. SMOOT. Mr. President, there has been an intimation, if not a direct statement, that the rates upon coal-tar dyes are the same to-day as they were under the Dingley law, but I wish to call attention to one difference. When the Dingley law was in operation there was a rate of duty upon coal-tar dyes of 30 per cent, as stated by every Senator who has mentioned the subject, but the Senate has not been informed that under the Dingley law all the intermediate products came in free. There is a long list of them, and therefore I will not read them to the Senate, but any Senator who is interested can look up the paragraph and find them.

Some of these products are absolutely necessary to the dye manufacturers of this country, and they are required to get them from Germany. Many of them are made nowhere else. Many of them are the products that go into the thousand different colors that are not manufactured in this country. The Underwood-Simmons law, instead of leaving those products that could not be made in this country upon the free list, imposed a duty upon them of 10 per cent. Therefore the coal-tar dye manufacturers of this country are not in the same condition as they were under the Dingley law.

Mr. NORRIS. Mr. President, will the Senator yield?

Mr. SMOOT. Certainly, I yield.

Mr. NORRIS. I want to ask the Senator a question.

Mr. SMOOT. I yield for a question.

Mr. NORRIS. It seems to me that that emphasizes the fact which I previously endeavored to state—that we are not now in a position to legislate intelligently on this subject. I should like to ask the Senator whether, if, instead of adopting the amendment of the Senator from Massachusetts, we should put on the free list the other ingredients which he has mentioned and which it is necessary to use in order to make these dyes, would not that bring the proper relief and would not that be better than to increase the tariff on these commodities?

Mr. SMOOT. It would bring a certain relief, I will say to the Senator, but not such relief that the business could live after normal conditions in the world are established.

Mr. NORRIS. How can the Senator say that? What evidence—and this is one of the things I wanted to find out—has the Senator as to the cost of the manufacture of these articles here and abroad?

Mr. SMOOT. Mr. President, I have called the attention of the Senate many times to the facts showing the difference in the wage paid in Germany and in this country, beginning with the chemist down to the very lowest class of labor engaged in the manufacture of chemicals; and I say to the Senator now that the wage paid in German institutions in the manufacture of chemicals and dyes is not to exceed one-quarter of the wage paid in this country. And I want the Senator to understand that in stating that I say it because I know it. Another thing is that the German people as a people have made a study of the question of making and manufacturing dyes as no other people on earth have done. They produce alizarins, which we never produce in this country. They produce a thousand kinds of colors for which the world depends upon Germany, and, Mr. President, the policy of Germany has been in the past, wherever there is established anywhere in the United States a factory of any size for producing chemicals, to ship into this country, even if at prices below cost, until they closed the American factory.

I could call the attention of the Senator, if he wanted it, this afternoon, and if I had the time, to a dozen such instances. Not only that, Mr. President, combinations are allowed in Germany, and they have been made so powerful in capital and organization that no matter in what part of the world other people begin to manufacture chemicals, the German combination simply go to work and undersell until they close them up, and the balance of the world pays the amount that is lost in advance prices until it is accomplished. I do not state this on hearsay. That is stated in reports from Germany herself.

Mr. President, it seems to me that any Senator who desires to see this industry established in this country should vote for the amendment that has been offered by the Senator from Massachusetts. It is 30 per cent ad valorem and 7½ cents per pound specific duty, and on some things I think that would amount to perhaps 75 per cent, and maybe more on some of the cheaper articles. Upon the great quantity of them, the high-priced products, it would be less than that, not to exceed 40 or 45 per cent. It seems to me, Mr. President, that what the country is passing through now, the condition in which we find ourselves, ought to teach every Senator who has a vote to cast to establish this industry in this country that now is the time to do it.

I want to say, further, Mr. President, that you will find that the clothing that the people wear in this country will not be so fast in color as it has been in the past, because we are not prepared to make the required product. I say that we never will be prepared unless we have a protective tariff sufficient for the manufacturers of this country to get established. I know that the rate proposed in this amendment is none too high to accomplish that purpose.

Mr. MARTINE of New Jersey. Mr. President, will the Senator yield to me just for a question?

Mr. SMOOT. I will.

Mr. MARTINE of New Jersey. I wish to ask for what reason the Senator can ask for this additional duty, when, if these statements are correct as I get them from the department, capital is to-day, under the present duty of 35 per cent——

Mr. SMOOT. Thirty per cent.

Mr. MARTINE of New Jersey. Thirty per cent—capital is to-day rushing in and building up the plants as rapidly as it can. The department says that the only delay is due to the fact that the manufacturers can not get the machinery. If that is so, why does the Senator ask for more duty?

Mr. SMOOT. Why, Mr. President, the capital that is going into this business to-day expects, and rightfully expects, that it will be more than a year before the plants in Germany get established in making these products again in the quantities that they used to, and the manufacturers know that at the prices they are paying to-day, if they can get one year's run, they will nearly clear the cost of their mill. I want to say to the Senator that the reds that are used in printing our currency we used to buy for 40 cents a pound, and the Government of the United States is paying $4 per pound for them to-day. How long it will take a manufacturer to make his plant clear, and perhaps make a profit, the same as the manufacturers of munitions of war are making to-day—and I was going to say a great many other industries in this country. But as soon as the war is over a change will come.

Mr. BRANDEGEE. Mr. President, will the Senator yield for a question?

Mr. SMOOT. I will; for a question.

Mr. BRANDEGEE. Is it not a fact that even if Germany were producing these dyes in sufficient quantities to-day, they could not be gotten into this country?

Mr. SMOOT. It is absolutely true.

Mr. BRANDEGEE. Is not that one good reason why capital would go in, having the entire American market, and only being able to supply half the demand, if it is up against no foreign competition at all?

Mr. SMOOT. Yes, Mr. President; and I want to say to the Senator from New Jersey that if he will go with me I will show him invoices for coal-tar dyes two years ago and invoices for the same colors purchased the last three months, and he will find that there has not been a slight increase of 10, 15, or 20 per cent, but he will find that there has been an increase in some instances of hundreds of per cent.

Mr. MARTINE of New Jersey. I realize all that.

Mr. SMOOT. And, Mr. President, it is natural under the conditions existing. Many of the manufacturers can not get what they want even with the prices asked and they are willing to pay, and the products that they are manufacturing to-day are not what the manufacturers of this country want. Blacks and light colors are being used as much as possible, in order that the American manufacturer will secure dyes in sufficient qualities to run the mills. I think, of course, the American customer, under the circumstances, will recognize this fact

and make his purchases accordingly; and I will say it is safer to buy a straight black this year than any other color, if fastness of color is desired.

Mr. MARTINE of New Jersey. I should like to ask the Senator whether there is any assurance that if we should adopt this bill we will get the rebate, and get clear down to the original prices again? With the subsidy to the dyestuff manufacturers that they will be granted under this additional stipend that the amendment of the Senator from Massachusetts proposes, they will not lower the prices. They will hold the prices up just as high, even after the war, as they are to-day.

The VICE PRESIDENT. This is not a question.

Mr. SMOOT. Mr. President, in answer to the question of the Senator from New Jersey, I will say that when normal conditions exist in the world again, competition will then bring prices down. I will admit that the increase in this rate, which is 7½ cents per pound, will in many, many cases enable the manufacturers of this country to proceed with the manufacturing of coal-tar dyes. In many cases it will not. But I will say to the Senator that 7½ cents a pound on the dyestuffs which cost a dollar a pound that go into the manufacturing of his clothing would not amount to one-tenth of a cent a yard. The Senator would not buy his clothing for any less; no one would; but perhaps we can have American labor make these products, instead of the products being made in a foreign country. That is the object of the amendment, and that is the only reason why I would vote for it.

Mr. VARDAMAN. Mr. President, I ask that the amendment be read. I have been absent during the discussion, in attendance upon a subcommittee, and I have not heard the amendment read. I should like to hear it.

The VICE PRESIDENT. The Secretary will state the amendment.

Mr. GALLINGER. Mr. President, I noticed when it was read before that some words were not plainly understood by those of us who were listening. [Laughter.]

The VICE PRESIDENT. The Chair cautions the Secretary to pronounce the words correctly.

The SECRETARY. The Senator from Massachusetts proposes to add the following to the amendment offered by the committee:

That on and after the day following the passage of this act there shall be levied, collected, and paid upon the articles named herein when imported from any foreign country into the United States or into any of its possessions, except the Philippine Islands and the Islands of Guam and Tutuila, the rates of duties which are herein prescribed, namely:

DUTIABLE LIST.

1. All products of coal, produced in commercial quantities through the destructive distillation of coal or otherwise, such as benzol, toluol, xylol, cumol, naphthalin, methylnaphthalin, azenaphten, fluorin, anthracene, phenol, cresol, pyridin, chinolin, carbazol, and other not specially provided for and not colors or dyes, 5 per cent ad valorem.

2. All the so-called "intermediates," made from the products referred to in paragraph 1, not colors or dyes, not specially provided for, 3½ cents per pound and 15 per cent ad valorem.

3. All colors or dyes derived from coal, 7½ cents per pound and 30 per cent ad valorem.

FREE LIST.

4. Acids: Acetic or pyroligneous, arsenic or arsenious, chromic, fluoric, hydrofluoric, hydrochloric or muriatic, nitric, phosphoric, prussic, silicic, sulphuric or oil of vitriol, and valerianic.

5. Coal tar, crude, pitch of coal tar, wood or other tar, dead or cresote oil.

6. Indigo, natural.

SEC. 2. That paragraphs 20, 21, 22, and 23 of Schedule A of section 1 of an act entitled "An act to reduce tariff duties and to provide revenue for the Government, and for other purposes," approved 9 o'clock and 10 minutes p. m., October 3, 1913, and paragraphs 387 394, 452, and 514 of the "free list" of section 1 of said act, and so much of any heretofore existing law or parts of law as may be inconsistent with this act are hereby repealed.

Mr. SIMMONS. Mr. President, I think probably there is no other Senator who desires to speak on this matter, and I move to lay the amendment of the Senator from Massachusetts on the table.

Mr. LODGE. I think we can get a direct vote, Mr. President.

Mr. SIMMONS. Very well; I have no objection.

The VICE PRESIDENT. The yeas and nays have been demanded and ordered. The Secretary will call the roll.

Mr. LODGE. This is on the amendment?

The VICE PRESIDENT. On the adoption of the amendment.

The Secretary proceeded to call the roll.

Mr. GALLINGER (when his name was called). I have a general pair with the senior Senator from New York [Mr. O'GORMAN], who is absent. Not knowing how he would vote if present, I withhold my vote.

Mr. JOHNSON of Maine (when his name was called). I transfer my general pair with the junior Senator from North Dakota [Mr. GRONNA] to the senior Senator from Texas [Mr. CULBERSON] and will vote. I vote "nay."

Mr. MYERS (when his name was called). I have a pair with the junior Senator from Connecticut [Mr. McLEAN]. In his absence, I withhold my vote. I am informed that if the Senator from Connecticut were present he would vote "yea," and if I were able to vote I would vote "nay."

Mr. OVERMAN (when his name was called). I have a general pair with the junior Senator from Wyoming [Mr. WARREN]. I see he is not present, and I shall have to withhold my vote, as I do not know how he would vote on this question.

Mr. OWEN (when his name was called). I transfer my pair with the Senator from New Mexico [Mr. CATRON] to the Senator from South Dakota [Mr. JOHNSON] and will vote. I vote "nay."

Mr. SUTHERLAND (when his name was called). I am paired with the senior Senator from Arkansas [Mr. CLARKE], who is absent. On that account I withhold my vote.

Mr. TILLMAN (when his name was called). I transfer my pair with the junior Senator from West Virginia [Mr. GOFF] to the junior Senator from Maryland [Mr. LEE] and will vote. I vote "nay."

Mr. UNDERWOOD (when his name was called). I have a general pair with the junior Senator from Ohio [Mr. HARDING]. I transfer that pair to the senior Senator from Tennessee [Mr. LEA] and will vote. I vote "nay."

Mr. WILLIAMS (when his name was called). Transferring my pair with the senior Senator from Pennsylvania [Mr. PENROSE] to the junior Senator from New Jersey [Mr. HUGHES], I vote "nay."

The roll call was concluded.

Mr. CHILTON. I transfer my pair with the senior Senator from New Mexico [Mr. FALL] to the junior Senator from Oklahoma [Mr. GORE] and will vote. I vote "nay."

Mr. DILLINGHAM (after having voted in the affirmative). I am compelled to withdraw my vote, as I see that the senior Senator from Maryland [Mr. SMITH] has not voted, and I have a pair with him.

Mr. CURTIS. I have been requested to announce the following pairs:

The Senator from Delaware [Mr. DU PONT] with the Senator from Kentucky [Mr. BECKHAM];

The Senator from Idaho [Mr. BRADY] with the Senator from Florida [Mr. FLETCHER]; and

The Senator from Michigan [Mr. TOWNSEND] with the Senator from Florida [Mr. BRYAN].

The result was announced—yeas 25, nays 41, as follows:

YEAS—25.

Borah	Curtis	Nelson	Sterling
Brandegee	Jones	Oliver	Wadsworth
Burleigh	Kenyon	Page	Weeks
Clapp	La Follette	Poindexter	Works
Clark, Wyo.	Lippitt	Sherman	
Colt	Lodge	Smith, Mich.	
Cummins	McCumber	Smoot	

NAYS—41.

Ashurst	Lane	Robinson	Taggart
Bankhead	Lewis	Saulsbury	Thomas
Broussard	Martin, Va.	Shafroth	Thompson
Chamberlain	Martine, N. J.	Sheppard	Tillman
Chilton	Norris	Shields	Underwood
Hardwick	Owen	Simmons	Vardaman
Hitchcock	Phelan	Smith, Ariz.	Walsh
Hollis	Pittman	Smith, Ga.	Williams
Husting	Pomerene	Smith, S. C.	
Johnson, Me.	Ransdell	Stone	
Kern	Reed	Swanson	

NOT VOTING—30.

Beckham	Fall	James	Overman
Brady	Fletcher	Johnson, S. Dak.	Penrose
Bryan	Gallinger	Lea, Tenn.	Smith, Md.
Catron	Goff	Lee, Md.	Sutherland
Clarke, Ark.	Gore	McLean	Townsend
Culberson	Gronna	Myers	Warren
Dillingham	Harding	Newlands	
du Pont	Hughes	O'Gorman	

So Mr. LODGE's amendment to the amendment of the committee was rejected.

The VICE PRESIDENT. The question recurs on the amendment of the Committee on Finance.

Mr. WORKS. Mr. President, I had supposed that a vote would not be called for upon the bill this afternoon. I have an amendment that I desire to submit and support by a few remarks. I am not prepared to do so this evening. I will ask the Senator from North Carolina whether there is any reason why the bill should be pressed to a vote this afternoon?

Mr. SIMMONS. I will state to the Senator that the only reason was that no Senator was ready to speak this afternoon, and I thought in view of the fact that we have a very short time before the 1st of May, the sooner we get this matter into

conference, where we anticipate there will be some little difference between the House and the Senate, the better. I was advised that there was no Senator on the other side of the Chamber who desires to speak.

Mr. WORKS. Then, evidently, I was not consulted on the subject. I do desire to present an amendment and support it very briefly. Probably it will not take me more than half an hour, but I can not do it now.

Mr. SIMMONS. Is there any reason why the Senator can not proceed now? I think we ought to get this matter out of the way as quickly as possible, so that the military bill may be taken up. It is important legislation, and I hope the Senator will not hold up the whole matter.

Mr. WORKS. I think under the unanimous-consent agreement the Senator ought not to press this measure to a vote now, when a Senator desires to be heard upon it and is not prepared to go on at this time.

Mr. SIMMONS. The unanimous-consent agreement, if the Senator will permit me, was that we would vote not later than 5 o'clock to-morrow.

Mr. WORKS. I think Senators had a right to assume——

Mr. SIMMONS. Of course under that agreement we can vote at any time when we are ready.

Mr. WORKS. We are not ready to vote now, when a Senator desires to submit an amendment to-morrow and speak upon it.

Mr. SIMMONS. Under the unanimous-consent agreement we were to proceed to the consideration of this bill beginning at 12 o'clock to-day and——

Mr. WORKS. I have no desire to delay the bill, but I do desire an opportunity to present what I have to say upon the amendment I shall propose, and I took it for granted that under the unanimous-consent agreement the bill would not be pressed to a vote this afternoon. I hardly think the Senator would desire to do that under the circumstances.

Mr. SIMMONS. Of course the Senator understands I do not desire to do anything that is discourteous to any Senator, and if the Senator states that he wants to speak and is not ready to speak this afternoon, I would not feel in face of that like insisting on a vote.

Mr. WORKS. That is what I have been saying.

Mr. GALLINGER. Mr. President, the Senator from North Carolina has stated what ought to be the action of the Senate. On this side of the Chamber we have hastened the passage of this bill. We have been anxious to have it passed. I have not agreed with some of the arguments that have been made in behalf of its passage, but it is inevitable that it is to pass and the Treasury needs the revenue. For that reason we have had no disposition to halt it.

Mr. President, it was distinctly understood that we would have most of to-morrow to discuss the bill, if anyone wished to discuss it, or to offer an amendment; and, when the Senator from California says he desires to offer an amendment and is not ready to do so now, there ought to be no controversy as to the bill going over until to-morrow.

Mr. STONE. There is none.

Mr. GALLINGER. I hope no effort will be made to force it.

Mr. SIMMONS. There is none. If the Senator from California says he is not ready to offer an amendment now, I, of course, do not press the bill.

EXECUTIVE SESSION.

Mr. STONE. I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After five minutes spent in executive session, the doors were reopened.

Mr. KERN. I move the Senate adjourn until 11 o'clock to-morrow morning.

The motion was agreed to; and (at 5 o'clock and 15 minutes p. m., Monday, April 10, 1916) the Senate adjourned until to-morrow, Tuesday, April 11, 1916, at 11 o'clock a. m.

CONFIRMATIONS.

Executive nominations confirmed by the Senate April 10 (legislative day of March 30), 1916.

RECEIVERS OF PUBLIC MONEYS.

Frank Campbell to be receiver of public moneys at O'Neill, Nebr.

Arnold F. Beeler to be receiver of public moneys at North Platte, Nebr.

John P. Robertson to be receiver of public moneys at Broken Bow, Nebr.

REGISTER OF THE LAND OFFICE.

Eugene J. Eames to be register of the land office at North Platte, Nebr.

PROMOTIONS AND APPOINTMENTS IN THE NAVY.

Ensign Howard A. Flanigan to be a lieutenant (junior grade).

Ensign Otto M. Forster to be a lieutenant (junior grade).

Chauncey R. Murray to be an assistant paymaster.

Boatswain Benjamin F. Singles to be a chief boatswain.

Boatswain Frank G. Mehling to be a chief boatswain.

Gunner Joseph Chamberlain to be a chief gunner.

Machinist Stephen H. Badgett to be a chief machinist.

Machinist Jonathan H. Warman to be a chief machinist.

John F. Huddleston to be an assistant paymaster.

POSTMASTERS.

MISSOURI.

Clyde G. Eubank, Madison.

A. S. J. Martin, East Prairie.

HOUSE OF REPRESENTATIVES.

MONDAY, *April 10, 1916.*

The House met at 11 o'clock a. m.

The Chaplain, Rev. Henry N. Couden, D. D., offered the following prayer:

Infinite Spirit, Father of all Souls, never far from any of us, we would draw near to Thee, that our minds may be quickened, our hearts purified; that we may be strong to do and to dare. For Thou art the inspiration of all good, the strength of every noble endeavor. We realize that the path of duty is not always easy to follow; but we shall reap if we faint not, for Thou art the God of our salvation, and in Thee we put our trust. For Thine is the kingdom and the power and the glory forever. Amen.

The Journal of the proceedings of Saturday, April 8, 1916, was read and approved.

RIVER AND HARBOR APPROPRIATION BILL.

Mr. JOHNSON of Kentucky. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of what is known as the juvenile-court bill.

The SPEAKER. The gentleman from Kentucky moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the juvenile-court bill, the unfinished business on District day.

Mr. SPARKMAN rose.

The SPEAKER. For what purpose does the gentleman rise?

Mr. SPARKMAN. Mr. Speaker, I rise to make a preferential motion. I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the bill H. R. 12193, the river and harbor appropriation bill.

The SPEAKER. The gentleman from Florida makes the preferential motion that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the river and harbor appropriation bill. The question is on the motion of the gentleman from Florida, that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the river and harbor appropriation bill.

The question was taken; and on a division (demanded by Mr. JOHNSON of Kentucky) there were—ayes 46, noes 6.

So the motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of the river and harbor appropriation bill, with Mr. SHERLEY in the chair.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

Fox River, Wis.: Continuing improvement from Depere up to Portage, including maintenance of improvement of Wolf River and of the harbors heretofore improved on Lake Winnebago, $30,000. And the Secretary of War is hereby authorized to convey, by quitclaim deed, to the State of Wisconsin, or to the city of Portage, free of cost, all the right, title, and interest of the United States in and to the "Portage Levee," including the right of way on which it is built, whenever the proper authorities of said State, or of said city, shall satisfy the Secretary of War that they are empowered by law to accept the same.

Mr. FREAR. Mr. Chairman, I move to strike out the last word. I dislike to question the competency or accuracy of the clerks employed by the Rivers and Harbors Committee, and will say that the best compliment I have received in my work has come from the secretary of that committee, who praised the

accuracy of my deductions in the past, a task he is required constantly to verify.

The gentleman from North Carolina [Mr. SMALL] is an old member of the committee, but apparently knows little about actual commerce on any of the rivers or canals, as I have demonstrated. On page 6583 of the RECORD he contributes a statement prepared by Mr. McGann, whom he terms one of the capable clerks of the River and Harbor Committee, and the gentleman from North Carolina says he accepts it as absolutely correct.

I ask every Member who desires to ascertain the truth and learn how far we have been misled by so-called commerce statements to turn to the RECORD of April 8, page 6583, and read first the analysis of commerce on the Tennessee River, prepared by myself, and then the statement prepared by the gentleman from North Carolina, which appears in an adjoining column. I will rest my whole case against the committee and against the bill on that page.

One of the statements must be wrong, and I here verify my own figures and disprove the claims of the gentleman from North Carolina, whose other statements I have so frequently discredited by official reports.

This statement is of the utmost importance because of misleading commerce reports constantly quoted by engineers and waterway rainbow chasers when searching for large governmental appropriations:

Tennessee River above Chattanooga.

COMMERCIAL STATISTICS, 1914.

(Chief Army Engineer's Report, 1915, p. 2870.)

			Tons.
Total tons (carried 24 miles on the average)			305,616
Logs	tons	30,573	
Lumber	do	8,510	
Ties	do	18,850	
Sand	do	145,832	
			203,765
Total			101,851

The logs, timber, and sand could have been floated in 2 or 3 feet depth without trouble.

I call upon the gentleman from North Carolina to explain his own error, as apparent from page 6583 of the RECORD.

Tennessee River between Chattanooga and Florence.

COMMERCIAL STATISTICS, 1914.

(Engineer's Report, 1915, p. 2871.)

			Tons.
Total tons (carried 42 miles on the average)			128,872
Logs	tons	16,746	
Lumber	do	10,933	
Ties	do	2,798	
Sand	do	54,708	
			85,185
Total			43,687

Again I ask what excuse has the gentleman from North Caroline for the error he commits?

Tennessee River between Florence and Paducah.

COMMERCIAL STATISTICS, 1914.

(Chief Engineer's Report, 1915, p. 2872.)

			Tons.
Total tons			449,956
Logs	tons	42,212	
Lumber	do	12,261	
Ties	do	330,376	
Poles	do	20,000	
Other timber	do	3,934	
			408,783
Total			41,173

Recapitulation.

	Total tons.	Net tons.
Above Chattanooga	305,616	101,851
Chattanooga to Florence	128,872	43,687
Florence to Paducah	449,956	41,173
Total	884,444	186,711

Only 186,711 tons, of which 78,000 tons was marble and cheap iron ore, floated from 5 to 15 miles. For this commerce we have already appropriated $11,000,000, and this bill carries $944,000 for the coming year.

Compared with this statement is the following from the gentleman from North Carolina, page 6583 of the RECORD:

"Now, the reports of the engineers show that for the calendar year 1914 there was a total commerce on the Tennessee River of 1,343,709 tons."

"Deducting floatable timber and sand, the commerce, as reported on the three sections of the river, is as follows: Above Chattanooga, 134,446 tons; between Chattanooga and Florence, 68,732 tons; between Florence and Chattanooga, 268,791 tons; making a total of 471,969 tons."

	Tons.
Mr. SMALL says the total 1914 commerce was	1,343,709
Engineers' report, 1915, pages 2870 to 2872, shows	884,444
Excess over official report	559,265

Mr. Small's statement is over 60 per cent too high on total commerce.

	Tons.
Net commerce, Mr. SMALL'S statement	471,969
Net commerce, engineers' report, pages 2870 to 2872	186,711
Excess over official report	285,258

Mr. SMALL'S statement is 285,258 tons, or 250 per cent, too high on net tonnage. The importance of this comparison should not be overlooked. On pages 6178, 6179, and 6180 of the RECORD of April 3, the statements of the gentleman from North Carolina were squarely discredited by the official reports, and now he places responsibility upon a clerk for the inexcusable errors above noted. By getting the statements of inland-waterway boosters squarely on record, we are able to puncture misleading arguments, on which they are now securing enormous appropriations from the Government In this connection I again call attention to the monstrous absurdity now perpetrated on the Government by the Beaufort-Norfolk waterway, which gets $1,000,000 in this bill for a net commerce estimated at about 65,000 tons annually.

But the most scandalous part of that project is that the Government dredge crew can be employed for $200,000 annually, whereas the $800,000 additional for 1916 is divided up among private dredges, as exposed by Mr. GOOD, of Iowa, and these private contractors charge 80 per cent more for the same service than the cost to the Government when it performs the work with its own plant. These are the contracts made for us by Army engineers, and we are to blame for the extravagant appropriations they feel compelled to spend.

I do not allege graft in some $300,000 overcharges on this one-year's job, provided for by an $800,000 surplus in this one bill, but I do ask how far is the Government to be mulcted by such wasteful projects and such outrageous contracts.

Mr. SEARS. Mr. Chairman, I ask unanimous consent that I may be permitted to proceed for 15 minutes.

The CHAIRMAN. The gentleman from Florida asks unanimous consent to proceed for 15 minutes. Is there objection?

Mr. FOSTER. Mr. Chairman, I do not believe at this stage of the proceedings gentlemen ought to ask unanimous consent to proceed for so long a time as 15 minutes under the 5-minute rule.

The CHAIRMAN. Does the gentleman object?

Mr. FOSTER. I do.

The CHAIRMAN. Objection is heard and the gentleman from Florida is recognized for five minutes.

Mr. SEARS. Mr. Chairman, I have not taken up much of the time of this House, and I am indeed sorry the distinguished gentleman from Illinois [Mr. FOSTER] objects, not that any words of wisdom perhaps will fall from my lips, but in order that certain corrections may be made in remarks of the gentleman from Wisconsin [Mr. FREAR], I have asked unanimous consent. It is not my purpose to attack those appropriations in this bill affecting the State of Wisconsin. I have studied those appropriations, and I believe they are worthy.

In a speech made before the House on war taxes and waste, the gentleman from Wisconsin [Mr. FREAR] took occasion to severely criticize several projects in my district which are provided for in the present rivers and harbors bill. Indeed, the gentleman took such a delight in this criticism that he referred to same on six different pages and at six different times.

Believing that these attacks are unfair and unjust, and that the distinguished gentleman from Wisconsin made said charges and criticisms because he was misinformed, and that there was no desire on his part to be unjust, I have decided, in justice to my State, my district, and my people, to briefly reply thereto and present to you for your consideration the facts.

On page 800 of the CONGRESSIONAL RECORD of January 16, 1916, the gentleman referred to the St. Johns River, Fla., as follows:

St. Johns River, Fla., $370,000, the full amount requested. Balance on hand January 1, 1915, $111,381. Amount already expended, over $6,500,000. Commerce is 40 per cent floatable lumber and ties. Florida projects are first in number and amount in all waterway bills. Florida also has first call at the hands of Army engineers. Why?

He also referred to the St. Johns River at various times during said speech for the purpose of proving to you that the rivers and harbors bill was nothing but a pork-barrel proposition.

In order that the Members may thoroughly understand this project, I desire briefly to give you the facts and figures relative

thereto as compiled by me from the report of the War Department, and in which I compare the St. Johns River, Fla., with the Fox River, Wis. I ask that you carefully study and compare them.

Mr. Chairman, I am satisfied the figures contained in comparisons Nos. 1, 2, 3, and 4, and also those contained in No. 5, which I will later give you, completely refutes—at least as far as my State is concerned—the statement that there is no commerce on the rivers and that the moneys spent on them by the Government is wasted.

Now, Mr. Chairman, I am satisfied any gentleman who will study the above figures will be compelled to admit there is no just grounds for placing these projects in the pork-barrel class. The Government has paid out on these projects the sum of $6,758,170.59, less than $1 per ton for the commerce carried over said projects, and from now on the cost to the Government will be materially decreased.

By referring to the Fox River, Wis., you will find the cost per ton to the Government has been something over $9 per ton. It is with no spirit of criticism of the Fox River project that these comparisons are given, but solely to prove to you conclusively that the St. Johns River projects are worthy and are entitled to even more liberal appropriations than are given them by the Government. They also completely refute the inference made by my colleague when he stated, "Florida also has first call at the hands of the Army Engineers. Why?

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. RAKER. Mr. Chairman, I ask unanimous consent that the gentleman may be permitted to proceed for five minutes.

Mr. MANN. Mr. Chairman, I amend that and ask that he may be permitted to proceed for 10 minutes.

Mr. FOSTER. Mr. Chairman, I have no objection to the gentleman's proceeding for 15 minutes, but it seems to me if we start this we can not deny the same privilege to others.

Mr. MANN. I think we will get along better if the gentleman's time is extended.

The CHAIRMAN. Is there objection to the request that the gentleman may proceed for 10 minutes?

There was no objection.

Mr. MOORE of Pennsylvania. Mr. Chairman, will the gentleman yield?

Mr. SEARS. Mr. Chairman, I regret I must decline to yield, as my time is limited.

Several of the distinguished gentlemen who have spoken against the rivers and harbors bill have stated they believe no assistance should be given by the Government until the projects receiving aid from the Government first receive some local assistance. While I do not entirely agree with this proposition, in addition to the statement made yesterday, when I showed Miami was spending $585,000 on the Miami Harbor project, I desire to read to you from page 632, part 1, Report of the Chief of Engineers, United States Army, as follows:

Local cooperation. None is required by the appropriation act of June 25, 1910. Between 1892 and 1894 Duval County expended $303,206.25 in building training walls and shore protection and dredging between Dames Point and Mile Point to secure an 18-foot channel through this 10-mile stretch. The funds were derived from the sale of county bonds issued for the purpose. The city of Jacksonville is now building a system of extensive, thoroughly modern municipal terminals, with adequate storage yards, warehouses, handling appliances, and rail connections, which will be ready for use about July 1, 1916. The cost is estimated at about $1,500,000. The funds were raised by an issue of city bonds specially authorized for the purpose.

This should meet the opposition of my colleagues along the lines above mentioned.

COMPARISON No. 1.

St. Johns River, Fla.

Total expenditures on St. Johns River from Jacksonville, Fla., to sea have been to June 30, 1915, $6,368,307.86.

The commerce was in—	Tons.	Value.
1912	2,204,794	$67,877,603
1913	2,562,043	71,244,501
1914	2,186,678	60,718,452
Total for three years	6,953,515	199,840,556

Average value per ton, about $30.
Passengers, 1,334,597.
N. B.—See page 632, annual report, on terminals. Balance in favor of above, 6,531,621 tons; value, $197,642,662; 1,244,974 passengers.

FREIGHT TRAFFIC.

Articles.	Amount. Customary units.	Amount. Short tons.	Valuation.
Cotton	24,320 bales	6,080	$1,266,000
Cement	156,500 barrels	31,300	265,125

Fox River, Wis.

Total expenditures on Fox River to June 30, 1915, $3,911,651.18.

The commerce was in—	Tons.	Value.
1912	145,890	$634,362
1913	134,638	724,972
1914	141,366	838,637
Total for three years	421,894	2,197,971

Average value about $6 per ton; passengers, 89,623.

COMPARISON.

Tonnage greater than Fox River by 127,481.
Value greater than Fox River by $9,268,146.
Expenditures about one-twentieth of Fox River.
Passengers about 55 per cent less than Fox River.

NOTE.—Not in a spirit of criticism, but solely because the gentleman takes a special delight in ridiculing the commerce on all projects where a large part of same is lumber, logs, sand, and gravel, I ask you to refer to comparison No. 1. There you will find, under heading "Freight traffic," coal, 65,656 tons; sand and gravel, 46,568 tons; and wire grass, 1,467 tons; a total of 113,691 tons out of a total of all articles of commerce of only 141,366 tons for year 1914.

COMPARISON No. 4.

St. Johns River, Lake Harney to the sea.		*Fox River.*	
Tonnage, 1912–1914, inclusive	7,996,577	Tonnage, 1912–1914, inclusive	421,894
Value, 1912–1914, inclusive	$226,153,301	Value, 1912–1914, inclusive	$2,197,971
Passengers, 1912–1914, inclusive	1,411,643	Passengers, 1912–1914, inclusive	89,623
Total expenditures	$6,758,170.59	Total expenditures	$3,911,651.18

COMPARISON.

St. Johns River, with less than twice the expenditures of Fox River—
Carried more than 15 times the tonnage of the Fox River.
Carried more than 112 times the value of the Fox River.
Carried more than 15 times the passengers of the Fox River.

NOTE.—The three St. Johns projects are combined, as they are really one, and besides, the gentleman in his speech combined the expenditures on same.

COMPARISON No. 5.

Kissimmee River, Fla.

Total expenditures on Kissimmee River, Fla., to June 30, 1915, $32,266.16.

The commerce was in—	Tons.	Value.
1912	71,950	$2,930,500
1913	85,550	3,558,400
1914	36,902	828,890
Total for three years	194,402	7,317,790

Average value per ton in 1913, about $40; average value per ton in 1914, about $23; passengers, 5,000.

NOTE.—I believe you will concede the above is a very good showing for a river which, according to the gentleman from Wisconsin, is dry 8 or 9 months out of 12.

FREIGHT TRAFFIC.

Fox River, Wis.

Total expenditures on Fox River, to June 30, 1915, $3,911,651.18.

The commerce was in—	Tons.	Value.
1912	145,890	$634,362
1913	134,638	724,972
1914	141,366	838,637
Total for three years	421,894	2,197,971

Average value per ton, about $6; passengers, 89,623.

COMPARISON.

Tonnage in favor of Fox River, 227,492.
Value in favor of Kissimmee River, $5,119,819.
Expenditures, about one one-hundred-and-twentieth of Fox River.
Passengers, about one-eighteenth of Fox River.

The word "why" in the statement can only refer to the chairman of the Rivers and Harbors Committee. I can not, however, bring myself to believe the gentleman from Wisconsin intended to cast any reflection on the chairman of said committee. I will, therefore, only say that his 21 years of faithful service in this House is too well known to need any defense at my hands.

I also find, in referring to the speech of the able but misguided gentleman, that he severely criticized the Kissimmee River project; and while this is a small project, small only from an appropriation standpoint, he took occasion to go out of his way and unjustly criticize same on four pages and at four different times. I believe that the gentleman, as stated relative to the St. Johns River proposition, also made these unjust criticisms because he was misinformed. The gentleman from Wisconsin [Mr. FREAR], referring to the Trinity River project, on page 1135 of the RECORD, above referred to, said:

Is not that a case like the Kissimmee River, in Florida, that ought to be insured against fire?

And on page 1148 of the same RECORD he referred to the Kissimmee River project in part as follows:

The country has been informed that the official engineer's report is untrue when it says the Kissimmee River is dry eight months of the year. What is the difference, provided the engineers approve Kissimmee River, wet or dry? The issue of wet or dry on the Kissimmee has become as famous as wet or dry Kansas, and has become a prolific source of argument; but so is the condition of the Trinity, which is dry eight or nine months of the year, according to the same authority. Yet Army engineers recommend an expenditure on the Trinity of twenty millions or thereabouts, although it is reported dry two-thirds of the time. Why not insure against fire?

On page 833 of the same RECORD he made the following statement:

A vigorous champion of the Kissimmee River, eight months dry during the year, according to engineer's report, was also eloquently impressed.

At this time, Mr. Chairman, I desire to present to you some figures which I have compiled from the records of the War Department, and I am satisfied, if you will carefully study these figures, you will agree with me that these criticisms are unjust, the facts do not sustain them, and the same should not have been made by the gentleman from Wisconsin. I am satisfied in the future no similar charges as these will be made by him or anyone.

I also desire to call your attention to the fact that on the Chippewa River, Wis., the Government has spent $201,756; and by referring to the report of the Army engineers you will find the river traffic at present on said river is confined to rafting of manufactured lumber and the running of loose logs, and that the maximum draft that can be carried at low water is 18 inches.

I also desire to call your attention to the St. Croix River, part in Wisconsin and part in Minnesota, on which the Government has spent $156,487.34. The commerce on said river, as shown by the 1915 report of the Chief of Engineers, was only 42,335 tons, and the same was composed largely of logs and lumber, a

larger part of which was floated; in fact, about 75 per cent of the commerce was logs and lumber.

When I state to you that in 1914, on account of the very dry seasons in our State, which practically made it impossible for river navigation on the Kissimmee River, the commerce on said river was 36,902 tons, with a value of $828,890, I believe you will agree with me that the Kissimmee River project is not only a worthy one, but that the total expenditure by the Government of $32,266.16 on said project, when compared with the appropriation of the St. Croix River of $156,487.34, with a tonnage of only 42,335 tons for the year 1914, fades into insignificance.

I also believe, Mr. Chairman, if it had not been the policy of the committee at the present time not to include any new projects, that the paltry appropriation of $47,000 which we are asking for the Kissimmee River, and which will give us continuous navigation, would be granted by the Members of this House at this time.

For 34 years I have lived at Kissimmee, on the shores of Lake Tohopekaliga, and I therefore believe I know and understand conditions there. Therefore, in order that my colleagues may more fully appreciate the unjust attack made on said river, I will briefly describe for what purpose the appropriation of $32,266.15 was spent and what the appropriation of $3,000 is to cover. Originally the Kissimmee River was only a short stream, but by a system of canals cut by private parties and without expense to the Government the distance now covered by said appropriation is approximately 137 miles, or from Kissimmee to Lake Okechobee.

As a matter of fact, my friends, if you would give us the appropriation sufficient to construct the necessary locks, instead of having navigation eight or nine months out of the year, and sometimes throughout the entire year when we have the usual amount of rainfall, we would have navigation the year round. In order that you may thoroughly understand the project I will briefly describe same. You can take the boat at Kissimmee, cross Lake Tohopekaliga, a distance of 13 miles, then through the Southport Canal into Lake Cypress, across Lake Cypress, and through a canal into Lake Hatchineha; then through a system of canals and the old river into Lake Kissimmee, and across said lake, where you reach the Kissimmee River proper; then down said river to Lake Okechobee, one of the largest inland lakes in the world, and then through Caloosahatchee River to the Gulf, or if you prefer through a system of canals constructed by the State without expense to the Government, and for the purpose of draining the Everglades, you can reach Fort Lauderdale, West Palm Beach, Miami, and the ocean; or you can go northward to Jacksonville. Yet, by asking the Government for $47,000 to give us 12 months' instead of a possible eight or nine months' navigation is only to be accused of being a persistent and consistent follower of the pork-barrel system.

But why take up more of your time with these facts and figures. The charges and imputations have been fully refuted. I will only say, Mr. Chairman, that Jacksonville, with her approximately, 100,000 good, true, loyal, and patriotic citizens; the picturesque St. Johns winding her way northward from Sanford to Palatka, and from Palatka to Jacksonville; the Indian River with her scenic beauty; and the Kissimmee River with her sweet-sounding euphoneous Indian name needs no further defense at my hands. If, however, a further defense should be needed I only have to state to you that during the winter season just coming to a close more than 100,000 tourists from the North, East, West, and South have basked in the balmy sunshine of Florida; have bathed in her placid waters during the months of January, February, and March, and for the past few months having, in truth and in fact, escaped the cold and chilling blasts of the north, and having really lived the life worth living, will now wend their way homeward, only to sing the praises of the wonderful resources and possibilities of my State and the hospitality of her people. [Applause.]

Permit me briefly to quote you What We Believe, written by Dr. Lincoln Hulley, president of Stetson University, De Land, Fla.:

We believe in Florida, the land of blue skies and soft winds and eternal sunshine.

We love its rivers, lakes, pine woods, orange groves, and broad stretches of prairie.

We are one with her people to unite heart, soul, and body in developing her resources, in making this the beautiful home of a free and prosperous people.

We vow with them to be true to the ideals of the sturdy settlers who opened this fair land to be a home for all people.

We invite those seeking new homes, if they are worthy, to settle among us, and we pledge to them the warm hand of hospitality, a glad welcome to the State, and a fraternal cooperation in seeking peace and happiness in this land of plenty—a land of summer and sunshine and song.

I also quote The Floridian's Creed and Covenant, by William Fremont Blackman, Ph. D., LL. D., former president of Rollins College, Winter Park, Fla., which is as follows, and ask that it be included in my remarks:

I believe in Florida, land of the open and fathomless sky, of lambent stars, of mountainous opalescent clouds, of soft benignant airs, of incessant summer, of unstinted and vivifying sunshine, of responsive and fecund soil.

I believe in Florida, laved on every hand—cooled and warmed and cleansed and fed and decorated—by the azure and teeming waters of Tropic seas and by countless and sparkling lakes and streams.

I believe in Florida, land of wide-stretching and open woods, of limitless green prairies and glades, of dense and vine-hung hammocks, of mysterious bays and swamps, all in their various forms lovely and fruitful; the land of fragrant pine and mourning cypress, of moss-draped oak, of waxen magnolia, of comely palm, of regal poinciana, of flaming vine, and of shy and brilliant orchid.

I believe in Florida, land of the orange and pomelo and spicy kumquat, of peach and pear and persimmon and loquat, of pineapple and guava and mango and avocado, of corn and cotton and cane and cattle, and of whatever else is anywhere borne of trees or grown by the soil of the earth.

I believe in Florida, the home of creatures strange, curious, and beautiful—the saurian monster; the gliding reptile; the darting, dainty lizard; the aquatic manatee; the egret in snowy nuptial array; the roseate spoonbill; the exuberant mocking bird; the flame-like, flute-like cardinal; the woodpecker with ivory bill and the humming bird with ruby throat; the painted butterfly sipping nectar in winter days.

I believe in Florida, land of romantic legend and adventurous history, of towns the most ancient and the newest, of swiftly-growing cities, of farms and orchards, and of wide and inviting solitudes still awaiting man's coming.

I believe in Florida, magnet and meeting place for men and women of the North and the South, the East and the West, and countries oversea—Americans all, one blended and indissoluble and free people. I believe in her eager boys and winsome girls, in her schools and colleges, in her churches of divers faiths, in her institutions of philanthropy and mercy, and in her press, the voice and the instructor of her common mind and will.

In fine, I believe in Florida, the Commonwealth old yet young, unformed as yet, but palpitant with energy and fairing forth into the future with high hope and swift step; and believing thus—

I covenant with all her people of like faith to give myself to her service, mind and heart and hand and purse, to explore and develop her hidden resources, to celebrate her praises truthfully, to win worthy citizens for her void spaces, to till her fields, to keep pure her politics, to make more efficient her schools, to strengthen and unify her churches, to cleanse and sweeten her social life, and thus to make her in full fact what she is by human right and divine dower, the queen of Commonwealths.

Neither of these gentlemen are Floridians by birth, only by adoption; both of them are from States north of the Mason and Dixon line; but no one, after reading their sentiments expressed as above, would ever doubt their loyalty to their adopted State.

Mr. Chairman, we should not too severely criticize the gentleman from Wisconsin. He is not entirely to blame, as he has worked so hard on the bill which was reported last year and the present bill under consideration he is suffering from a severe attack of rivergitis and harboritis. His case is not, however, dangerous, and I am satisfied if he will pay my State a visit this fall and secure a few facts he will at least recover, so far as my projects are concerned. I now take pleasure in extending to him a cordial invitation, and assure him he will receive a cordial reception.

Now, Mr. Chairman, not being satisfied with criticizing the projects in my State and other projects in the South, the distinguished gentleman diverted his remarks and engaged in an attack upon the South as a whole. On page 1140 of the above RECORD referred to he called attention to the number of southern Members holding chairmanships of important committees, and severely criticized the same, as follows:

SOUTHERN DELEGATION WITH 27 CHAIRMEN.

The country is confronted with a remarkable spectacle when chairmen from Southern States sit in judgment over the deliberations of 27 of the most important committees of the House, and when a large majority of the Democratic majority controlling national legislation hail from these same Southern States; but when to this astonishing situation the country is further informed by the committee chairman that southern leaders and southern delegations will be lined up behind such scandalous raids on the Treasury it is a call for sectionalism that will bear fruit in no uncertain manner.

In reply to the above I will only say, Mr. Chairman, the gentlemen referred to do not owe their high standing in Congress to chance, and same is due solely in recognition of their ability, character, and long service.

I desire to state a large percentage of my constituents were formerly your constituents, but they are now, regardless of the State or section they formerly lived in, Floridians, loyal and true, and it is unfair to them to raise the cry of sectionalism. And to do so, Mr. Chairman, is only to criticize those, many of whom were but recently constituents of yours, but I am glad to say now are constituents of mine.

In order that you may thoroughly understand how rapidly my district is growing it is only necessary for me to remind you that approximately six years ago at St. Cloud, Fla., what is now known as the "Wonder City," there was only one house, while to-day there are approximately 3,000 citizens, happy and contented. In this short time they have built blocks of handsome brick business houses, beautiful homes, an ice factory, a three-

story brick hotel, and have banks, electric lights, telephone, cement sidewalks, and paved streets. Fully 80 per cent of these people moved to my district from States north of the Mason-Dixon Line, and you only have to write any of them to find out whether or not the lines dividing the North and the South have been swept aside. A few years ago the Grand Army of the Republic met in my home town, and I never saw a more beautiful sight than the one presented when the old soldiers wearing the blue marched down our principal street, and by their side marched those wearing the gray. As they marched down the street our local band played "Dixie," and before the last note died away one of the old and few fife and drum corps of the days of '61 to '65 took up the strains of "Yankee Doodle." On that occasion, Mr. Chairman, it was my pleasure to deliver the address of welcome, and as I, a southerner and son of a Confederate soldier, clapsed the hand of the commander of the Grand Army of the Republic, a veteran of the Civil War, it was my pleasure to remark, in truth and in fact, "There is no North, no South, no East, no West." [Applause.]

I could also call your attention to the growth of Okeechobee City, on Lake Okeechobee, and in fact many other places in my district, where the growth has been equally as marvelous and wonderful, but time will not permit.

Now, Mr. Chairman, I shall vote on all bills as my conscience dictates, and I shall never vote against a proposition because it does not directly or indirectly affect my district, and because no benefits for my district will be derived therefrom. I also trust, in the future, when any gentleman desires to make an attack on any proposition he will name the State, and that he will not unjustly criticize either the South or the North.

I am sorry to have taken up so much of your time, but you can rest assured I shall never let my State be unjustly criticized without defending her to the extent of my ability.

I will simply say in conclusion, Mr. Chairman, I trust as long as I sit as a Member, or perchance as a spectator, in the Halls of Congress, no more will I hear the cry of the North and the South in a partisan manner, as that day has passed forever, and we are now one people, with one flag; a united Nation with only one purpose in view, "On earth peace, good will toward men." I thank you. [Applause.]

The Clerk read as follows:

Duluth-Superior Harbor, Minn. and Wis.: For maintenance, $43,000.

Mr. LENROOT. Mr. Chairman, I move to strike out the last word.

This item of $43,000 for the maintenance of the Superior-Duluth Harbor is an item for a port that the gentleman from Minnesota [Mr. MILLER] and I have the honor to jointly represent. I speak upon this item not for the purpose of justifying it, because it needs no justification, but there have been intimations thrown out on this floor from time to time that if a Member was silent with reference to a project in his own State he was inconsistent when he voted against a project in some other State.

Now, Mr. Chairman, I want to call attention to this item for the purpose of showing some of our friends what commerce really is and what justification there is for Members remaining silent upon some of these propositions and not upon others. The Superior-Duluth Harbor last year—and I read from the report of the Board of Engineers—did the following business:

The total number of tons received and shipped for the calendar year 1914 was 33,535,701 tons—

Mark the figures—

with a total valuation of $287,200,960.

It is the largest interior port in the United States and second only to New York City in the United States. The total number of vessels arriving and departing was 9,712. Net registered tonnage of all vessels arriving and departing, 28,216,139 tons. The average number of tons of cargo received per day during the season of navigation for 1914 was 45,176. The average number of tons shipped per day for same period was 97,528. In other words, the commerce of our port was 143,000 tons per day, three times as much as most of the smaller items in this bill for the entire year. In other words, we ship more in a single day than the majority of the rivers in this country ship during an entire year.

I read further:

The harbor has iron-ore docks with a total storage capacity of 797,592 gross tons, coal docks with total capacity of 10,908,000 short tons, and grain elevators with total capacity of 31,625,000 bushels, and these freight-handling facilities are being increased annually. From a total of 6,325,351 tons of freight shipped and received in 1895 the commerce has increased to 33,535,704 tons shipped and received in 1914. From the curve of increase shown in the harbor commerce, and with a knowledge of the sources of supply which create this traffic, it is believed that the prospective commercial importance of this harbor is very great and that any reasonable necessary aid to insure the safety of vessels using it would be fully justified.

From the report of the committee upon this bill, containing an extract from the report of the Board of Engineers, I read:

From comparison with the rate on freight passing through St. Marys Falls Canal with railroad rates the saving through water transportation appears to be $2 per ton, and for the 33,535,704 tons received and shipped at this harbor in 1914 amounts to $67,071,408.

The CHAIRMAN. The time of the gentleman from Wisconsin has expired.

Mr. LENROOT. Mr. Chairman, I ask for five minutes more.

The CHAIRMAN. The gentleman from Wisconsin asks unanimous consent to proceed for five minutes more. Is there objection?

There was no objection.

Mr. LENROOT. In other words, the saving by reason of this water commerce from the port alone was $67,000,000 last year.

Now, Mr. Chairman, we have a very congested condition in this harbor. In the last river and harbor bill I secured the incorporation of an item for a survey to increase the anchorage basin and turning area. A favorable report was made on this project. It is now pending before the Committee on Rivers and Harbors, recommending the adoption of a project at a total cost of $360,000, and an immediate appropriation of $180,000. It is a matter of urgency and a matter of necessity. But, having in mind the rule that the committee adopted when they began the consideration of this bill, having in mind the condition of the Treasury, I did not even ask the Committee on Rivers and Harbors to consider this very necessary item, because I believe that in view of the present condition of the Treasury the committee was warranted in keeping out all new projects except those that were absolutely necessary, and I supposed that in the make-up of the bill which the committee would bring in they would have the same thing in mind; that they would bring in a bill carrying appropriations only for the maintenance of existing rivers and harbors in order to carry the commerce that now floats upon them, and in addition carrying only appropriations for existing projects whereby, if they failed to carry on the work, there would be a vast loss to the Government in the projects that have already been adopted.

But I find when I come to an examination of this bill that there is nothing of that kind; no such rule has been adopted. I venture to say that at least half of the appropriations in this present bill could be dispensed with without interfering with the maintenance with a single river and harbor where it ought to be maintained or without the Government losing a dollar in the carrying on of existing projects. I had supposed that the House would treat this river and harbor bill upon that basis, having in mind the condition of the Treasury; but that is not so. We find throughout this bill the argument is not its present necessity, but whether it is carrying out an existing project and whether in the future, however distant it may be, that the expenditure is warranted.

I have tried on two or three occasions and have taken the floor to attempt to get such items stricken out, upon the theory alone of the present condition of the Treasury; but I have been unsuccessful in that. And I want to say that when we come to the question of the extravagance of this administration, in view of the present condition of the Treasury, in view of the fact that the chairman of the Committee on Ways and Means is lying awake nights to find where he is going to get the revenue to supply the appropriations that are being made, I assert some of the items in this bill are absolutely unjustified; and if some of the items remain in the bill there are tenfold more reasons for including some new projects such as are contained in the report, as, for example, that with reference to my own harbor, where the necessity is tenfold greater than the necessity for some of the appropriations that are contained in this bill.

The CHAIRMAN. The time of the gentleman from Wisconsin has again expired.

Mr. SPARKMAN. Mr. Chairman, new projects were not left out of this bill for the reason that none of them were urgent or important. The gentleman's project was not before us at the time we were framing this bill, but if it had been it would have fallen outside of the rule established, not to include new projects in this bill.

Mr. LENROOT. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman from Florida yield to the gentleman from Wisconsin?

Mr. SPARKMAN. Yes.

Mr. LENROOT. I want to say that I am not criticizing the gentleman at all, or his committee, for not including this project. I did not ask them to do so.

Mr. SPARKMAN. If the gentleman had been with us when we were framing this bill, he would have had, I think; in fact, I am sure he would have had more information than he has now; at least, more than he seems to have when he says there are many projects in this bill that could have been left out without any loss to the Government.

In that he is badly mistaken. There are very few projects in this bill which, in my judgment, could have been left out without loss to the Government.

Now, there may be some items here and there where no great amount of damage perhaps would be done, but not many; if any such there are now, we were confronted with this condition; We found $230,000,000 of projects on the books to be taken care of if they are to be completed, and one of the reasons for leaving out new projects was that we might deal more liberally with these old projects and get them out of the way, as far as possible in this bill. Of course, another reason was the condition of the Treasury and the necessity for national preparedness. We considered all those things. But if we had taken on these new projects we could not have carried forward this old work as rapidly as was desired, nor have dealt with them as liberally as we have.

I will say, Mr. Chairman, that I, for one, propose to try to have new projects placed in the next bill. I stated here the other day that after this bill is out of the way and disposed of by the House I propose to ask the committee to come together for the purpose of considering new projects, of having hearings upon them, and to prepare the bill, in so far as new projects are concerned, before this session ends; that is, as far as we can prepare it.

Now, as I have just remarked, we want to get this old work pushed along as rapidly as we can. You will see that with $230,000,000 of projects and only about $40,000,000 in this bill how long it is going to take us to care for all these old projects. Of course, if the Flood Control Committee takes care of the building of the levees on the Mississippi River, that is going to eliminate a part of our work, and we can perhaps get along more rapidly. Now, the gentleman [Mr. LENROOT] has a project that is a very important one. I have been there and I know what his harbor is. There is not a more important inland harbor in the whole country than his, and I think it not only worthy but urgent; and as soon as we have a bill with new projects in it I think that will be taken care of. [Applause.]

The CHAIRMAN. Without objection, the pro forma amendment will be considered as withdrawn, and the Clerk will read.

The Clerk read as follows:

Calumet River, Ill. and Ind.: For maintenance, $20,000: *Provided*, That the upper limit of said project shall be at the intersection of the Grand Calumet River and the Indiana Harbor Canal.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. Reference is made here to the Indiana Harbor Canal. I wish some one who is informed would describe that canal.

Mr. MADDEN. I will say to the gentleman that it is an artificial waterway running in from the lake to the interior to reach a lot of manufacturing plants. It was built by private enterprise, as I understand, to begin with, and at private expense. They turned it over to the Government of the United States, which is now appopriating money out of the Treasury to build breakwaters to protect it from storms.

Mr. MOORE of Pennsylvania. Did the Government make any expenditure for the acquisition of this canal?

Mr. MADDEN. None whatever.

Mr. MOORE of Pennsylvania. It was donated by the owners?

Mr. MADDEN. Donated by the owners.

Mr. MOORE of Pennsylvania. And it runs up to private establishments?

Mr. MADDEN. It runs into the interior from the lake several miles, and is capable of carrying ships up to these manufacturing plants.

Mr. MOORE of Pennsylvania. Does it make a connection between the lake and the Illinois River?

Mr. MADDEN. No; it is just a harbor.

Mr. MANN. The Indiana Harbor Canal runs from Lake Michigan to Indiana Harbor and intersects the Grand Calumet River.

Mr. MOORE of Pennsylvania. But there is an artificial canal?

Mr. MANN. Yes.

Mr. MOORE of Pennsylvania. And it has been taken over by the Government?

Mr. MANN. I do not remember whether the Government has taken it over or not.

Mr. MADDEN. It was taken over in an appropriation bill several years ago.

Mr. MOORE of Pennsylvania. This is for the maintenance of an artificial canal?

Mr. MANN. This appropriation is for the maintenance of the Calumet River. It has nothing to do with the maintenance of the Indiana Harbor Canal.

Mr. MOORE of Pennsylvania. Of what benefit would the river be to these manufacturers, these industries along the banks, if it were not for the canal leading into the river?

Mr. MANN. The river and the canal have nothing to do with each other, except that they meet. One is on one section of the triangle and the other is on the other.

Mr. MOORE of Pennsylvania. It provides transportation inland, does it not?

Mr. MANN. This provision in the bill has nothing to do with the Indiana Harbor Canal.

Mr. MOORE of Pennsylvania. Does it not make a connection with the lake?

Mr. MANN. The Indiana Harbor Canal runs to the lake, but the Calumet River at this point is not navigable at this time.

Mr. MOORE of Pennsylvania. The purpose is to make it navigable, is it not?

Mr. MANN. The project for the Grand Calumet River provides for its extension one-half mile above Hammond, Ind. Now, you might think it was easily ascertainable where one-half mile above Hammond, Ind., is, but nobody knows or ever has known just what that meant; whether it meant one-half mile above the eastern boundary of Hammond, Ind., or one-half mile above the center line of Hammond, Ind., or one-half mile beyond the western boundary. The engineers have desired that it shall be determined exactly where the upper limit of the project is, and, on their recommendation, it was fixed at the junction with the Indiana Harbor Canal. However, there is no appropriation for the improvement of the Grand Calumet River up to that point, and none is being asked for at this time.

Mr. MOORE of Pennsylvania. I will say to the gentleman that I have no objection to the item.

Mr. MANN. I understand that.

Mr. MOORE of Pennsylvania. I am only trying to ascertain just what connection the canal has with this project.

Mr. MANN. The canal runs from the lake to Indiana Harbor. It is an artificial canal. There are manufacturing plants along there. The Grand Calumet River comes around the other way, and the two are connected, but there is no commerce that runs around through the two. This is just fixing the upper limit of the Calumet River project.

Mr. MADDEN. This was all built by private enterprise.

Mr. MANN. The Indiana Harbor Canal has nothing to do with anything in this item.

Mr. MADDEN. It is to build a breakwater.

Mr. MANN. The gentleman is looking at the wrong item.

Mr. MOORE of Pennsylvania. I have no disposition to oppose the item.

Mr. SPARKMAN. If I understand this discussion, it is with reference to the item in lines 16 to 19, inclusive, for the Calumet River. Is that correct?

Mr. MOORE of Pennsylvania. Yes.

Mr. MADDEN. I thought the gentleman was asking about Indiana Harbor.

Mr. MANN. Mr. Chairman, I move to strike out the last two words. There are very often controversies here as to the effect of the improvement of rivers and harbors. The part of the Calumet River that is in Illinois, or a portion of the part of it that is in Illinois, is in my district. The major part of the Calumet River is in my district. We have been making improvements for several years, which are now practically completed. I hear gentlemen talk here about commerce to the extent of thousands of tons, and some to the extent of hundreds of thousands of tons. The Calumet River has a commerce of six million to eight million or ten million tons every year, and does not take very much trouble to boast about it. We hear a great deal about the commerce of Chicago. Calumet Harbor is in Chicago. The Chicago River now has a commerce of three or four million tons a year. Calumet Harbor itself had a commerce last year of something over 7,000,000 tons. During the more prosperous times a few years ago it went up to 8,000,000 tons, and then it dropped down again.

A large share, it is true, is iron ore; but a large share also is grain and other heavy commodities.

If any harbor improvement has ever demonstrated the benefit of making improvements in advance of the commerce it has been demonstrated at South Chicago on the Calumet River, for as fast as the river has been deepened so as to make it navigable, it has been lined with great establishments carrying on a great commerce.

Mr. MOORE of Pennsylvania. Will the gentleman yield?

Mr. MANN. Yes.

Mr. MOORE of Pennsylvania. That has been done in anticipation of business at that point?

Mr. MANN. Much has been done; yes.

Mr. MOORE of Pennsylvania. With reference to this improvement, it can not be claimed for the Calumet River, or South Chicago, that it was wholly responsible for the heavy tonnage to which the gentleman refers. That tonnage is caused by the development of business elsewhere and the distribution of resources throughout the country.

Mr. MANN. Undoubtedly the Calumet River is so located that it is within touch of commerce coming into Chicago. Owing to the many difficulties or obstructions in the Chicago River, lake navigation from South Chicago is for grain about 50 cents a ton cheaper than from the Chicago River, and the heavy commerce naturally has a tendency to go down by way of South Chicago to Calumet River; it is through commerce.

Mr. MOORE of Pennsylvania. There is an extensive lake tonnage centralized at this point?

Mr. MANN. Yes.

Mr. MOORE of Pennsylvania. That passes on to Cleveland, Toledo, Erie, and Buffalo?

Mr. MANN. Yes; the Calumet River commerce radiates to all points on the lake.

Mr. MOORE of Pennsylvania. And in its course it would pass through such connecting waterways as the Great Lakes to the East?

Mr. MANN. I do not think anybody would be foolish enough, if that is what the gentleman wants my opinion about, to send commerce from the Calumet River for the purpose of going through the Beaufort inland canal.

Mr. MOORE of Pennsylvania. The gentleman will admit that iron ore is not perishable and that coal is not perishable.

Mr. MANN. Oh, no; iron is perishable. [Laughter.]

Mr. SMALL. Mr. Chairman, among the criticisms of this bill there is an occasional expression directed against that really national project, the Norfolk and Beaufort Inlet waterway. The gentleman from Texas [Mr. CALLAWAY] appears on the scene at intervals and endeavors to indulge in ribald jests about that very important project.

Mr. MADDEN. What is the project the gentleman referred to?

Mr. SMALL. The Norfolk and Beaufort Inlet waterway. Yesterday I received a letter from a man who appears to be the chief boatswain in charge of one of the United States steamers, owned by the Bureau of Fisheries and now located at Wilmington, N. C., on Cape Fear, and I wish to read the letter. It is as follows:

DEPARTMENT OF COMMERCE,
BUREAU OF FISHERIES,
Wilmington, N. C., April 7, 1916.

Hon. JOHN H. SMALL, M. C.,
The Capitol, Washington, D. C.

SIR: Having read an account in the Wilmington (N. C.) Star of your speech in the House in re the appropriation for inland waterway—Norfolk to Beaufort—I feel constrained to address a few lines to you on the question.

I am in command of this vessel, which belongs to the United States Fish Commission, at present on the Cape Fear River, engaged in the propagation of shad. We came down via the Albemarle and Chesapeake Canal two weeks ago.

This vessel is 37 years old, and owing to the fact that she has the same engines now that she started with in 1879, and that she has had practically no repairs to her hull since 1896, it is considered too great a risk to send her to sea by the outside route around Cape Hatteras. Therefore, for the last five or six years whenever she is ordered south we always have to use the inland waterways; and, as we have twin screws, it becomes necessary to have a tug tow us through from Norfolk to the North River Light. With our draft of 9 feet and with the shallow depth of water through the North Landing River, we would be in danger of breaking our propellers on stumps, sunken logs, etc., which would not be the case if the whole route were deepened to 12 feet, as the bill provides for.

I also wish to cite the fact that all the way across Croatan Sound this vessel dragged over the bottom, just being able to barely slide over, and in two places in Adams Creek we also stuck.

I do not know just how much traffic there is, but I do know this, that if the entire route is deepened to 12 feet and later to 15 feet it would be the greatest boon to all maritime interests and a blessing to us fellows who handle ships. And as you so aptly say, "We could send our submarines, torpedo vessels, tugs, and small gunboats via that route, thus saving time, expense, and worry to the naval authorities."

There may be waste in the rivers and harbors bill, but it is not in any part of it which improves waters in this section. I am telling you this as a man who has served 30 years in the United States Navy, and several years previous to that in Maine merchantmen and New Bedford whalers. Being a native of Massachusetts, no one can honestly accuse me of being partial to North Carolina. I simply want to give credit where credit is due, and it is due your section.

If this will be of any assistance to you, you are at liberty to use it, providing you withhold my name, as the Navy Department would not approve of my writing this.

Sincerely hoping you win out in your fight for a good cause, I remain,

———— ————.

It is for that reason that I do not give his name.

The CHAIRMAN. The time of the gentleman from North Carolina has expired, and the Clerk will read.

The Clerk read as follows:

Illinois River, Ill.: Continuing improvement and for maintenance below Copperas Creek, $55,000.

Mr. MOORE of Pennsylvania. Mr. Chairman, I move to strike out the last word. I wish to say a few words about the tonnage situation. The gentleman from Wisconsin [Mr. LENROOT] made a speech, eloquent, as usual, about the large tonnage at his port of Superior. It is entirely commendable to that port and that section of the country, but the argument as he makes it is very much the same as we sometimes make along the Atlantic seaboard, where we speak of the revenue derived at our ports. At New York we take in the largest amount of customs duties of any port in the United States, more than at all ports combined. At Philadelphia we take in $20,000,000, which is more than the Government has given us back in all time for the improvement of the river. Gentlemen rise and say that we have no right to state those figures, because business does not originate with us, because that $20,000,000 revenue at Philadelphia is paid for by the people of the country.

Now, if we accept that as the true line of argument, we have to apply it to the argument made by the gentleman from Wisconsin [Mr. LENROOT] as to the tonnage of his port and to the increased tonnage of the Calumet River referred to by the gentleman from Illinois [Mr. MANN].

The truth of the matter is—and it scarcely seems necessary to reiterate it—we are interdependent in all these matters. There would be no great business at Philadelphia if there was not a hinterland. There would be no great business at New York if there was not a country to fall back on, and the same argument applies to Duluth, to Superior, to Buffalo, to Chicago, and other ports. The inland ports do not create revenue, but they do create tonnage. But the tonnage created on the Great Lakes is largely tonnage of weight; it would not compare in value with the coast tonnage. But there would be scarcely any tonnage for the Lakes if there were not waterways or railroads in the country radiating from the ports and carrying the raw materials where they may be fabricated or consumed.

Mr. GOOD. Will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. GOOD. What does the inland waterway create? It creates neither tonnage nor revenue.

Mr. MOORE of Pennsylvania. So the gentleman from Iowa returns to the attack. When the gentleman makes that statement he again shows his bias against the inland waterways and thinks he can get along without them. He can not. The gentleman comes from the interior and does not visit us in the great cities along the coast where the storm beats, but if he did he would have a different point of view. What would be the use of the millions of tons of iron and copper ore if it was not for the great cities of New York, Philadelphia, Buffalo, Pittsburgh, Toledo, Cleveland, and others?

Why, this vast tonnage to which the gentleman from Wisconsin [Mr. LENROOT] refers is manufactured in the State of Pennsylvania, and it goes into what? It goes into railroad tracks, it goes into the construction of bridges and into buildings, not only in this country, but just now it goes very largely into the great works developed by the European war.

Mr. MADDEN. Mr. Chairman, will the gentleman yield?

Mr. MOORE of Pennsylvania. Yes.

Mr. MADDEN. I suppose they could manufacture it where the ore is produced, if they wanted to.

Mr. MOORE of Pennsylvania. Why do they not do it?

Mr. LENROOT. They are doing it now.

Mr. MOORE of Pennsylvania. I am glad of it.

Mr. MILLER of Minnesota. They are doing it.

The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

Mr. MILLER of Minnesota. Mr. Chairman, I ask unanimous consent that the gentleman may have three minutes more. I would like to ask him a question.

The CHAIRMAN. The gentleman has yielded the floor.

Mr. MILLER of Minnesota. Then, Mr. Chairman, I ask to be recognized and move to strike out the last word.

The CHAIRMAN. The gentleman from Minnesota is recognized.

Mr. MILLER of Minnesota. Mr. Chairman, I do so only that I may take the time to make an inquiry of the gentleman from Pennsylvania——

Mr. SPARKMAN. Mr. Chairman, will the gentleman from Minnesota yield to me to make a request for unanimous consent?

Mr. MILLER of Minnesota. Certainly.

Mr. SPARKMAN. How much time does the gentleman from Minnesota desire?

Mr. MILLER of Minnesota. Five minutes.

Mr. SPARKMAN. Mr. Chairman, I ask unanimous consent that all debate on this paragraph and all amendments thereto close in five minutes.

The CHAIRMAN. Is there objection?

There was no objection.

Mr. MILLER of Minnesota. Mr. Chairman, the purpose of making this inquiry was this: In listening to the gentleman from Pennsylvania [Mr. MOORE] I observed him to say that the commerce at the Duluth-Superior Harbor was largely one of bulk and not of value. May I inquire of the gentleman if he knows what the value of the commerce at the Duluth-Superior Harbor each year is?

Mr. MOORE of Pennsylvania. Yes; I put that in the RECORD a day or two ago.

Mr. LENROOT. I gave it to the gentleman this morning.

Mr. MOORE of Pennsylvania. So far as the foreign tonnage is concerned, it is just one-half what the foreign tonnage is on the Atlantic seaboard.

Mr. MILLER of Minnesota. Will the gentleman state what the value of that is?

Mr. MOORE of Pennsylvania. The Great Lakes tonnage is about one-sixteenth of the foreign tonnage of the Atlantic coast. The lake tonnage is concentrated at the gentleman's port, it goes into the neck of a funnel and is easily calculated, while ours is distributed, and it is very difficult to get any statistics upon it.

Mr. MILLER of Minnesota. Will the gentleman state what the total tonnage is along the Atlantic coast?

Mr. MOORE of Pennsylvania. If the gentleman will look in the RECORD——

Mr. MILLER of Minnesota. Oh, if the gentleman has it he can give it. I don't want to look into the RECORD.

Mr. MOORE of Pennsylvania. Oh, I do not carry billions in my head or in my pocket.

Mr. HULBERT. I can give the gentleman the information that he is looking for.

Mr. MILLER of Minnesota. I will give the gentleman from New York an opportunity in a moment or two. I want to say that the value of the Duluth-Superior tonnage each year is upward of $300,000,000, and if that is one-sixteenth of the value of the freight tonnage on the Atlantic seaboard, then that tonnage is vastly superior to anything that I have ever heard stated of it.

Mr. MOORE of Pennsylvania. Suppose, for the sake of argument, we accept the gentleman's figures as correct; does the gentleman deny that the people of the United States participate in it from Florida to the State of Washington?

Mr. MILLER of Minnesota. I am not denying anything.

Mr. MOORE of Pennsylvania. Does the gentleman deny that we pay for that all over the country?

Mr. MILLER of Minnesota. I will assert this, that the tonnage at the Duluth-Superior Harbor is a tonnage serving all of the people of the great interior, and in addition somewhat the Atlantic seaboard.

Mr. HULBERT. Mr. Chairman, will the gentleman yield?

Mr. MILLER of Minnesota. Oh, wait one moment. I have the time. The gentleman has answered my question as best he can, which was not satisfactory to anyone, but I do not wish to tire his intellect further.

Mr. HULBERT. Mr. Chairman, will the gentleman yield now?

Mr. MILLER of Minnesota. Oh, wait a minute until I can make a brief statement, and I will give the gentleman from New York an opportunity. Mr. Chairman, I always like to listen to these gentlemen from the Atlantic seaboard talk about their wonderful ports and cities. One would think that all the greatness of civilization was centered there. The tonnage of the Duluth-Superior Harbor each year, the number of clearances of boats, arrivals and departures, is greater than the combined commerce, the combined arrivals and departures at the ports of Boston, Philadelphia, New Orleans, and San Francisco.

Mr. MOORE of Pennsylvania. Why does the gentleman leave out New York?

Mr. MILLER of Minnesota. For the simple reason that I can not put New York in that class.

Mr. HULBERT. I am glad the gentleman excepts New York.

Mr. MOORE of Pennsylvania. That is a delightful Minnesota comparison.

Mr. MILLER of Minnesota. It at least has the merit of being truthful.

Mr. MOORE of Pennsylvania. Yes; up to the point where the gentleman leaves off.

Mr. MILLER of Minnesota. Very well, if the gentleman will wait a minute. Now we will turn our attention to New York, and I am glad to see for the first time in the history of Congress the gentleman from Philadelphia standing up to say something good about New York. Turning to the city of New York, which is so ably represented by the gentleman who is about to speak, if he gets the time, I beg to state that if they would just compile the figures, give us the tonnage of New York, then we would have something on which to base the comparison.

Mr. HULBERT. I am prepared to give the tonnage.

Mr. MILLER of Minnesota. Then the gentleman can give something that the Board of Engineers of the Army has not heretofore been able to do.

Mr. HULBERT. I will give the figures of the customhouse.

Mr. MILLER of Minnesota. I yield to the gentleman.

Mr. HULBERT. During the 12 months ending December 31, 1915, the imports into the United States were valued at $1,280,069,660, and of that total $987,447,342 entered or went through the port of New York.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. HULBERT. I ask that I have half a minute in order to complete the statement.

The CHAIRMAN. All time has expired. The Clerk will read.

The Clerk read as follows:

Mississippi River, from Head of Passes to the mouth of the Ohio River, including salaries, clerical, office, traveling, and miscellaneous expenses of the Mississippi River Commission: Continuing improvement with a view to securing a permanent channel depth of 9 feet, $6,000,000, which sum shall be expended under the direction of the Secretary of War in accordance with the plans, specifications, and recommendations of the Mississippi River Commission, as approved by the Chief of Engineers, for the general improvement of the river, for the building of levees, and which may be done, in the discretion of the Secretary of War, by hired labor or otherwise, between Head of Passes and Cape Girardeau, Mo., and for surveys, including the survey from Head of Passes to the headwaters of the river, in such manner as in their opinion shall best improve navigation and promote the interests of commerce at all stages of the river: *Provided*, That of the money hereby appropriated so much as may be necessary shall be expended in the construction of suitable and necessary dredge boats and other devices and appliances and in the maintenance and operation of the same: *Provided further*, That the watercourses connected with said river and the harbors upon it, now under the control of the Mississippi River Commission and under improvement, together with the harbor at Vicksburg, Miss., which is hereby transferred to and placed under the control and jurisdiction of such commission, may, in the discretion of said commission, upon approval by the Chief of Engineers, receive allotments for improvements now under way or hereafter to be undertaken, to be paid for from the amount herein appropriated.

Mr. SPARKMAN, Mr. MILLER of Minnesota, and Mr. HULBERT rose.

The CHAIRMAN. The gentleman from Florida [Mr. SPARKMAN] is recognized.

Mr. SPARKMAN. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The gentleman from Florida offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 28, line 2, after the word "appropriated," insert:

"*Provided further*, That the report of the Mississippi River Commission contained in House Document No. 667, Sixty-third Congress, second session, shall not be construed as a project requiring special congressional action."

Mr. MANN. Mr. Chairman, what is this for?

Mr. SPARKMAN. The purpose of this amendment is to make certain other language in the paragraph that has just been read. That language is contained in the last proviso before the amendment and is as follows:

Provided further, That the watercourses connected with said river and the harbors upon it, now under the control of the Mississippi River Commission and under improvement, together with the harbor at Vicksburg, Miss., which is hereby transferred to and placed under the control and jurisdiction of such commission, may, in the discretion of said commission—

And so forth.

Now, since this bill was framed Col. Townsend, the chairman of the Mississippi River Commission, stated in a letter to me that the language quoted would hardly, in his opinion, accomplish the purpose we have in view. I thought it would and think yet it ought to do it, but he has to expend the money furnished and to select the places where it is to be expended, and he thinks the language insufficient; hence the purpose is to make it certain.

Mr. MANN. Is that the project referred to in that document that is cited, at Vicksburg?

Mr. SPARKMAN. Yes; that is the project referred to in the document.

Mr. MANN. Of course, there has been an effort for a long time by the Mississippi River Commission to take care of the harbor at Vicksburg.

Mr. SPARKMAN. Yes.

Mr. MANN. And is that the document that refers to that matter?

Mr. SPARKMAN. Yes; that is the one.

Mr. MANN. Theoretically, then, we are adopting that project?

Mr. SPARKMAN. No; we are not adopting a project.

Mr. MANN. I would say that theoretically we were adopting it.

Mr. SPARKMAN. We are rather excluding it than adopting it.

Mr. MANN. I do not think so. The amendment, as I understood it, authorizes the Mississippi River Commission to proceed with that project without requiring congressional action.

Mr. SPARKMAN. It is for the purpose of making certain what Congress intends to do there. There is no necessity that any survey be ordered. The survey was made, and it has never been adopted and perhaps never would be adopted. The purpose has been for years to place this back under the control of the Mississippi River Commission, where it properly belongs.

Mr. MANN. I am not sure there is no doubt about that. We had long controversies in the House when the gentleman was opposing it.

Mr. SPARKMAN. Every place similarly situated on the Mississippi River except this is under the jurisdiction of the Mississippi River Commission, so far as I know.

Mr. MANN. The purpose of the amendment, as I understand, is to permit the Mississippi River Commission to use its discretion about this improvement without further action by Congress?

Mr. SPARKMAN. That is correct. We want them to do it if they think it ought to be done. That is the purpose of this provision, and it is accomplished, I think, by the language we use here in the bill; if not, this amendment will.

Mr. MADDEN. The House acted in favor of this proposition last year, did it not, or the year before?

Mr. SPARKMAN. We had a similar provision to that in the bill of last year. We have put it in two bills, I believe.

Mr. HUMPHREY of Washington. Mr. Chairman, I would ask that the amendment be reported again.

The CHAIRMAN. Without objection, the Clerk will again report the amendment.

The amendment was again reported.

Mr. COLLIER. Mr. Chairman——

Mr. HUMPHREY of Washington. I wanted to ask the chairman what was really the purpose of the amendment?
